Legal Notice.

NOTICE OF DISSOLUTION OF THE FIRM OF ALLEN & JONASSOHN.

Notice is hereby given,

That the copartnership of ALLEN & JONASSOHN, composed of JOHN F. ALLEN and OSCAR T. JONASSOHN, and doing business at No. 65 Nassau Street, in the Borough of Manhattan, City and State of New York, and at No. 212 Union Street, in the City of Providence, State of Rhode Island, and at 58 Rue de Turbigo, in the City of Paris, Republic of France, has been dissolved by mutual consent at the termination of the 28th day of FEBRUARY, 1903.

Mr. ALLEN and Mr. JONASSOHN are each of them authorized to collect claims and to pay the debts of said old copartnership.

Mr. ALLEN will continue in business at the present office of said firm in PROVIDENCE, and Mr. JONASSOHN will continue in business at the present office of said firm in the City of New York.

Dated NEW YORK, March 2, 1903.

Cleveland.

D. Leonheiser, Huron, O., spent a day in the Cleveland market last week.

Mr. Chamberlain, Columbus, O., has become head engraver with the Sigler Bros. Co.

A. W. Elliott, Twinsburg, O., spent a day or two among the jobbing houses of the city last week.

J. H. Frease, Napoleon, O., passed through this city last week on a short trip through eastern Ohio and western Pennsylvania.

The Claus Shear Co., Fremont, partially resumed operations a few days ago, after a shutdown of six weeks on account of labor troubles.

The Joseph Welf & Sons Co., of this city, has been incorporated with a capital stock of $10,000 to take over the retail jewelry business heretofore conducted by Joseph Welf. Joseph Welf, Jacob H. Welf, Joseph A. Welf, A. C. Reinhard and Clara Welf are the incorporators.

P. F. Sherrick, of Ashland, whose store was destroyed by fire two weeks ago, saved a portion of his goods by putting them in safes and rolling the safes into the street. He will suffer a loss in business, as it is impossible for him to secure another room at this time. The goods are stored in a hardware store now.

The organization of the Wingate-Nusbaum Co. has been completed by the election of the following officers: President, William B. Wingate; vice-president, William F. Rees; secretary, S. B. Nusbaum. The company will operate a wholesale and retail jewelry store and do a manufacturing business at 39-41 Euclid Ave. The optical department, which will be made a special feature of the business, will be in charge of Dr. Adolph Nunvar. Messrs. Wingate, Nusbaum and Rees have just returned from the eastern markets and the house will be ready for business March 15.

Columbus.

T. T. Tress is spending a two weeks' vacation in Florida.

R. N. Whitford, manager of the Hofman Jewelry Co., left Saturday on a two weeks' business trip through the east.

F. D. Oger, of Oger Bros., has been ill for the past week from an attack of la grippe complicated with throat trouble. He is improving slowly, and it is hoped will soon be able to attend to business.

On Feb. 19 Referee in Bankruptcy Rogers heard the petition of Mrs. W. S. Tussing, in which she filed a claim for certain jewelry alleged to have belonged to the missing jeweler. Mrs. Tussing also claimed two horses, a phæton, a runabout buggy, all of which were taken possession of by the trustee. The Referee, being satisfied that the property belonged to Mrs. Tussing and was purchased by her personal savings and being unable to see how it would injure the creditors, made an order allowing her to keep the property, valued at about $400. A. L. Thurman, the trustee of the Tussing property, reports that the appraisal of the jewelry stock amounted to $4,716.26 and the total appraisal of all property to about $5,500, with book accounts of about $1,000, making the total assets about $6,000. This will leave practically nothing for the creditors, after subtracting the exemptions. The claims which have been proved amount to about $65,000. A petition that the trustee be allowed to sell the stock in bulk was filed Wednesday.

Harrisburg, Pa.

William P. Denehey has returned from a visit to his daughter in Wilkes Barre.

John H. Barker, who had been in the employ of L. A. Faunce, has purchased the jewelry business of the late Domer Thompson, 1917½ N. 6th St.

W. T. Jenkins and J. Allen Fuss, Waynesboro, Pa., have secured the contracts to furnish the silverware for the Central and Werner Hotels, respectively.

The State Senate has passed the Grady resolution creating a commission to purchase a silver service to be presented to the battleship *Pennsylvania* and appropriating $25,000 for that purpose.

A settlement has been effected in the cases of the two Adams Express men who stole a large quantity of goods, including a package containing several gold watches consigned to W. P. Denehey, 206 Market St., and the prosecutions have been withdrawn.

Jesse Sanborn, a watchmaker, formerly of Steelton, but who for the past few weeks had been in the employ of L. W. Berby, Huntington, is reported to have secured several watches from a show case, pawned them and left town. Later the watches were recovered, but Sanborn is still missing.

The Call Bill, requiring all tickets of pledge issued by pawnbrokers to designate when within 10 days the ticket or tickets become due and prohibiting pawnbrokers from charging more than 6 per cent. per annum on a loan, and 1 per cent. per month for storage and other necessary expenses, was reported affirmatively from committee in the House of Representatives last week.

Wilkes Barre, Pa.

The Bee Hive jewelry store will remove to a new site in Public Square soon.

Gately & Britton's installment house in Lebanon will move into the Academy of Music building soon.

A. F. Hitchler, a jeweler of Milton, Pa., will again take up his residence in Wilkes Barre in April, after an absence of five years.

R. C. Dreisbach, who has been in the employ of Joseph Leibson for some years, is now a graduate of the Jacksonian Optical College. He received his diploma last week.

H. G. Shupp's package sale last week attracted a large number of people to the store and about 4,000 packages were sold. So great was the crowd that several women fainted and the services of several policemen were necessary to keep the people in check. Purchasers were admitted a few at a time and made their exit through a rear door.

Reports from Belgrade, Neb., announce that there is a good opening for a jewelry establishment at that place.

Lazarus Rubenstein, Schenectady, N. Y., has purchased the stock and fixtures of another jeweler of that city. Mr. Rubenstein will remodel and take possession of the new store about May 1st.

Pittsburgh.

John Adelman is remodeling the fro and interior of his Fifth Ave. store.

F. E. Leister, formerly employed by Jol Zugschweit, Carnegie, has opened a jewel store on Main St., Carnegie.

George Dunbar, representing the G. Barrett Co., is this week covering l western Pennsylvania territory.

Jesse Crawford, for several years watc maker for Goddard, Hill & Co., has open a store in the Bijou building, Penn Ave.

George B. Barrett, of the G. B. Barre Co., accompanied by his daughter, Mi Cora Barrett, sailed last week for Jamaic where they will spend several weeks.

Among the jewelers who will move in larger quarters in the Spring is O. Ganter, now at 442 Wood St. Mr. Gant will occupy rooms on the fourth floor the Farmers' Deposit Bank building.

L. W. Vilsack and Charles O'Brien, L. W. Vilsack & Co., 527 Smithfield S are in New York purchasing a stock f their new store in the Farmers' Depos Bank building, Fifth Ave. and Wood St.

J. M. Roberts and his son were the pri cipal witnesses at the coroner's inquest the death of Maggie Hall, who was kill in the yard of Mr. Roberts's home on t night of Feb. 10. The inquest was he last week, and Nicholas Glazner, charg with killing Miss Hall, was held for tri on a charge of murder.

A clerk in the employ of A. H. Gerwi wholesale jeweler, Diamond and Wood St Saturday morning, dropped a lighted mat among some waste paper causing a sligh fire. An alarm was turned in and the enti down-town fire department called, but t flames were extinguished by the chemica before much damage was done.

Among the retail jewelers who visited t wholesale houses here during the last wee were: F. W. Laban, Steubenville, O.; Jol Linnenbrink, Rochester, Pa.; G. V. Brad Washington, Pa.; J. F. Murphy, Dawso Pa.; A. Roy, of Roy & Anderson, Bra dock, Pa.; J. W. Caler, Beaver, Pa.; Fra Murdock, Ligonier, Pa.; Louis Schmi Braddock, Pa.; T. H. McNary, Washin ton, Pa.

Andrew Jackson Christy, formerly a jew eler in this city, died Wednesday at t Soldiers' Home in Youngstown, O. M Christy was in the jewelry business he several years ago, but disposed of his sto and entered the Soldiers' Home. He w a gallant soldier during the Civil War an was wounded in one of the principal ba tles. His wound prevented him from d voting his entire time to business.

A. M. Andrews, who for the past years has had charge of the silverware d partment at Heeren Bros. & Co., will en gage in business for himself April 1. M Andrews will be located in rooms 211 an 212 on the second floor of the Farmer Deposit Bank building, Fifth Ave. an Wood St. He will go east this week t buy stock and equipment for his establis ment.

James S. Campbell, Washington, N. C lost heavily in a recent fire at that plac The stock in the jewelry establishmen of Dora Glick, Devall's Bluff, Ark., w entirely destroyed by fire a short time ag

QUERIES BY OUR READERS.

Note.—Questions under this department will be answered as promptly as possible. Some queries require careful investigation before a satisfactory answer can be given; hence such answers are often seemingly delayed. THE CIRCULAR-WEEKLY desires every jeweler to take advantage of this department.

SEATTLE, Wash., Feb. 20, 1903.

Editor of THE JEWELERS' CIRCULAR-WEEKLY:

Will you kindly give us the names of the present owners of the following jewels: Piggot, Koh-i-noor, Regent, Sancy, Nassack, Hope blue diamond, Shah of Persia, Grand Mogul, Orloff, Polar Star, Grand Duke of Tuscany, Star of South, Pasha of Egypt, Le Jubile. L. L. M. Co.

ANSWER:—The latest owner on record of the Piggot diamond is Ali Pasha of Egypt; the Koh-i-noor is part of the English Crown jewels; the Regent is owned by the French Government; the Sancy is said to be now owned by an Indian Maharajah; the Nassack is in the family of the Marquis of Westminster, England; the Hope blue diamond is now owned by Jos. Frankel's Sons, New York; the Shah of Persia was presented to the Emperor of Russia, Nicholas, in 1829, and we know no later record of ownership; the Orloff is among the Russian Crown jewels; the Star of the South was sold to the Gaikaw of Baroda, India, about 1853; the Pasha of Egypt was bought by Ibraham, the Viceroy of Egypt. Of the Grand Duc of Tuscany we have no record. By Le Jubile we infer you mean the Jubilee diamond, which is the name given to the diamond formerly known as the Jagersfontein Excelsior, in its present cut form. Until two years ago this stone was owned by a syndicate of capitalists connected with the Jagersfontein mine, where it was found. As to the Great Mogul, authorities differ, but many believe that the present Koh-i-noor was cut from this stone.

NEW PHILADELPHIA, O., Jan. 2, 1903.

Editor of THE JEWELERS' CIRCULAR-WEEKLY:

Please inform us through your columns in regard to inspection or examination of first class mail matter. We are of the impression that any first class matter bearing proper postage, either foreign or domestic, would reach its destination without anyone having permission to examine contents.

This being the case how are small dutiable articles kept from entering our country through the mails? And if contents of packages are stated to a foreign postmaster and properly certified and forwarded to the United States, have we the privilege of examination and by whom is it done? Awaiting your reply, and thanking you for the very knotty problem you solve for us, we are,

J. E. J.

ANSWER:—Generally speaking, all first class mail matter from foreign countries that are not clearly letters are, when received at a regular port of entry, detained by the Post Office and a communication sent to the addressee to come to the office and receive it. In the presence of the addressee the package is opened, and if it is found to contain dutiable goods, the goods are sent to the nearest United States Appraiser, and when he makes his report upon the same, the duty is levied and the package turned over to the addressee, when such duty is paid. In case the package or letter is addressed to someone who is not in the vicinity of the Post Office at the port of entry the package is opened by the Post Office authorities, the value and duty of the articles contained therein is determined by the official appraiser, and information to this effect is sent to the addressee, who is notified to forward the amount of the duty. When such payment is received the package is delivered in the regular way.

We are informed by Customs officials that technically the amount paid is a fine equal to the amount of the duty, as under the International Postal Union Treaty, dutiable articles are forbidden to be sent through the mails and therefore the Government gets around this difficulty by providing that violations of the law shall be subject to the fine equal to the amount of duty on the article, whereupon the merchandise is surrendered.

CANTON, O., Feb. 13, 1903.

Editor of THE JEWELERS' CIRCULAR-WEEKLY:

Can you give me a brief history of the factory building at Marion, N. J., which at one time was used for a watch factory, but is now used as an automobile factory? Was it ever used exclusively as a watch case factory? If so what was the name of the company operating it and when?

A. B. S.

ANSWER:—The watch factory at Marion, N. J., was built by the United States Watch Co., which was organized in 1863. It was used exclusively for the manufacture of watches by this company until 1872, when the company made an assignment. The company then was reorganized under the name of the Marion Watch Co., which continued the manufacture of watches at this factory until 1874. In that year the factory was finally closed and the machinery sold to various parties. The company had no connection with the present United States Watch Co., of Waltham, Mass.

W. W. HARRISON,

MANUFACTURER OF

Umbrellas and Walking Sticks

OF THE BETTER SORT,

405 BROADWAY, NEW YORK.

SOME POINTS OF EXCELLENCE in Harrison Umbrellas, gained by 25 years of careful study of the details so essential in making an umbrella adapted to the wants of the Jewelry trade:

Exclusive Designs in Handles. **Quality of Silks.**
Perfection of Finish in Handles. **Finest Tempered English Frames.**
Compactness in Roll. **Strength of Construction.**

Harrison's Gold Head Walking Sticks have stood the test for more than a quarter of a century. They comprise all the Standard Shapes and are made of twenty-year 14k. Filled Gold and of twenty-year 14k. Filled Gold with 14k. Solid Gold tops, ends and nam plates. Also a line of Solid Gold Heads.

The only Umbrella and Walking Stick Manufacturer in the United States not selling to the Dry Goods and Department Stores.

W. W. HARRISON, 405 Broadway, New York.

A Review of United States Commerce, for the Fiscal Year 1901-2.

(*Continued from issue of Feb. 25.*)

WASHINGTON, D. C., Feb. 11.—Further statistics, covering the imports for 1902, show that those of diamonds and other precious stones free of duty were valued at $7,001,391.39, as compared with $7,398,664.10 in 1901, and were twelfth on the list as regards the magnitude of value. Going further down the list, we find that ivory imports, in the raw state, were valued at $1,151,836.10, as against $1,021,968 in 1901.

In order of the duty collected, diamonds, not set, stand eighteenth on the list, the duty collected at the present rate of 10 per cent. ad valorem being $1,273,705, as compared with $1,161,124.09. The imports of all other articles of jewelry in 1901 were valued at $4,878,747.64, on which the duty collected was $981,607.87, or 20.12 per cent. In 1902, the value of these imports was $6,322,430.79, and the duty collected was $1,218,989.60, or 19.28 per cent. ad valorem. A slight reduction also appears in the ad valorem rate of duty collected on clocks and watches, as in 1901 the value was $2,010,646.78, on which the duty amounted to $722,685.89, or an average of 35.94 per cent. In 1902 the value was $2,443,919.31, and the duty to $833,542.54, or 34.11 per centum ad valorem.

The total list of dutiable merchandise imported during the past two years of interest to the trade, together with the rate of duty, amount collected, etc., were as follows:

Japanese Art in Leather Goods.

AN interesting Japanese leather pouch or Netsuki bag, which reflects the art in leather stamping and silk embroidering peculiar to old Japan, is now in possession of Deitsch Bros., manufacturers of leather, ivory, ebony, shell and silver goods, 14 E. 17th St., New York. The article is said to be a product of the 18th century and to have been used as a State portfolio, having been carried, it is claimed, by the private secretary of the Mikado.

The pouch was purchased, together with three others of smaller dimensions, at the sale of Japanese art objects, which had been collected by Bunkio Matsuki, held Feb. 12, 13 and 14, in the American Art Galleries, New York. It is 11¾ by 9¾ inches and has three compartments. It is extremely heavy and is made from a Japanese leather called *nui-tongawa*.

The body of the bag is of a rich tan color and the outside of it is covered with a heavy Japanese deerskin leather, richly embroidered in drab, purple and gray colors, with designs of pæonies and smaller Japanese flowers. The pæonies are worked closely in purple silk and stand out in relief. The clasp of the bag is of gold-bronze, and is made in the figure of a crouching lion. Attached to the clasp is a heavy chain of Japanese silver.

The Netsuki is made from ivory and is ornamented with the figure of a coiled dragon, which is burned into the knob of ivory in *niello*, after the style of Japanese art, every detail being perfect and clearly distinguishable. A small panel in the top of the Netsuki is ornamented with gold, on which is likewise a figure of a coiled dragon. The chain and mount are of the style peculiar to the 18th century, the pouch itself being of the latter period of the same century.

The interior of the pouch is of rich tan-colored leather, extremely soft and strong. A very small conventional design in blue and dark red is stamped on the leather, and the effect produced, though entirely different from that of the outside, is in harmony with the general style of the bag.

In spite of its alleged antiquity, the bag bears a striking resemblance, both in shape, in color and in designs, to many of the modern silk and leather purses. This is probably due to the fact that the Netsuki bags so much in vogue at the present time trace their origin directly to these examples of Japanese art.

The three smaller bags purchased by Deitsch Bros. are similar in general design and appearance to the one already described, but differ in detail in respect to the color and designs of their decorations. One of them has a silver clasp representing a Chinese warrior; another has an embroidered body design of a dragon in flames. The body of the dragon reaches nearly around

JAPANESE NETSUKI POUCH FROM BUNKIO MATSUKI COLLECTION.

he bag and is raised in relief. One of the other bags is of a dark tan color, richly embroidered in silk with grotesque figure designs, the figures being rabbits, hedge-hogs and other animals. They are worked in blue, brown, gray and maroon colored silk, and the bag is edged with a light colored border.

The Japanese art, as represented by the pouches in question, is extremely well marked and shows the genius of the race for the grotesque and religious style of decorating.

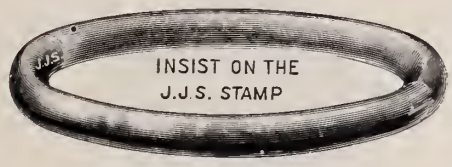
Spring pocketbooks, wrist bags, chatelaine bags, etc., are now beginning to partake

JAPANESE NETSUKI BAG.

very largely of Japanese art, and whether the style has been forced upon the manufacturer by the constantly increasing craze for something odd and something that has a smack of religious decorations and Oriental designs about it, or whether it is the result of the increasing activity on the part of Japanese manufacturers to force their art on the American market, is not exactly known. Whatever the cause may be, it is, nevertheless, apparent that the influence of Japanese art in leather goods is growing in this country and is a very pronounced feature of the Spring lines of leather goods.

Two Soldiers Sentenced for Breaking Window of Halifax Jewelry Store.

HALIFAX, N. S., Feb. 25.—Two members of the Royal Garrison Artillery stationed at this place pleaded guilty Monday of breaking the plate glass window of the jewelry store of Thomas Johnson & Sons, 187 Barrington St., and have been sentenced to three years in the penitentiary.



The crime was committed Saturday night; the men, after deliberately kicking in the window, waited in front of the jewelry store until a police officer came along and arrested them. They made no resistance and went quietly to the lockup, where they stated they had committed the act because they were disgusted with the army and wanted to be relieved of service.

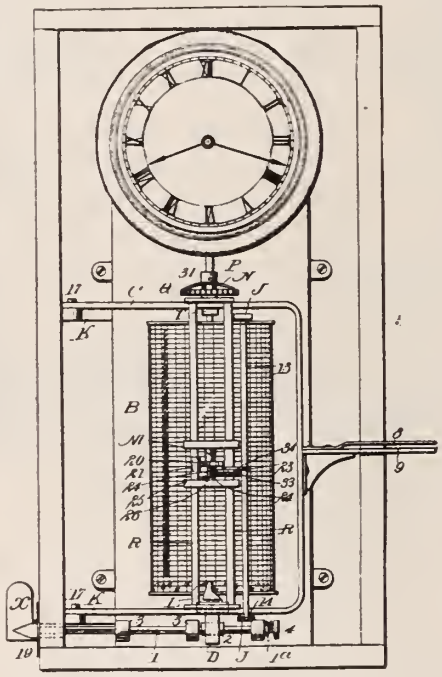
The Latest Patents.

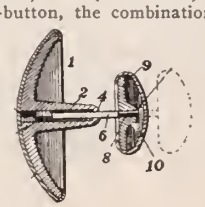
ISSUE OF FEB 24, 1903.



721,133. CENSER. Bernard W. Ahne, Mount Hope, N. J. Filed May 3, 1902. Serial No. 105,828. (No model.)

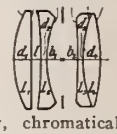
A censer comprising a casing having a door

adapted to be opened or closed, a coal-pan arranged within the censer, a shield or screen arranged above said pan and means for raising and lowering the shield or screen simultaneously with the opening and closing of the door.



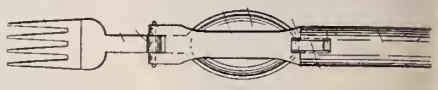
721,187. WORKMAN'S TIME-RECORDER. Daniel Hepp, Chicago, Ill. Filed Aug. 4, 1902. Serial No. 118,305. (No model.)

In a workman's time-recorder, the combination with a movable record-carrier, said record having time and workmen's divisions, and means to mark the same, of means to shift the carrier to locate "in" and "out" marks differently, comprising a movable support for the carrier, a crank-shaft adapted to be turned by a workman, and an eccentric on the shaft bearing against the support, to shift the same.



721,203. COLLAR-BUTTON. Herman Landman. Kansas City, Mo. Filed Feb. 24, 1902. Serial No. 95,447. (No model.)

In a collar-button, the combination with a base,



and a tubular stem projecting integrally therefrom, the bore of the latter extending completely through the base and being threaded throughout its length save at its front end which is reduced and smooth, and a shell secured over the back of the base and closing said bore; of a head, and a solid stem projecting therefrom through and closely fitting said smooth portion of the bore, the rear end of this stem being enlarged and threaded to engage th threads within such bore.

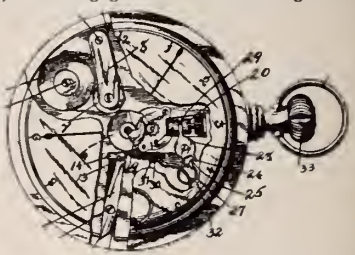
721,240. PHOTOGRAPHIC OBJECTIVE. Pau Rudolph, Jena, Germany, assignor to the firr of Carl Zeiss, Jena, Germany. Filed July 1 1902. Serial No. 115,696. (No model.)

A spherically, chromatically and astigmatically corrected objective, consisting of four lenses separated by the diaphragm into two groups each of tw lenses, of which groups one includes a pair o facing surfaces and the other a cemented surface the power of the pair of facing surfaces being neg ative and that of the cemented surface positive.

721,247. FORK AND SPOON. Albert G. Smart Melrose Highlands, Mass. Filed July 28 1902. Serial No. 117,316. (No model.)

The combination, with a handle, of a bar having its middle portion pivoted to one end of the handle and having a spoon at one end and a fork at the other, and catches for coupling the said spoon and fork to the handle alternately.

721,249. TABLE-FORK. Martin V. B. Stimson Groton, Conn. Filed July 16, 1902. Serial No. 115,871. (No model.)



As a new article of manufacture, a table-fork,

having a plurality of tines, similarly curved or bent upward toward and downward from the plane of the axis of the handle, forming on both their front and rear faces, concave and convex surfaces.

721,361. WATCH-REGULATOR. Oscar F. Enewall, Chicago, Ill., assignor of two-thirds to Charles D. Peacock, Jr., and Axel Bonde, Chicago, Ill. Filed Feb. 26, 1900. Serial No. 6,439. (No model.)

In a regulating mechanism for timepieces the combination of the setting mechanism, the regulator, a disengageable or shiftable gear between

said regulator and setting mechanism, a winding and setting stem having a double-click longitudinal movement, means for operatively connecting said stem with the setting mechanism at the first click of said longitudinal movement means operatively related to said stem for holding said gear out of engagement and means for effecting the engagement of said gear at the second click of said longitudinal movement.

721,362. HANDLE FOR BAGS. Gustav H.

Gentzel, Jersey City, N. J., assignor to John Mehl & Co., Jersey City, N. J. Filed Dec.

30, 1902. Serial No. 137,089. (No model.)

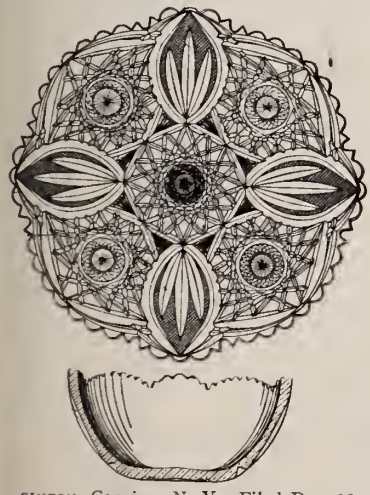
A bag-handle comprising a flexible band baving eyes or loops in its free ends and suspension devices each secured to one of the loops or eyes and passing freely through tbe opposite loop or eye.

721,374. WORKMAN'S TIME-RECORDER. Alfonso L. Jayne, Buffalo, N. Y. Filed July 13, 1901. Serial No. 68,178. (No model.)

In a time-recorder, the combination with tbe time mechanism, of a record-receiving element, a time-stamp actuated by said time mechanism, means for moving said time-stamp in one direction, means for retarding tbe movement of the time stamp, and mechanism for causing tbe record-receiving element to be marked.

721,549. FOUNTAIN-PEN. August Eberstein, Boston, Mass. Filed Feb. 12, 1901. Serial No. 46,973. (No model.)

In a fountain-pen, a tubular barrel open at one end, a detachable feed-section to close the open end of the barrel and having a permanently-at-



tached elastic ink-reservoir, the latter being inclosed and protected by the barrel when tbe feed-section is in place therein, and a long, relatively inelastic tube mounted on, and extended rearwardly beyond tbe inner end of the feed-section, and detachably connected thereto, surrounding tbe reservoir and constituting a long and firm handpiece for the feed-section when the latter is removed from the barrel for tbe purpose of filling tbe reservoir.

Design **36,232.** MEDALLION. William A. Malliet, Hackensack, N. J. Filed Nov. 13, 1902.

Serial No. 131,270. Term of patent 7 years.

Design **36,233.** GLASS VESSEL. Walter Ginton, Corning, N. Y. Filed Dec. 19, 1901. Serial No. 86,617. Term of patent 7 years.

B A N E N E

An Internal Treatment for Cloudiness of the Transparent Media, Sluggish Circulation, Cataract, Floating Spots, Anæmia of the Retina, Congestion of the Retina, Affections of the Choroid, Optic Nerve Diseases, Sluggish Action of Pupil, Hæmorrhage in the Eye, Weakness of Ocular Muscles, Weakness of Accommodation, Dimness of Vision.

What is Banene

BANENE is a distillation of well known drugs that are active tonics, the administration of which stimulates the capillary circulation of the delicate structures of the eye. It seems to have particular effect upon the circulation of the retina (the layer of the inside of the eye where the images are formed). This membrane is a fine, delicate, semi-transparent membrane, 1-75 to 1-200 of an inch in thickness, made up of ten coats, each one performing its own individual function. One of these ten coats is made up of the optic nerve fibers (threads), that originate in the brain and pass through a tube (the optic sheath), that attaches to the back of the eye-ball.

These fibers are attached to the back of the eye (owing to their passing through fine holes), and completely line the inside concave surface of the eye, attaching again just back of the lens (at the ora serrata), and it is upon this coat that all other coats are built. Passing through with these fibers is a small blood vessel that supplies this inside coat (the retina) with blood vessels. Many times the blood supply is not sufficient for this coat. This causes the vision to be blurred, the veins to become congested and many times pain in the eye ball; at these times the patient is usually annoyed with what appears to be floating spots, sometimes arranged and looking like a chain and cobwebs. Those who are wearing glasses feel the necessity of changing them, while those who have never worn them feel how needful they are for their comfort. These conditions speak only too plainly of impaired circulation and mal-nutrition of the eye. BANENE internally and MURINE externally will absolutely cure these conditions, if the trouble has not existed so long a time as to cause structural changes.

Floating Spots, Cobwebs, Etc.

Opacities, Cataract, Etc.

Therefore, the timely use of these remedies will prevent structural changes due to opacities, cataract, etc. Its efficiency upon those parts of the eye where its nourishment depends upon imbibition is marked. There are parts of the eye where we have no blood vessels, and for the want of any better knowledge, we say the parts imbibe their nutrition or one drop sucks its nourishment from its adjoining drop. In order that the substance for absorption shall be properly manufactured in the coats of the eye, it is necessary that we should have a good blood supply to the coats that build up the transparent media, or, in other words, the coats that supply the substance that makes the vitreous humor. By common consent this substance is manufactured in the choroid and cellular body, which is supplied with blood through arteries that penetrate the eye-ball in the back and in front. These arteries are called the ciliary arteries and BANENE, taken internally, acts directly upon this circulation.

Stimulates Circulation

Cataract

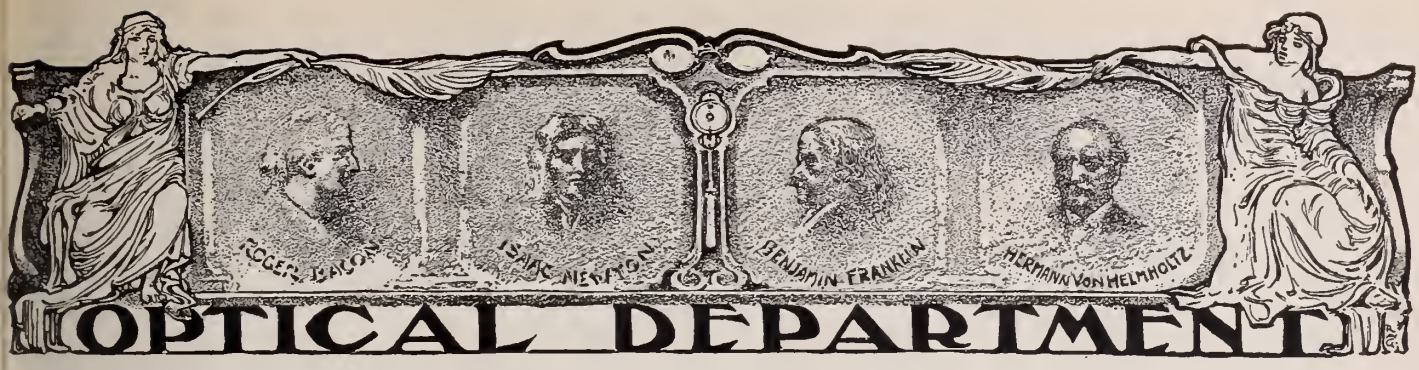
A noted oculist discovered that where people were afflicted with an opacity of the crystalline lens (cataract), and had taken BANENE internally and used MURINE externally, the opacities were often cleared up. Hence, we say that a cataract is absorbed by the use of BANENE. This was first noticed by an oculist of large experience and practice, who was using these remedies for the purpose of getting the eye in a healthy condition before operating for cataract. In this instance, a lady troubled with cataract was the patient. After a careful examination, he found the lens so opaque that it was impossible to get a distinct outline of the blood vessels upon the retina; the eyes were considerably congested (red), and the blood vessels were large and angry looking over the surface.

He gave the patient MURINE and BANENE, and requested that she use the medicine as directed and come prepared for an operation in six weeks. Words cannot describe his surprise when the patient returned at the end of two months with the lens practically cleared up and having very good vision. He experimented with these remedies for a number of years, with the result that a large per cent of the cases troubled with cataract, who used these remedies faithfully, were relieved and their vision restored. We have cases where, even after an operation, there was a blurred condition of the vision and many times light was almost imperceptible, that were entirely cured by these remedies, due to the fact that they cleared the transparent media of the eye. All the eye requires under these conditions is an active tonic and stimulant, and this is supplied by BANENE internally for the internal structures of the eye and MURINE externally for the external surface of the eye.

Cataract Absorbed, Sight Restored

The best oculists use these remedies before an operation and give the case an opportunity to escape the use of the dreaded knife. They have become such favorites among the profession that they try them before sending the patient to a specialist for an operation. It would be foolish for us to claim that they will absorb or remove every cataract, but the large number of cases where these remedies have produced this wonderful result would warrant giving them a thorough trial before subjecting themselves to the expense or to the hardship of an operation for its removal. Should an operation be required after the administration of these remedies, the result will be insured, because their use will leave the eyes in an absolutely healthy condition and the cut will heal rapidly, leaving the retina clear and the vitreous transparent.

Muscular Weakness



The muscles of the eye curtain (the iris) and of the pupil are liable to become relaxed from general debility or age, and thereby lessen the visual action of the eye. BANENE is the SYSTEMIC REMEDY indicated (8 drops in water taken internally three times daily); Murine, one or two drops in each eye hourly, for its local strengthening effect.

Dimness of Vision accompanied by an INABILITY TO WEAR GLASSES WITH COMFORT. Murine and Banene should be in the hands of every individual who wears glasses, and they should be promptly used at the first indication of discomfort.

Full Report of the Meeting of the Virginia State Optical Association.

RICHMOND, Va., Feb. 25.—As already announced in last week's issue of THE CIRCULAR-WEEKLY, the semi-annual meeting of the Virginia State Optical Association was held in this city at Murphy's Hotel last Thursday. The meeting was well attended by opticians from all over the State.

The first session was held at 3 o'clock in the afternoon and was devoted largely to business. Thirteen new members were received into the association.

One feature of the afternoon session was a demonstrated talk on anatomy of the eye by B. R. Tucker. His talk was listened to with much attention, and he fully deserved the thanks of the members. After other matters of business had been transacted the meeting adjourned until 8.30 P. M.

The evening meeting was devoted largely to educational features. E. E. Shreiner, of the S. Galeski Optical Co., Richmond, spoke at length on "Optical Organization," which brought forth much discussion. John W. Buchanan, Petersburg, presented an excellent paper on "The Practice of Optometry, as Viewed from the Standpoint of the Refracting Optician." C. H. Rudd, Richmond, read a paper on "Retinoscopy." Discussions pro and con were indulged in quite freely.

The most interesting feature of this session was a free clinic. The opticians showed much earnestness in the examinations of patients and in demonstrating the various instruments for examining the eyes and measuring their refractive errors.

A banquet followed and much pleasantry added zest to a most enjoyable repast.

Dr. S. Galeski, D. E. Lumsden and D. A. Buchanan were elected honorary members.

The following were elected active members: F. Weidenfeld, Richmond; Louis T. Rogers, Richmond; F. S. Bullington, Richmond; B. A. and H. E. Traylor, Norfolk; J. J. Palmer, Newport News; F. H. White, Lexington, J. A. Currie, Petersburg, and Louis Voigt, Roanoke, and W. E. Hull, Newport News.

The next meeting will be held in Staunton in August.

"Comfort and Style in Eye Glasses," is the title of a 12-page optical booklet issued by Julius R. Watts & Co., Atlanta, Ga. The booklet measures 4x4¾ inches. The cover is green, on which the title and advertising matter is printed in gold. The text is convincingly written and illustrated with half-tone cuts of the examination rooms, showing the use of the retinoscope and the ophthalmometer. "Why Some People See Poorly," is a caption under which some strong arguments are presented.

Reasons for the Introduction of Bill to Regulate Practice of Optometry in Indiana.

APPENDED below is a letter recently published in the Indianapolis dailies by C. M. Jenkins, president of the Indiana Optical Society, anent the bill already introduced in the Indiana State Legislature, to provide for the regulation of optometry in the State of Indiana.

The writer of this letter has always been deeply interested in the advancement of the science of optometry and is sparing no effort to secure the co-operation of both the press and his fellow opticians to further the interests of the Indiana opticians.

Regarding the necessity and equitable features of House Bill 328, introduced by Mr. Kirkman, to define and regulate the practice of optometry, we beg attention to some of the leading features in favor of the bill. We feel that the press, the people and their representatives cannot help but favor the proposition that the fitting of eyes with glasses is a distinct work—equally so with that of dentistry, and merits legal restraint.

The object of the proposed bill is to dignify the calling, raise the standard of the profession of optometry and the business integrity of the trade in general. It will not affect the present established optician, except to stimulate him to a greater degree of proficiency; nor will it apply to physicians and surgeons, except to protect both them and the people from imposters.

It will be more than self-supporting, leaving an annual surplus for the general school fund, as provided therein. Another very commendable feature is embodied in Section 16, exempting from the provisions of the act the merchant selling glasses as mere merchandise, without pretense of qualification.

Thus no hardship is imposed upon the poorer classes, particularly the rural element, who must often rely on such aid, but who, under existing conditions, are daily imposed upon by the hordes of peddlers and fakirs who swarm into Indiana from the larger cities with pretense of qualification to filch our people of their hard-earned dollars. If, after due consideration, you deem our bill equitable and just, we ask your most earnest support.

A Glass Eye Which Deceived an Eye Specialist.

THE Civil Service Commission at Washington recently received from a concern which manufactures glass eyes, says the Chicago *Inter-Ocean*, a request for an indorsement of its wares on the ground that "a hazel, crystal left eye worn by one of our patrons was marked 'farsighted—refraction excellent' in a recent examination for the commission."

All the details of the matter were given, the candidate's name, the date on which he took the examination, and the percentage he made. The commissioners found that the statements in the letter tallied with the records. The candidate was summoned before a medical expert at the commission's New York office and the report of that officer received to-day confirms the company's assertion.

The medical officer says that the left eye was of glass, but that it could hardly be detected, as it rolled in unison with the other, was of the same color and looked for all the world like a natural eye. The physician was in some doubt himself, he says, even after the usual tests until he tapped the candidate on the pupil with the butt end of a penknife.

The commission announced, with considerable heat, that it would not comply with the company's request.

Optical Notes and Briefs.

The Tilton Optical Co., Portland, Me., has voted to increase the amount of its capital stock from $100,000 to 117,000.

A representative of Andrew J. Lloyd & Co., opticians, Boston, Mass., has just set out on his annual trip to the optical factories of Europe.

One of the most important results of the convention of the North Dakota State Optical Association, which was held Feb. 11 and 12, in Fargo, N. D., is the fixing of a permanent organization including the election of officers to look after the affairs of the association. It is intended, if advantageous arrangements can be made, to hold the meeting of the association next July at the Chautauqua Grounds on the shores of Devil's Lake.

James McDowell, associated with Prof. John A. Brashear, the Allegheny, Pa., lens maker, has just returned from a trip to Santiago, Cal., whither he had gone to make the final corrections of the optical parts of the Cassegrain telescope, made in Allegheny for the observatory to be erected at Santiago. The reflecting mirror of the telescope is 37 inches in diameter and is six inches thick. It weighs 600 pounds and is said to be the largest reflecting telescope of its kind ever successfully made.

Opticians are beginning to feel that the boisterous gale which swirls around the Flat Iron building, 23d St. and Fifth Ave., New York, is having no little effect on the sale of eye glasses. "That's the 10th man," recently remarked a prominent optician on 23d St., "who came in here to-day and declared that his glasses were blown off just as he was rounding the corner of the tall skyscraper. On real blustery days there is a continual clink of glasses heard falling on the pavement. It certainly does remind one of the old saying, 'It is an ill wind that blows no one good.'"

(Additional Optical News on page 54.)

Optical Department.

The Passing of the "Drops" in Refraction.

BY GUSTAVUS KAHN.

ARE trial-case and subjective methods scientific. This is a question often raised, and answered by some in the affirmative and by others in the negative. A thorough and mature investigation of this subject discloses the paramount importance of all tests, which are based on the patient's visual impressions, still, in a strict sense, they cannot be called scientific, because in all subjective tests personal equation equals in variety, kind and manner, the actual number of clients under test, and is therefore an uncertain quantity with which to reckon, leaving, as it does, mathematical precision entirely out of the question.

By turning to retinoscopy, which is entirely free from this objectionable feature, we again ask ourselves the question—is it possible to ascertain the refraction of the eye with scientific exactitude, sufficient for the proper selection of the lenses in all cases and conditions and under all circumstances? To be strictly just and honest to our cause, without self-conceit and vanity, we cannot conscientiously answer yes, under all circumstances, because, in order to measure the purely static refraction of the eye by means of retinoscopy, all dynamic factors should be entirely eliminated for the occasion, there being no such thing as accommodation. If it exists, it should be put at rest with a cycloplegic; then, and then only, will it be possible to measure the static refraction pure and simple.

As to the utility, however, of such findings as a basis for the selection of the lenses, there is another question to be solved as long as the dynamic refraction must, and does, enter into the consideration in the matter of prescribing lenses, still the knowledge of the real and absolute state of the static refraction is in all cases very valuable, and while it is true that it cannot absolutely be measured while the accommodation is in action and while it is paralyzed by cycloplegics, it is again difficult to decide on the proper lenses notwithstanding the exact measurements of the static refraction. This may not be true of the majority of cases, still they exist in sufficient numbers to exclude the rule in all cases and under all circumstances.

Ordinary retinoscopy without cycloplegia may be valuable and undoubtedly is in numerous instances, but owing to variableness of the accommodation exerted, the static refraction is only possible to measure in a certain large percentage of favorable cases in which all the conditions are present to facilitate good results. However, in order to be scientific and exact, such results must be obtainable in all cases and under all circumstances alike, and since we have seen that this ideal result cannot possibly be achieved, for that reason we must condemn ordinary retinoscopy and place it on the same level with subjective or trial-case methods in regard to being exact and mathematically true.

But since both have their good points as well as their faults, but not the same good points nor the same faults alike, a combination of them certainly must be much nearer being scientific than the trial-case and subjective methods or ordinary retinoscopy, without cyclopegia, alone.

The only salvation from doubts and haphazardness therefore must be in a method which enables us, if not to measure, at least to estimate scientifically, the static refraction while the full power of accommodation is in force; and while from a medical standpoint this is still pronounced impossible, nevertheless many opticians who have the best facilities for experimenting have tried for many years, with more or less partial results, to find a way to do so. All such efforts during the past have been on lines of a subjective nature only. Fay, De Zang and others have gained the best results with their instruments and methods, and especially Mr. Fay, whose wonderful optometer has accomplished so much in that direction.

With all such achievements, there are in those methods too many elements of doubt, and it is not so precise as it might be under all circumstances, because a cyclopegia or partial one may exist without dilation of the pupil and erroneously be taken for a pronounced case of hyperopia; not having any corroborative means, there is a total absence of any standard for a comparison. Fay's method comes nearest, however, in subjectively estimating the static refraction dynamically, but the fault of the system is its one-sidedness, since it is purely subjective without any means for verification.

But it is the great mistake of all previous inventors in that line to have exerted all their talents and energies to find some subjective means to accomplish the desired end, when retinoscopy offers such great inducements in so many different ways that it gives an opportunity to corroborate one method by another and thereby insure certainty.

A. J. Cross, New York, has, in this respect, achieved wonderful success with his various forms of skiascopy for the purpose of estimating the static refraction dynamically. By his method and instrument ordinary skiascopy may be used with great facility and besides the ordinary, he has evolved the dynamic and static methods; also, for corroborative purposes, the amplifying method and all those different methods of skiascopy may be used and utilized in less time than it takes to scope by the old vulgar method without his apparatus, and if all those different skiascopic tests and quickly applied it is not alone possible to tell the exact static refraction correctly, but we can also decide much better than we could by the old method of retinoscopy as to what lenses are required without having recourse to the test case. Still for that reason I would not want to discard the test-case, which is our only means of measuring the acuteness of vision, but we may certainly decide on the necessary correction just as well, if not better, without the trial lenses. We have, however, the advantage of ascertaining the binocular vision and the improvement which the lenses will afford.

Mr. Cross's method must be studied and well learned, for which much practice required, but when once mastered it is th most perfect system for refracting, an therefore, the best and most scientific. is the friend of the optician, invented an evolved by a practical optician, for the us of opticians. The beauty of it is, that n cyclopegia is required while a pupillar magnification takes the place of pupil dila tion. This gives the refraction of tha part of the eye which is used in visio while, with dilated pupils, there is alway an element of doubt and uncertainty i that direction.

All Mr. Cross's methods of static an dynamic skiascopy, with the exception o the amplifying method, may be performe without any instruments whatever, and w should learn them thoroughly. When th knowledge is acquired we will find his in strument very valuable in facilitating ou work. It is not possible for me to explai in this paper the technical principle o which his dynamic skiascopy is based, bu any ordinary refractionist, even if he doe not practice retinoscopy, but only has smattering knowledge of it in theory, ma grasp the subject in a thorough mann after hearing the lectures which Mr. Cro is now giving with such success in Ne York City.

Of course practice will be necessar but with its theoretical knowledge we grounded, the practical part will take ca of itself, especially in the way in which th lectures are illustrated, with full-size, larg blue-print drawings and models. Ever optician should try to become master of th most practical and exact method of mea uring the error of refraction and becom independent of patient's misstatements o what he imagines he sees, also independe of cyclopegia and uncertainties.

This method is, par-excellence, the mo desirable for the optician and admirabl suited to all who want to make the adapta tion of lenses to the human eye an exac and beautiful science and a permanent occu pation for life. The Cross method of sk ascopy is destined to supersede all othe modes of refracting, owing to its grea practical adaptability and high merit, no to speak of its usefulness to the non-medic optometrician.

My advice to all opticians, therefore, to take time by the forelock and strive t become expert in dynamic skiascopy in or der to be the first in the field to reap it advantages and benefits before it becom the common property of all members of th optical profession, which it undoubtedly wi before very long, and thereby complete th passing of the "drops" for refracting pu poses and make "optometry" a distinct pr fession in every respect separate from an independent of medicine.

An ancient pair of spectacles are di played in the store of M. W. Adams Co., Burlington, Vt., which are cruc enough to be the work of an optician o the middle ages. The workmanship is a by hand and the lenses appear to have bee puttied into the rough frames. They ar now the property of J. J. Collamer, o Shelburne, and were formerly owned an used by a prominent judge in Vermont.

Retail Jewelers' Advertising.

[The use of this department is open to every retail jeweler and optician. Forward for criticism your newspaper ads., booklets, catalogues, novelties, circulars, etc. Ask advice and offer suggestions. Replies in these columns are unbiased. Make letters as full and particular as you desire. Every letter and ad. sent will receive full attention, though the publication of the matter may sometimes be delayed several weeks. Address all letters and other matters to THE JEWELERS' CIRCULAR PUB. Co., 11 John St., cor. Broadway, New York.]

STEPHEN PRESTON, JR., Mount Vernon, N. Y.; Frank V. Kent & Co., Grand Forks, N. D., and F. P. Donahey, Vineland, N. J., recently submitted the advertisements illustrated herewith.

Mr. Preston always injects a certain amount of originality into his advertising, which he changes frequently and renders doubly effective by giving it a local significance. He used the accompanying ad. with good results on the occasion of a lecture recently given in his city by Miss Helen M. Stone. The unique border, which, in printers' parlance, is known as "The Klondike," considerably enhances the ad.'s attractiveness.

The advertisement of Frank V. Kent & Co. is marked by a certain amount of attractiveness produced by a bold contrast of black and white in the illustration, and a simple, but none the less effective, typographical arrangement. Although the cut accompanying this advertisement stands out prominently, intricate designs should never be used in this manner, the simpler designs being the ones best adapted to an effective black and white combination, when the design is to appear in white.

The ad. of F. P. Donahey is rather neat and ought to have a certain amount of attracting power in a small town. The catchphrase was timely and appropriate. The text is well written and calculated to remind those in need of glasses that "delay is detrimental." Optical advertisers find it advantageous, in this style of advertising, to impart bits of information about the eye to the reader, as this often does more to inspire the latter with confidence in the optician than mere talk.

THE MIGHTY DOLLAR

was a powerful influence in effecting the release of

MISS ELLEN M. STONE

from the brigands. The purchasing power of the mighty dollar in our store is equally wonderful. Come and investigate before purchashing elsewhere.

A Strong Point.

IN advertising there is nothing more essential than logic. Persistence is a valuable portion, but the logic of the advertisement does more to sell the goods than any other feature. A low price will not accomplish much unless the reason for that low price is logical and appeals to the judgment of the people.

There are many times when the reason is omitted entirely. It may be from oversight or because the advertiser fails to appreciate the value of giving a reason. If the article is worth selling it will appeal to a larger number of people by a plain statement of why it is worth selling, but the reason won't sell the article unless it is presented logically. There may be many points about an article which make it attractive, but unless these are presented in a clear, attractive form there won't be any use of expecting the returns to be very great.—*Advertising World.*

Advertising Fables.

ONCE there was a rural merchant who never used more than 30 cents worth of advertising space at a time. During the several years of his Hanging-On career he spent $9.30 without getting 10 cents worth of returns. He never allowed anyone to edit his copy because he believed that no Knight of the Blue Pencil or Business Architect knew anything outside of drawing $11.00 per for Alleged Omniscience.

After losing his $9.30, he finally concluded, by an Intricate System of Reasoning, that the medium was a Greenback Crematory, and, moreover, that advertising in general was for Ornamental Purposes only. Consequently he withdrew his last 30-cent ad.

One day an Uncle Tom's Cabin troupe Blew Into his town, and, with it, a press agent who needed money. It came to pass that Ye Harbinger of Ye Show dug out this wise merchant and bet him $10 he could fill his store with customers inside of 24 hours. The astute merchant saw a chance to get back his nine thirty with 70 cents to the good and took the bet forthwith.

The press agent wrote the following Rank Rot and straightway delivered it to the editor of the country paper:

JEWELER GONE CRAZY?

Editor—Is Jeweler Blank, of 62 Saw Mill River Road, suffering from meningitis or paresis? He is selling off his entire stock at prices calculated to drive us out of business, and as for watch repairing—well, we will certainly have to eliminate that department from our business entirely—so ridiculously low are his charges. Please investigate this matter for yourself and oblige

A DISGRUNTLED JEWELER.

At 5 P. M. the next day the press agent was seen standing on the veranda of the Swellantieus Hotel, smoking a 25-cent cigar. He had collected his ten.

The 30-cent advertiser now believes the medium is a hit at Passing around Publicity and every week uses a ¼ page ad., prepared by the editor.

Moral.—Bad advertising is better than no advertising, or advertising which cannot be seen with a microscope.

RETAIL MERCHANDI

AWARDING OF PRIZES."

The names of the successful contestants in the prize essay competition, No. 8, "How to Install a Stationery Department in a Jewelry Store," will be found on the editorial page of this issue.

PRIZE ESSAY COMPETITION, NO. 10.

SUBJECT:

"How to Develop a Watch and Watch-Repairing Department."

THE repairing of watches is, and should be, the "mainspring" of the retail jeweler's business. How many of our most successful jewelers entered the commercial world as repairers, and by careful attention to work, and absolute integrity, have won their way to more dignified positions. Confidence in a jeweler's ability, judgment and integrity can be more surely gained by the careful repairing and adjustment of customers' watches than in any way I can think of.

In order to gain the confidence of the community in our ability as watch repairers, there are several rules which we must follow.

First, we must do the best work. Solicit high grade watch repairing. Let the cheap work go. The man who does cheap work will acquire the reputation of being a third-rate workman, and will find it to be a difficult matter to work any higher in the public's estimation. People with first-class time pieces do not carry them to the repair shop where the signs, "Watches cleaned for 50c," "Mainsprings 50c," are displayed, but they take them to the place where first-class work is done at right prices. The laborer is worthy of his hire, and is entitled to and should receive pay for skilled work. If we advertise for the best work, we will get enough of the cheap work without looking for it.

Second.—Do not take in watches to "start up." A good many people want a cheap job done, and to accommodate them and get their 50 cents, the jeweler will start the watch. This is not satisfactory, as the watch will soon stop again, and will either be returned to the store to have it started again (this time for nothing), or we have lost the trade and influence of the customer.

Third—Do not punch mainsprings and use them again. Use the best springs obtainable, and cheerfully replace all which are broken under the guarantee. Do not make the mistake of charging the customer half-price, and saying that you will divide the expense with him. He may say "all right," and act as though he considered it so, but he will remember it against you.

Fourth—Do not make extra charges above the price quoted unless you are authorized by the customer to make any and all necessary repairs. A watch left for cleaning or mainspring, may have a broken jewel, a bent pivot and so on, and if we go ahead and repair it, the customer will be astonished to learn the amount of our charge, and in many cases will doubt our integrity when we mention the work we have done. The better way is to notify the customer of the necessary repairs and what the expense will be before proceeding with the work, and, although we will often be told that they wanted the watch "fixed," whatever was needed, still in the long run, we will find that better satisfaction will result when this rule is followed than when repairs are made which add dollars to the anticipated cost without orders.

Fifth—Never use any material except the very best; always order needed material not on hand. To get perfect action, perfect material is needed. Be careful to use only the best watch oil, as a great deal of trouble is caused by poor oil.

Sixth—The watch cases should all be carefully cleaned and polished before being delivered to the customer, as "Man looketh on the outward appearance" and will often tell you that he left his watch to be cleaned and that it was never touched. A few minutes each day will suffice to keep your watch rack in splendid shape and will pay handsome returns for the time expended.

Seventh—Be prompt; have work ready at the time promised. Be careful, however, about your promises. Never promise work sooner than you can surely have it ready. Busy people do not like to do the same errand two or three times. They want to know when to come, and then to get what they come for. A customer will bring in a watch to be repaired, and will not want to leave it, unless he can have it the same day, or the next day. The jeweler has other work to do, and knows that something will have to be slighted or postponed for a day in order to get out this job. And so it happens, that some one calls for a job, and is met with the statement that "we were unable to get that out for you to-day, but will surely have it ready to-morrow." How much better to tell the man who was in a hurry that he had better leave his watch, two or three days, so as to ensure a first-class job. It is advisable to have a few watches to loan to this class of customers, while repairing their watches, as we can then induce them to leave them longer, thus giving us more time to do the work.

Eighth—Advertise judiciously. Advertisements should be well written, carefully worded, correctly punctuated and capitalized, and should be "counter talks" with customers, both present and prospective. Your advertisements should give the reader to understand that there is *one* thing which you do thoroughly understand, and that is a watch; and that if his watch can be made

Prize Essay Competition—No. 11.

Three prizes, $20, $10 and $5, will be given to writers of essays on the subject:

"How a Jeweler Can Profitably Conduct a Camera Department."

The prizes will be awarded to the writers of the best and most reasonable essays. The ideas expressed, rather than the language used, will be considered in making the awards. The essays will be lettered when received and the judges will not know the identity of the writers until after the decisions have been made.

Essays must be in the office of THE CIRCULAR-WEEKLY by April 15. Write plainly and legibly and on one side of the paper only.

The right is reserved to publish any or all of the essays received. The competition is open to any person connected with the trade.

Gand HINTS to JEWELERS

give correct time, you are the one to see; id that if it will not pay to repair it, you ill tell him so frankly; that you are in siness to gain the good will and patronage the community, and that by fair and uare dealing, you will do so.

In your ads. occasionally quote a few Watch Pointers," such as: "Wind your atch regularly; always in the morning." Keep your pockets clean." "Never open our watch to the movement; the works are ill there." If your watch stops, or fails perform satisfactorily, bring it to us."

C. T. E.

(To be continued.)

surance Companies' Discriminations Against the Use of Benzine.

THE insurance companies have recently inserted a new clause in the contracts hich they are drawing up, discriminating gainst the use of benzine. As all watchakers find it absolutely essential to the roper cleaning of watches to use benzine, it ill not seem strange that they have more or ss feeling in the matter.

Says one of these gentlemen, a man whose eputation is of the best, and who, in the ourse of a business career of more than 5 years, never had had a fire, and who onsequently may be justified in raising a rotest, if he is affected by the measure: "I hall not be harmed by the clause in the ast. It will simply necessitate my buying ore frequently, which is not a great hardhip. Heretofore I had been carrying a alf gallon, and this lasted me nearly a year, indeed not longer. Now that they will ermit only a quart on the premises, it eans that I shall have to call for it every alf year.

"Besides this, the companies require that it e carried in a special can, a very ingenious rticle, which will not, when the top is properly screwed down, permit the fumes to escape. The penalty is an increase of 10 cents er hundred dollars in the rate of insurance, am told, and this is for an extra limited mount.

"My objection is two-fold. The first is hat the insurance companies are continually adding new clauses, and changing the orms of their policies, until it takes a Philadelphia lawyer to know when his policies ead right. Besides, I object to the paternalism of the relations between the companies and those holding their policies. One ight retort and say that I am under no ompulsion to carry insurance. But, of ourse, that would never do.

"There is no remedy. We have simply to omply with their conditions. Don't misnderstand me. I do not say that a proision of this kind may not be right. But he wrong of it, to my mind, is in making it a compulsory clause in every policy. Why can they not make their conditions with the individual policyholder? In some cases a quart of benzine may not be used up in two years; in others it may not last two weeks. But, aside from this, they could discriminate between the careful and the careless—those with a reputation above reproach and those who have no such reputation."

From inquiry at a number of places it is learned that nothing will cut grease and oil or any other form of dirt on watches as benzine will. Besides, it imparts a higher brilliancy and polish. There are a number of so-called polishes sold, but they are inferior to benzine, except in the case of naphtha. Naphtha, however, is even more inflammable than benzine.

The patent can has a stopper on top, which is to be unscrewed until it is loose while the benzine is being poured out through a nozzle and screwed tight when the can is not being used. The reason for this is that the fumes of both benzine and naphtha are inflammable.

Asked as to the sudden zeal of the insurance companies in the matter, another jewelry dealer, who seems to be well informed, says that it grew out of a number of explosions that had taken place among inflammable substances carried in stock by the wholesale drug houses.

THE ONLOOKER.

A Huge Advertising Sign.

THE accompanying illustration is a reproduction from a photograph recently forwarded to THE CIRCULAR-WEEKLY by Chas. N. Hancher, Wheeling, W. Va., and shows a huge sign which he has erected on the mountain side.

This sign is said to be the largest of its kind in the United States. It measures 480 feet in length, each letter being 18 feet high, five inches thick and built separately on locust posts set five feet in the ground.

These letters are made so as to withstand the severest storm. It took the labor of nine men 30 days to construct the sign. The letters, each of which weighs several hundred pounds, were placed in position with the assistance of horse and tackle. Each letter is elevated two feet from the ground.

GIGANTIC SIGN ERECTED ON THE MOUNTAIN SIDE.

The photograph was taken at a distance of one and one-half miles, hence some idea of the enormous size of the sign can be obtained by comparing it with the size of the houses which were much closer to the camera than the sign.

There is a duplicate of this sign on the opposite hillside, so that it is impossible to enter the city either by boat or train without seeing one of them. They have created considerable talk and given no little amount of advertising to the jeweler.

THE BEST IS ALWAYS THE CHEAPEST; THIS applies to Watch Glasses as well as to anything.

The best Watch Glasses are those that are carefully made, from the proper stock, properly labeled and correctly gauged.

The CHEAPEST Watch Glasses are those which require the least time to fit, and in which there is the least percentage of breakage.

The **V. T. F.** Glasses combine all of these cardinal qualities and BEAR THIS LABEL: Insist upon getting the **V. T. F.** and take no other.

REVERSE.

THE HOROLOGICAL REVIEW

The Manipulation of Steel in Watch-Work.

(By JOHN J. BOWMAN, of the Ezra F. Bowman Technical School, Lancaster, Pa.)

(*Continued from issue of Feb. 25.*)

TAPERS of any desired angle may be produced with accuracy (if the attachment is well made) by setting the parallel slide to the required number of degrees of the circle. It will be seen that among the advantages of the slide-rest over the hand graver are: In heavy turning the strain of holding the tool into the metal, which would otherwise have to be borne by the hand, is supported by the slide-rest and the power furnished by the hand is greatly increased by the screw and crank; the effort required is correspondingly reduced. On account of the guiding of the slide extensive surfaces may

FIG. 6.

be turned with a flatness and accuracy impossible with hand tools. With the graver there is no means of measuring angular work, while the slide rest has the advantage of its graduated circle, with which any taper desired may be set off and produced on the work.

The manner of operating this attachment will be understood by referring to Fig. 6, in which the operation is that of turning a taper on a piece of steel held in a split chuck.

The most useful shapes in slide-rest tools are shown at Fig. 7, in which *a* is a combined slide and end cutting tool, *b* a "diamond point" tool, *c* an inside-turning tool and *d* a cutting-off tool. The first shape mentioned is adapted to most work, and it is well to have two of these with the faces ground at opposite angles. The diamond-point tool is used mostly for turning where there is no facing to be done. The inside turning and cutting off tools are for the purpose indicated by their respective names.

On every slide-rest the tool-post is ar-

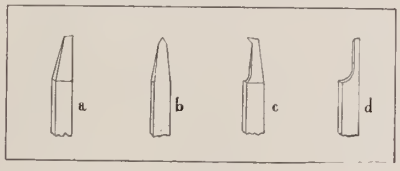

FIG. 7.

ranged so the tool can be adjusted at any angle and also vertically for some distance above and below the center of the work. As in the case of the graver, the tool should be set so as to cause the waste metal to come off in spiral ribbons.

Except when cutting a square shoulder, set the tool so the cut taken does not "undercut," as in that case the tool is continually drawn into and cramped in the cut, resulting in a broken tool or bending the work when a little extra force is applied to the tool. (Fig. 8, a.) On the other hand, if the tool is set so as to cut an "outside taper" as it progresses (b), when too much force is put on the tool the work tends to simply push the tool out and away, since it is not confined by an undercut.

Put the lathe-belt on the largest pulley of the lathe and the smallest pulley of the countershaft, to give the greatest power. Run the work at moderate speed. The cutting being done faster than with the graver, a constant supply of oil must be fed to the point of the tool by dropping it on the top of the revolving steel. If there is not a

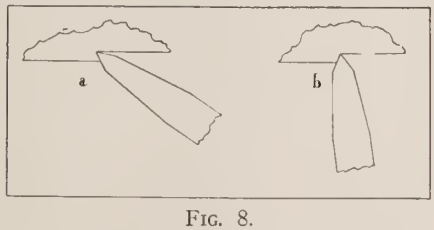

FIG. 8.

great deal of metal to be removed, rubbing beeswax on the work (which becomes hot enough to melt the wax) will answer with the advantage that it does not scatter grease over the bench and tools, as does the oil.

The tightness of the slides can be adjusted by the screws on one side. To produce smooth work let the slides work freely. Making them too tight causes a vibration of the slide-rest due to the force needed to turn the crank, and this makes unsightly ridges in the work, which would have to be removed by filing. When the slide-rest is used properly no further finish is needed on the work unless it is to be polished. After the work is roughed out nearly to size finish it by setting the face of the tool at a long taper to the work and taking light cuts. Oil should not be used in taking the final cuts. Well executed slide-rest turning will impart a fine gray surface which has the appearance of having been "frosted" or ground. In speaking of setting the tool at different angles to the work, it is meant that this is to be done by adjustment of the tool-post; not, of course, by the graduated circle on the parallel base.

To separate the finished work from the

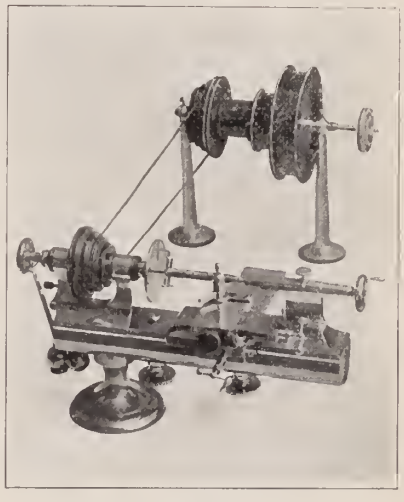

FIG. 9.

remaining metal, turn a small groove at the point of separation, and while revolving the work slowly saw it through with a jeweler's saw. This is quicker and better than by using a cutting-off tool in the slide-rest. The same care must be taken to keep slide-rest tools flat and sharp, as with gravers. It is surely impossible to do good work with ill-kept tools, and the time spent in maintaining them in good condition is made up many times over in working with them.

If the chuck used to hold the blank wire does not fit it perfectly it will be impossible to produce accurate work. A split wire-chuck was never intended to be used as a universal chuck, contrary to what many workmen seem to believe. It should be used always for the size of wire it is stamped for and no other. If the piece of wire to be

turned is longer than about an inch, steady the free end by turning a male center on it and supporting it in a hollow center held in the tailstock, or *vice versa*. If the work is of greater diameter than your largest chuck, file both ends flat and find the centers as closely as possible with a pair of dividers; drive the centers with a pointed punch; then drill a short hole in each. The blank must be enough larger than the largest part of the piece to be turned to allow for any inaccuracy in centering, so it may be turned true.

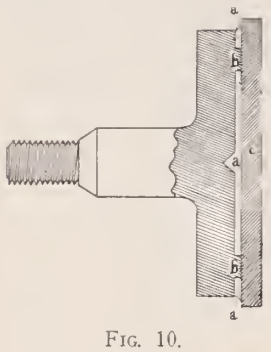

FIG. 10.

Put the face plate with its taper center in the lathe spindle, swing the blank between that and the tailstock center and clamp the dog on the work as close to the face plate as possible. The projecting arm of the dog should stand straight into the slot of the face plate. This method of holding work is illustrated by Fig. 9. Where the entire blank is to be used in the piece being made, the back end is finished first and then the dog is taken off and the work reversed; to protect the finished surface wrap it with thin sheet brass or other soft metal before screwing on the dog. A piece rotated by a dog may be drilled by supporting its back end in a "back rest."

To stand the strain of turning a large flat piece of steel the safest plan is to soft-solder it to the cement brass. Use a "brass" not much smaller in diameter than the piece of work is to be when finished. Turn out the face of the brass in the center and from the edge inward to a depth of about ½ millimeter, leaving a raised ring, say, two or three millimeters broad, as shown in section at Fig. 10. See that this ring is faced off perfectly true. The advantage in this is that in cementing on a piece of work the melted solder or wax is pressed into the recesses (a, a, a), while the metal ridge (b, b) comes in contact directly with the plate (c) to be turned, and, being true, sets the plate perfectly true "in the flat." If the face of the cement brass were left plain, even though true, a bit of hard matter in the cement or solder would throw the plate out of true, whereas with this form of face it will be worked into one of the recesses, where it can do no harm.

Again, the recesses hold a greater body of cement than a flat face could, giving better holding power. To solder work to the brass, hold the brass face up over an alcohol lamp; apply soldering fluid and several small pieces of soft solder. When the solder flows spread it evenly over the face of the brass. Having had the screw chuck already in the lathe, heat the steel to be turned quickly, screw the brass into the chuck by running the lathe and apply the steel to the coated brass. Have the back of the steel blank filed or emeried flat and clean and apply soldering fluid to its surface before attaching it. Have a center punched in front or a hole drilled through and true the blank with a rather blunt pegwood or metal point held on the T rest; if necessary continue the heat of the lamp under brass and blank. Keep the work revolving and the truing point in the center until the solder sets.

(To be continued.)

Calculation for a Compensated Pendulum of Nickel-Steel.

(Translated for THE JEWELERS' CIRCULAR-WEEKLY from the French of DR. CH. ED. GUILLAUME in the *Journal Suisse d'Horlogerie.*)

THE singular properties of the nickel-steels has furnished Professor Thury material for a very interesting description of compensated pendulums. Having myself made a complete calculation for a pendulum, whose rod was constructed of one of the new alloys, an account of it will probably be of value. The smallest of the coefficients of dilatation of some of these alloys leads to a new construction of compensated pendulums, of which the calculation may be very much simplified by a series of approximations. By a preliminary measure of the dilatations of all the pieces composing the pendulum, we may arrive at a solution near perfection, so that the pendulum when finished will leave a very slight margin for correction.

In my plan, the dilatation of the bob itself serves for compensation without the interposition of a tube. If it is observed that an error of one millimeter in the diameter of the bob, for instance, of brass, produces an error of compensation less than one-thousandth of a second per degree of temperature in 24 hours, it will be recognized that it is useless to have recourse to an adjusting screw, which requires greater complication in the construction.

It is a property of the new compensation, which seems to have escaped the notice of some who have been interested in the subject. In the table of dilatations, published by Prof. Thury, it will be seen that the second term of the formulas of dilatation follows a regular rate from the maximum. At first it increases, passes the maximum, then diminishes, becoming negative, and again ascends. The irregularities in the rate of this coefficient cannot be attributed to the small errors of observation. A formula of dilatation of two terms is deduced from an ensemble of observations, all of which contain a certain error. The formula leads with the greatest exactness, according to a given total of observations, to the average dilatation of the bar studied between two determined temperatures; but the part corresponding to the two terms of the formula is very difficult to establish. There is produced between the two coefficients a sort of compensation, according to which, one of the two terms may have too strong and the other too slight an influence in the calculation.

Notwithstanding this, my experiments show, with certainty, that the second coefficient passes from the positive to the negative, and that it must be annulled for a certain percentage between 36 and 37 per cent. of nickel. For percentages a little lower, it is positive and very small; whence an important advantage results for the compensation, as may be seen at once comparing the new compensation with th which results from the employment of m cury. In considering a mercury pendulu in which the dilatation of the latter co pensates that of the steel rod supporting t vessel, the dilatation of the steel is e pressed by a formula of two terms, in whi the coefficient of the term containing t square of the temperature reaches in gene a high figure.

At the ordinary temperature the di tation of the mercury is expressed, on t contrary, by a formula in which the seco term is negligible. In the compensation one dilatation by the other, it will be nec sary to fix on two points for which the di tation will annul their effects. At int mediate temperatures the pendulum will too short. At the outside temperatures will be too long. In other words, the co pensation can be established only for t two temperatures at which the line of di tation of the mercury will cut the cur of dilatation of the steel.

With the employment of the new met we can adopt arbitrarily the thermic qu ities of the compensating bob, formed, example, of brass or nickel-steel of hi dilatation. The ratio of the two coefficie of the formula of dilatation being settled the compensating organ, we can sele keeping the metal for the rod near the mi mum of dilatation, in such a way that t ratio of the two coefficients shall be t same as for the bob. Thus we will real a complete compensation, in which the t curves of dilatation will be applied, one the other, throughout their extent.

The other advantages of the new co pensation, as compared with that furnish by mercury, will be the following: Suppr sion of the movable pieces forming the m cury pendulum, a pendulum with mom of inertia variable on account of the edd of the liquid; omission of the cement, wh is a permanent cause of variation; avo ance of the changes proceeding from bu bles of air, from the oxidation of the m cury, and variations in the capillary junct resulting from it; suppression of the m cury vapor, which is a cause of variation the pendulum, and which constitutes a p manent danger for the gilded pieces of t mechanism; and, finally, the possibility giving to the compensating piece a lent ular form, which is preferable to the c indrical form.

CALCULATION.

The principles of the construction bei thus settled, I will give the complete c culation of a compensated pendulum.

The apparatus which I made use of calculating the elements was prepared, the suggestion of M. Caspari, by M. M aume, clockmaker, of Paris, for one of t clocks of the hydrographic depot of t Marine. The rod, selected from th which I prepared at the outset of the vestigations, is not of the least dilata alloy; its dilatation is expressed in the sc of the hydrogen thermometer by the form $a_1 = (1.057 + 0.00320\ T)\ 10^{-6}$.

The compensation was made, by me of a bob of brass, for a bar, of which had found the dilatation expressed by formula:

$$a_2 = (18.043 + 0.00474\ T)\ 10^{-6}.$$

The calculation was first made for a cylindrical bob copied from the mercury vessel of the pendulum which it was proposed to replace. I will give the calculation for the cylinder, which can afterwards be easily adapted to the lenticular form.

First Approximation.—We will consider the pendulum as formed of a cylindrical rod, bearing at its lower part a mass also cylindrical of the value M. Let R be the radius of the cylinder, l its length; L its distance from its center of gravity to the axis of suspension. The moment of inertia of the cylinder, with reference to this axis, is expressed by

$$I = M\left(\frac{1}{4}R^2 + \frac{1}{12}l^2 + L^2\right).....(1)$$

On making the calculation we find in round numbers R = 4, l = 14, L = 100, the unit being the centimeter.

The sum of the first two terms of the value of I will be less than 0.002 of the last. There will be occasion to take account of the entire length of the pendulum, which must be shortened about one millimeter when the calculation is terminated. But as the variations of temperature themselves produce only a variation in the length of the rod, less than .00001, with reference to its average length, there is no occasion to take account of the corrective terms in the calculation of the compensation. These terms will enter into the ultimate correction, determined by test when the pendulum is completed.

(To be continued.)

London's Public Clocks.

THE need for synchronized public clocks in London, says an exchange, is testified to by many business men who have studied the subject.

Two experts made observations for a whole week on the times kept by the public clocks between the Mansion House and Victoria Station. There are 35 clocks on that route, and of these Big Ben, the Law Court's clock, and one synchronized clock were the only ones that showed the correct time on all the seven days. The others varied at different times, some being slow and others fast. One was as much as six minutes wrong.

At 10 o'clock every morning the railway companies send a time signal of the Greenwich time to all the stations on the system. Then it is the duty of the officials to see that the clocks are right. That is a simple duty in a small country station, but at a place like Waterloo, where there are many platforms and one or two cumbersome terret clocks, which can only be managed by experts, it is most difficult to keep up a general time agreement.

The correct time is thoroughly appreciated by the general post office. But post office clocks are synchronized. St. Martin's-le-Grand still relies upon frequent time signals over the wires. The setting right of the clocks is a matter of discipline. It is not automatic, as it ought to be. As a matter of fact, there are hundreds of clerks under one roof there coding telegrams, the exact time of sending which is of great importance, by clocks that do not agree.

An Ingenious Novelty.

A WATCH manufacturer of La Chaux de Fonds, Switzerland, has just brought out a clever novelty, which he calls "Pendulette suisse," says a Swiss exchange.

We have not exactly to do with a little clock, as might be supposed, but on the lower part of the watch dial is painted the picture of a tiny clock, the seconds dial with the seconds' hand being apparently the dial of the clock. But the most interesting part of

AN INGENIOUS NOVELTY.

the invention consists in the fact that through an oval opening, such as every regular clock has, the pendulum bob is seen moving to and fro.

The mechanism of this novelty is most simple. The pendulum bob is ingeniously connected with the fork of the watch, and, when moving, the fork imparts to the pendulum its natural motion from right to left.

Electric Clock-Work As An Aid To the Memory.

(Translated for THE JEWELERS' CIRCULAR-WEEKLY from the *Revue Chronometrique.*)

HOW many persons have had occasion to regret the consequences of a faulty memory, either for a business affair or for some act of private life? As an aid to the memory, some will make a knot in a handkerchief, or a mark on an object which constantly strikes the sight; or else, charge a person near to use his own memory in refreshing theirs.

All these methods are far from being efficient, and they are often supplemented by the use of note-books, memoranda, etc., on which the needed points are written. But these systems are practically used only by persons extremely careful, or who, by habit or necessity, have frequent occasion to consult such methods. Otherwise, the necessary entries are neglected, or else consulted too late, so that the precaution becomes useless. A good, automatic reminder may, therefore, be a valuable auxiliary for a careful person, and for some that are not careful. Inventors have for a long time racked their imaginations, and those interested have been embarrased in the selection.

We give the description of an arrangement, which we have seen in operation under various circumstances. It appears to answer the purpose well, and its installation is so inexpensive as to be within the reach of all, and suited to the taste of anyone.

The motive force is borrowed from a clock movement, called "The Black Forest." On the arbor of the hour wheel is attached a wheel with points, communicating by an endless chain with another wheel of twice the diameter, and bearing twice as many points. The latter wheel turns freely on a pivot screwed to the center of a small board suspended on the wall and placed below the clock.

A dial of 24 hours fixed on the pointed wheel makes, like the latter, one revolution each day. Near the periphery of the wheel a circle is drawn, which is perforated with small holes, regularly spaced, of which the number varies with the degree of precision of which the mechanism is capable. The small board bears, also, a free click, resting on a pin, the head of which penetrates the interior of the perforated circle. At a small distance from the head of the click ends a steel plate, also attached to the board.

Electricity having to intervene in this apparatus, in order to produce the special warnings, the click is connected with one of the poles of a battery by a wire, which passes to an electric bell, while the spring is directly connected with the other pole.

For obtaining a signal at any hour of the day, a pin is placed in advance in the hole of the dial corresponding to this hour; and when the pin raises the click, as a pin raises the warning-piece of a clock, this closes the electric circuit as soon as it touches the spring, and the bell sounds as long as the click is raised by the pin.

Several pins may be employed for different indications, serving as a reminder to those interested, of the various occupations of the day which they may be afraid of forgetting.

The electric current necessary for the working of the warning bell is borrowed from the battery which actuates the ordinary bell of the apartment, of which the care devolves on the "concierge" (janitor). The possessor of the *memento* has, therefore, only to be assured of the good state of the points of contact of the click, and of the spring.

Watch Trade in Turkey Controlled by Swiss and Germans.

A FRENCH consular report says that Switzerland and Germany control the watch trade in Turkey. Everyone in Adrianople carries a watch, which must be either gold or silver. There is no demand for nickel, aluminum or gun metal watches. When soldiers get their discharge from the army and are going back to their native village, they make it a practice to take several watches back with them, to sell again or give away as presents. A French manufacturer tried recently to introduce his goods into the Turkish market and sent out samples, but his watches were found too expensive. The Turks use heavy silver chains, which are sold by weight.

Workshop Notes and Queries.

[*Answers are solicited from our readers to the questions published weekly on this page.*]

Question No. 391.—**Der Uhrmacher am Werktisch.**—*Where can I get the book, "The Watchmaker at the Bench" in English?* *J. L.*

Answer:—In a description of this book given in the issue of Aug. 20 of The Circular-Weekly, it was stated that the book was written in German, and that it could be obtained from Mr. Willh. Schultz, chief editor of the *Deutsche Uhrmacher Zeitung*, Berlin. The price of the book is $1.40. Mailing will cost you 25 cents extra.

Question No. 392.—**Ivory Imitation Figures.**—*I have seen common plaster-of-paris figures made to imitate ivory. How is that done?* *S. L.*

Answer:—We have given some receipt of that kind in the answer to question 363, issue of The Circular-Weekly of Jan. 28, but we will complete that answer with this ivory process. Cover the plaster figure in an irregular manner with a solution of beeswax and turpentine, and upon this layer spread burnt umber; then rub away with a piece of silk everything which has not been absorbed by the plaster. It requires a little experience to get good results, but some people more intelligent than others will have this art mastered very soon, and will be able to create wonderful imitations.

Question No. 393.—**Mainspring.**—*I sold a standard American-make eight-day clock, and after three weeks it was returned with mainspring broken in 64 pieces. What was the cause?* *A. R.*

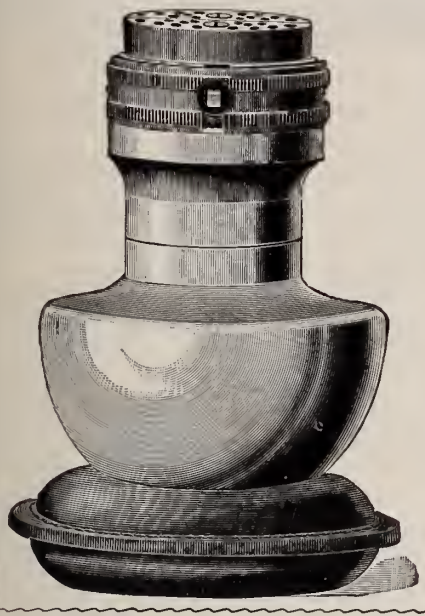
Answer:—The exact cause can hardly be determined. A spring may break, not only in two, but in several pieces, even when it never has been used. The watchmaker who keeps in stock an assortment of mainsprings will sometimes find broken ones under his new mainsprings, especially among those rolled up in a wire. If the diameter of the collet of the mainspring arbor and its hook are correct, the spring is not rusted, has the correct kind and quantity of oil, or has not been exposed to a sudden change of temperature, the exact reason for breaking cannot be given. The laws of fatigue, stress and strength of material are not always axioms. Material calculated to support a certain stress or load may break by repeated applications of the stress or load more than one-third less than that calculated for it. In springs, the load or stress of material is calculated according to the power it can exercise to the elastic limit. A slight flaw, not easily detected, may cause rupture under comparatively few applications of a range of stress, but little greater, or very less, than the elastic limit. That means that such a mainspring can break during the time it is lying in stock in its wire ring, where it remains in a partly wound-up state. For this reason, mainsprings kept loose in stock are not liable to break. Therefore, it may be stated that the mainspring kept in a wire ring has already been partially experimented with, and if it be of the same quality as the loose mainspring, preference should be given to the former, when a broken mainspring is to be replaced. Of two mainsprings of the same dimensions, the stronger one, *i. e.*, the most hardened, stretches the least before breaking. The stronger will break under a suddenly applied force, or impulse, more easily than the weaker one. At the moment this suddenly applied force or impulse causes a break in the mainspring, the pressure of this broken coil, in addition to the suddenly applied force or impulse, increases the general stress, and may cause other coils to break at the same time.

Question No. 394.—**Soft Soldering.**—*What is a good receipt to remove soft solder from jewelry which was previously repaired with such solder?* *J. M.*

Answer:—A great many articles of jewelry in the course of repair are soldered with soft solder—a mixture of lead and tin—instead of being repaired with hard solder. When later on the article is sent to be properly repaired, it has to be put into the hands of an expert craftsman to undo the damage done by soft-soldering. If it has been heated above a certain degree in a subsequent repair, in attempting to hard solder, it will be a most difficult matter to either remove the soft solder, or properly repair the work without being required to put in a new part, because the mixture of lead and tin will have penetrated into the gold, making it as brittle as glass, which can easily be perceived by scratching the solder with a sharp-pointed instrument. The solder will be as hard as glass and can never again be expelled with safety to the article under repair. If, however, the solder is still soft, scrape off as much of it as you possibly can, with a three-square scraper. If it exists in a large quantity it will be better to slightly warm the article at the place containing the solder until it becomes liquid, when the greater portion may be shaken off, and, if the soldering flux be applied to the spot in small quantities, the fusing of the solder will be much facilitated and the surplus easily gotten rid of. The next process will be to place the article in the following mixture at a temperature of about 150° Fahrenheit: Crom's powder, 3 dwts.; muriatic acid, 1 oz.; water, 5 oz. Leave the article immersed for some time, occasionally watching its action, and as soon as the solder shows unmistakable signs of having become removed, withdraw the article and rinse well in clean, cold water. The dissolving fluid should only be just strong enough to dissolve the lead and tin, but not to attack the gold. If, after taking out the work for inspection, it still shows black spots, it is a sign that more soft solder remains, and the article should again be immersed until the soft solder is removed. All work after this treatment will require to be well rinsed in clean water, annealed if possible, and boiled out in a weak pickle, before commencing to do the necessary work of repair. This is a simple and effective receipt, which is given in addition to another excellent one given in answer to question No. 24, in the issue of The Circular-Weekly of March 5, 1902.

Question No. 395.—**Bronzing of Copper.**—*Please tell me how I can bronze copper?* *P. R.*

Answer:—The following, recently published in *Science Pratique*, is a process analogous to one practiced at the Mint of Paris for bronzing medals. Spread on the copper object a solution composed of acetate or chlorhydrate of ammonia, 30 parts; sea salt, 10 parts; cream of tartar, 10 parts; acetate of copper, 10 parts; diluted acetic acid, 100 parts. Let dry at an ordinary temperature during 24 to 48 hours. The surface of the copper will become covered with a series of varying tints. Brush with a waxed brush. The green portions soaked with chlorhydrate of ammonia will assume a blue coloring; those treated with carbonate will be thick and darkened.

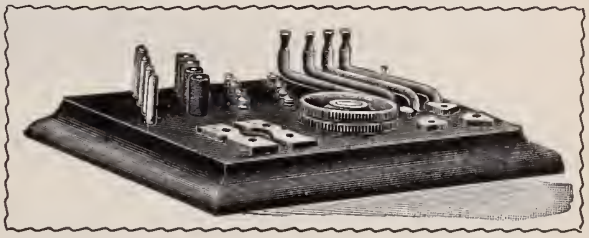


Question No. 396.—**Urate and Chloride of Gold.**—*Can you tell me what is urate of gold and what is chloride of gold?*

Answer:—*Urate of gold* is something we have been unable to find in any of the great drug or chemical concerns of the city. Their proprietors told us that they had heard of the chemical but were unable to say who manufactures or sells it, what it looks like, and what its real qualities are. *Chloride of gold*, however, is well known to every gold plater. This salt occurs in masses in the shape of needlelike crystals, which are yellow, red or brownish red, according as it has been more or less perfectly deprived of acid. That generally sold by manufacturers of chemical products is a light yellow, and besides the fact that it contains less gold than it ought to, it still retains an excess of acid, which is injurious to the baths. Chloride of gold is decomposed by light into metallic gold chlorine; hence the necessity of keeping it in opaque bottles with ground glass stoppers. Cork, like other organic substances, decomposes this salt. Chloride of gold absorbs atmospheric moisture and becomes dissolved into a liquid of fine yellow color. It produces violet stains on the skin and dissolves in water in nearly all proportions. It is distinguished by giving a precipitate of purple of Cassius with protochloride of tin, and by depositing spongy gold when strongly heated. A diluted solution of chloride of gold is decolorized by sulphurous acid, and, after a certain time, or more rapidly by heat, the metal is precipitated as a powder, which is green by transmitted and red by reflected light. If a solution of this salt is added drop by drop to a diluted solution of sulphite or hyposulphite of sodium, a colorless double salt is produced. On the contrary, should we pour the solution of the sulphite or hyposulphite into that of gold, this metal is immediately and completely precipitated. The soluble cyanides or prussiates precipitate the chloride of gold at first as cyanide from concentrated solutions, but an excess of the reagent redissolves the precipitate, and forms with it colorless double salts which form the usual electro-gilding baths.

THE SPECIAL

DUPLEX BASE



Anti-Friction Engraving Block.

Designed by an Engraver for Engravers.

Nickel-plated.
With Swivel Jaws.

Designed and Manufactured by
Adolph Muehlmatt,
Cincinnati.

Perfection of construction, shape and workmanship. The Special is not a cheap engraving block, but a first-class article of improved design. Complete, with attachments and leather pad, $6.00.

SUSSFELD, LORSCH & CO.,

WHOLESALE AGENTS.

Ask your jobber for **"The Special."** 37 Maiden Lane, New York.

In the matter of how much you can earn,

Everything Depends

on what your training has been. This applies to Watchwork and Engraving even more strongly than to many other occupations.

The only way to learn right is to go to a good school.

We believe we are conducting the leading Horological School of the country.

Consider carefully before you decide where to go.

THE RAMBLER'S NOTES.

WHAT THE RAMBLER SAW AND HEARD AMONG THE DEALERS IN ART POTTERY, CUT GLASS, BRONZES, ETC.

NEW EFFECTS IN KAYSER ZINN.

IN the past few years Kayser Zinn has come to be employed quite extensively in the manufacture of art ware and bric-à-brac. The ware is especially adapted to such purposes and can be made up in shapes, designs and effects sufficiently artistic and expensive to interest the up-to-date jeweler. One of the latest treatments in which the ware is seen shows embossing and gilding in such a way that the natural color is left exposed in places, bringing out the detail of the design with attractive results. This gilded variety is made up into desk sets, penholders, ash trays, card receivers, center pieces and match safes, the embossing on the articles being usually in the form of an *art nouveau* head or female figure, more or less ornamented by a floral border design, also embossed. The face of the figure and certain other parts of the design are in the natural color of the metal, while the body of the piece has a gilt finish. This ware in a variety of objects, showing all the leading finishes of the metal is carried by L. Straus & Sons, 42-46 Warren St., New York, and their line is one of the most complete and varied ever offered to jewelers.

*

JARDINIERES AND PEDESTALS.

FLOWER pots and jardinieres suitable for jewelers have been made up in so many varieties of forms and shapes and in such combinations of colors and decorations that it is difficult at this late day to produce anything entirely new; yet this has been done by the J. B. Owens Pottery Co., Zanesville, O. A number of samples of this new pottery have just arrived at the New York warerooms of the concern, 70 W. Broadway, and, besides being new, show decided improvements over last year's styles. One variety of jardiniere and pedestal, which together measure 5 ft. 6 in., consist of a colored floral pattern embossed on a white underglazed background. The piece has gold tipped edges and is very rich in effect. The interior of the jardiniere is shaped so that it will take a flower pot very nearly its own size. The pedestal is a work of art and is embossed in green and purple, the green being in a palm design, running spirally around the pedestal, while the purple, decorated with white and edged with gold, forms a background that sets off the flower with beautiful effect. Another variety of jardiniere mounted on a pedestal consists of embossed floral designs on a blended background of green, purple, gray, turquoise and brown. The decorations are of the same general color as the body of the jardiniere, but the designs, being embossed, give the piece a distinctly new appearance. Other jardinieres show rainbow tints blended without regard to design or pattern. They have no embossing, and their chief charm lies in the simplicity of the color blending and the graceful outlines of the shapes.

*

SALESROOMS GREATLY IMPROVED.

THE New York warerooms of the Bradley & Hubbard Mfg. Co., 26 Park Place, New York, have just been renovated and improved in many ways; the walls and ceilings have been painted white and a few more sample tables have been put in. A full line of new samples in art metal goods, gas portables, bronzes, lamps and students', library and desk art fixtures are now in process of manufacture at the company's factories. A few of these samples which have already arrived will interest buyers from the jewelry trade who are looking for domestic art metal wares of good quality. The full line, however, will not be ready until early in the Spring.

THE RAMBLER.

L. R. Herrick, Lyons, N. Y., who, a short time ago purchased the stock of J. Groat, of that place, is advertising for sale his entire stock. After disposing of this he will accept a position as traveling representative for a jewelry firm in Lancaster, Pa.

The attempt to establish an academy and gallery of art in the District of Columbia is again brought to the attention of Congress through a bill introduced by Senator Burnham. The purpose of the incorporation of certain persons named is for the permanent establishment in the District of an exposition of art, musical, scientific and industrial, and to this end the corporation may acquire by lease, purchase or gift, land sufficient for and on which they shall have the power to erect all necessary buildings and structures in which to assemble all articles of artistic, musical, scientific and industrial interest. The name of the corporation is "A Permanent International Art, Musical, Scientific and Industrial Exposition, for Washington, District of Columbia," or to be known, for brevity's sake, as "I. A. M. S. and I. E."

The Silver Trade of Asiatic Turkey.

A REPORT of considerable interest to the trade has been received by the State Department at Washington from Consul Jewett, at Sivas, Turkey in Asia. He states that, considering the poverty of the country, there is a very considerable amount of silverware used in that consular district, it being conservatively estimated that about $200,000 worth is annually manufactured and imported. It is in the form of watch chains, bracelets, coffee cup holders, belts and belt buckles, decorations on costumes, harness trappings, cigarette and tobacco boxes, cigarette holders, hilts and scabbards for swords and daggers, table silver, seals, purses, candlesticks and church articles. About 95 per cent. of these goods are manufactured there by hand and the rest is imported from France.

Consul Jewett believes that American silverware is lighter, cheaper and fully as artistic as the French, and infinitely superior to the clumsy, poorly finished native handmade goods. There is almost nothing there in the line of table service between heavy hand-made solid silver and the very cheap German ware of low-grade alloys, and it would seem to the Consul that silver plated ware might find a good market in a country like Turkey, where money is scarce and the people fond of display.

But there is no probability that such a trade will grow up of itself or will be started by merchants of that country. They have no surplus capital to invest in commercial experiments, and they will stick to their long-established trade with Europe unless Americans show them a safe and more profitable investment. It is evident that the cost of transportation will always give Europe an advantage over the United States in the Turkish market, especially while we have no regular direct steamship lines to Constantinople and the Black Sea. Europe sells on credit and makes goods to meet the peculiar demands of foreign customers. The Americans generally require that the full price of the goods shall accompany the order, and, the first orders naturally being small, they receive little attention as to selection, packing and forwarding, which may result badly to the merchant there, whose object is not to build up the trade of any particular country, but to use his capital to the best advantage to himself

If the American manufacturers wish to open a new market for their goods in Turkey, they should, in the opinion of Consul Jewett, allow a credit of about $500 for each line of goods to well-recommended merchants who are willing to try to introduce American goods; they should pay as much attention to the selection of the goods, to the instructions for packing and forwarding a $50 order from a new market as of a $5,000 order from a well-established one; the goods should be up to sample or description in every way. American goods must win on their superior merits and never degenerate.

Consul Jewett cites the following instance: "A gentleman who was ambitious to introduce American goods into this region some 10 years ago gives the following report of his experience. In the line of silver plated ware his first and second orders came all right and sold first rate, but the third order took 13 months from the time the money was sent till the goods arrived. By mistake or carelessness the goods were left in a French custom house for several months in a damp place, where they were half spoiled. He ordered American spoons, and received Swiss watches. He had a similar experience with other lines of goods, and as all the risk and loss fell upon him, the goods being paid for in advance, he abandoned his laudable ambition to build up a trade in American goods."

The import tariff on silver and plated ware is the same as on other goods, viz., 8 per cent. ad valorem. The importation of silver bullion is prohibited; nevertheless, considerable enters the country as contraband.

Goods should be packed very tightly and carefully, as there is a 10 or 15 days' journey with springless wagons or pack animals over very bad roads. The packing cases should be strong and not more than 180 pounds gross weight. The distance being great and transportation slow, the goods should be sent promptly and as quickly as is consistent with cheapness of transport. Samsoun is the port of entry for the Sivas district.

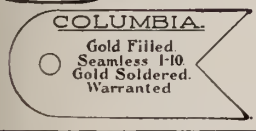
Items Heard on the Road.

THE hatpin with the plain head of gold or silver or that with the simple, real or mock gem is a thing of the past, so the swell Cleveland, O., jewelers say, and a glance at the hats of the fashionable women on Euclid Ave. proves that they are justified in saying it.

Golden boutonniere holders are good sellers at Columbus, O.

Muffs of sable bearing monograms in gold are frequently seen in Rochester, N. Y. A really fine one costs hundreds of dollars.

After adding cameras, umbrellas, stationery and cutlery to his stock, a Pittsburgh jeweler has now taken unto himself the sale of women's full dress chest protectors.



All sorts of unique designs in ornaments of gold, steel and rhinestones, combined with pearls and various colored jewels, are conspicuous features on the creations of Cincinnati milliners.

"Marry a girl with straight hair," says the oracle. "The chances are that her ways are as straight as her locks, while the heart of the curly headed girl is as full of twists and kinks as her hair." This is the reason given by one Pittsburgh jeweler for the small demand for curling tongs in the Smoky City. THE WANDERER.

SILVERSMITHS' ART OF THE EIGHTEENTH CENTURY.

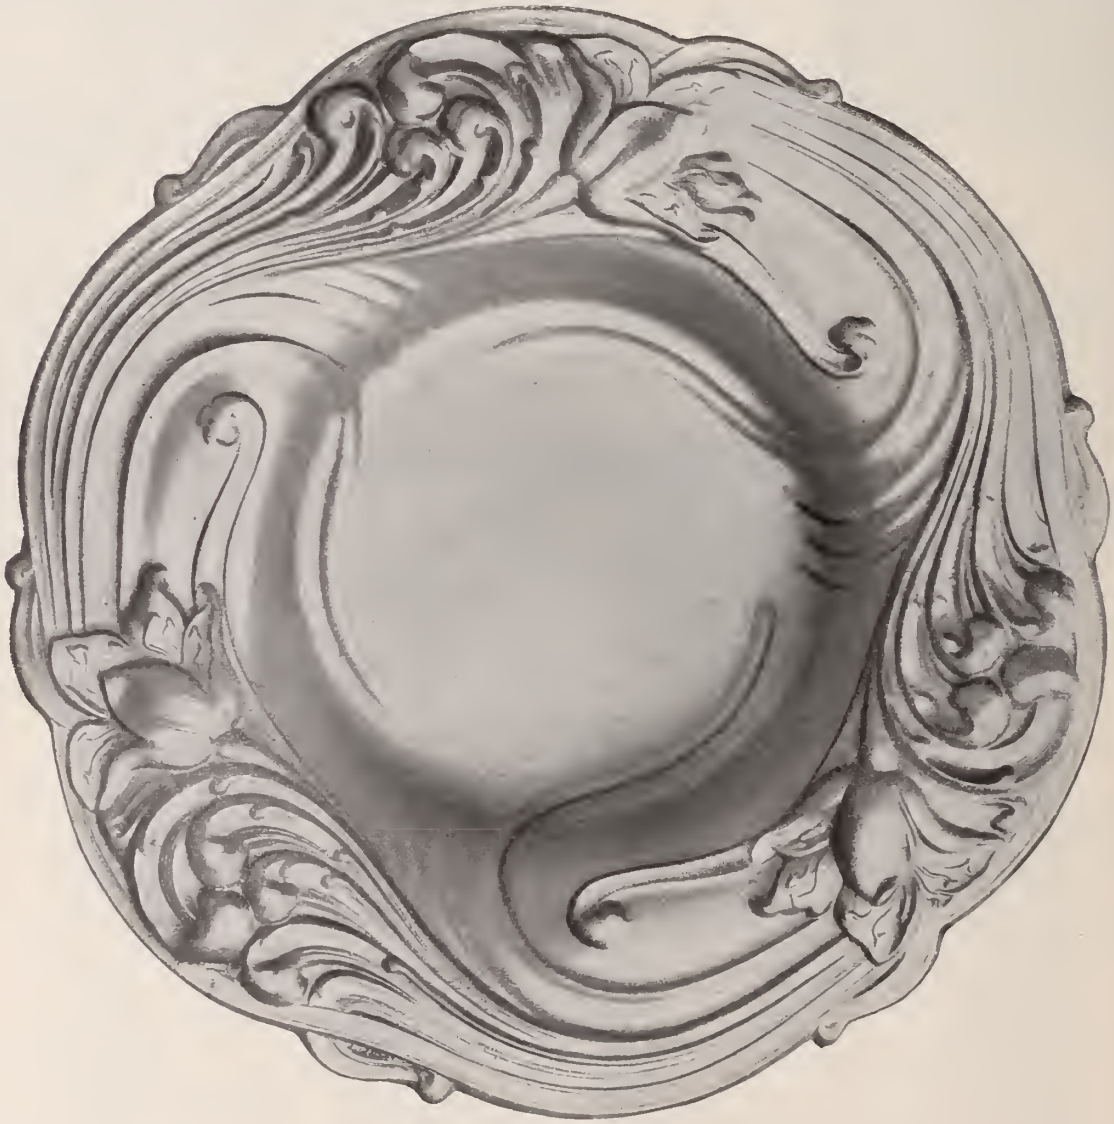
OME beautiful examples of the German silversmiths' art of the early part of 18th century were recently placed on hibition in e store of ederick W. offman, 79 N. arl St., Al- ny, N. Y., d attracted nsiderable at- ition from e art loving blic.

The principal icle of the llection, of ich an illus- ation appears this page, is magnificent ble center- ce made by igust Ritter, noted silver- ith of Nur- burg. The sign symbol- s the abund- ce which other Earth oduces, and manner in ich this idea carried out roughout the tire piece, in tail and per- ction of rkmanship, is st remarka-

In the center a flower girl nding on a wer like ucture, under arbor of iling grape vines, while in the foreground the husbandman gathering in the har- t. The four seasons are represented by Cupids, two of which at the left in front can be seen in the cut. The Cupid sprinkling earth represents Spring, while the other, with the sickle, typifies Summer. At the back Autumn is represented by a Cupid gathering fruit, and Winter by a similar figure, showing flax ready to spin. At the side is a fountain with a dolphin sporting therein, which was probably intended to represent the necessity of water in bringing forth the fruits of the earth.

SILVER CENTERPIECE MADE BY AUGUST RITTER.

The large shield at the top bears the coat-of-arms of Saxony, and another small shield at the left shows the date 1748. The letter F on the shield stands for Ferdinand (Fürst Ferdinand of Saxony). The general execution, and the strong influence of the Rococo period manifested in the work, show plainly that the piece was made in the reign of Louis XV.



Two pepper shakers, a muffiniere and a mustard stand, are set on the piece in the corners, while two salt cellars appear on the front and rear. The side pieces of the set, two in number, are in keeping with the centerpiece above described, as will be seen from the illustration on page 11. Each has two glass

ALVIN DEPOSIT WARE

AND ARTISTIC HOLLOW-WARE.

The beauty of Design and Finish of the Alvin Ware has long been recognized as the highest in Silverware Art.

The accompanying illustration shows one of our new Bon-Bon Dishes with French Grey border, bright center. The beauty of the design cannot be fully appreciated from the illustration alone. You must see the article itself. It is of good weight and popular in price.

BERRY BOWLS, BREAD TRAYS, BUTTER DISHES, BUTTER PLATES, SALTS, ETC.

Alvin Manufacturing Company,

54 MAIDEN LANE, 41 UNION SQUARE,

NEW YORK.

Every man whose business exposes him to dust should carry a **Fahys** Screw Bezel Solid Back Watch Case if he wants his watch to keep perfect time; whether he is a railroad man, works in a mill, or a mine, dust will work into an ordinary watch. Even a man who is not unusually exposed to dust will find that small particles and lint from his clothes work in. If he carries a **Fahys** Screw Bezel Solid Back Case with a screw dust-proof cap, or covering, the works of his watch are absolutely protected not only from dust but also from moisture. How many men in your town, Mr. Jeweler, would be glad to know about these cases?

Don't you think it would pay you to carry them in stock and recommend them?

These cases protect the movement, the name and guarantee of **Fahys** protects the jeweler and the purchaser.

GET IN LINE.

You will have to buy diamonds somewhere—they are an absolute necessity in your business. . . . . .

There are roundabout methods, but they are costly. . . . . .

The direct method is to buy of the diamond cutter, save all middlemen's profits and get the lowest price that it is possible to secure. . . . . .

If you will get in line and look through our end of the telescope for a moment, we can show you some values that will interest you—stones at their actual price in the rough, with the addition of the cost of cutting and one small profit instead of several large ones. . . . . .

Chicago, 103 State St.

WE make the only line of high-grade college seals, flags and buttons on the market and sell them exclusively to the Retail Jewelry Trade.

Jewelers in college towns who have discontinued selling flags on account of dry goods, clothing and furnishing goods stores' competition, will find it will pay them to carry our goods in stock, and that their customers will readily appreciate the superior workmanship, finish and artistic merit, as the tendency heretofore has been to cheapen the quality and price of college goods.

The trade has our positive assurance that the standard of the goods and our policy of dealing direct with retail jewelers only, will be strictly maintained.

Jewelers outside of college towns carrying a large or small assorted stock of our college goods have the privilege of exchanging any of the pieces that are unsalable or shop-worn, if not damaged, for other college goods.

Orders for single pieces are also solicited from Retailers who carry no stock.

Special Flags made to order for Academies, Seminaries, Business Colleges, Public Schools, etc.

The Strength of a Chain

Foster's Strong Links.

LINK THE THIRD—THIRTY YEARS' EXPERIENCE.

The fact that we have been in business thirty years means two things to every buyer of chains and lockets.

First, no house stays in business thirty years unless its goods give satisfaction.

Second, thirty years' experience must necessarily enable the house that has it to do better work than a house which has not had so thorough a training.

In our thirty years of manufacturing chains we have learned to give the best quality for the money. The chains we make look better and present a better appearance than ordinary chains. Every single one is manufactured of seamless wire by us in our own plant, so that when we guarantee them we know exactly what we are saying.

F&B TRADE MARK REGISTERED

This mark means the best vest chains that can be bought for the money.

the collection described contains but a few of a large number of fine pieces of this character, which are also in his possession.

Quarterly Sale of Ivory at Antwerp.

ANTWERP, Feb. 15.—The first public ivory sale of the year commenced Feb. 3. There was a large attendance of home and foreign buyers. The following quantities passed under the hammer:

	Kilos.
Congo (hard)	58,611½
Congo (soft)	2,481½
Angola	18,429
Cameroon	2,590
Ambrize	2,057½
Gabon	2,458½
Senegal	544
Mozambique	73
Hippopotamus teeth	73½
Total	87,318½

Former corresponding sales were: 82,147½ kilos in 1902; 87,726½ kilos in 1901; 72,664 kilos in 1900; 64,169 kilos in 1899; 57,405 kilos in 1898; 59,719 kilos in 1897; 65,800 kilos in 1896; 61,352 kilos in 1895; 37,543 kilos in 1894; 43,543 kilos in 1893; 25,500 kilos in 1892; 24,952 kilos in 1891; 12,118 kilos in 1890.

Notwithstanding the importance of the exposed quantities and the greater value obtained in the former sales, the total was sold at prices equal to the last sales.

The actual stock amounts to about 150,000 kilos, against 134,750 kilos in 1902; 135,500 kilos in 1901; 130,500 kilos in 1900; 82,135 kilos in 1899; 37,000 kilos in 1898; 61,000 kilos in 1897; 121,800 kilos in 1896; 79,000 kilos in 1895; 18,500 kilos in 1894.

The next quarterly public sale of ivory will commence May 5.

Rare antique porcelains and ceramics from the Morideau and Malvern collections recently exhibited at "The Petit Salon of America," were disposed of at auction at Davis & Harvey's Galleries, 1112 Walnut St., Philadelphia, recently.

"Something Different."

In all the arts and crafts it is the man who stamps his own individuality upon his work, and who imparts to his productions his own genius that is a true artist. The workman who is able to only imitate is a mechanic, not an artist.

The making of jewelry is an art-craft, and most susceptible of artistic expression. There are many mechanics but few artists. The productions of the artists are what we seek. We select those pieces that possess a character and originality of their own, which are the qualities that make them salable. Take watch cases for instance, some have all the ear-marks of regularity, while others have an appearance of "something different" that will attract the eye of a prospective purchaser at once. This is especially true of the productions of the Dubois Watch Case Company. Our mounted diamond pieces are of high artistic merit. We believe in advertising the truth only, and therefore solicit selection orders that we may demonstrate that our stock is always as good as we say it is.

LARTER, ELCOX & CO.,

21-23 MAIDEN LANE, NEW YORK.

Reigning Paris Fashions.

PARIS, Feb. 15, 1903.—The displays of the leading jewelers show splendid jewels and precious stones, and in every shop of the Rue de la Paix one can admire the wonderful progress made in artistic jewelry. The dominant note is always that of matt gold elaborately chased with allegorical figures.

Among the most noticeable features of

FIG. 1.

FIG. 3.

FIG. 4.

FIG. 2.

these magnificent exhibits I will first cite necklaces of 11 rows of coral adorned with matt gold representing flowers and foliage handsomely chased. Others, very artistic, also show *motifs* of chased matt gold alternating with baroque pearls and emeralds. In this line mention should also be made of a magnificent pattern consisting of eight rows of pearls, between which are inserted rows of diamonds.

In the way of pendants many new and exquisite designs are to be seen. As an instance, I will cite a handsome pendant of chased matt gold adorned with a superb *motif* of ivory representing a man offering a spray of flowers to a charming woman, typifying Beauty. This handsome *motif* is framed with diamonds and translucent enamels.

Among the novelties in bracelets are those consisting of a chain of matt gold, upon

FIG. 5.

which is gleaming a given name or a phrase traced in fine diamond dust.

Charming brooches are extensively shown. The newest patterns consist of two heart-shaped turquoises set with brilliants and surrounded with a true lovers' knot. Another dainty specimen is a dove holding in its beak an olive branch. The bird is thickly studded with tiny brilliants, while its eyes, beak and claws are rubies. The olive branch is made of platinum covered with emerald dust.

Rings in the new art style are more pop-

ular than ever before. Figs. 1, 2, 3 and 4 show some of the latest creations in this charming line. They are of chased matt gold, finely enameled. Nos. 1 and 2 are in the marquise shape, and, while the former represents a woman's head surrounded with flowers, the latter represents a dolphin elaborately wrought. Fig. 3 and Fig. 4 are dainty rings, representing flowerets, delicately enameled. Besides these tasty designs, many new signet rings are also shown. The prevailing fad is to have one's motto engraved upon the signet.

FIG. 6.

Long chains are always fashionable. The most favored specimens consist of links of matt gold, punctuated with round or baroque pearls.

Large or small strass buckles, together with buttons adorned with colored stones, are much in demand. A unique design in sash buckles is that represented in Fig. 5. It is of chased matt gold, delicately enameled, and represents a charming figure of a woman surrounded with iris flowers. Fig. 6 shows a new and popular sash of black velvet adorned with a buckle of chased silver, representing olive branches gracefully entwined. Silver bees with outspread wings add to the general effect of this charming sash.

Many new and attractive designs for umbrella handles are noticed. One style enjoying a great vogue is round or oblong in shape and is of chased matt gold adorned with floral decoration. Others consist of a

FIG. 7.

cylinder of crystal, around which are entwined sprigs of mistletoe.

Vases and dishes of pure tin are more and more popular. Parlors and dining-rooms are profusely adorned with these artistic articles, the decoration of which is often enhanced with precious stones, such as turquoises and emeralds. In this line I saw a superb dish, whose decoration shows flowers and foliage of the maple tree, treated in a most artistic manner.

In Fig. 7 is illustrated a new and effective

Consul Van Buren Reports on the Silver Trade at Nice.

WASHINGTON, D. C., March 4.—According to Consul Van Buren, at Nice, France, there is no local manufacture of either silver or plated ware. The general run of silver and plated ware sold there and of French manufacture comes from Paris, but a very considerable quantity of such articles are of German origin. As to British goods, a certain quantity of both silver and plated ware are sold by a prominent firm having a branch established in Nice. In this case, too, the goods are evidently cleared at some other custom house than the one at Nice. For this reason the Consul is unable to furnish the approximate value of such importations. It should be remarked also that the last-named articles are of a special style, and are not suited to all tastes, nor do they furnish the demand for the Louis XV., Louis XVI. and other classical styles which always exist in this market.

There are evidences that the use of miscellaneous fancy articles of silver are destined to enter into consumption in Nice as time progresses. A few years ago this department of the trade was practically unknown there, and even now such articles are made in Paris to a limited extent. The Consul means by this that the variety of such articles as shown by catalogues from the United States does not yet exist in Nice, and it is particularly in this department of the industry that he considers an opening for business might be made. He has recently had occasion to look over a catalogue of an American firm manufacturing silver articles in general, and it appeared to him at first sight that a marked opportunity should exist for the introduction and sale of the very many useful articles, and more especially the cheaper ones, manufactured in the United States. As to the method to be adopted for such introduction and sale Consul Van Buren can but repeat what he has always advised as the surest and quickest means for entering into competition with other countries. To negotiate with some firm doing business exclusively with the United States, to grant an exclusive agency to such a firm for the sale of the goods, and to establish agencies at the most convenient seaports.

Consul Wallace Reports on Silver Trac at Crefeld, Germany.

WASHINGTON, D. C., March 4.—In an i teresting report to the State Departmer Consul Wallace, at Crefeld, German states that his district, being out of th usual route of the traveler, seems som what neglected by the American exporte There is but a small number of manufa tured articles of the United States exhi ited or offered for sale at the shops of Cr feld, although the Consul is informed th trade has been increasing in recent year Some time ago an effort was made to i troduce silver and plated ware of Americ manufacture, by a local dealer at Crefel but his efforts met with no encouragemer and the attempt was abandoned, so that this date there are no articles of this cla of goods for sale there.

The consumption of silverware and si ver plated ware in the Crefeld district estimated at about $180,000. The dema is supplied almost entirely from the produ of German factories, with the exceptio of a small amount purchased from Englis and French firms who have been endeavo ing to establish a trade in this line of good but so far have met with but little succes and is confined chiefly to the smaller a ticles and cheaper grades designed ar made especially for the trade. The greate part of the trade in silver and plated wa is in knives, forks and spoons; there little demand for the works of art or o nament in these wares. The church o ganizations of the district are the best cu tomers for silverware. This trade as rule is supplied by hand-made work of l cal artisans from special designs.

The manufacturer desiring to make a effort to establish trade in silver and plate ware would do well to first consult the l cal dealer upon the kind of goods th market required. A useless expenditure often made by the attempt to force trad While a small amount of American-d signed goods could be disposed of—a unique and odd articles outside of the con mon—a business in this line can be estal lished only with such goods as are espe cially made to meet the requirements of th fashion in vogue and the taste of the pu chaser. Reference is not intended here t the common articles, such as flat ware.

A general supply depot established a some available point, where goods in quan tities could be displayed and delivered t customers, would facilitate trade and de crease the cost of the merchandise to th purchaser. The retailer could be supplie with such articles as he desired, and woul know the actual cost of same delivered a his place of business.

The inability to purchase in small quan tities, near at hand, and want of informa tion as to actual cost, are existing obstacle in the way of trade. It is said the im ported articles in these wares are 10 pe cent. higher in cost than the German prod uct. List prices and catalogues would re ceive more attention from local dealer if made in the language and currency o the country and the cost for delivery o goods fixed at some local point.

NOTE.—The commerce between the United States and Hawaii and Porto Rico, respectively, is not included in the statements of the foreign trade of the United States after June 30, 1900, but after this date the trade of Hawaii and, after July 1, 1901, of Porto Rico with foreign countries is included in the statement of the foreign commerce of the United States.

J. H. Leyson Retires From Jewelry Business in Butte, Mont.

BUTTE, Mont., March 4.—An event of considerable interest and importance to the members of the jewelry trade in the northwest was the announcement, made last week, of the immediate retirement of J. H. Leyson from business in Butte.

Mr. Leyson is one of the pioneer and most successful jewelers in this part of the country. He came to Butte nearly 26 years ago, and three years later started in business under the firm name of Leyson & Yurk. Several years ago Mr. Leyson purchased his partner's share in the business and since that time has conducted its affairs alone.

For some years past, however, Mr. Leyson has been much engrossed with outside affairs, but he has had the able assistance, as manager, of John A. Maynes, who came to Butte from Salt Lake two years ago, and has since that time conducted the store at 221 N. Main St. Mr. Leyson is also the proprietor of a flourishing jewelry business at Salt Lake City. The store there will be much enlarged, and it is probable that Mr. Maynes, as soon as affairs are closed up in Butte, will occupy a responsible position there.

In consequence of Mr. Leyson's decision to retire, arrangements were made to close out at auction the entire stock in his Butte store, consisting of about $100,000 worth of goods. Martin & Moody, jewelers' auctioneers, have been engaged for the purpose and the sale opened Monday. Everything will be offered for sale without reserve, and it is expected that in a few weeks the entire stock will be sold. The stock of unset diamonds and other gems alone amounts to about $150,000.

Mr. Leyson is well known and highly respected here, not only in business, but in public life, and his departure will be felt generally as a loss to the city.

Bill to Regulate Pawnbrokers Now Pennsylvania Legislature.

PHILADELPHIA, Pa., March 4.—Jewele as well as other merchants of this ci are interested in the new bill for the reg lation of the business of pawnbrokers Pennsylvania, which was recently intr duced in the Legislature at Harrisburg Representative Call, of Philadelphia. T principal provisions of the law are to e force publicity in the sale of unredeem pledges.

The act provides that pawnbrokers mu advertise unredeemed articles to be so at public sale; that a registry book mu be kept, containing a list of all articl pledged, the name, date and address of t person or persons pledging the same; copy of the book shall be returned to t chief of detectives or proper authorities each business day before 9 P. M.; the bo shall be open at all times to the inspecti of the authorities; no pledges shall be tak from a minor or person under the influen of liquor; nor from men, women's appa or jewelry, nor from women, any proper obviously belonging to a man; a paw broker refusing to restore stolen goo shall be deemed guilty of a misdemean Under the act no citizen whose goods ha been stolen or pledged shall be compell to pay for restoration. The paw brokers are prohibited from charging mo than 6 per cent. a month for storage a other necessary expenses. The fee is $ and fines and imprisonment are to be i posed for violations of the act.

The bill has the approval of the jewe trade in Philadelphia and throughout State. Most of the better class of paw brokers also approve its provisions, a it is generally expected that the bill will speedily enacted into a law.

Chas. Beardslee has again resumed bu ness at Moss Point, Miss., after a reti ment of nine years.

Reasons for the Reasonable.

Worth Reading and Thinking Over

There's no good reason why the Jeweler should deprive himself of the benefits of selling a *dependable* 10 K. 20-year Filled Case. He has everything to gain by discarding the unworthy kinds, and holding fast to the *one good* kind.

Some Jewelers are properly cautious when it comes to 25-year goods and in this grade sell the Boss only; but they seem to drop all caution when the customer is after "something cheaper." And yet the buyer of a 20-year Case will insist on getting *20-years' wear* out of his case, just as the buyer of a 25-year Case wants 25-years' wear out of *his*; and there will be as much complaint against the Jeweler in the failure of the 10 K. Case as in the failure of the 14 K.

It is high time that the Jeweler looked facts in the face. Otherwise, two things are bound to happen: first, the Jeweler who is now selling the inferior makes of 20-year cases will have to reckon by and by, with indignant customers, when these cases *fail to wear* 20 years—fail to wear even 10 or 5 years; second, the Jeweler in the meantime will have lost his 20-year Case business, because he has no chance in competition with the big "outside" houses who buy the inferior makes of Cases in great lots at "prices accordin'."

It ought not be—it need not be. If the Jeweler will sell only the *dependable* 10 K. 20-year Filled Case, the BOSS, he will bring back and firmly secure the 20-year trade which should never have been lost to him; and at the same time will secure his reputation and his future smooth-going. There's a sure market at all times for goods of real worth, such as the *best* 20-year Filled Case; and the Jeweler can control this market, if he will.

Now read next page.

The Keystone Watch Case C

In order to emphasize the distinction between *the best* and the "just as good," in 20-year Filled Cases, we announce to The Trade

A NEW SHAPE IN BOSS 10-K.

which will be known as

"THE LINCOLN."

This new Boss 10-K. shape marks a great advance, in artistic design, over any 20-year Filled Case ever put on the market. Study this sectional view (the case is sawed through the middle), and you will agree that the designer of a solid gold case could produce nothing better in proportions and grace of line.

Showing different finish on faces of centers.

"*The* LINCOLN"

will suggest to the Jeweler a likeness to the great historical character whose name it bears in *the thing it stands for.*

Abraham Lincoln said, "you can fool some of the people all of the time, and all of the people some of the time, but you can't fool all of the people all of the time." So this latest Jas. Boss 10-K. Filled Case, to be known specifically as "THE LINCOLN," will rebuke the shortcomings of those inferior 20-year cases which fool some of the people some of the time, and will bear perpetual witness of its own intrinsic worth to all of the people all of the time.

"THE LINCOLN" is made in all sizes, both O. F. and Hunting, and variously Plain, E. T. and Engraved. Most of the engraving patterns are entirely new.

and Brown Sts., Philadelphia.

If

The Royal

has a
fair chance
it will demonstrate
its superiority
in the
20-year
Filled Case
class.
And when
you give *it*
a chance,
you are helping
your own

for leadership.
It will help
you, if you
will help it.

PHILADELPHIA
WATCH CASE CO.
RIVERSIDE, N. J.

The Diamond Markets.

ANTWERP, Feb. 15.—The Antwerp diamond market again shows a quiet tendency. The stock in polished goods is increasing. Large goods are always sold easily and small mêlée and roses are also finding buyers without difficulty.

The following foreign buyers were here recently: Mr. Zipper, of Lemberg; Mr. Hurwitz, of St. Petersburg; Mr. Rappaport, of Warsaw; Mr. Goldschmith, of Vienna; Mr. Grossbard, of Warsaw, and Mr. Braun, of Vienna. The American buyers were Mr. Berman and Mr. Klipper, of New York.

It is the general opinion here that the present calm conditions will not last long and that next month, after the carnival holidays, will again show lively conditions in the trade.

V. Pouldjian, a well-known diamond merchant, announces his engagement to Miss S. 'Esmerian.

Harley Yoes, the commissary of the art department of the World's Fair of St. Louis, Mo., U. S. A., who is now in Brussels, is expected to arrive here soon to conduct negotiations for the exhibition of various products.

LONDON, Feb. 14.—The beginning of the year was characterized by a brisk business, but February opened somewhat duller.

A new rise of 5 per cent. is announced on "irregular and spotted" goods. This rise, which was anticipated, will not make any change in the present conditions of the market; price in general will, of course, become firmer for polished goods, but raises of this kind are felt more on rough than on cut stones.

Mr. Gandee, of this city, has returned from Antwerp, where he bought several lots of brilliants before the new prices went into effect.

News has been received here that Mr. and Mrs. Chamberlain paid a visit to the offices of the De Beers Co., where they were received by President Sir Lewis Michel. They examined the collection of diamonds of all sizes and colors. At their departure, Sir Lewis offered to Mrs. Chamberlain a lot of rough diamonds, and expressed the hope that she would wear them as a remembrance of the visit to the mines. She hesitated at first, having received a collection in the morning from the Kimberley mines, but finally accepted, thanking Sir Lewis and saying she would take great pleasure in wearing them.

AMSTERDAM, Feb. 14.—A number of buyers were here in the beginning of the month, the United States, France, England, Germany and Belgium being represented. Mr. Friedlander, of Birmingham, has been buying pearls and colored stones and left for Paris in order to complete his purchases.

A failure took place here in which the liabilities amounted to about 500,000 guilders.

This city was in a difficult condition on Jan. 31, owing to the general strike of the carrying companies. The strike fortunately ended the following day.

PARIS, Feb. 15.—The tone of the gem market remains steady here. Sales, however, were not so numerous as last week, but there is no reason to complain.

Messrs. Ullmann Fils, of London, and Mr. Friedlander, of Birmingham, have been here, the latter buying many colored stones and white pearls.

There is always a good demand for large goods but they are not easy to find, as they are sold directly in Antwerp and Amsterdam after cutting. Sales in roses show prices to be unchanged. Owing to the news of the advance in London on rough goods, polished goods will be higher next week.

Practice of Optometry in Pennsylvania May be Regulated by Law.

HARRISBURG, Pa., March 4.—Senator Weiss, of Lebanon, Pa., last Monday night introduced a bill to protect the public against the practices of inexperienced opticians. His measure is entitled, "To Regulate the Practice of Optometry."

This term is defined as "the employment of subjective and mechanical means to determine the accommodative and refractive states of the eye, and the scope of its functions in general, or the act of adapting glasses to the eye by using such skilled means as will determine their choice."

The Governor is authorized to appoint a board of examiners on optometry consisting of five opticians. Persons desiring to practice optometry shall pass an examination before the board to determine their fitness. Any person practicing optometry and not having a certificate issued by the board shall be guilty of a misdemeanor and liable to a fine of from $20 to $100 or three months' imprisonment.

The provisions of the act do not apply to duly licensed physicians, or to persons who sell spectacles or eyeglasses as merchandise.

Career of the Late Herman Gerloff.

DETROIT, Mich., March 5.—Herman Gerloff, whose death, as announced in the last issue of THE CIRCULAR-WEEKLY, was caused last Monday by inhaling the fumes of potassium cyanide, was but 29 years of age and one of the best-known jewelers in this city. His untimely death has brought untold sorrow to his young bride of four months.

Mr. Gerloff was born in this city in 1874. He was a prominent member of Rouge River Lodge No. 401, I. O. O. F., and Friendship Lodge No. 417, F. and A. M. He was much beloved for his high sense of honor and his habitual cheerfulness of disposition, and leaves, besides his widow, his mother, Mrs. Christian Guhl, Artillery and South Sts., and two sisters, Mrs. Louis Cooney, of Delray, and Mrs. Joseph Cooney, of Oakwood.

At the establishment of Traub Bros. & Co. the deceased was considered a model workman. His ten years' service there had won for him a legion of friends, and when he left the store five months ago to set up in business for himself he took with him the best wishes and hearty good will of every employe and friend of the establishment.

"But, I don't understand," was repeated over the 'phone from Traub Bros., when the information was conveyed as to the manner of Mr. Gerloff's death. "It is most strange. He knew enough of the dangers of potassium cyanide to fully protect himself. It is very strange."

Assets and Liabilities of George E. Moore, Denton, Tex.

DENTON, Tex., March 4.—The assets of Geo. E. Moore, the jeweler of this city who made an assignment 10 days ago, as reported in the last issue of THE CIRCULAR-WEEKLY, are estimated to be worth about $5,500, of which $4,500 is said to be the value of the stock and fixtures and $1,000 the value of the notes and accounts.

The liabilities are $4,835.11, and among the creditors are the following: Niagara Ring Co., $55; Merry Optical Co., $181; Hay Lithographing Co., $213; Shuttles Bros. & Lewis, $200; S. Langsdorf & Co., $71; Parker Pen Co., $48; J. R. Wood & Sons, $227; J. W. Jenkins & Sons Music Co., $45; St. Louis Clock and Silverware Co., $334; Pitkin & Brooks, $196; Albert Pfeifer & Co., $104; J. W. Crowdus Drug Co., $50; C. A. Kieger, $179; W. B. Belknap & Co., $36; Morgan & Hawley, $575; Fritz & Nall Umbrella Co., $51; Joseph Bennet & Co., $50; New England Watch Co., $61; Benjamin Allen & Co., $129; A. L. Silberstein, $206; Gans Bros., $31; L. Gutman & Sons, $304; Rockford Silver Plate Co., $91; First National Bank (note), $200; W. Swatty (notes), $300; First National Bank, Weatherford, $50; John B. Schmitz, $47; W. P. Parker, $10; G. W. Wilson, $43; J. B. Wilson Lumber Co., $70; M. S. Stout (rent), $600.

The assignee, Sidney J. Carroll, who is now in charge of the business, has been working for the past week making an inventory of the stock.

T. Prigoff has removed from 216 Granger Block, Syracuse, N. Y., to 1 Monroe Block, cor. Railroad and S. Salina St.

All Jobbers or Jewelers' Circular Publishing Co.

Firm Used Name of New Orleans Jeweler to Get Goods on Credit.

NEW ORLEANS, La., March 5.—What is believed to be one of the largest swindling schemes attempted in this city for some time was recently discovered, although the alleged swindlers have escaped from the city with their booty.

The two principals in this scheme are said to be young men calling themselves Jacob and Charles W. Young, who did business under the name of Jacob Young & Co. By creating the impression that they were the concern known as Jacob Young, 2050 Magazine St., who is a well known and honorable jeweler, they were able to obtain on credit from different parts of the country goods, consisting of watches and jewelry, valued at from $15,000 to $20,000.

The two "Youngs" first appeared Jan. 10 and engaged an office in the Tulane-Newcomb building. They circulated a story to the effect that they were strangers from New York, and moved into their new quarters about Feb. 1. The next step of the Youngs was to solicit orders from an unlimited number of manufacturing jewelers and jobbers all over the country. These jewelry concerns were aware of the high commercial standing of Jacob Young, so most of them sent goods on four months' time.

For days a great quantity of goods, both by mail and express, began to pour into the offices of the "Youngs" from all parts of the country. Among the firms victimized, it is said, were the Geneva Optical Co., St. Louis; C. H. Knights & Co., Chicago, and the Gustave Fox Co., Cincinnati, and firms in Atlanta, New York and other cities.

The discovery of the fraud was made by drummers of the victimized concerns who called at the store of the real Jacob Young, by whom they were told that he had ordered no goods. Mr. Young had received a number of bills for goods that went to Jacob Young & Co., but these bills he returned to the persons who had sent them and this led to an investigation.

To the mercantile agencies who began to investigate the firm the two "Youngs" stated that they had on hand stock closely approximating $2,000; cash, $1,000, and fixtures, $400, while their debts amounted to but $410. They gave as reference 230 W. 122d St., New York. On examination this address proved to be that of an apartment house, but nobody there knew anything about Jacob or Charles W. Young.

Before starting up the firm went to T. Fitzwilliams and ordered letter heads and envelopes printed. These have not yet been paid for. In engaging their office they stated that they wanted the longest possible lease, and finally signed one for three years and eight months.

The police of the city and detectives have been put at work to look up the members of the missing firm, but up to the present time have been unable to get a clue. The real Jacob Young has been put to much inconvenience by the concern trading on his name and is very desirous that the fact become known that he is not connected in any way with the members of Jacob Young & Co.

Elgin National Watch Co. Increases Its Capital to $5,000,000.

CHICAGO, March 4.—In response to a notice issued to stockholders by the directors of the Elgin National Watch Co., Jan. 26, the stockholders met at a special meeting in the office of the company, Room 201, American Express building, at 12 M. to-day and authorized the issue of $1,000,000 additional stock, making the total capital $5,000,000.

The stockholders left it to directors to issue the new shares as they saw fit, and when the stockholders had gone the directors decided to put it out as a 25 per cent. stock dividend. In this way the company capitalizes $1,000,000 of its surplus for the benefit of the stockholders. The new shares will be distributed *pro rata* March 23 to holders of record March 10.

The par value of shares of the Elgin National Watch Co. is $1,000, and their market value has been around $2,200. The shares have paid 8 per cent., of $80 a year. The directors of the Elgin National Watch Co. are: A. C. Bartlett, H. A. Blair, C. H. Hulburd, E. A. Hamill, George H. Laflin, M. A. Ryerson and George T. Smith.

Creditors of Abram Perel, Baltimore, Md., Meet in New York.

A meeting of the creditors of Abram Perel, a retail jeweler at 913 E. Baltimore St., Baltimore, Md., was held Thursday afternoon at the Astor House, New York, at which Mr. Perel's attorney explained that the jeweler was financially embarrassed because of a number of bad debts and accounts which he was unable to collect. The attorney said that Perel's liabilities amounted to about $15,000 and that his assets were about $8,600, consisting of stock, $2,000; accounts, $6,000, and cash, $600.

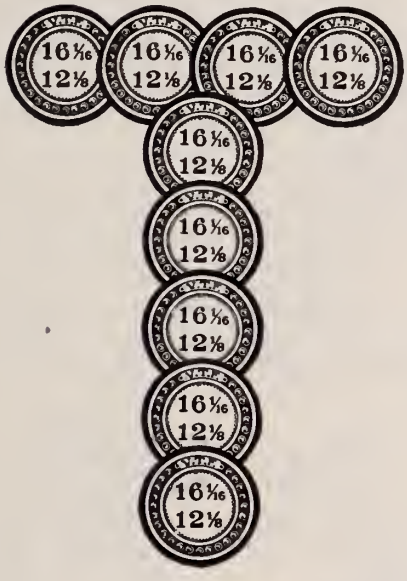
An offer of settlement on the basis of 30 cents on the dollar, 15 per cent. in cash and the balance in notes for three, six and nine months each, indorsed by Perel's wife, was made to the creditors, and papers of acceptance were signed by a majority of those present. The 30 per cent. offer will probably be effected without opposition.

Among the creditors for amounts above $100 are: A. Roseman, $1,400; A. Schwob $1,200; L. Berney, $700; Alois Kohn & Co. $500; Sumner & Freudenheim, $700, and S. Konovitz, $500.

A. B. Cohen, Scranton, Pa., will shortly move into larger quarters in the Paul Block.

Long Distance Telephone, 1156 Cortlandt. Cable Address, "Venablo."

Why use IMITATION Materials for American Watches when the GENUINE can always be obtained at our establishment??

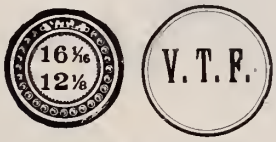


Our Cardinal Points

1st—Accurate and Rapid Filling of Orders.
2d—Unlimited Stock.
3d—Right Prices.
4th—Best Grade of Goods.

("We handle everything known to the trade and solicit correspondence.")

THE BEST IS ALWAYS THE CHEAPEST; THIS applies to Watch Glasses as well as to anything.



The best Watch Glasses are those that are carefully made, from the proper stock, properly labeled and correctly gauged.

The CHEAPEST Watch Glasses are those which require the least time to fit, and in which there is the least percentage of breakage.

The **V. T. F.** Glasses combine all of these cardinal qualities and BEAR THIS LABEL: Insist upon getting the **V. T. F.** and take no other.

N. B. — See that each Geneva Glass is wrapped separately in tissue paper.

AVERY & BROWN,

68 Nassau St., New York.

Death of Edward J. Isaacs.

Edward J. Isaacs, who had been in the diamond and diamond brokerage business in New York at various intervals, committed suicide last week by shooting himself. At the time of his death Mr. Isaacs was in business with Edw. Felbel, at 229 Broadway. Just a few months previous to his forming this partnership he occupied an office at 54 Maiden Lane and carried on a brokerage business in precious stones and diamonds. He was well known in the trade, having spent more than 25 years of his life on Maiden Lane.

Deceased was born about 50 years ago, and after gaining some experience in the jewelry business in New York, started in for himself under the style of E. J. Isaacs. In 1884 he became financially embarrassed, and after settling up with his creditors continued to do a brokerage business, selling goods on commission. He was known as a very handsome man and was of a quiet, taciturn disposition, but in spite of this was extremely well liked and favorably known. It always seemed to be extremely difficult for him to prosper in business, and for some reasons he was always in financial trouble, though he was industrious in his work and regular in his habits.

It was thought that his last act was caused by some business trouble. Ten minutes before the time for closing his office on the fateful day he was very cheerful with Felbel, his partner, and talked exuberantly concerning real estate deals. At the close of the talk Felbel started down stairs, bidding Isaacs to follow him. As Felbel reached the bottom of the stairs, however, Isaacs put his revolver to his head and shot himself.

Mr. Isaacs is survived by a widow.

Career of William E. Major.

The career of Wm. E. Major, wholesale dealer in optical goods at 48 Maiden Lane, New York, whose death was reported in the last issue of THE CIRCULAR-WEEKLY, was one of long and patient labor in the optical trade of New York. He had been in business on Maiden Lane for more than 25 years, was of an extremely quiet and modest disposition and was well known in the city trade.

Mr. Major obtained his experience with A. Walter & Co., and in 1879 began business for himself in a small way, selling goods on memorandum. He worked up a very good trade, and in 1885 took in as a partner Chas. E. Carson, the firm being known as Major & Carson. Three years later this firm was dissolved. In 1890 Mr Major became financially embarrassed, but after a settlement with his creditors continued business almost until the time he was stricken with his fatal illness. His death was caused by a cancer, from which he suffered for 14 months.

For nearly 30 years the deceased was a member of Mistletoe Lodge No. 647, F. & A. M., and was a veteran member of Company K, 23d Regiment, N. G., N. Y. The funeral services were held from his late residence, 71 Kingston Ave., South Brooklyn, and the interment was in Greenwood Cemetery with Masonic honors.

Death of G. Walter Bowman.

HAGERSTOWN, Md., March 5.—G. Walter Bowman, a former jeweler of this city, died yesterday afternoon at his home on Broadway of paresis. He had been ill but a month.

The deceased was 40 years old, was the son of the late Geo. R. Bowman, a jeweler and confectioner of this city, and was a prominent member of the 1st Hose Fire Department here. About 1878 Mr. Bowman's father started in the jewelry business for the benefit of the deceased and his brother.

The deceased continued in the jewelry business until his retirement, about two years ago. He is survived by a widow and an infant child.

Death of J. Alvis Johnson.

WENATCHEE, Wash., March 4.—The recent death here of J. Alvis Johnson, well known as a jeweler of this section, has caused profound regret among his many friends, as well as relatives and business associates.

Mr. Johnson was associated with his father, O. D. Johnson, in the jewelry firm known as O. D. Johnson & Son, and had conducted business here since 1900. The partners had formerly been in Wellington, Kan.

The deceased, who was 30 years old, died of consumption. He was a practical man, was married and was well thought of in the trade and in the community.

The Strength of Gold Filled Chains

The strength of rolled plate or gold-filled chains has not been a matter of moment since 1865, when William Blackinton invented and dedicated to the public for general use, the hard-soldered link. Provided the links are properly soldered, all gold-filled chains are of like strength. The vital question is the thickness of the gold covering and the length of time it will wear on a person leading a strenuous life. That's the test. How many kinds make good? One kind—the "Old Reliable "W. & S. B.★" never fails to.

New Gold and Silver Law.

Bill Regulating Sale of Gold, Silver, Plated and Imitation Jewelry Introduced in Michigan Legislature.

LANSING, Mich., March 5.—A most important bill from the standpoint of the jewelry trade has been introduced in the House of Representatives of the Michigan Legislature, and provides for the regulating and stamping of gold and silverware. The bill is elaborately drawn and contains provisions relating to all kinds of electroplate, gold plate, imitation and solid gold and silver jewelry, watches and optical goods, and is said to have been introduced on behalf or by the request of the Michigan jewelers.

No action has yet been taken on the bill, which has been referred to a Committee on Introduction in the Chamber in which it was introduced. The bill in full reads as follows:

A BILL TO PROVIDE THAT ALL ARTICLES OF JEWELRY, WATCH CASES, SPECTACLES, OR EYEGLASS FRAMES MADE TO RESEMBLE GOLD OR SILVER, AND MANUFACTURED, SOLD OR OFFERED FOR SALE AS GOLD FILLED, ROLLED PLATE, GOLD FRONT, ELECTRO-PLATE, PLATED GOODS, OR KNOWN BY ANY OTHER NAME AS IMITATION OF GOLD OR SILVER, SHALL BE MARKED, STAMPED OR LABELED WITH THE QUALITY OF THE ARTICLE AND THE NAME OF THE MANUFACTURER.

The people of the State of Michigan enact:

Section 1. That every person, firm or corporation within this State that is engaged in the manufacture, sale or exchange, or who or which offers for sale, or has in possession with intent to sell, any article of merchandise known as jewelry, watch cases, spectacles or eyeglass frames, in the manufacture of which there is contained in addition to gold other material, composition or metal, such jewelry, watch cases, spectacles and eyeglass frames being commonly known to the trade by the name of gold filled, rolled plate, gold front or plated goods, which articles of merchandise may resemble gold, or be sold or offered for sale in imitation of gold, shall be sold or offered for sale, or held in possession with intent to sell or dispose of, only when attached to cards or with tags attached thereto, and that such card or tag shall have legibly printed, engraved, written or stamped on the face thereof the name or initials of the manufacturer of said articles of merchandise, together with an explicit and correct statement of the quality of gold used in such composition as represented by the number of karats of pure gold, and in addition thereto the proportion of such gold to the amount of other metal, composition or material used in such article.

Sec. 2. When articles of jewelry, watch cases, spectacles and eyeglass frames are manufactured from one or more plates of gold overlying or surrounding any other metal, composition or material, and known to the trade as rolled plate, gold filled, gold front goods, or that may be known by any other name, such articles of merchandise shall be sold, or offered for sale, or held in possession with intent to sell or dispose of, only when presented for sale while displayed on cards or with tags attached thereto, upon which cards or tags there shall be legibly printed, stamped, engraved or written a statement showing the quality in fineness of gold as represented by the number of karats of pure gold with which such article is overlaid or surrounded, and in addition thereto a statement of the proportion such amount of gold bears to the total weight of such article of jewelry, watch case, spectacle or eyeglass frame, or other article of adornment.

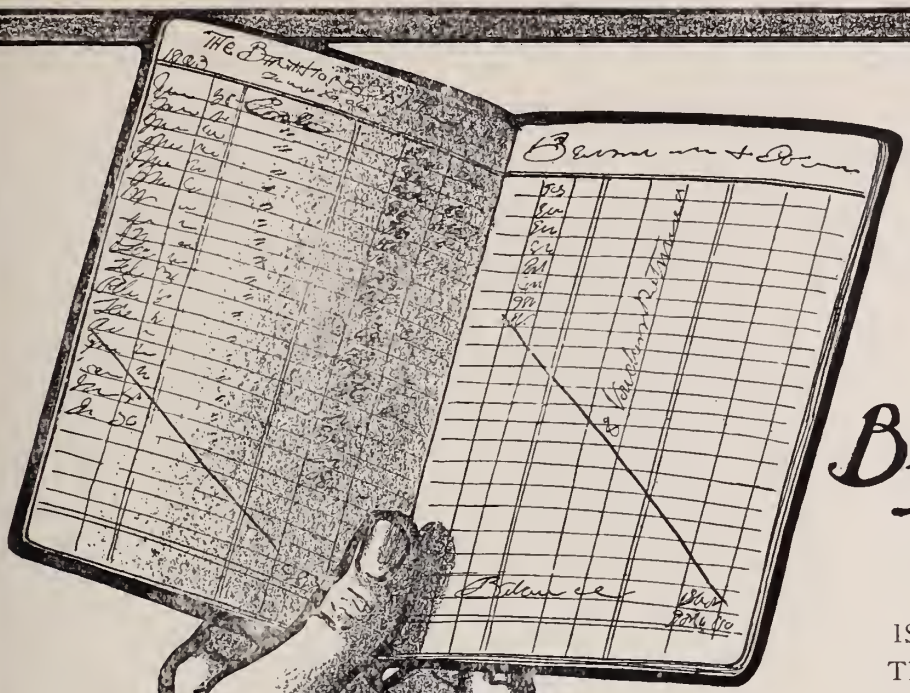
Sec. 3. When articles of jewelry, watch cases, spectacles and eyeglass frames are manufactured of material, metal or other composition than gold, but are plated by what is commonly known as the electro-plate process with gold or any other process other than the process known as the rolled plate process, such articles shall be sold, or offered for sale, or held in possession with intent to sell or dispose of only when presented for sale while displayed on cards or with tags attached thereto, upon which cards or tags there should be legibly printed, stamped, engraved or written a statement that such articles are electro-plated.

Sec. 4. When articles of jewelry, watch cases, spectacles and eyeglass frames are manufactured of material, metal or other composition than gold, they shall not be sold or offered for sale, or held in possession with intent to sell or dispose of when so marked or stamped with words, letters, figures or characters as to convey the impression that such article is composed of gold.

Sec. 5. Every article of jewelry, watch case, spectacle or eyeglass frame manufactured or sold, or offered for sale, or held in possession with intent to sell or dispose of, that purports to be made of gold shall be marked or stamped upon or within with words, letters, figures or characters the actual quality of gold as represented by the number of karats of pure gold in the composition, metal or substance of which it is made.

Sec. 6. Every article of merchandise manufactured or sold, or offered for sale, or held in possession with intent to sell or dispose of, that is composed of silver, shall be marked or stamped upon or within the same with letters, figures or characters, a statement of the quality of the silver of which such article is composed, such marking or stamping showing the number of parts in 1,000 that are pure silver.

Sec. 7. When articles of jewelry, watch cases, spectacles and eyeglass frames composed of materials other than gold, and made to resemble gold, such articles being known to the trade as gold filled, rolled gold, or gold front goods, it shall be deemed a sufficient compliance with the provisions of this act requiring the quality and fineness of gold and the quantity of gold used in such composition in proportion to other metal or substance to be set forth upon a card or tag attached in such cases where the required statement is legibly marked or stamped with words, figures or characters upon the article of merchandise itself.



Sec. 8. Any person who shall violate any of the provisions of this act shall, for each offense, be guilty of a misdemeanor and upon conviction thereof shall be punished by a fine of not less than $25 nor more than $100, or by imprisonment in the county jail for a period of not less than 30 nor more than 90 days, or by both such fine and imprisonment.

Sec. 9. It shall be the duty of the prosecuting officer of this State to prosecute to completion all suits brought under the provisions of this act, upon the complaint of any citizen.

Sec. 10. All acts or parts of acts in conflict with this act are hereby repealed.

John Hardwick, formerly manager for E. Hardwick, Walla Walla, Wash., has succeeded to that business and will conduct it under his own name.

Fred. L. Baker Held in Heavy Bail to Answer Charges of Larceny.

LANCASTER, Pa., March 8.—In default of $12,000 bail, Alderman Spurrier remanded Frederick L. Baker, the absconding traveling salesman for the Non-Retailing Co., of this city, to jail for court after yesterday's hearing. The evidence of A. F. Hostetter, president, and Alfred W. Moyer, manager, of the company, was heard, and Baker will answer charges of embezzlement and larceny at the next term of Quarter Sessions. From the line of cross-examination adopted by Baker's attorney, J. W. Brown, the impression was conveyed that Baker's defense will be that he went to Brazil in his capacity as a salesman, and not as a fugitive from justice.

It will be remembered that Baker, who covered territory in Pennsylvania, Ohio, Michigan, Indiana and Kentucky for the Non-Retailing Co., disappeared about the first of the year with jewelry valued at $18,000 belonging to the company, and was not seen again until brought back to Lancaster from Rio Janeiro, where he was arrested by Pinkerton detectives.

Manager Moyer testified that when Baker disappeared, about Jan. 3, he had in his possession about 1,200 watches, 350 movements, 800 chains, 100 lockets and 500 rings. He had also collected $1,500 from the Hofman Supply Co., Columbus, O., and $2,028.43 from Wright, Kay & Co., Detroit, Mich. He wrote Manager Moyer that he would be in Lancaster about Jan. 8 to make settlement, but went to Brazil instead. On cross-examination Moyer stated that Baker's contract expired Dec. 31, 1902, but that the company had a verbal contract with him on the old terms. He admitted that the new contract did not restrict Baker's territory.

Of the goods taken from the Non-Retailing Co. all but several thousand dollars' worth of the jewelry and $1,500, which Baker had when arrested at Rio Janeiro, have been recovered.

Jewelry Thieves Escape From Prison at Tampa, Fla.

TAMPA, Fla., March 4.—Geo. Lawrence and Laird Penn, two professional thieves, who were captured by the police on the charge of stealing $3,000 worth of diamonds from the jewelry store of H. E. Adams, 506 Franklin St., have broken out of jail in this city and escaped to the woods, where officers are at present hunting for them.

The men made an opening in the roof of the jail with a pocketknife or some small instrument, and after getting out stole a wagon, in which they rode several miles from the city. It is believed that the robbers had accomplices, who assisted them in their escape.

Chas. L. Huntington Files Voluntary Petition in Bankruptcy.

PORTLAND, Me., March 4.—Chas. L. Huntington, a jeweler of Blanchard, has filed a voluntary petition in bankruptcy in the United States District Court in this city.

The schedules filed with his petition show liabilities of $2,865.59 and assets of $558.31.

Hearing on Bill Against Trading Stamps in Massachusetts Legislature.

BOSTON, Mass., March 7.—There was an important hearing Thursday before the Judiciary Committee of the State Legislature on the petition for prohibition of the use of trading stamps. The bill pending before the legislators reads as follows:

It shall be unlawful for any person to sell or offer for sale any article or merchandise of any description whatsoever with a promise, express or implied, to give or deliver, or in any manner hold out a promise to give or deliver, any ticket, check, metal or paper stamp, or other written or printed promise or assurance, express or implied, with the said ticket, check, or metal or paper stamp, or written or printed promise or assurance, used in payment or purchase of or exchange for any other articles of merchandise for any other person or corporation. It shall be unlawful for any merchant or manufacturer to place tickets or coupons in packages of goods sold or manufactured by him, said tickets or coupons to be redeemed by such merchant or manufacturer either in money or merchandise, whether such packages are sold directly to the consumer or to retail merchants; nor shall it be lawful for any person to give out with such package tickets or coupons so given out by such merchant or manufacturer. Any person violating the provisions of this act shall be guilty of a misdemeanor, and shall be punished by a fine of not more than $1,000 or be imprisoned in jail not exceeding six months, or both, in the discretion of the justice or the jury trying the same.

That the trading stamp people are taking the matter somewhat seriously is evidenced by the fact that eminent counsel is engaged. There are plenty of advocates of the bill among the smaller competitors of the trading stamp coterie.

Installment Jewelry Dealer Fined for Contempt of Court.

Adolph Teitlebaum, an installment jewelry dealer, of the East Side of New York, was fined $150 Friday for contempt of court by Justice Andrews, of the New York Supreme Court. The circumstances leading up to the fine occurred during the trial of the action brought against Teitlebaum for $1,000 damages for false arrest by Antonio Cappola, one of Teitlebaum's customers.

Teitlebaum obtained a judgment against Cappola, May 8, 1902, for $11.49, and on the latter's failure to pay that amount had him sent to Ludlow St. Jail. Cappola declared that he owed Teitlebaum only 50 cents as a balance, having paid the rest, but he finally paid the judgment on protest in order to obtain his freedom. He then brought an action asking for damages for false arrest and imprisonment.

When the action came up for trial Thursday the paper contract on which the plaintiff rested his case, mysteriously disappeared from a table on which it had been laid. Justice Scott took a recess of the court for five minutes and ordered that the paper be restored in that time. The paper could not be found, however, and when the recess was over the Justice said he was satisfied that Teitlebaum was responsible for its disappearance, and at the close of the trial imposed the $150 fine. In addition to this the jury found a verdict of $275 against Teitlebaum for the false arrest of Cappola.

Teitlebaum is alleged to have sent a large number of persons to Ludlow St. Jail for failure to pay judgments he had obtained against them for the non-payment of goods purchased on installments.

W. F. Main Asks Appointment of Receiver for the Western Mfg. Co.

MINNEAPOLIS, Minn., March 4.—Proceedings have been begun in this city by W. F. Main for the purpose of obtaining a temporary receiver of the Western Mfg. Co., or the Twin City Jewelry Co., which is said to be a partnership, composed of W. F. & F. A. Roebuck. The plaintiff also asks a restraining order, preventing the Messrs. Roebuck from converting the assets of the concern before the hearing upon the application for the receiver takes place.

In the complaint Mr. Main alleges that the firm of Roebuck & Roebuck has assets of $100,000, but is deeply in debt to various persons, mainly to the plaintiff. He further alleges that under a special agreement between the parties to the action an expert accountant was engaged to go through the books, but before he was half through with his work he was ejected by the defendants Mr. Main alleges that the defendants are converting assets to their own personal use, and therefore asks for a receiver.

Judge Elliott has issued an order to show cause why a receiver should not be appointed.

ONEIDA COMMUNITY, Niagara Falls, N. Y.

Providence.

E. C. Ostby, of the Ostby & Barton Co., is enjoying a trip in the south.

After a trip to Jamaica Charles F. Irons, of the firm of Irons & Russell, has returned to this city. He was greatly benefited by the outing.

Notice of the dissolution of the firm of Allen & Jonassohn has been issued. Mr. Allen will continue in business at the present office of the firm in this city.

In the Manufacturers' Tournament, the bowling team representing the George W. Dover Co. is at the head of the list. The Ostby & Barton team has not been so successful and is next to the last in the list.

Echoes of the last banquet are appearing in the form of the questions, "Is that your hat?" "Have you got my hat?" and similar queries. There appears to have been something of a mix-up at the close of the banquet and various pieces of headgear went to the wrong parties. That more instances of this kind did not occur is rather remarkable in view of the number present.

A fire at the plant of the American Enamel Co., on Nevelle St., threatened to do considerable damage last Friday afternoon. The prompt work of the employes of the concern, however, checked the progress of the flames and the loss was comparatively slight. Water found its way down into the stockroom, and damage there will probably reach $500. This is covered by insurance.

A meeting of the creditors of Gladding & Coombs Bros. was held Thursday in the office of Referee in Bankruptcy Chester W. Barrows. The trustee, Benjamin F. Chester, was present and offered a petition asking for permission to sell the assets of the concern, valued at $7,127.67. The necessary authority was given. As a result the plant of the concern, at 100 Stewart St., will be sold at public auction next Monday at 10 A. M. The firm was adjudged to be bankrupt Feb. 7.

Claiming that he was injured as the result of the defendant's negligence, William E. McAllister has brought suit for $3,000 damages against Julius Eichenberg. The plaintiff was operating a drop-stamping machine in the jewelry shop of the defendant Nov. 13, 1902. McAllister claims that the adjusting rod on the side of the machine broke owing to some defect and the drop fell, crushing his left hand so badly that amputation of the forefinger was necessary. He therefore brings suit for the amount stated.

William H. Luther, who is one of the Police Commissioners of Providence, has brought a petition for a writ of mandamus in the Appellate Division of the Supreme Court, asking that the City Auditor and City Clerk be compelled to take the necessary steps to enable him to draw his salary as Police Commissioner for the month of February. The Democrats raised some question as to the legality of Mr. Luther's appointment, and the City Auditor declined to authorize the payment of the salary until the question is settled. A ruling of the Supreme Court will now be in order.

Rose Dagostino, of North Providence, has brought suit for $3,000 damages against the C. F. Adams Co., of this city. She claims that employes of the company came to her house Dec. 12, 1902, and, claiming that she had a clock there belonging to the firm in question, carried away a timepiece, in spite of her protestations that the clock did not belong to the concern. She alleges that the employes of the company treated her in a rough fashion. Several days after the visit, the plaintiff claims, the clock was brought back. She now brings suit for the suffering that she claims was inflicted upon her.

Since the Board of Trade has been converted into the Chamber of Commerce and the list of members has been swelled by the addition of many manufacturing jewelers and others whose interests are closely allied with the jewelry industry, much more attention has been paid by this representative body of business men to the interests of the jewelry trade. The Chamber of Commerce intends to erect a new building, and has under consideration a plan to have the Manufacturing Jewelers' Board of Trade merge its interests with those of the Chamber of Commerce without in any way losing its own individuality. At the last meeting of the Chamber of Commerce a number of jewelers were admitted to membership.

The Roger Williams Silver Co. won the suit that was brought against it by the Washington Real Estate Co. for money which the plaintiff company asserted was due for two months' rent. The real estate company asserted that $120 should be paid them for rent accumulated after the defend-

Sterling Silverware.

The Roger Williams Silver Co. is located in a city where one-third of the Sterling Silver goods manufactured in this country is made. Our new works are equipped with modern facilities and skilled workmen, the equal of any silver manufactory in the country.

Our productions are carried in stock by jewelers in all principal cities, which fact proves our lines are meeting the demands of the trade and gaining recognition. Our new goods for the spring season are nearly completed. They comprise many original and novel ideas.

For Easter we have a line of hand made Vases, no duplicates, also full line of candlesticks.

Our New York Office and traveling representatives carry a full line of samples for your inspection.

Roger Williams Silver Co.

Salesroom,
860 Broadway, New York.

TRADE MARK.

Factory,
101 Sabin Street,
Providence, R. I.

ant company left the shop hired on a notice for a monthly hiring only. The silver company denied any liability for such rent accrued on the assumption of a yearly rental, it having been the successor of the Howard Sterling Co., on a monthly tenancy. The defendant claimed that it gave due notice of the intention to quit the building and denied that it was under obligation to give three months' notice. The matter was threshed out before Judge Wilbur and a jury in the Common Pleas Division of the Supreme Court, with the result that the jury brought in a verdict for the silver company.

The funeral of William Kerr, the veteran watchmaker, who died Feb. 28, was held at 2 o'clock Wednesday afternoon from his late home, 29 Spring St. Rev. S. A. Blaisdell conducted the services, which were simple. The attendance at the funeral was large, including, besides the immediate relatives and friends of the deceased, those who had met him in a business way and many of his associates in the industry with which he had been connected since early manhood. There were a number of members of St. George Lodge, No. 14, K. of P., present also. The floral remembrances were numerous. At the conclusion of the services the remains were conveyed to the Riverside Cemetery for interment.

Attleboro.

The Dunbar, Leach, Garner Co. is planning to increase the floor space of its factory.

A suit at law between the Frank Mossberg Co. and William H. Webster was brought before the Court at Taunton Monday.

Attleboro's public spirited men talk of trying to induce Scofield, Melcher & Scofield, of Plainville, to remove their plant to this town.

Leavitt Bros. were the hosts of a merry party at the home of A. L. Leavitt, of the firm, last week. All the working force was given a reception, to add to the cordial relations which now exist between employers and employes.

The police of this section have undertaken to locate Clarence A. Skinner, who mysteriously disappeared a little over a week ago. He is one of the two brothers who were recently released after serving time for the wholesale robbery of the shops of W. H. Wilmarth & Co., P. J. Cummings & Co., and other concerns, in which they were caught red handed by the police.

Lemuel W. Teed, of Teed, Crandall & Co., stated Saturday that negotiations were on foot between the house and the Taunton Board of Trade for the removal of the entire establishment to that city. He added that no definite decision had been reached, and that newspaper reports which called it settled, gave the location and dimensions of the new factory, and told the deal made between house and Board, were wholly fictitious. Mr. Teed did not deny that the house would look favorably upon the plan, provided the Board would make good the offer it originally made.

In a recount of contested votes cast at the recent town meeting it was found that J. Thomas Inman, of J. T. Inman & Co.,

How often have you been told "Just as good"

when looking at other makes of **Chafing Dishes** and **Metal Wares** in general? Some manufacturers claim to make solid copper goods, which are in fact, made of brass, with soft metal trimmings and iron legs. Not one of these three metals will give satisfactory results in an article like a chafing dish, kettle, etc.

It would seem sometimes as though the idea existed with some manufacturers that the public was a great body of money-owning, ignorant people, who would be cajoled and hoodwinked out of their money by whoever could play the shrewdest and sharpest tricks with them.

An ideal store will not stoop to this deception. It will practice no methods to deceive or mislead its customers, and therefore, for the protection of this class of store, we wish them to look for this trade-mark

which is stamped on all of our goods. Our goods are all made of the most carefully selected material, and the greatest care and skill are exercised in their production. All articles manufactured by us are guaranteed, and bear our trade-mark. You have heard the claim: "As good as Sternau's," but have you ever seen "as good"?

Our Supplement No. 18 will interest you.

Shall we send it?

S. Sternau & Co.,

Manufacturers of Everything in Metal Wares,

Factory: Brooklyn, N. Y.

204 CHURCH STREET, Cor. Thomas, New York.

who had been declared elected to a place on the school board, was not so elected, and in his place belonged one of the candidates who was first announced as defeated, Benjamin P. King, with A. Bushee & Co. Albert M. Everett, a retired manufacturer, was found to have been elected Overseer of the Poor.

The Poole Silver Co., Taunton, will add another story to its main building on Whittenton St., and the plans for the addition are now in the hands of the architect. The roof will be raised and the extra story will give over 5,000 square feet floor space.

At the last town meeting it was voted to place a fire alarm box at the new factory of H. M. Williams Co. Sidney O. Bigney entered a protest about the condition of the river which flows back of his factory. He was appointed head of a committee of five to bring in data on a costly scheme of improvement which he suggested. Another matter at the meeting was the acceptance with the thanks of the town of a beautiful grove from Joseph M. Bates, of Bates & Bacon, and Clarence L. Watson, of the Watson & Newell Co., as an addition to the town's fine park reservation.

Plainville.

Charles A. Whiting has been spending a few days in town.

W. F. Maintien, of Maintien Bros. & Elliott, will probably be re-elected as Selectman.

Mr. and Mrs. Woodbury Melcher have gone south and will be away from home about a month.

North Attleboro.

TRADE CONDITIONS.

The usual Spring decrease in the number and size of orders received by local jewelers has begun to be felt, and some of the shops have started on a short schedule. New samples are being sent out on the road and a big business is looked for as soon as the traveling men get out among the trade.

Mr. Payson has left for the west in the interests of the Falls Mfg. Co.

Alpin Chisholm, of the Bugbee & Niles Co., has left for a western trip.

Charles Peckham, salesman for John H. Peckham & Co., has left for the west.

Edwin H. Cummings has left for the road in the interests of J. F. Sturdy's Sons.

Wallace G. Franklin, of E. I. Franklin & Co., is the nominee of the Republican party for Town Auditor.

John H. Peckham is again a candidate for the office of Selectman. He retired from office two years ago.

Harry E. Hull, of W. H. Bell & Co., is seriously considering a trip to Florida for the benefit of his health.

Donald Le Stage has left for the west with a new line of samples from the factory of H. D. Merritt & Co.

Alfred Sweet, New York representative for J. F. Sturdy's Sons, has returned to the metropolis after a visit in town.

A letter received from Henry F. Barrows, of H. F. Barrows & Co., states that he has left New York for the south and will stay in a warmer climate for some weeks.

Arthur Precourst, an employe of the O. M. Draper Est., was badly hurt last week while at work at a lathe in which he was using a circular saw. His arm touched the saw, severing an artery.

A. H. Bliss has about decided to build a large addition to his large brick factory on Chestnut St. His chain business is increasing and tenants of the building are also desirous of getting more room.

John Irving has retired from the position of foreman for Frank M. Whiting & Co. after six years' service, and will go to Colorado. Last week he was presented with a gold chain and charm by his comrades in the factory. Joseph Schmadl will take Mr. Irving's place.

The name of Attleton has caught more people than any other that has yet been suggested for the town to take if it votes to make a change. It retains the characteristic part of the name which has made jewelry famous and yet gives a better and more euphonious combination than Attleboro. Attleboro Falls is now associated with Attleboro by strangers, who do not realize that it is a part of North Attleboro. Attleton Falls would leave no room for doubt in the matter.

Close upon the heels of the Paye & Baker Mfg. Co., which recently moved to this town from Providence, comes the Providence Brush Co., which has purchased the business of the Thomas Scott brush factory. Messrs. Slocum and Poland, who own the Providence brush works, have decided to remove the greater part of their plant to this town and will do all the mechanical work here. They have procured quarters at the Cargill building on Chestnut St. and will equip the new plant at once. They employ about 40 hands in the busy season and will manufacture all kinds of brushes used in the jewelry trade.

Newark.

The International Jewelry Workers' Union, No. 2, will meet hereafter at 48 William St., instead of at Lyric Hall.

The annual masquerade ball of Local No. 2 of the International Jewelry Workers' Union was held last week at the Colosseum, in Springfield Ave. There were more than 260 couples present, including a delegation from Local No. 1, of New York.

William Cook and William Miller, two furniture movers, were arrested Wednesday, charged with the larceny of 50 gold rings, valued at $100, belonging to Alexander Demarch, a jewelry agent, living at 512 S. 14th St. They were held in $500 bail each for the Grand Jury.

Irving Wyatt, a salesman in the employ of the C. D. Pond Mfg. Co., jewelry manufacturers, was arrested last week at his home, 569 N. 4th St., on a charge of embezzling $132.75 worth of jewelry from the company. Wyatt is alleged to have made false sales from Feb. 5 to March 2, of this year, while in the employ of the company.

The Keystone spectacle soldering block for repairing broken spectacles, is a practical tool for practical workmen. It is claimed that with this block a broken bridge can be soldered or a new one of any size or shape can be put on in less than a minute. It will be found described in the advertisement of the Keystone Mfg. Co., Lancaster, Pa.

The movement shop of the Seth Thomas Clock Co., Thomaston, was obliged to close down for a few days last week owing to inadequate boilers.

F. D. Green, at one time president of the Milford Silver Co., died recently in Brooklyn, N. Y., after a lingering illness. He is survived by his wife, two sons and a daughter.

Rev. and Mrs. Geo. L. White, of Bristol, recently celebrated the 50th anniversary of their marriage at the home of their daughter, Mrs. Thomas B. Steele. Rev. Mr. White several years ago was connected with the E. N. Welch Mfg. Co., now the Sessions Clock Co., Forestville, and afterwards with the E. Ingraham Co., Bristol.

G. A. R. Department Commander N. Burton Rogers, New Haven, last Wednesday night attended a camp fire in New Milford, which was given in his honor. He will go to Winsted March 16 with his staff, where he will attend another camp fire. The State encampment will be held in Danbury May 6 and 7, when Department Commander Rogers's term of office will expire and his successor will be elected.

Grover Robbie, the boy who stole several hundred dollars worth of dies from the New Haven Clock Co.'s factory, where he had been employed, and subsequently sold them to a junk dealer for a few cents, was arraigned in the New Haven City Court March 5, and, on pleading guilty to two charges of theft made against him, was bound over to the Supreme Court under bonds of $200 in each case. The charge of theft against Solomon Bostwick, who purchased some of the dies, was *nolle prossed*.

W. H. Gaines, formerly of Waterbury, but more recently superintendent of factory "H" of the Wm. Rogers Mfg. Co., Hartford, has succeeded Arthur Rogers as superintendent of the factory of C. Rogers & Bros., Meriden. This is the result of a deal by which the Wm. Rogers Mfg. Co. leases the flatware department of C. Rogers & Bros. George D. Munson, of Wallingford, will be general manager of the concern, succeeding Vice-President George H. Wilcox, of the International Silver Co., in that position.

The following concerns were before the Committee of Incorporations in Hartford last Wednesday afternoon, in opposition to the bill for the incorporation of the Cheshire Water Co.: G. I. Mix & Co.,

A LARGE ASSORTMENT OF DIAMOND MOUNTED JEWELRY CARRIED IN STOCK.

Chas. Parker Co., the Jennings & Griffin Co., the R. Wallace & Sons Mfg. Co., and the Watrous Mfg. Co. Attorney H. G. King, of Meriden, also appeared in opposition to the measure, in behalf of the G. I. Mix Co., and conducted a hearing for the opposition. He said his clients were strongly opposed to the taking of Honey Pot Brook and Ten Mile River by the Cheshire Co., on the ground that the result would too seriously diminish the flow in the Quinnipiac River, causing serious loss and affecting the interests of several manufacturing concerns on that river

C. B. Rogers, former president of C. Rogers & Bros., Meriden, left yesterday morning for the Bahama Islands in company with his wife.

F. R. Collins, the Canaan jeweler who was burned out last week, has secured temporary quarters in the store of G. L. Parsons & Sons, of that place.

President Walter Camp, of the New Haven Clock Co., made one of the chief addresses in answer to the toast "Athletics," at the annual banquet of the Yale News Editors, held March 5.

The International Silver Co. has awarded the contract for erecting factory "M", at Wallingford. The new building will be 50x100 feet, two and one half stories high, and will cost about $10,000.

F. R. Collins's jewelry store, Canaan, last week was included in the number of buildings destroyed in a large fire supposed to have been started by burglars. The contents of the safe were not touched.

Wm. E. Sessions, president of the Sessions Clock Co., Forestville, is listed as one of the speakers for the second annual banquet of the Business Men's Association, which will be held shortly in the Armory building at Bristol.

An impostor is making the rounds of Connecticut claiming to represent Henry Kohn & Sons, Hartford, and the latter desire to warn the trade against him. The man makes a specialty of selling knives and forks, and asserts that the firm which he represents is going out of business.

Paul Mendelssohn, the policeman who was murdered in Forest Park last Sunday night by masked men had been for many years in the employ of the Waterbury Clock Co. The murdered man belonged to the Knights of Pythias, and was highly esteemed by the members of that fraternity.

The attention of the State Legislative Committee on Cities and Boroughs, during its two sessions last Saturday, was devoted to a consideration of House Petition No. 84, amending the charter of the city of New Britain so as to allow it to extend its water system by establishing reservoirs in the towns of Bristol and Burlington. The Sessions Clock Co. and the Bristol Brass & Clock Co. are strongly opposed to any project which would divert the water from the village.

The bids for the purchase of the property belonging to W. A. Kendrick, of Wallingford, were to have been opened in New Haven this morning at the office of Referee Newton, but the matter went over for a week. The petitioner has made an offer to settle with creditors for 40 cents on the dollar. If the offer is accepted the bankruptcy proceedings will be dropped.

Boston.

D. C. Percival, Jr., treasurer of the corporation of D. C. Percival & Co., left Thursday for a two weeks' trip to Atlantic City, which may include a visit to Virginia. Mr. Percival is accompanied by his wife.

R. D. Gordon, of Gordon & Burgin, who was obliged to postpone his intended trip to Jamaica by reason of illness, has so far recovered that he expects to sail from Boston to-day. Mr. Gordon will be accompanied by his wife.

"Ed" Cole started on the road Monday for D. C. Percival & Co. Mr. Cole is well known throughout New England, having been for 13 years with H. A. Osgood & Son, Lewiston, Me. He was also for a short time with Smith, Patterson & Co.

Charles H. Pearson, the clock manufacturer, who was a candidate for nomination as selectman in Brookline, did not win out in the caucus last week, but will be a candidate at the polls, having received nomination paper indorsements.

In the United States Bankruptcy Court, Boston, Wednesday, a voluntary bankruptcy petition of Samuel P. Lee, said to be a jeweler, of Mansfield, Mass., was filed. According to the schedule the total liabilities are given as $1,124, and the total assets, $300.

John S. Dall was found dead recently in his store, 2775 Washington St. He left home in the morning apparently in his usual health. His son called at the store, to find him sitting dead in a chair. Heart failure is given as the cause. Mr. Dall was about 68 years of age. He was born in Vonsil, Denmark, and came to this country when a young man.

The Arts and Crafts Society opened an exhibition March 3 in the town of Brookline, under the auspices of the Brookline Education Society, which will continue through the month of March. The displays of hammered silver, gold, enamel, bronze and other metal work and jewelry, as in all the exhibits of the society, are the most interesting features.

The first meeting of creditors of Edmund H. Miller, 102 Court St., notice of the filing of whose bankruptcy petition appeared in THE CIRCULAR-WEEKLY recently, will be held in Room 121, Post Office building, at 10 A. M. to-morrow, at which time creditors may attend, prove their claims, appoint a trustee, examine the bankrupt, and transact such other business as may properly come before said meeting.

James S. Blake, a prominent jeweler, who holds high rank in the Masonic fraternity, and is Illustrious Potentate of the Mystic Shriners in Boston, officiated at the big gathering of "nobles" of the order in Symphony Hall, Thursday. At this session an official jewel for Mr. Blake was authorized, and a committee was appointed to procure it for presentation to him.

J. Smith, Papillion, Neb., and a woman supposed to be his wife, were arrested last week on the accusation of a man from Lincoln, Neb., who alleges that the woman was married to him. The woman was always supposed to be the wife of Mr. Smith by the people of Papillion during the eight months he has been at that place.

Workmen in the Factory of Ciner & Seeleman Go on Strike.

The 35 employes of Ciner & Seeleman, manufacturers of diamond mountings at 87 Maiden Lane, New York, went out on strike last week and refused to come back. Their demand is considered very arbitrary by the firm, who say the men are fighting on a technicality rather than on a real grievance.

The first demand of the workmen was for an hour for lunch at noontime instead of half an hour. This time was granted by the concern, but the employes then insisted that they should work until 5.30, as they did not wish to lose any time. This was finally allowed by the concern. The strikers then asked to close at 5 o'clock, as usual, but wanted to get down 30 minutes earlier in the morning. The concern finally consented to allow that schedule.

Then it was, according to the firm, that the strikers became even more arbitrary, and stated that before they would come back to work under any condition the concern must pay $1,000 fine to the International Jewelry Workers' Union for refusal to comply with their demands in the first place. The jewelers absolutely refused to do this and the men left the factory.

Ciner & Seeleman are now thoroughly decided to grant the strikers no further concessions. A member of the firm was seen Monday by a CIRCULAR-WEEKLY reporter, and he said that he thought it was time that a manufacturing jeweler had a few rights of his own. "I did not know that I had any union men in my factory," he said, "or that by a refusal to immediately grant whatever was asked from me by my employes I was making myself liable to a fine, but since there were union men in my shop and I am found guilty of the great injustice of refusing to pay whatever is asked from me, the present condition remains. It may continue to remain as far as I am concerned until the strikers conclude to come back of their own accord, or until I am able to obtain more men to run the shop."

OUR TRAVELING Representatives

Traveling representatives may consider these columns open for the publication of any news or items of interest regarding themselves or their confreres.

The following representatives of eastern houses were in Minneapolis and St. Paul, Minn., last week: F. L. Pettee, Waterbury Clock Co.; representative of Bates & Bacon; Mr. Somborn, Albert Berger & Co.; F. C. Somes, S. O. Bigney & Co.; F. E. Hyatt and L. Levy, Philadelphia Watch Case Co.; F. C. Shinn, Charles L. Trout & Co.; B. Kaufman, Fred Kaufman; Mr. Weiser, Heintz Bros.

Among the traveling men now visiting the trade in San Francisco, Cal., are: Sol Kaiser, Byron L. Strasburger & Co.; Mr. Davidson, Wallach & Schiele.

The traveling representatives who visited Denver, Col., during the past week, included: L. M. Levy, Philadelphia Watch Case Co.; George L. Field, Keystone Watch Case Co.

Among the traveling representatives who visited New Orleans, La., during the past week, were: E. A. Schwartz, James M. Cohen; Leon Abeles, C. P. Goldsmith & Co.; Oscar S. Schmidt, Aikin, Lambert & Co.; William Fenton, Jr.; William L. Gilbert Clock Co.; R. L. Seely, Moore & Son.

Eastern representatives in Chicago, during the past week, included: Mr. Kent, S. B. Champlin & Co.; F. C. Somes, S. O. Bigney & Co.; Frank W. Collom, J. J. White & Co.; Mr. Parks, T. Quayle & Co.; E. Anbry, Henry Lederer & Bro.; George C. Booth, Engelfried & Weidmann; "Archie" Sherrard, Enos Richardson & Co.

Among the traveling men who, recently, visited Portland, Ore., were: Fred S. Davis, Wordman Bros.; Mr. Carpenter, Frank M. Whiting & Co.; Alfred Lowenthal; W. R. Hammond, Merrill Bros. & Co.; M. S. Schimmel, Sussfeld, Lorsch & Co.; A. W. Rothschild, Rothschild Bros.; I. Ettinger, Gattle, Ettinger & Hammel; A. Mix, Charles L. Trout & Co.

Traveling representatives of eastern firms calling on the Columbus, O., trade, during the past week, were: Ben S. Loeb, American Cutlery Co.; M. Kuhr, Herman Scheuer; K. D. Yeaton, S. Sternau & Co.; J. Carpenter, Horton, Angell Co.; George Marks, William Demuth & Co.; Artbur L. Fuller, Towle Mfg. Co.; H. L. Greenbank, Clemens Oskamp Co.

The trade in Lancaster, Pa., was visited, last week, by the following: H. Delerson, Sohn & Hyman; C. W. H. Sillcocks, Whitehead & Hoag Co.; Mr. Roggenberg, H. B. Sommers & Co.; C. B. Grey, Shafer & Douglas; Louis Berger, American Watch Case Co.; A. N. Ticberon, C. F. Rumpp & Sons; J. Arthur Cope, International Silver Co.; Mr. Sylvia, New Haven Clock Co.; E. Ball, Woodside Sterling Co.

Traveling representatives in Indianapolis, Ind., last week, included: H. C. Cobb, Daggett & Clap Co.; Frank Morse, H. L. Greene & Co.; Frank W. Collom, J. J. White & Co.; W. R. Boss, Hutchison & Huestis; A. I. Mayer, Hirsh & Hyman; William Bosselman, T. Quayle & Co.; Mr. Qvarnstrom, Carter, Qvarnstrom & Remington; Mr. Kramer, John T. Mauran Mfg. Co.; George H. Remington, Maintien Bros. & Elliot.

The following traveling mer. visited the Albany, N. Y., trade, during tbe past week. Harry Slater, Cbampenois & Co.; George Osborne, William Smith & Co.; Mr. Zimmern, Zimmern, Rees & Co.; R. T. Supple, Wm. B. Durgin Co.; O. Krause, Arthur W. Ware & Co.; Fred W. Carpenter, D. Gruen Sons & Co.; C. E. Hunt, William B. Kerr & Co.; E. Cooper Stone, Jones & Woodland; R. G. Toffey, Mauser Mfg. Co.; William Davidson, Harrison Bros.; George H. Sylvia, Pairpoint Corporation; H. Allyn Parker, Gebhardt & Parker.

Representatives who visited Pittsburgh, Pa., last week, were: G. C. Hudson, G. C. Hudson & Co.; Harry Kenyon, Parks Bros. & Rogers; D. E. Hydecker, L. Frackman; Christopher Morgan, Rogers & Bro.; William W. Middlebrook, B. A. Ballou & Co.; J. Carpenter, Horton, Angell Co.; W. R. Ross, Hutchison & Huestis; William Bosselman, T. Quayle & Co.; W. T. Sberman, S. K. Merrill & Co.; Mr. Smeet, Waite, Mathewson & Co.; E. L. Mumford, W. H. Bell & Co.; Charles Pemb, Jules Racine & Co.

Syracuse, N. Y., jewelers were visited by the following representatives of wholesale bouses, during tbe past week: William Matschke, F. & F. Felger and A. Joralemon & Sons; G. B. Osborn, William Smith & Co.; E. Cooper Stone, Jones & Woodland; C. S. Fake, Wbiting Mfg. Co.; H. E. Slater, Champenois & Co.; Max L. Jacoby, Manchester Mfg. Co.; Mr. Platt, Theodore W. Foster & Bro. Co.; George C. Booth, Engelfried & Weidmann; W. O. Thiery, Illinois Watch Case Co.; S. D. Klein, Klein Bros.; Izri W. Lederer, S. & B. Lederer Co.; A. M. Shepard, F. H. Noble & Co.; P. A. Wilkinson, J. J. Sommer & Co.; R. T. Supple, Wm. B. Durgin Co.; tbe Fairchild & Johnson Co.'s representative.

The following traveling representatives of eastern jewelry houses visited Kansas City, Mo, last week: W. Sumner Blackinton, W. & S. Blackinton Co.; H. W. Raymond, Fred C. Steinmann & Co.; Joseph S. Frank, Sussfeld, Lorsch & Co.; A. M. Stevens, Enos Richardson & Co.; W. F. Adams, Simpson, Hall, Miller & Co.; Frank Schonred, Deitsch Bros.; A. W. Ware, Arthur W. Ware & Co.; M. Klipper, Hipp. Didisheim & Bro.; H. M. Rogers, Wm. A. Rogers, Ltd.; Lawrence H. Smith, Bippart, Griscom & Osborn; Mr. Smith, Mikael Samuel & Co.; I. R. Theto, B. H. Davis & Co.; Mr. Wittnauer, A. Wittnauer; E. E. Field, Keystone Watch Case Co.; John F. Garland, Keller Jewelry Mfg. Co.; William T. Smith, Wilcox Silver Plate Co.; C. W. Battey, Scofield, Battey & Co.

N. W. Reynolds has sold his jewelry business at Peterson, Ia., to K. E. Smith.

W. J. Moore has discontinued business in New Lewisville, Ark.

Law Not Violated.

Magistrate Barlow Decides that the Word "SterlinE" Is Not Covered By the New York Silver Law.

Magistrate Barlow, in the Centre St. Police Court, New York, rendered an oral decision Wednesday, dismissing the case under the New York Silver Stamping Law begun by Newton Dexter against the Siegel-Cooper Co., of New York, the first week in January, but subsequently transferred to the James E. Blake Co., Attleboro, Mass. Magistrate Barlow said that after a thorough examination of the briefs submitted to him by the attorneys on both sides, and after considerable thought on the matter, he had come to the conclusion that the complainant had no case, and he must, therefore, refuse to receive the complaint. He would recommend, however, that the law under which the charges were brought be changed or amended so as to cover the point in dispute.

The proceedings in question were begun to test the legitimate use of the word "SterlinE" on a metal which did not assay .925 pure silver. The makers of the metal were the James E. Blake Co., and this concern was charged with a violation of Section 364A of the Penal Code, which is the first clause in the Silver Stamping Law. The word "SterlinE" had been registered as a trade-mark by the manufacturers, and it is claimed by them that its use on metal of the alloy already mentioned was not a violation of New York laws.

The facts that the goods were made and stamped as already described were admitted by Dill & Baldwin, attorneys for the defendants. This admission was put into writing and presented to Magistrate Barlow. He thereupon said that if the attorneys for both sides would submit briefs he would look them over and render a decision. Those briefs were presented to him Feb. 19.

G. T. Donnell, of Donnell & Smith, attorneys for Mr. Dexter, the complainant, contended in his brief that both to the eye and ear the word "SterlinE" is substantially identical with the word prohibited by statute, and argued that only the most careful scrutiny would reveal the fact that the final letter of the word engraved upon the metal in the case was an "E," and not a "G." "An average eye," says the brief, "noting the stamp would unquestionably fail to perceive the variation. The individual letters are so diminutive that the eye does not attempt to trace the contour on each of them. The general effect of the combined letters as they collectively strike the vision is the similarity that the label on the box is "Sterling." What the eye fails to perceive with accuracy, the mind through the process of association and inference supplies. It connects the symbol which it assists with the symbol which custom has made familiar, and the inference is unhesitatingly drawn that the stamp is "Sterling." It cannot be claimed that if "Sterling" is engraved in almost microscopic letters upon silverware that by some flaw in one of the letters the penalty provided by the statute may be avoided. The question is whether this particular stamp made in this particular clearness would or would not be by the average eye as identical with "Sterling."

The brief submitted by the defendant's counsel is divided into four distinct parts and argues each part to the conclusion that the word "SterlinE" is not in this instance a violation of the law.

The attorney contended (1) that to offend against Section 364A it is necessary both that the article be marked "Sterling" or "Sterling silver," and indicate by this marking that the article is .925 parts pure silver; (2) that the defendant has not used a word indicating that the article contains to statutory amount of pure silver; that the word "SterlinE" is spelled with a final "E" as large as the "S." and that this spelling is stamped on the article itself, on a small card, which is placed within the article, and on the box in which it comes in large letters; (3) that the use of the word "SterlinE" is not prohibited by the statute forbidding the word "Sterling," and that an act to be criminal must be within the strict terms of the statute; that the ordinary purchaser would not be defrauded by the use of words so similar to "Sterling," but even should we admit that these words are similar, the proceedings must be dismissed, as criminal statutes are inelastic and cannot be extended to cover cases not within the letter of the law, and there can be no constructive violation of a penal statute." This reasoning is substantially backed up by extensive citations incorporated in the brief.

In concluding the brief states that to be a violation in this case there must be a use of the word *"Sterling,"* indicating that the article on which it is stamped contains a certain quality of pure silver. "SterlinE" is not "Sterling," and a statute prohibiting the use of the word "Sterling" except on articles of a certain quality does not forbid the use of "SterlinE" on anything. No one ever has or ever will be defrauded by such similarity, so that if the spirit of the law be to prevent fraud on purchasers, not even the spirit of the law is violated. The Legislature, after enumerating and prohibiting the use of only words that do employ such quality, has prohibited the use of no other words employing the same thing. Certainly the use of the present word is not within the statute, and the proceedings should be dismissed.

Magistrate Barlow's decision makes it improbable that further legal action in the matter will be taken, but it is possible that Mr. Dexter may go to Albany to secure an amendment to the law which covers the points under consideration in this case.

Arthur M. Felson's Stock To Be Sold at Auction by Trustee.

UTICA, N. Y., March 10.—Mr. Lee, trustee in bankruptcy for Arthur M. Felson, of Gouverneur, N. Y., who failed, Feb. 1, for about $40,000, has rejected all sealed bids received for the purchase of Felson's stock and fixtures, under the right reserved in advertising for bids. The bids received have not been given out.

Trustee Lee will sell Mr. Felson's stock and fixtures at public auction Thursday, March 12, at 11 o'clock. The sale will take place at Gouverneur and will be subject to the approval of the court.

James Wiseman has discontinued his jewelry business in Hamburg, Ark.

Tiffany & Co. Deny They are Interested in Alleged Oregon Diamond Finds.

Newspapers in Portland, Ore., and vicinity are persistent in their reports that diamonds are being found on Crane Creek, which is about 40 miles southeast of Burns. Several newspapers from that section have declared that genuine diamonds are being found, that claims have been staked out and have been prospected, and that Tiffany & Co. have sent experts to the alleged find, who report favorably. The papers also state that Tiffany & Co. have purchased several claims, which are being developed.

Geo. F. Kunz, gem expert for Tiffany & Co., stated emphatically to a CIRCULAR-WEEKLY reporter Friday that Tiffany & Co. had not seen a single so-called diamond specimen from Oregon, that the concern had nobody in that region investigating the rumors current there, and that it was never the policy of the firm to stake out mining claims under any condition.

Personally, Mr. Kunz said, he did not believe that there were any genuine diamonds in that section, and that constant reports in the newspapers to the contrary were either circulated by designing persons, who wished to float some mining stock or bonanza schemes, or were the result of ignorance on the part of those who had examined the mineral purported to be diamonds.

"Quartz in seeming octahedron form, similar to a rough diamond, has been found in that section," said Mr. Kunz, "and it is not unlikely that these small pieces of quartz have been mistaken for diamonds. As to the alleged piece of diamond bearing ground, the size of an egg containing hundreds of diamonds, which the newspapers state have been found, I can only say that the idea is preposterous. Diamonds do not come so plentifully sprinkled in such a small piece of ground."

Death of Max Oppenheimer.

KINGSTON, N. Y., March 5.—Max Oppenheimer, an old jeweler of this city and father of Wolf, Seligmann, Simon and Julius Oppenheimer, of the firm of Oppenheimer Bros., retail jewelers at 578 Broadway, died Tuesday afternoon at his home on Cedar St.

The deceased was 67 years old and had been ill but a short time. He came to this country when a young man, and about 23 years ago, with his sons, established the jewelry business of M. Oppenheimer & Sons, which grew until it became one of the most prominent concerns in this section. The deceased withdrew from the firm Dec. 7, 1897, at which time the partnership dissolved, and the business has since been conducted by the four sons, under the name of Oppenheimer Bros.

Mr. Oppenheimer is survived by two daughters, as well as his sons. The funeral was held to-day at 2 P. M. from the family residence.

L. L. Wertz, Lancaster, Mo., recently lost his entire stock by fire.

Alexander A. Eisler has sold out his jewelry and drug business in Harper, Kan.

Geo. E. Torrey, Vancouver, B. C., is visiting the leading diamond markets in Europe.

The Letter and the Spirit of the Law.

THE failure of the prosecution to make out a case against the manufacturer accused of violating the New York Sterling Law by the use of the word, "SterlinE," as a trade-mark on articles which did not assay 925 parts pure silver, serves to call attention to a fact not thoroughly understood by merchants in general, namely, that criminal statutes are inelastic and cannot be extended to cover cases not within the letter of the law, no matter how much the spirit of the law may have been violated. The particular decision referred to was simply that of a committing magistrate, who refused to hold the accused for the Grand Jury, and, while such a decision will not be an important precedent that will have to be followed by other judges, nevertheless it has served to point out a weak spot in the silver stamping laws of not only New York, but of many other States of the Union—*i. e.*, that only the words "sterling," "coin" or "solid silver" are forbidden to be used on articles which will not assay up to the required standard.

It would, therefore, appear that jewelers and jewelry organizations, who have at heart the desire to see the present sterling laws enforced in spirit as well as letter, should at once make preparations to amend these laws, so as to specifically provide for punishing all acts which they consider should properly come within the meaning of the statutes. To do this will not be an easy task, or one that should be attempted in a hurried manner, as there is danger of constitutional objections to provisions which include too much. In drafting such amendments, and, in fact, in the preparation of all laws of this character, the sponsors of the bill should bear in mind that it is almost impossible to have a court give consideration to what might be termed a constructive violation of a penal statute, particularly when the act provides for the punishment of a special crime not ordinarily known to the common law.

There is no doubt that the sterling laws on the statute books of various States have done great good to the jewelry trade, though they have worked as preventive more than as punitive measures. If the good results of these laws are to continue the laws must be in such shape that they can be rigidly enforced, and for that reason every proceeding, such as the one referred to, which shows the defect in a law or the way it can be remedied, is of advantage to the trade, even though the particular object for which the proceeding was instituted be not obtained.

New Bill to Regulate Sale of Jewelry.

ONE of the most, if not the most, elaborately prepared laws for the regulation of the sale of jewelry and kindred articles that has yet been drafted has been introduced in the Legislature of the State of Michigan, and is now being considered by the Committee on Introduction of the House of Representatives of that State. This bill, of which a copy appears in another column of the present issue of THE CIRCULAR-WEEKLY, differentiates between various kinds of electroplate, combinations of metal, gold and silver of various fineness and imitations of precious metals in a way not heretofore attempted in acts of this character. It meets certain objections made to laws providing that all articles be stamped in a particular manner by making it incumbent upon the manufacturer and seller to attach to the articles of jewelry or optical goods made of the precious metal or imitations thereof, cards or tags, on which shall be legibly printed the name and substance of which the article is made, together with the initials of the manufacturer.

The bill, as already stated, has been prepared with a great deal of care, and appears to be the work of some one conversant with the conditions existing in the jewelry trade. On its face it appears to contain nothing that would injure the honest manufacturer or dealer, while on the other hand it seems to be an act whose passage would greatly help and encourage the legitimate trade of Michigan, as it strikes against dishonest practices upon the public, from which the legitimate jeweler has often suffered.

Jewelers and other merchants of the Empire State who favor the passage of the Rosenstein bill, now under consideration by the New York Legislature, can find much that is interesting and instructive in a perusal of the proposed Michigan law. They can no doubt obtain from this act hints which can be used to advantage in preparing amendments to the Rosenstein bill that will meet the fair and legitimate objections that have been made against the act by many manufacturers and jobbers.

Jewelry Failures in February.

THE commercial failures in the jewelry trade for February just past equal in number and amount the average figures of the month during the past five years. The number of insolvencies among dealers of jewelry and clocks reported for February were 16, with total liabilities of $91,808, or an average of $5,738.

According to the table of failures by branches of business as published in *Dun's Review*, the failures among jewelry and clock dealers in February, 1902, numbered 23, and the aggregate liabilities were $318,-619, while in February, 1901, they numbered 21, with liabilities of $228,247; in 1900 they numbered 12, with liabilities of $65,607, and in 1899 they numbered 16, with liabilities of $71,208.

International Silver Co. To Remove Branches to Wallingford.

WALLINGFORD, Conn., March 9.—During the past 24 hours various rumors have been in circulation regarding the moving of some of the branches of the International Silver Co. to Wallingford from Meriden. The stories were to the effect that the coffin trimming departments of the C. Rogers & Bros.' plant, recently acquired by the International Silver Co., were to be moved here. This morning C. H. Tibbits, manager of factories "L" and "M," International Silver Co., located here, was seen at his office and he verified the story.

Mr. Tibbits said in substance that not only was the coffin trimming business of C. Rogers & Bros. to be moved here but also the same branch now carried on by factory "E," Meriden Britannia Co., would be moved here also. Both branches known as the casket hardware will be located at factory "L" (Simpson, Hall, Miller & Co.) Work is now in progress on the extension of what is known as the press room. The machinery, etc., will be moved here as soon as possible and it is expected that by June 1 all the branches of the casket hardware line will be in full operation at factory "L."

Attempt to Discover Identity of Unknown Man by Means of Marks on His Watch.

WACO, Tex., March 4.—Another attempt to discover the identity of a man by the numbers and marks on his watch is being made in this city, and jewelers throughout the country are asked to aid in the work. Last night the body of an unknown man, about 35 years of age, was found three miles south of the city, and owing to the fact that the deceased had been dead a long time there is no other way of finding out who he is except from the marks inside the watch which he carried.

This watch is an 18 size, seven-jewel Trenton movement, numbered 410384 and is set in an open-face nickel case, made by the Dueber Watch Case Mfg. Co., bearing the number 26170. There is a horse head on the back of the case. Within the case there are the following marks, evidently placed there by jewelers who had the watch in their possession for the purpose of repairing it:

7271 G
S 115
871

Any jeweler who remembers having repaired the watch or seen it at any time will confer a favor upon the people of Waco by notifying Fall & Puckett, undertakers of that city, where the body is now being held.

R. O. Hosse, Wheaton, Ill., has moved his stock into more commodious quarters.

J. C. Worst, Meadville, Pa., badly sprained his left arm and shoulder recently by a fall on an icy pavement.

Last Week's New York Arrivals.

THE CIRCULAR-WEEKLY each day posts in its office a bulletin of the latest buyers visiting New York, which every member of the trade is cordially invited to copy.

For the sum of $10. (payable in advance, a daily list will be mailed or delivered, during the Spring season (ending July 1, 1903, to the offices of those desiring this service.

New York Notes.

A judgment for $254.28 in favor of the City of New York against the American Watchman's Time Detector Co., has been satisfied.

The International Silver Co. has declared a dividend of 1 per cent. on its preferred stock, payable April 1. Books closed March 2 and will reopen April 2.

A. Straus, proprietor of the M. Straus jewelry establishment, 409 Fulton St., Brooklyn, was initiated last week into the New York Lodge, B. P. O. E. No. 1.

Daniel Levy, proprietor of the Burma Diamond Co., 1225 Broadway, has leased the store at 228 Fifth Ave., and will open a branch there April 1. Mr. Levy will handle a line of imitation jewelry of high grade.

A banquet of the general engravers of New York was held Saturday evening in Allerton Hall, on Third Ave. There were about 100 persons present, most of them coming from jewelry establishments, and a very enjoyable time was reported.

The Board of Classification of the United States General Appraisers overruled the protest Saturday of Hammel, Riglander & Co., 35 Maiden Lane, regarding the classification of optical glass. A full account of the case will be given in the next issue of THE CIRCULAR-WEEKLY.

Henry Lieberfreund, who has been for a long time in the employ of N. Lieberfreund, manufacturer of gold lockets and diamond mountings at 75 Nassau St., has been admitted to the firm as a partner, and the firm name will henceforth be Lieberfreund Bros.

Geo. S. Van Wickle, said to be a retail jeweler, died Wednesday at his home in New Brunswick, N. J. The deceased was in his 50th year, was an active church man, having been for several years treasurer of the Central New Jersey Baptist Association, and was a member of Union Lodge No. 19, F. and A. M. He leaves a widow and four children.

Louis Berman, an installment jeweler at 1703 Madison Ave., against whom an involuntary petition in bankruptcy was filed June 16, 1902, has been discharged from his debts in bankruptcy by the United States District Court. Mr. Berman's liabilities were $7,775 and he had no assets. There were about 25 creditors.

D. Le Roy Dresser, senior member of the firm of Dresser & Co., which assigned Saturday, was a director of the Benedict & Burnham Mfg. Co., and the New England Watch Co., and was comparatively well known in the jewelry trade, having been at one time president of the Merchants' Association of New York.

The firm of Frank C. Osmers Co., 15 W. 27th St., has been organized for the purpose of manufacturing jewelry. The concern will also give estimates and furnish designs on orders, and will do a jobbing and repairing business. Frank C. Osmers, of the concern, was, for the past 10 years, connected with Williamson & Co. and with the Thos. E. Brogan Co. as superintendent.

A fire Friday in the Howard building, 176 Broadway, caused some excitement in the jewelry store of J. Brunner's Sons, located on the street floor of the building. The fire started on the top floor, but as its seriousness could not be immediately determined the clerks in the jewelry store suddenly became very anxious to gather up the jewelry in the show windows and put them in a safe place. The damage to the building was about $500.

Maxheimer & Beresford, manufacturing jewelers at 9 Maiden Lane and proprietors of a jewelry store at New Rochelle, N. Y., under the style of Beresford & Co., who filed a voluntary petition in bankruptcy in the United States District Court, Jan. 8, have applied to that court for a discharge from all their debts in bankruptcy. Creditors who are interested are notified to be present at the Post Office building, March 23, at 9.30 A. M., and show cause, if they have any, why the petitioners' application should not be granted. The liabilities of the bankrupts are $23,749 and the nominal assets are $10,496. There are about 25 creditors.

A peculiar case of conscience in a jewelry thief has just come to the notice of the police of Jersey City. Detective Larkins was approached one day last week by a man who called himself Edward Wilson. He told the detective that he was just out of prison. He said he had been a thief all his life and that he wanted to begin over again "on the level." To ease his conscience and get a fair start, he said he wanted to make a confession to the detective. He said he had stolen two watches from a jewelry store in Chester, Pa., previous to serving time for his last offense, and that he wanted the detective to communicate with the Chester firm and have them dispose of him as they saw fit. Wilson is being held by the Jersey City police awaiting word from the Chester police.

Alfred Britton, known to the police as "Toothpicks," who was arrested Friday charged with the theft of four silver plates valued at $200, from Tiffany & Co., has been held in $1,500 bail for examination. On the night of his arrest "Toothpicks" confessed to the police that he had been stealing from Tiffany & Co. for two years, and had stolen $5,000 worth of articles in that time. Inspector Brooks says Britton is one of the cleverest shoplifters in the country, and that his photograph is in the Rogues Gallery. In connection with his last theft, Louis Elsberg, said to be the proprietor of a jewelry store at 365 Bowery, was arrested Saturday charged with having received stolen property, but when examined in the Essex Market Police

Court Saturday. Elsberg exonerated himself so far that Superintendent Hyde, of Tiffany & Co., said he did not wish to make a complaint against him. Elsberg was discharged Monday by Magistrate Flammer after it was shown that he had paid "Toothpicks" the full value of the articles. In court Elsberg waived all claim to the plates, and they were turned over to Tiffany & Co. Britton, when examined, denied absolutely that he had made any confession to Inspector Brooks or that he had said he had been plundering Tiffany & Co. for two years.

Morris H. Shiman, who represented Potter & Buffinton among the jobbing trade between Pittsburgh and San Francisco, will be admitted April 1 as a partner to the firm of Shiman Bros., manufacturers of diamond jewelry and mountings at 12 John St. Mr. Shiman is well known in the wholesale trade of the west and middle west.

S. J Clark and Charles E. Holland have incorporated a company at Albany, with a capital of $10,000, under the style of the Clark-Holland Co., for the purpose of dealing in watches and jewelry. Mr. Holland, president of the concern, will travel extensively throughout the country. Mr. Clark, who is the secretary and treasurer, will be the inside man, taking charge of the office, which is at 116 Nassau St.

A report from Hightstown, N. J., Thursday, states that a safe in the jewelry store of Jesse Carvas was blown open Tuesday night and more than 100 watches were stolen. Not only was the safe wrecked, but the windows of the store were blown out and a part of the safe went through one of the sides of the building. The explosion made a great noise and aroused many of the neighbors, but the burglars were able to escape with their booty.

About 250 employes at the factory of the Tiffany Glass & Decorating Co., Irving Place and Main St., Corona, L. I., went out on strike Friday, but returned to work within a few hours. The strikers declared that they went out for a "principle," which was summed up by some in the words "more beer." Because of the poor water in the town, the workmen had been for some time allowed to substitute beer in its place. Ultimately this privilege was taken away from them. The firm did not object to the men having beer at luncheon time, but it was not thought that a man who drank beer in working hours could do the best work of which he was capable.

Otto Brandes, who for a year has been night watchman at Adams & Co.'s department store on Sixth Ave., was arrested Wednesday at his home, 516 Washington St., Hoboken, N. J., charged with stealing $3,500 worth of jewelry from the store during the last year. His employers had missed a number of articles of jewelry and silver recently, and were unable to catch the thief at work, although detectives were put in packing cases in the store to watch for him. A month ago Chief Hayes, of the Hoboken police, was instructed to watch Brandes. A few days later Detective Weinthal saw Brandes go into a pawnshop, and he immediately obtained a warrant for his arrest. Brandes is being held in $1,000 bail to await requisition papers.

Word was received last week in New York of the death and burial of James F. Leighton, formerly president and manager of the Providence Jewelry Co., of St. Louis, Mo. Leighton was 57 years old and died from typhoid fever. He had lived in St. Louis nearly all his life. For a quarter of a century he was a prominent jeweler in that city, but when he became financially embarrassed, a few years ago, he retired. He was a veteran of the Civil War and went through the siege of Vicksburg. A wife and seven children survive him. The funeral services were held from his late residence, 5245 McPherson Ave. There was a large attendance of prominent men of the city and many magnificent floral tributes were piled upon his bier. The interment was in Bellefontine Cemetery.

Charles E. Holland, president of the Clark-Holland Co., 116 Nassau St., who returned to New York from a trip to New England last week, reports that he was relieved of about $200 worth of gold-filled watch cases and watches while in Brockton the latter part of February. Three of the watches he was able to recover. He states that E. J. Hollingsworth, who registered from New York, and with whom he had been friendly while stopping at the Hotel Belmont, had been unable to provide himself with money while in that city, and that he gave Hollingsworth 15 gold watches to take out as samples on which to solicit orders. Hollingsworth, he claims, never returned the goods. Mrs. Hollingsworth, who was stopping at the hotel, told Mr. Holland that she did not know where her husband had gone, and said she had been compelled to pawn some of her rings in order to provide money for herself. The numbers of the watches have been given to Inspector Kingsman, of Brockton, but up to the present time he has been unable to locate none but the three already mentioned.

A man who gave his name as James McDonough and his residence as 32 Queen St., Jersey City, was arrested in that city

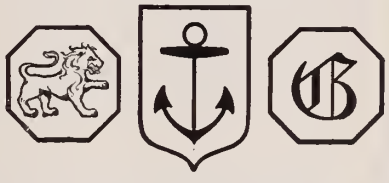
Living up to a Reputation

Ours was established more than FIFTY YEARS ago.



It was based on giving the public at the start exactly what we said we were giving them and in continually living up to that practice.

This is the way we have always done business.

There is no other way that will last.

Making a reputation is not an easy matter. Sustaining it requires a care for every detail, an insistence upon nothing but the best and a strict adherence to declared business principles.

last week by Roundsman McMahon about 2 o'clock in the morning for robbing the jewelry store of Chas. G. Rochat, at 75 Montgomery St. McMahon was en route for his home and was standing on the platform of a trolley car. When the car passed the cor. of Washington and Montgomery Sts. he was startled by the sound of breaking glass. Looking up, he saw a man taking a tray of gold watches from a hole in a window of the jewelry store. Leaping from the car, which was going at full speed, the roundsman seized the man by the collar. McDonough dropped the tray and gave fight, but was quickly subdued. McDonough pleaded guilty before Judge Hoos, in the First Criminal Court and was held in $1,000 boil to await the action of the Grand Jury.

A judgment for $237.53 against Morris Singer, in favor of Kastenhuber & Lehrfeld, was filed Wednesday.

A judgment for $336.32 against the American Watchman's Detector Co., in favor of the Bunnell Telegraphic & Electrical Co., was filed Wednesday.

A judgment for $4,537.50 against Abraham S. Herzog in favor of J. Heilbronn and S. Marchand, was filed Wednesday. The judgment was the result of the suit between the parties mentioned in the last issue of THE CIRCULAR-WEEKLY.

Louis W. Hraba, manufacturer of artistic leather goods at 29 E. 19th St., sailed for Europe Thursday on the *Konigin Louise*. Mr. Hraba will be gone for several weeks and will visit many of the principal cities on the Continent. His trip is purely one of business.

Edwin J. Freeman, 39 years old, for many years assistant superintendent at the factory of Tiffany & Co., Forrest Hill, N. J., died suddenly Thursday in the factory. He had been in the employ of the company for many years, was unmarried and lived at 426 Lenox Ave., Manhattan.

Joseph C. Peto, a retired silversmith, died suddenly of apoplexy at his home, 401 Quincy St., Brooklyn, on Friday. The deceased, who was 78 years old, was a highly skilled workman and was for 50 years in the employ of Wood & Hughes. He was a member of the American Model Yacht Club and the Brooklyn Mutual Aid Society. Funeral services were held Monday night.

A dispatch from Washington, N. J., yesterday, stated that Jos. A. Lundy, manufacturer of clock cases, had filed a petition in bankruptcy in Trenton with assets to the amount of $8,150 and liabilities at $9,220. The cause of the failure is said to be the refusal of the insurance company to pay the insurance on the plant, containing machinery, stock and lumber belonging to Mr. Lundy, which was destroyed by fire Jan. 26.

About $600 worth of diamonds and jewelry were seized from a man said to be J. Freundlich, who arrived in New York Wednesday from Antwerp on the steamship *Zeeland*. In addition to the goods seized, Freundlich had with him about $1,000 worth of cut, unset diamonds. These he had declared before the other jewelry was found on him. He called on Mr. Hamilton, chief of the law division of the Custom House at New York, Friday, and said that the pieces of jewelry that had been seized from him were personal effects; that he was a foreigner and did not suppose it was necessary to declare goods which were not for commercial purposes.

Fourth Annual Dinner of the Eighteen Karat Club.

The fourth annual dinner of the 18-Karat Club, composed of employes of Tiffany & Co., was held Saturday evening in the Union Square Hotel, New York. Arrangements for the dinner had been under the special charge of T. B. Morse, and as very good talent had been engaged for the occasion the programme was an excellent one. There were about 56 members present, and lots of good things to eat and drink were on hand.

Contrary to the custom of former years, there was no quartet composed of members of the club, since it was emphatically stated by this quartet that when it went to a club dinner again it would not lose its opportunity to eat by singing. The members of the club, therefore, did nothing but eat and drink and listen to an entertainment which the hired artists furnished for them. All the popular songs of the day, including "Bill Bailey, Won't You Please Come Home?" "Just a Gleam of Sunshine to My Heart," "Under the Bamboo Tree," "Mr. Dooley," "Ain't That a Shame?" etc., were sung vociferously by the club whenever a hired soloist struck the chorus.

After an evening of mirth and jollity the banquet came to an end just before midnight.

Death of Thomas F. Sherman.

NEW HAVEN, Conn., March 8.—Thomas F. Sherman, who, for many years, conducted a jewelry and watchmaking business at 175 Meadow St., this city, died in Harris, Col., last Friday evening, whither he had gone in an effort to recover his health. The body was brought to this city and the funeral took place in the undertaking rooms of Cox & Henz, Sunday afternoon, at 2 o'clock.

Mr. Sherman was widely known among the trade and was held in high esteem by all with whom he came in contact. Several years ago he sold out his business in this city and went west. This was his second trip to the west, he having returned after his first trip apparently in the best of health.

Telegraph Messengers Accused of Stealing Jewelry from New York Merchants.

The arrest in New York Saturday of two boys, who gave their names as John Moriarity and Lawrence Neubert, has induced the New York police to believe that they have discovered a band of young thieves organized to operate under the guise of messenger boys for the purpose of stealing and selling jewelry placed in their hands for delivery. By the arrest nearly $2,000 worth of jewelry belonging to Thomas Kirkpatrick, a retail jeweler at 334 Fifth Ave., New York, was recovered by the police, and it is thought that there was probably much more jewelry which they did not get. Many other arrests are expected in the next 48 hours, and from boys taken into the net the police expect a startling story.

The particular theft which led to the arrest occurred Friday afternoon, when a Postal Telegraph messenger was called to the Kirkpatrick store from the telegraph office and was sent with a package containing a diamond necklace, valued at $2,000, and a diamond ring, valued at $300, to one of the concern's customers. The same evening the messenger boy called on Albert Hirsch, who runs a phonograph establishment at 352 Eighth Ave., and offered to sell him a valuable ring for $35. The boy's pocket was bulging with jewelry, which he offered for sale at ridiculously low prices. Mr. Hirsch purchased a small turquoise necklace for $1.75 and, suspecting something wrong, told him to come back again in a short time and he would have the money to buy the ring. Mr. Hirsch then sent for a detective.

A few minutes later two boys appeared, one of them wearing a district messenger's uniform, and produced the diamond necklace and ring. The boy who went to Kirkpatrick's store, and who later appeared at Mr. Hirsch's place, did not return the second time, and the police are still looking for him. The two boys who did appear are the ones who were arrested. The addresses they gave the police were false.

The boys have been subjected to a severe examination, and, it is said, have given the police valuable information as to the plans of the band, but did not reveal the names of any members of it. The two prisoners were arraigned in the West Side Police Court Sunday morning, and held in $1,000 bail each for further examination.

At the present time Mr. Kirkpatrick has a suit against the American District Telegraph Co. for $1,100, which he alleges is the amount he lost through one of that company's messengers more than a year ago.

H. K. Lee has sold his business in Fosston, Minn., to his brother, K. K. Lee.

BUFFALO, N. Y.

We make the largest line of Solid Gold Set Rings in America for the Retail Trade.

New Stores and Enterprises.

(New Optical concerns will be found in the Optical Department and new enterprises in New York will be found under heading "New York Notes.")

C. D. Maus has opened a new store in Creston, Ia.

C. Malmberg has established himself in business in Parker, S. D.

Sol. Herzberg has gone into the retail jewelry business at 216 N. Eutaw St., Baltimore, Md.

The Paule Jewelry Co. was recently incorporated in Burlington, Ia., with a capital stock of $50,000.

J. A. Scribner, formerly in the employ of A. Michaal, Green Bay, Wis., has opened a store of his own at that place.

Harry Bartlett, formerly of Columbus, Tex., has opened a first-class watch repairing and jewelry establishment in Angleton, Tex.

The Elgin Jewelry Co. was recently incorporated in Elgin, Ill., with a capital stock of $25,000. The incorporators were: T. A. Loveland, J. L. Records and C. W. Harrison.

The Rocky Mountain Gem Co. was recently incorporated in Denver, Col., with a capital stock of $25,000. The incorporators were: G. F. Glaser, I. M. Glaser, J. A. Robert and K. B. Stephens.

The H. C. Thompson Clock Co. has been incorporated in Bristol, Conn., with a capital stock of $12,000. The officers are M. Thompson, president; James R. Cairns, secretary and treasurer; R. Urwin, superintendent.

The Jermyn Cut Glass Co. has just been incorporated in Scranton, Pa., and has purchased a site upon which the erection of a two-story frame plant will shortly be commenced. The company expects to employ about 75 operatives when working full capacity. The building will be 32x72 feet. The officers of the company are: T. R. Durfee, president; A. F. Gebhardt, vice-president and treasurer, and H. D. Carey, secretary.

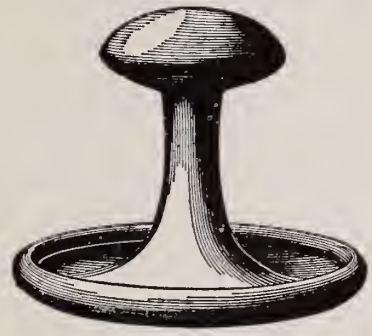
Columbus, O.

TRADE CONDITIONS.

Trade is a little slow at present, but not unusually so for this season of the year. In fact conditions are better than at this time a year ago. Benches are full of repair work, and taking this as an indication, trade will be brisk this Spring.

F. D. Oger has recovered from his illness and is back at his place of business.

C. C. Johnston, advertising manager of the Hofman Jewelry Co., spent the past week in Chicago.



An auction sale of the jewelry stock of Perry M. Ford began last week at 168 S. High St.

It is reported that the creditors of the missing jeweler, William S. Tussing, will receive about five per cent. on their claims. An order will be taken some time this week, before Referee Rogers, to sell the stock of goods left by the bankrupt at 19 E. Gay St.

E. E. Venrick, formerly of Norton, Kan., has set out for St. Joseph, Mo., where he will resume business.

The Giant of Collar Buttons

IN QUALITY,
IN SALES.

One Million Five Hundred Thousand Krementz One-Piece Collar Buttons made and sold within the last year. . . . . .

WHY? Because of their HIGHEST QUALITY, BEST CONSTRUCTION, GIVING THE MOST WEAR, AND GREATEST COMFORT and their IRON-CLAD GUARANTEE.

To verify this we invite the trade to read **"The Story of a Collar Button, with Illustrations,"** which may be had **FREE** for the asking, and to try the experiment suggested on page 5 of that booklet.

Extract from "Printers' Ink," Nov. 23, 1898.

The Little Schoolmaster now suggests, to every pupil in his class, to send a two-cent stamp to Krementz & Co., 49 Chestnut Street, Newark, N. J., and ask to be favored with a copy of their leaflet, "The Story of a Collar Button." Afterward, if any pupil will send to *Printers' Ink* another leaflet, new or old, that is half as good as this one, or that approaches it in excellence, the deserving student will be rewarded with one of *Printers' Ink's* souvenir spoons as an acknowledgment of his discovery and contribution. "The Story of a Collar Button" is the best piece of advertisement construction that has come to *Printers' Ink's* attention in the yeat of our Lord 1898.

Should you wish to utilize this booklet to increase your collar button business, we will, on receipt of your order, print your card upon and send you a quantity of them.

Krementz One-Piece Collar Buttons are stamped as follows, ON BACKS:

Patent sustained by United States Supreme Court.

Quality and Construction have made our reputation.

SCHRADER-WITTSTEIN CO., Mfg. Jewelers,
Estab. 1863.
CHICAGO, 103 State Street.
NEW YORK, 21 and 23 Maiden Lane.

Syracuse.

E. G. Seymour, of the Jos. Seymour Mfg. Co., was in New York last week.

E. C. Albertson, a Bridgeton, N. J., jeweler, has engaged as watchmaker Harley P. Latterof, of this city.

Henry Greenman and wife, of Richfield Springs, spent last week in town in attendance on the A. O. U. W. Convention.

The Manhattan Silver Plate Co., of Lyons, is now running with a force of 95 hands, working eight hours a day. Orders are coming in at a rate which makes the outlook promising for the operation of the factory all the year.

It is reported here that a manufacturer of Binghamton is to establish a factory in this city for making time recording clocks, in which about 150 hands will be employed. The manufacturer has been looking about in this city for sites to establish a factory and, it is said, will rent a building and start a factory by April 1.

Levi Levy has obtained a settlement in his action against Arthur M. Felson, of Gouverneur, for alleged conversion. Mr. Levy claimed to have sold Felson 44 diamonds for $2,245 and he sued for that amount. A settlement has been reached whereby nearly that sum is paid. The case was on the calendar for the present term of Supreme Court.

The Albert G. Finn Silver Co., of this city, was incorporated Saturday at Albany with a capital of $50,000. The directors are Albert G. Finn, George W. Hand, John J. Hurley, Emmett G. Fairchild and Jerome L. Cheney. The company succeed the partnership, which has been manufacturing silverware at 512 and 514 E. Water St., and which succeeded the Butler Co. when Frederick A. Butler retired and that company went out of existence on Jan. 1.

Members of the trade are warned against Albert Meyerheim, who is said to be borrowing from jewelers on the representation of acquaintanceship with the members of the firm of Henry Freund & Bro., New York. Meyerheim is in no way connected with the firm in question.

Canada Notes.

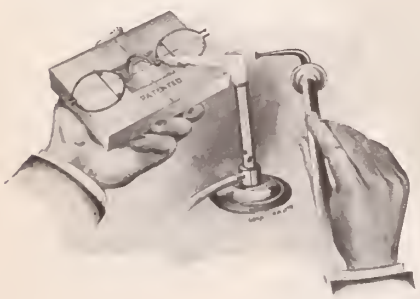
Harry Stenson is about to sell his business and leave Kaslo, B. C.

T. A. Challoner has succeeded J. W. Spring, Rossland, B. C.

Charles L. McQuillan, watchmaker, Toronto, has given a chattel mortgage for $84 to A. McCampbell.

The death of Stephen Birks, Rathwell, Man., occurred in Winnipeg Hospital last Wednesday. He was the youngest son of the late John Birks and a brother of Henry Birks, of Henry Birks & Sons, Montreal, also of Fred Birks and Arthur Birks. Henry Birks, who is opening a branch of the firm at Winnipeg, has left to look after his deceased brother's affairs.

Greenfield, Mass.



George E. Bemis, of Charlemont, has been chosen clerk and treasurer of that town.

Trading stamps have been abolished by the concerted action of all the merchants, co-operating with the Board of Trade.

Merton R. Deane, Greenfield, Mass., who has been some time with Harry Richardson, has taken a position with Elmer G. Tucker, 323 Main St., Worcester, Mass.

A new and enlarged edition of "*Old Plate—Its Makers and Marks*," by J. D. Buck, of the Gorham Mfg. Co., New York, will be issued by that concern within a few days. It is the object of this new issue of the book to attempt a description of some of the many examples of silverware to be found in various parts of the country made not only by foreign but by native craftsmen, and to endeavor to trace more specially the names, marks and abodes of the latter. The book has been printed on heavy deckle-edged paper, has 328 pages, and more than 100 illustrations, of which many are full page plates. The edition is limited to 600 copies. It is of special value to jewelers and assayers who buy old plate, as it enables them to tell whether the silver offered them is valuable only for its commercial worth or for its age and old associations. The book has nine chapters, and is written in a style at once interesting and instructive.

News Gleanings.

Chas. E. Davis has removed from Mecosta to Lake View, Mich.

W. W. Scott, Watertown, N. Y., was burned out in a recent fire in that place.

M. O. Stanley, formerly located at Ponca, Okla., is now in business in Galleton, Mo.

The jewelry establishment of G. W. Berry, Redfield, Ark., was destroyed by fire recently.

The stock of W. S. Quencer, Watertown, N. Y., was seriously damaged by fire last Friday.

I. M. Radebaugh recently arrived at Hastings, Minn., where he will continue the business of F. C. Taylor.

I. F. Varney, Wichita, Kan., has leased new quarters, which are being thoroughly renovated and overhauled.

The Henry P. Hall Jewelry & Music Co. has been chartered in Carthage, Mo., with a capital stock of $10,000.

The cash register in the store of J. O. Gaskill, Argentine, Kan., was robbed recently of $21.25 by a couple of boys.

Clarence E. Fuller, Kalamazoo, Mich., has just been appointed watch inspector for the Michigan Central & Lake Shore Railroad.

Eugene L. Thurber, Warrensburg, Mo., was married recently to Miss J. Shutt, a teacher in the public schools of Butler, Mo.

Andrew Manifold, Beloit, Kan., and bandmaster of the leading band of that city, was a recent visitor to Kansas City, Mo.

A former employe is suspected of stealing a miscellaneous collection of jewelry from the Reama Silver Plate Co., Springfield, O.

Chas. W. Crankshaw, Atlanta, Ga., last week removed his stock to his handsome and elaborate new quarters in the Century building.

The promoters of a large silver plating establishment recently visited Owensboro, Ky., where they were seeking a desirable location for a factory.

The Santa Paula Jewelry Co. contemplates opening a branch store in Oxnard, Cal. Mr. Hostetter will take charge of the new establishment.

C. F. King, Southbridge, Mass., last week suffered a severe loss by fire, which wrought damage to the business section of that city to the extent of $9,000.

John C. Woelfle, Peoria, Ill., has moved from his old quarters, 122 S. Adams St., to 112 S. Adams St., where he has better facilities for his increasing business.

O. S. Beggs contemplates removing from Warren, Ind., to Camden, where he will take the place of W. R. Adam, who recently removed his stock to Franklin.

R. F. Glines & Co. have purchased the jewelry stock of Dr. Daniel at Marshall, Ark. Under the new management the business will be considerably enlarged.

Robert Helmer, formerly engaged in business in Hutchinson, Minn., was a recent visitor to Silver Lake, Minn., seeking a suitable location in which to resume business.

It is reported that W. E. Hurlston, formerly employed by the Walter Hafner Jewelry Co., Hillsboro, Tex., has committed suicide. Ill health is said to be the cause of his act.

B. H. Cosby, who conducted a jewelry business in Asheville, N. C., for 10 years, will shortly retire from the jewelry business and engage in the constructing and building of railroads.

Paul Rudert, Tarentum, Pa., intends to retire from the jewelry business and move to another place, owing to the ill health of his family. He announces that there is a good opening in Tarentum for an enterprising jeweler.

The glass in the front show window of Martin W. Noblitt & Co.'s store, Asheville, N. C., was smashed with a rock a short time ago and several pieces of jewelry were removed from the window. There is no clue to the thieves.

The Rochester Business Men's Association, Rochester, N. Y., has entered into an agreement to discontinue the giving of trading stamps or premiums of any kind on and after April 1. It is signed by 67 merchants, including several jewelers.

Mrs. L. A. Gregory was arrested last week in Nashville, Tenn., accused of stealing a diamond ring valued at $200 from the store of E. Wiggers. She is also charged with having stolen jewelry from the B. H. Stief Jewelry Co., of the same place.

A. P. Taliaferro, a prominent jeweler of Columbus, Miss., last Friday instantly killed Joseph Sloan. When arrested Taliaferro declared the trouble grew out of family affairs and that he was forced to shoot Sloan to protect the honor of his home.

A thief recently attempted to enter the establishment of W. T. Jenkins, Waynesboro, Pa., but was frightened away before accomplishing his object. Mr. Jenkins has provided against burglary losses by equipping his store room with a burglar alarm.

The Remington Watch Co., Appleton, Wis., reports that it has taken a contract for 85,000 watch cases and 75,000 movements for a New York company. The contract amounts to $400,000.

Geo. Margolius, who recently ran away from Montreal, Can., after becoming involved in debts amounting to $20,000, was arrested last week in Chicago. The Canadian Jewelry & Importing Co., Montreal, is a creditor to the extent of $274.59.

Josiah K. Seem, who, many years ago, conducted a jewelry establishment in Canton, Pa., died recently in Macomb, Ill., aged 74 years. Mr. Seem was the inventor of a calendar clock which he manufactured for a time in Canton. He is survived by his wife and two daughters.

Harry Stitzell, a jeweler in the employ of G. W. Chittenden, Des Moines, Ia., was held up a short time ago and robbed of a case of jewelry valued at $200. He has a slight abrasion on the head which he says is due to being struck with some blunt instrument by one of the robbers.

Jones & Gorman have recently closed out their business in Fond du Lac, Wis., and announce that all articles previously left for repair with them can be had by calling at B. H. Anderson's store. Outstanding accounts can be adjusted at the law office of T. F. Doyle, of that place.

Burglars last week entered the establishment of C. Stausmyer, Fremont, O., and escaped with miscellaneous jewelry valued at $200. Entrance was gained by breaking a pane of glass in the rear window, after which the thief stretched in his arm and secured the key to the back door.

An overheated stove last week caused a slight fire in the jewelry store of A. F. Bramhall, 811 14th St., Washington, D. C. An alarm was quickly turned in and th fire was extinguished after it had caused a damage amounting to about $25.

H. L. Mosely, assignee of the jewelry stock of Wm. B. Dutton & Co., Weatherford, Tex., has sold the company's stock and fixtures to the Merchants' and Farmers' National Bank, the company's largest creditor. The consideration of settlement was 33⅓ per cent. paid on all claims. The liabilities amounted to about $4,500.

Jacob Grafman, Swissvale, Pa., was held in court last week charged with larceny by John Leak, of Rankin, who alleges that he left a watch with Grafman for repair and has been unable to again secure it, the jeweler insisting upon his taking a cheaper timepiece, and declaring that he had lost the original.

The daughter of N. C. Lillemoe, a jeweler of Erskine, S. D., is suffering from a peculiar case of catalepsy. About two weeks ago she lay down on a couch and at once became unconscious. All efforts to arouse her since then have been futile. A consultation of physicians has been called to pass upon the case, but thus far they have not been able to afford her any relief.

Judgment was entered a short time ago in the Third District Court of New Bedford, Mass., for the plaintiff in the sum of $26.85 in the case of Lewis Leite, a jeweler of that place, against Walter A. Perry. In the course of the trial it appeared that Perry held a mortgage on some of the stock and fixtures in Leite's jewelry store, and as the terms of the mortgage were violated in that money due was not paid, Perry went to the jeweler's store and helped himself to an assortment of jewelry, etc. Among the things taken were articles which the jeweler claims Perry had no mortgage on, and consequently a suit for conversion was brought and won by Leite.

OFFICE OF

C. PREUSSER JEWELRY CO.,

438 and 440 East Water Street.

Milwaukee, Wis., March 3d, 1903.

We take pleasure in informing the trade that MR. OTTO A. ZEDLER, formerly with Messrs. Bunde & Upmeyer, of this city, has become a stockholder of this company, and is this day elected its Secretary.

The detail management of the company's sales and purchases will now be in the hands of Mr. Zedler.

The business will be continued at Nos. 438 and 440 East Water St.

We respectfully ask that the new management be accorded all the courtesies shown us by the trade for many past years.

Dr. Jos. Schneider, Pres. and Treas.
Louise Preusser Schneider, Vice-Pres.
Otto A. Zedler, Sec'y and Manager

Optical Notes and Briefs.

(*Additional Optical News on page* 72.)

Edward Oehlers has opened an optical office in Elroy, Wis.

A. A. Burns has added a complete optical outfit to his store at Hills, Minn.

U. P. Utter has purchased the optical business of M. Thomas, Ogden, Utah.

Hirsch & Kaiser, opticians, San Francisco, Cal., have added two more men to their working force.

E. Restikangas, Ishpeming, Mich., has completed a course in optics under C. A. Snell, Minneapolis.

An unsuccessful attempt was made last week to rob the store of E. Borhek, 628 Chestnut St., Philadelphia, Pa.

Henry H. Harm, optician for F. H. Harm, St. Paul., Minn., has gone to Florida, where he will engage in other business.

Alterations to the establishment of Haussmann & Co., Ltd., 705 Chestnut St., Philadelphia, Pa., were completed last week.

A. Abrahams has completed the remodeling of his new store at the southeast cor. of 10th and Arch Sts., Philadelphia, Pa.

The March meeting of the Maine Association of Opticians was held last Wednesday evening at the Cony House, Augusta, Me.

F. J. Bachelder, with the California Optical Co., San Francisco, Cal., recently returned from a southern trip, and last week started north again.

Geo. A. Barron, optician, Boston, Mass., and secretary of the New England Association of Opticians, is enlarging his optical department and fitting up an up-to-date dark room.

The Central New York Optical Society will hold the meeting postponed from March 11, in Syracuse, N. Y., April 8, at which time Dr. Fred Lester, of Seneca Falls, will address the society.

Dr. W. B. Needles, optician, formerly with Emery, Bird, Thayer & Co., and later with Gurney & Ware, both of Kansas City, Mo., is now optician for J. Logan and Lawrence M. Jones, of that place.

Members of the Indiana Optical Society are highly gratified over the passage of the bill, introduced in the State Legislature, to define and regulate the practice of optometry in the State of Indiana.

D. V. Brown, manufacturing optician, 740 Sansom St., Philadelphia, Pa., has completed the remodeling of the big building adjoining on the east and will probably soon move into a portion of the new building.

The Houghton-Hardy Optical Co., Boston, Mass., has petitioned the Commissioner of Corporations, William D. Trefry, for authority to change the name of the company to that of the Boston Optical Co., and a hearing will be held before the Commissioner at 10 A. M., March 19, 1903. The petition bears the signatures of F. R. Hardenburgh, president, and James T. McEvoy, clerk.

Meeting of the Illinois Optical Society.

CHICAGO, March 11.—The next regular meeting of the Illinois Optical Society will be held in this city to-morrow and March 13, at the rooms of the Chicago Jewelers' Association, on the sixth floor of the Columbus Memorial building. There will be an evening session to-morrow and an afternoon session Friday, March 13. The meeting will conclude with a banquet that evening at the Palmer House.

Prof. Geo. A. Rogers is chairman of the literary programme committee, and will take charge of this part of the meeting. For the benefit of out of town members special rates will be made by the Merchants and Travelers' Association.

Savannah, Ga.

Sternberg & Co. are displaying a very handsome line of cut glass.

R. Van Keuren & Co. are displaying a line of handsome and costly vases of bronze and porcelain.

The County Commissioners of Ware County, Georgia, have purchased a clock for $1,085, which will be placed in the Court House tower at Waycross, Ga.

Theus & Co. furnished to the congregation of St. John's Episcopal Church, of this city, a handsome oak brass-bound chest containing 121 pieces of silver table ware, and a heavy silver salad bowl, spoon and fork, which was presented to Rev. Charles Hall Strong on the 25th anniversary of his pastorate.

Detective Murphy learned March 4 that a negro, Ben Lloyd, had sold some gold rings, whereupon he arrested Lloyd as a suspect. The negro has confessed that the rings were stolen from A. L. Desbouillons, in whose employ he had been for several years. Detective Murphy has located four rings, and believes that he will discover other goods. Mr. Desbouillons knew nothing of the theft until notified by the police department.

R. S. Wood, who had been in business for about 30 years in Painesville, O., contemplates retiring for a time.

VOL. XLVI. CHICAGO, WEDNESDAY, MARCH 11, 1903. No. 6.

Chicago Notes.

C. E. Hodgen, Kokomo, Ind., spent the past week visiting the local trade.

Mrs. W. P. Walters, Sheridan, Wyo., called on the local trade during the past week.

Mr. Wykkel, of Pyl & Wykkel, Kalamazoo, Mich., called on the trade here last week.

J. W. Forsinger returned last week from a combination business and pleasure trip to the east.

Henry Birks, Henry Birks & Sons, Montreal, Can., was in this city last week, accompanied by his son.

H. M. Tenney and J. C. Duff, two of the Lapp & Flershem force, returned from their territories last week.

D. L. Nesler, Chicago manager for D. L. Nesler Co., returned last week from a two months' eastern trip.

N. M. Mendenhall, of Mendenhall & Daughterty, Fairmont, Ind., looked over various lines in this city last week.

L. H. Moser, one of Otto Young & Co.'s house salesmen, is spending a couple of weeks at his home in Salem, Ill.

Henry Bourquin, son of E. Bourquin, Horton, Kan., last week visited the trade of this city on his way to Columbus, O.

J. W. Armbruster, general selling agent for the Illinois Watch Case Co., stopped over in this city last week on his way east.

K. E. Smith, formerly of Van Horn, Ia., who is now moving to Peterson, Ia., was in town last week placing orders for his new store.

M. H. Kennedy, Miami, Ind. T., was recently here attending the lectures at the Northern Illinois College of Ophthalmology and Otology.

A. L. Sercomb, C. P. Dungan and J. K. Caldwell, of the International Silver Co., have returned to Chicago after a pleasant vacation spent at West Baden, Ind.

S. K. Huston, representing F. & F. Felger and other lines, has arranged to move his office from the fifth to the sixth floor of the Champlain building, about May 1.

"Jack" Stanley, western manager of the Mauser Mfg. Co., returned last week from a trip to the Pacific Coast. Mr. Stanley was accompanied by his wife, who will hereafter accompany him on all the long trips that he makes.

F. W. Van Berg, of the Van Berg Silver Plate Co., paid a visit to the local office of the company last week. P. M. Vermaas, the local manager for the same company, has returned from an extended western trip.

Burglars entered the hardware and cutlery store of Bullard & Gormley, 78 Randolph St., last week, and escaped with $100 in cash, a quantity of silverware and cutlery and a number of silver watches; in all, the plunder was valued at about $2,000.

G. F. Williams will in future cover Illinois and Iowa for William A. Rogers, Ltd., and Geo. W. Shepardson, formerly traveling for R. Wallace & Sons Mfg. Co., will cover the far west for the same concern. Both men will travel from the local office of the company.

It is reported here that A. E. Colburn, a manufacturing and retail jeweler at Trinidad, Col., is selling out his business in that town and will remove to Whatcom, Wash., where he will establish himself in the same line. He will take a number of Mexican filigree workers with him.

Harry Goodman, a pawnbroker at 291½ Clark St., caused the arrest, last week, of John Miller and William Evans, whom he charged with breaking into his store March 1 and taking watches and rings valued at $650. The men will be arraigned in the Harrison St. Police Court Saturday.

When Robert F. Bullen died, about a year ago, he left his widow $30,000 worth of stock in the Harris Co., 184 S. Clark St. This interest was bought out Wednesday by the Harris Co., and in part payment for the same they transferred to Mrs. Bullen $6,000 worth of stock which they held in the Charles Moe Co.

Among the buyers in town last week, not elsewhere mentioned, were: O. E. Elefson, Tomah, Wis.; C. F. Graff, Elkhorn, Wis.; E. B. Woodward, Spring Valley, Minn.; E. A. Goodale, Lenox, Ia.; J. A. Rummele, Manitowoc, Wis.; J. A. Oswald, Crawfordsville, Ind.; Frank Shannon, Montello, Wis.; Julius Tausig, Hammond, Ind.

Bessie Palmer, an actress known in the theatrical world as Mlle. Asita, was defendant last week in a criminal suit in Justice Richardson's court, charged with concealing or disposing of a $400 diamond that had been mortgaged. The complainant was Loftis Bros. & Co. The hearing of the case was postponed until this week.

I. V. Dickinson, general agent of the Elgin National Watch Co., has returned from a flying visit to Canada. B. E. Chapman, M. H. Douglas and J. H. Carr, missionaries of the same company, were in from their respective territories last week. W. H. Kinna, the San Francisco representative of this company, who recently spent a couple of months at the local office, has been on the sick list since his return home, but his many local friends will be glad to hear he is now convalescent.

Oliver & Scott have sold for C. Jevne & Co. to Charles A. Stevens & Bros. the leasehold interest in the building at 109-111 Wabash Ave., possession to be given March 7. This allows Stevens & Bro. to occupy the Wabash Ave. store now instead of seven years later, when the lease for 99 years from Otto Young to Stevens & Bros. commences. The same brokers sold this estate to Mr. Young for $375,000, and subsequently leased it for him to Stevens & Bros. at an annual rental of $15,000.

The first regular monthly meeting of the Jewelers' Club of Chicago was held Tuesday evening, March 3, at the rooms of the Chicago Jewelers' Association. The board of directors acted on 175 applications received to date. H. S. Hyman, president *pro tem.*, appointed the following as a committee on nominations: J. H. Purdy, of J. H. Purdy & Co.; Ross Lusk, with the Gorham Mfg. Co.; A. H. Wittstein, of the Schrader-Wittstein Co., and Mr. Humphry, with Hyman, Berg & Co. The committee was requested to prepare a ticket of officers for the club for the ensuing year, to be voted on at the next regular meeting of the club, which will be held on the evening of the first Tuesday in April. It was found that the Chicago Jewelers' Association rooms, which were so generously tendered the club by the association as a temporary meeting place, were too small for the attendance, and consequently arrangements will be made for a hall centrally located, in which the next meeting will be held. Members will be notified in time, and announcement of the date will also be made in THE CIRCULAR-

WEEKLY, March 25. Over 200 applications for membership have been received to date.

A. M. Church has been detained at his home for the past two weeks with an attack of la grippe.

S. C. Eppenstein is spending a month traveling through California, combining business with pleasure.

I. Speyer, of Goldsmith Bros., has returned from a western trip. H. L. Nussbaum, with the same house, is spending 10 days at Four-Mile, Ky.

It is reported from Bristol, Conn., that the American Silver Co. will establish an office in this city, where a full line of the products of their establishment will be carried.

The Elgin Co., of Elgin, Ill., has been incorporated with a capital of $25,000 to do a manufacturing and jobbing business in jewelry. Theodore A. Loveland, James L. Records, Charles W. Harrison are the directors.

Kansas City.

TRADE CONDITIONS.

The weather during the past week was mild in Kansas City, but there were heavy snows throughout parts of the State of Kansas. The annual convention of the Missouri Fruit Packers' Association, which was held here last week, enlivened business considerably. An unusually large number of out-of-town buyers are in the market, purchasing their Spring stocks. They anticipate a heavy trade and are buying heavily. The jobbers are extremely busy and retail trade is beginning to increase. Prospects were never hetter for a big Spring business in all lines.

W. W. Trigg and wife have returned from a buying trip to New York.

Charley Wright, of Gurney & Ware, is convalescing from typhoid fever.

F. J. Green, formerly located at 1021 Main St., has moved to 1118 Walnut St.

Ben. T. Popenoe, of the Columbian Optical Co., spent last Sunday in Lawrence.

Mrs. Snow, cashier for J. R. Mercer, has resumed her business duties after a week's illness.

Mr. Hoefer, of Woodstock, Hoefer & Co., has just returned from a business trip to New York.

Mr. Chamberlain, of Emery, Bird, Thayer & Co., has just recovered from an attack of la grippe.

Frank Jacobson, formerly with Chas. E. Graves & Co., Chicago, Ill., is now with the Jaccard Jewelry Co., of this city.

Paul R. M. Preston, of the material department of the Edwards & Sloane Jewelry Co., was married, March 4, to Miss Ina M. Newell.

A reception was given to Mrs. Ward Moffitt Lewis, last week, by Mrs. Charles Miner Leurs, her sister-in-law. Mrs. Ward M. Lewis is the daughter of Calvin B. Norton, of the C. B. Norton Jewelry Co.

The man giving his name as "Wood," recently arrested for attempting to pass worthless checks on Gurney & Ware, to the amount of $750, was released, March 2, as no case against him was made out by the prosecution.

Mr. Raphael, manager of the Streicher Watch and Jewelry Co., of this city, has been away from business for some time owing to his mother's serious illness. Mr. Streicher is in New York seeking a location for a new store, which he will conduct in

connection with his establishment here.

Mr. Gurney, of Gurney & Ware, returned March 5 from a purchasing trip to New York.

Frank O'Neill, implicated in the robbery of C. A. Kiger's store during the holidays, was recently sentenced to four years in the penitentiary.

Otto Kuane, of Woodstock, Hoefer & Co.'s traveling force, was in town selecting stock and has again started out for Iowa on his Spring trip.

The following out of town merchants visited Kansas City during the past week: F. S. Hester, Lawrence, Kan.; Dr J. S. Lawton, St. Joseph, Mo.; Andrew Manifold, Beloit, Kan.; S. N. Dabney, Atlanta, Mo.; Otto Burkland, Osawatomie, Kan.; F. P. Owen, York, Neb.; W. S. Wheeler, Dreyfous, Kan.; W. W. Whiteside, Liberty, Mo.; F. W. Swearingen, Topeka, Kan.; W. F. Laraway, wife and son, Glenwood, Ia.; S. J. Huey, Excelsior Springs, Mo.; G. W. Killiam, Pittsburg, Kan.; M. O. Stanley, Ponca, Okla.; W. S. Noble, Drexel, Mo.

Indianapolis.

D. J. Reagan, representing the Baldwin, Miller Co., was in Iowa last week.

Greyer & Scott, Muncie, Ind., have moved into a new store room on the Public Square.

It is reported that the Wayne Jewelry Co., Fort Wayne, Ind., will increase its capital stock to $100,000.

A thief last Wednesday evening smashed the show window in the store of Fletcher Noe, 103 N. Illinois St., and escaped with about $12 worth of cheap jewelry. The broken window is valued at $75.

S. Baldwin, of the Baldwin, Miller Co., and Gus Craft, of A. P. Craft & Co., were among last week's victims of la grippe. Fritz Nichols, of S. T. Nichols & Co., who was seriously ill with typhoid fever, is gradually convalescing.

Among the out-of-town buyers in this city last week were: Chas. Ham, Frankfort, Ind.; Mr. Shaver, of Kester & Shaver, Kansas, Ill.; Geo. H. Morgel, Brazil, Ind.; F. Y. Drake, of Conwell & Drake, Van Buren, Ind.

Denver.

Peter Miller has closed out his stock at Colorado Springs and gone to La Junta.

T. J. Lewis, president of the Lewis Jewelers' Supply Co., last week made a business trip to Colorado Springs.

The McCracken Jewelry Co. has changed its corporate name to the Stockton-Whitmore Co., also its street address to 628 16th St.

Among the out of town jewelers in Denver last week were: G. L. Muffley, Golden; Henry Curtis, Littleton; George N. Anderson and H. W. Wyman, Colorado Springs.

Cincinnati.

Many of the jobbers came in this week to renew their stocks.

The Gustave Fox Co. is mailing this week its Spring catalogue on Elk goods.

B. S. Newman, of Frohman & Co., has completed a trip over his southern territory and will start on another tour this week.

The store of Loring, Andrews & Co. was closed a few days of last week on account of the death of Chas. L. Howe, a member of the firm.

Theodore Neuhaus leaves this week for a trip through the east, visiting Washington, Baltimore, and Philadelphia. He will attend the Jewelers' Banquet at Philadelphia and then go to New York.

Loring, Andrews & Co. are announcing their removal to new quarters on E. 4th St., by sending out large canvas banners, artistically mounted on brass frames of wrought design, intertwined with yards of green ribbons in large elaborate bows, emblematic of Spring. The banners are painted in green and white with letters of gold.

The safes of Duhme Bros. & Co. are still in the ruins in the sub-cellar of their former building under masses of debris. The firm are not allowed to dig in the ruins until all the dangerous walls have been taken down. It is thought by next week a search for the safes can begin. It is believed that the safety of the stock in the safes depends on how they fell; if on their face the stock will be all right, but if on their back the water would get through the doors. No definite idea of the condition of the stock can be given until the safes are opened. Duhme Bros. & Co. are still in the St. Paul building awaiting the arrival of their safes. The house's loss is fully covered by insurance.

White's Art Company,

447 Elm St., Chicago.

Hand Painted China Only.

Our new and handsome line for the Spring Season of 1903 is now ready.

We will be pleased to send selection packages to dealers in territory not visited by our traveling representatives. Correspondence solicited.

White's Art Company, Studio, 447 Elm St., Chicago.

San Francisco.

TRADE CONDITIONS.

With the wholesalers, generally, business is still rather quiet. Among the retailers there is a noticeable increase in trade, attributable to the large number of tourists who are beginning to arrive in this city.

A. F. Peters, Fresno, Cal., was a visitor to this city last week.

Sydney Weinshenk, of the Alphonse Judis Co., has just left on his usual Spring trip.

B. T. Van Decar, Myrtle Point, Ore., was in San Francisco recently making purchases.

F. Huber, Dillon, Mont., paid his first visit to this city last week, in company with his sister.

Adolph Eisenberg & Co. have made extensive improvements in the interior of their establishment.

Mr. Wise, of J. S. Lehrberger & Co., has just returned from a short trip through the central portion of the State.

Kingoro Ezawa, the proprietor of seven jewelry stores in Tokio, Japan, is now in this city replenishing his stock.

Al Candor, a representative of Nordman Bros., has just returned from a successful trip to the southern part of the State.

Paul Walsh, Pacific coast representative of the Dueber Watch Case Mfg. Co., has returned to this city after a successful trip to the interior.

Mr. Elston, representing E. Hirschfeld & Co., was in town for a few days of last week, replenishing his stock, and has started out again on the road.

A. W. Huggins, of A. I. Hall & Son, has returned from an extended trip to Honolulu. H. E. Hall is a convalescent from a prolonged illness.

The wholesale jewelers, beginning April 1, will close their stores at one o'clock every Saturday afternoon. This will be continued until the end of July.

Barnard Hirsch, of Hirsch, Block & Co., who recently returned from a purchasing trip to the east, is now on his way to the southern States with his new goods.

H. H. Allen, of the Morgan & Allen Co., left last week for Salt Lake City, Utah, whence he will proceed to different parts of the east. He will return in about two months.

George Greenzweig, of Geo. Greenzweig & Co., wholesale jewelers, in the Adams building, has left for the east, whence he will sail for Europe. He will visit Germany, Austria and France.

Col. Andrews, of Andrews's Diamond Palace, has had the former painting of Queen Esther removed from his store and a new canvas painted which is truer to the historical description of the Queen.

At the last meeting of the Jewelry Clerks' Union held in this city, encouraging reports were received as to the growth of the membership. The attendance at the meetings is also increasing, showing that the members are becoming more interested in the work.

Rothschild & Hadenfeldt are now located in their new quarters in the Levison building, 134 Sutter St. Their present quarters are larger and pleasanter than the ones they formerly occupied, and the factory is fitted up with electric power and all modern improvements. They have also added three large new safes.

Pacific States.

E. B. Wheat, Condon, Ore., has removed his stock into new quarters.

J. B. Moomaw, formerly of Reedley, Cal., is now established in business in Dinuba, Cal.

T. G. Spike contemplates moving his jewelry stock into a new building in Laton, Cal.

J. V. Beghtol, Kearney, Neb., was a recent visitor to his son, C. A. Beghtol, of Ogden, Utah.

Paul Lyons, formerly engraver with the Frank Golden Jewelry Co., Reno, Nev., has accepted a similar position in Tonopah.

F. B. Mitchell has left the employ of F. F. Daunt, Merced, Cal., and accepted a position as watchmaker with a large wholesale house in San Francisco, Cal.

The store of J. Sutcliffe, Long Beach, Cal., was plundered, a short time ago, of a considerable quantity of valuable jewelry. There is no clue to the thieves.

S. W. Thompson, Salem, Ore., has gone to California for the benefit of his health.

Robt. Skinner, Emmet, Idaho, recently moved into a new residence.

G. P. Nordin, Spokane, Wash., was arrested a short time ago for receiving stolen goods. It is charged that Nordin bought an Elk's pin worth $10 for 20 cents. The pin was afterward identified as stolen property.

T. G. Challoner, Rossland, B. C., had a very neat window display last week. Pretty rings, with valuable settings, watches, brooches, pins and other articles in the jewelry line were displayed. The background was composed of costly fans.

F. B. Taskett, a diamond expert, from San Francisco, Cal., was in the vicinity of Gridley, Cal., a few days ago booming up an alleged find of a large number of diamonds in the gravel along the Feather River. James Aldrich, a trapper, exhibited in Gridley, a few days ago, a stone which he claimed to be a diamond in the rough. He would not say where he found it, but the fact that he had been trapping on Feather River leads to the belief that he had picked it up from the gravel beds of the Feather River.

IF YOU send me five or more watches to repair at one time, I give 5% discount.

23-25 LOOIJERSGRACHT, AMSTERDAM, HOLLAND.

St. Louis.

TRADE CONDITIONS.

It has rained for the last five days here and has been dark and dismal, so that the retail trade has suffered in consequence. The wholesale jewelry trade continues active and is getting better all the time.

Mr. Smith, Smithville, Tex., replenished stock in this market last week.

Mr. Berkley, formerly with the W. P. Cowperthwait Loan Co., died about 10 days ago.

Walter Samms, Chicago, and W. E. Samms, of Samms & Waddell, Clinton, Mo., were here for three days last week.

Mr. Kirkpatrick, of the Model Drug and Jewelry store, Oklahoma City, Okla., was visiting old friends in this city last week.

A fire caused by an overheated stove last week damaged about $500 worth of jewelry novelties in the storeroom of the T. S. Byers Mercantile Co.

Morris Eisenstadt, of the Eisenstadt Mfg. Co., who broke one of the lower bones of his leg about 10 days ago, is gradually getting better and his friends hope to see him out in a couple of weeks.

The Wabash Railroad Co. will put on a time inspection service, March 15. The same system will be adopted which is used by all the other railroads. F. U. Hugenin has been appointed the general time inspector.

Mr. Gutfreund, general superintendent of the Eisenstadt Mfg. Co., has returned from his California trip, greatly improved in health. Joe Friede, of the same company, returned from the south last week. He spent several days in New Orleans, where he witnessed the Mardi Gras celebration.

Goodman King, of the Mermod & Jaccard Jewelry Co., who is vice-chairman of the Committee on Manufactures and Liberal Arts of the Louisiana Purchase Exposition, to be held here next year, has issued a general letter to all the jewelry and silverware manufacturers and kindred lines advising them to make exhibits at the coming exhibition.

Geo. Dunn, of Thomas Dunn, pawnbroker on Franklin Ave., died recently at Stafford Springs, near Vicksburg, Miss., of diabetes, aged 48 years. He had been associated in business with his brother, Thomas Dunn, in St. Louis for over 23 years. The remains were brought to St. Louis for interment in Bellefontaine Cemetery. Mr. Dunn is survived by a widow, two sons and a daughter.

The Eisenstadt Mfg. Co.'s design, patented by E. Harkrader, of the fleur de lis monogram, containing the letters, L. P. E., and enameled in the four different colors of the Exposition—red, white, blue and yellow—has been adopted by the Exposition directors as the official monogram of that association and will be used on all stationery and all advertising matter pertaining to the World's Fair. The company has obtained the exclusive right to manufacture the design on all jewelry, silverware and metal novelties and spoons, and will shortly show a magnificent display of the goods, to be sold to the trade.

Minneapolis and St. Paul.

S. Gittelson has opened a loan office at 316 Nicollet Ave.

S. H. Clausin, Minneapolis, has just returned from a trip to California.

The Montana Diamond Co., Minneapolis, will remove from 312 to 325 Nicollet Ave.

Kirchner & Renich, Minneapolis, have added G. Briedenfeld to their force of working jewelers.

P. M. Thouren & Co., Minneapolis, have enlarged the quarters of their manufacturing jewelry shops.

M. Shapira, of A. I. Shapira & Bro., St. Paul, has returned from a month's sojourn at Hot Springs, Ark.

C. J. Solum has resigned his position with Weld & Sons, Minneapolis, and is now with Munns & Pommerleau.

Alfred S. Riley and Lewis L. Williams, both of St. Paul, were discharged from bankruptcy last week by Judge Lochren, of the District Court.

Geo. R. Holmes, St. Paul, will remove April 1 from 141 E. 7th St. to 417 Robert St. The new quarters will be handsomely fitted up with mahogany fixtures, frescoed ceiling and similar work.

Joseph Cohen, with M. L. Cohen, Minneapolis, accused of complicity in the municipal scandals, had a drawn jury in a trial last week for securing protection money from the keeper of a house of prostitution. Another indictment has been returned against him.

Among the retailers who visited St. Paul and Minneapolis during the past week were: W. F. Baier, Jordan, Minn.; Mrs M. E. Brown, Graceville, Minn.; A. W Carlson, Lindstrom, Minn.; J. B. Wagner Morton, Minn.; G. R. Simons, Langford S. D.; L. H. Bruns, Anoka, Minn.; M. P Lovgren, Wheaton, Minn.; H. J. Heram Elbow Lake, Minn.; Wm. Krohn, Annandale, Minn.; A. L. Mealey, Delano, Minn.; E. A. Barker, Bemidji, Minn.; E. M Schwenke, New Richland, Minn.

Cleveland.

Mr. Bickford, Elyria, O., was in this city, on business, Friday.

The Deutsch Jewelry Co. will enlarge its field force for the Fall season.

E. N. Davis, Kent, O., spent Thursday among the wholesale houses in this city.

Mr. Moses, formerly with the Sands-Friedman Mfg. Co., has gone into the jewelry business in this city.

G. W. Scribner, of the Scribner & Loehr Co., and Mrs. Scribner, are spending several days in New York this week on business and pleasure combined.

H. W. Arnstine, of Arnstine Bros. & Mier, will start Monday on a four weeks' eastern trip. B. V. Arnstine has just returned from an extended southern trip.

The C. C. Sigler Co. is putting in a lot of new counters and counter cases and is also arranging a number of apartments for diamond customers and others who wish to conduct their business in comparative privacy. The apartments will be carpeted and nicely furnished.

O. T. Loehr, of the Scribner & Loehr Co., has been made president of the Deutsch, Feaur & Loehr Co., which will conduct a number of grocery stores. Mr. Loehr, however, will continue to give most of his attention to the jewelry business, the other being merely an outside enterprise.

Arnstine Bros. & Mier have engaged the services of the following men as additions to their field force: Ralph M. Cohen, formerly with Stern Bros. & Co., New York; W. F. Skillman, New York, and Julius Meyerson, Cleveland; Joe Fleisher, formerly manager of the wholesale stock department of the house. They will begin their duties at once.

The Cole Drug Co., jewelry and drugs, Dayton, Ia., has added W. C. Boggs to its staff of watchmakers.

JOS. NOTERMAN & CO.,

Loose. DIAMONDS Mounted.

509-511-513 Race St.,

CINCINNATI - - - OHIO.

Pittsburgh.

TRADE CONDITIONS.

Lent is already felt in every line of trade. Sales among the retail men have been light, but the representatives of the wholesale houses are meeting with excellent success and rural buyers throughout western Pennsylvania, Ohio and West Virginia are placing gratifying orders with Pittsburgh firms.

H. H. Weylman, Kittanning, was in Pittsburgh last week en route to the south, where he will remain a few weeks.

B. E. Arons, with his wife and family, returned last week from an extended trip through Florida and other southern States.

James R. Brown, of the firm of Marsh & Brown, Bijou building, returned Friday from a business trip through Ohio, Western Pennsylvania and West Virginia. Mr. Brown says retail dealers in the three States are buying unusually heavily and that they all are enjoying prosperity.

J. W. Best has closed out his business at 107 6th St. and is this week moving into his new storeroom at 618 Smithfield St. Mr. Best has secured a five years' lease on the property and has remodeled it and re-equipped it so that it is now a modern establishment. The optical department of the store is in charge of Fred C. Jeffs, a graduate optician.

C. C. Will, for 38 years a jeweler in Smithfield St., who, for the past year or so had been conducting a fruit farm near West Alexandria, has disposed of his land and bought a property in West Alexandria, where he will reside in the future. Mr. Will, who is the father of Edward H. Will, 107 Smithfield St., has retired from active business life.

Edward H. Will, 107 Smithfield St., last Saturday completed the semi-annual inspection of the watches of the employes of the Pittsburgh division of the Baltimore & Ohio Railroad. The inspection started several weeks ago, and during its progress between 500 and 600 timepieces were examined. Mr. Will is the official watch inspector in this territory for the company. This road is the only one entering Pittsburgh that has a periodical inspection of the timepieces of its employes.

Thomas Brown, colored, was arrested Thursday afternoon by Detectives Edward Barry and Frank Mulholland on the charge of being a suspicious person. The shop of Simon Shupinsky, in Wylie Ave., was robbed recently of a number of razors, watches and a quantity of jewelry. Thursday Brown appeared at the shop and attempted to pawn a razor which Mr. Shupinsky recognized as one which had been stolen from him at the time of the robbery. He summoned the detectives and had Brown placed under arrest. Brown said that he had bought the razor from a peddler in Uniontown, Pa., but the police have held him.

Frank Dold, who, it was alleged, broke the plate glass window in B. E. Aron's jewelry store, 215 Smithfield St., Wednesday, with the intention of securing the goods in the display window, was fined $20 and costs at the Central police station, Thursday morning. The prisoner, when questioned as to the breaking of the glass, said that it was entirely accidental, and was the result of too frequent imbibing by himself and a friend. While passing along the street they stopped to look at the display, when his friend staggered against him, causing the crashing of the glass. Both denied emphatically that it was their intention to take anything from the window.

Albany.

The guessing contest introduced by the well-known jewelry firm of Goewey & Jennings, 13 S. Pearl St., has caught the fancy of men in other lines of trade, and as a result many guessing contests are in progress. The prizes in nearly every instance consist of jewelry.

The building on S. Pearl St. recently purchased by Isaac Brilleman will be altered in a few weeks to make it suitable for a jewelry store. When the work is completed the store will be occupied by Marsden & Seaman, who are at present employed as chief clerks for Mr. Brilleman. Mr. Brilleman is to vacate his present quarters on N. Pearl St. May 1.

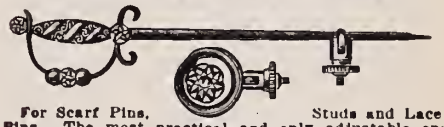
A report has been current in this city during the past few days to the effect that the jewelry store under the name of R. P. Thorn & Sons was to discontinue business. To offset this the management of the above-named concern has had published in the local papers the following notice:

It has been rumored, owing to the death of Mr. John H. Thorn, that the jewelry business conducted under the name of R. P. Thorn & Sons since 1850, would be discontinued. This is a mistake. The business will be conducted as heretofore and conducted along the same conservative lines.

Portland, Ore.

TRADE CONDITIONS.

Retail trade is quiet just at present, although there are many traveling men in town. The manufacturing jewelers, however, are rushed with work.



A. & C. Feldenheimer are making a particularly fine display of art goods and vases.

Two unknown men were recently arrested in the store of E. C. Brigham on the charge of theft. While one engaged the attention of Mr. Brigham the other attempted to help himself to miscellaneous jewelry.

During the fire which recently gutted the 7th and 8th floors of the Dekum building, the office furniture of W. H. Lesh was damaged to the extent of $250. The store of Wm. Friedlander was threatened for a time, and the more valuable stock was collected for removal, but the fire was checked by the quick work of the firemen.

The store of Geo. A. Poetz, Mobile, Ala., was slightly damaged by fire a short time ago.

THE CROHN PATENT SAFETY GUARD.

For Scarf Pins, Studs and Lace Pins. The most practical and only adjustable one invented. Price, $1.50 per doz. For sale by all wholesale jewelers and material houses. Sample by mail, 25c.; In 10k. gold, 75c.; 14k., $1. M. CROHN, Maker and Inventor, 48 and 50 Maiden Lane, N. Y.

T. PRIGOFF,

MAKER OF

FINE DIAMOND WORK

and also Repairer of all kinds,

HAS REMOVED

from 216 Granger Block to 1 MUNROE BLOC

Corner Railroad and S. Salina Streets,

SYRACUSE, N. Y.

Philadelphia.

I. Eisenstein will remove soon from 5th and Pine Sts. to the cor. of 4th and Lombard Sts.

Mrs. Kerper, buyer of Gimbel Bros.' jewelry department, made purchases in New York last week.

C. L. Le Cato, case maker, 732 Sansom St., made a canvass of the Atlantic City trade last week.

John Smedley, manager of L. C. Reisner's branch store, has recovered from an attack of la grippe.

Edward Kegel, a silversmith, residing at 208 S. 8th St., was married last week to Miss Nora Deckert.

The new jewelry department of N. Snellenberg & Co.'s store will be completed in time for the Easter trade.

Emil Brocker has returned to his home in Jenkintown, after an extended pleasure trip to Florida and New Orleans.

J. Julius Hovey represents the Philadelphia Jewelers' Club in the billiard tournament now being played.

The Bailey, Banks & Biddle Co. have advertised a $50 reward for the return of a solitaire diamond ring lost Saturday.

Harry Weir, 106 Levering St., Manayunk, who had been critically ill, is now convalescent and has returned to business.

Edward Wecder, watchmaker for Geo. Grau, 722 Chestnut St., is at his home in Pennsberg, Pa., suffering from typhoid fever.

De Forrest Leslie Bachman, assistant manager of Wanamaker's jewelry store, sailed Friday for a pleasure trip to the West Indies.

The Bailey, Banks & Biddle Co. were awarded the contract for the prizes for the billiard tournament of the Athletic Club of Philadelphia.

George W. Leopold, diamond salesman for Gimbel Bros., who had been ill about two months with typhoid fever, has completely recovered.

J. B. Bechtel, of the jobbing house of Joseph B. Bechtel & Co., left Sunday for a trip, on pleasure solely, to Detroit, Milwaukee and the west.

The jewelry store of T. Taylor Shannon, 3853 Lancaster Ave., West Philadelphia, was robbed Friday night by a sneak thief of $40 worth of goods.

Harry Murray, diamond salesman under Wm. P. Sackett, at Wanamaker's, who is suffering from typhoid fever, has suffered a relapse and his condition is grave.

Wm. Todd, watchmaker for Charles Wocher, 718 Chestnut St., who fell on the ice at his home in Darby recently, has recovered and returned to his bench.

The three dozen silver cups awarded as prizes at the indoor athletic meet of Company D, 1st Regiment, Saturday, were contracted for by Wm. P. Sackett, of Wanamaker's.

Abe Fisher, who was succeeded in business, at 719 S. 2d St., last week, by S. Stamm, has practically retired from the trade, but will continue to do work for old customers.

A movement is on foot among the local jobbers to close their places of business throughout the year at 1 o'clock Saturdays and at 5.30 P. M. every other afternoon excepting during the Summer, when the stores are to be closed at 5 o'clock. A petition agreeing to these hours for closing was circulated throughout the trade last week by Robert Coates, with L. P. White.

Thieves tried to force an entrance into the jewelry store of the estate of C. Kibele & Co., 628 Chestnut St., last week, but were unsuccessful. The discovery was made Wednesday by Frank Hendry, manager, who reports that nothing was stolen.

Fred. Loos, a venerable watchmaker, with B. F. Williams & Co., 726 Chestnut St., who was hurt in a railroad accident at Secane, Del. Co., recently, has been ordered by his physician to temporarily retire from business. His daughter is now attending to his affairs.

James Gillender, Jr., head of the firm of James Gillender's Sons, extensive manufacturers of glassware, died last week at his home, 1509 Oxford St. He had been ill only since Sunday and death was caused by an attack of la grippe and pneumonia. The firm was founded by Wm. F. Gillender in 1861.

A really remarkable display of gems, which attracted great attention throughout the trade, was made last week by Wm. P. Sackett, of Wanamaker's, who exhibited the dome of the National Capitol at Washington in diamonds, rubies and sapphires. This brilliant piece was made of 25,000 stones of 5,000 carats and is valued at a quarter of a million dollars. It is about 22x15 inches. The case in which the jeweled dome was shown contained also a magnificent display of costly tiaras, necklaces, brooches and other pieces arranged artistically about a velvet plateau. The exhibition is the fourth annual display of gems made by Mr. Sackett, and attracted thousands of sightseers.

Montana.

On April 1 Richard Roberts and L. C. Olmstead, Big Timber, will form a partnership. In order to reduce their stocks to conform to the more limited space that will then be at their disposal they intend during the month of March to have a cost price sale.

The store of B. M. Francis, Higgins Ave., Missoula, was closed up Feb. 26 by the Sheriff on an attachment for $345.58, issued at the request of the Rockford Silver Plate Co., Rockford, Ill. Mr. Francis has been in business in Missoula for the past two years.

Ed Mayer, 65 W. Park St., Butte, whose stock was damaged by fire some weeks ago, has been busily engaged in refitting the store in preparation for his auction sale, which began Saturday. Mr. Melzner is the auctioneer. The stock he is selling amounts to over $25,000.

The Mossberg & Granville Mfg. Co., Providence, R. I., has issued an attractive booklet, which contains much valuable information for manufacturing jewelers and silversmiths. The booklet is tastefully arranged and contains half tones and fine cuts of some of the machinery manufactured by the concern and testimonials from various companies, who have used its machinery. The booklet is bound in a slate colored matting, and contains 60 pages.

Harrisburg.

The House has passed on second reading the bill regulating the business of pawnbrokers.

L. A. Faunce has purchased a handsome new home on N. 2d St., into which he will remove in the near future.

Frank C. Sites, a watchmaker in the employ of C. Ross Boas, has been elected a member of the Board of Control from the Fifth Ward.

The new exchange of the United Telephone Co. in Hummelstown, this county, has been placed in the jewelry store of J. Urban Kilmer.

P. K. Devers, of Sievers & Devers, York, entertained a number of friends Friday with a turkey dinner. The fowl weighed 40 pounds dressed.

When the bill to abolish trading stamps was called up on third reading in the House last week it was amended so as to apply to manufacturers, and laid over for the present.

L. A. Faunce, 1314 N. 3d St., has joined a combination of local merchants who have inaugurated a voting contest, the prize being a $350 piano. A coupon is given with every 25 cent purchase. The contest is open only to organizations.

Jewelers in the smaller towns of the State have shown themselves to be in favor of the Kirk bill, introduced in the House Friday, increasing to $50 the annual license for hawking and peddling in boroughs and townships, and $150 where a vehicle is used.

Several Johnstown jewelers have joined a merchants' organization in that city whose object is the furthering of the movement to have the present Legislature create a new county out of portions of Cambria and Indiana counties, with Johnstown as the county seat.

A charter was granted at the State Department Saturday to the Conshohocken Brass Co., organized with a capital of $5,000, to manufacture articles of jewelry, silverware, plated ware and works of ornament and art. The incorporators are: H. Bayard Hodge, Harold P. Keen, John A. Collins and William H. Roth.

Milwaukee.

A check forger recently swindled A. Tegmeyer, a jeweler of this city, out of $15. A full description of the man has not been secured.

Otto Zedler, for 20 years in the employ of Bunde & Upmeyer, was presented, a short time ago, with a handsome gold watch by his fellow-employes on the occasion of his resigning from his position. Mr. Zedler has been elected secretary and manager of the C. Preusser Jewelry Co.

Bunde & Upmeyer recently denied very vigorously the report that pearl-bearing clams were becoming scarce in the rivers in Wisconsin and in the Mississippi along the western boundaries of the State. Mr. Bunde declares that the number of pearls taken from the Mississippi River between St. Paul, Minn., and Hanover, Mo., last year was more than double that of any previous year and that his firm alone paid out to pearl fishermen the sum of $100,000.

Baltimore.

A. Rodberg has opened a new store at 126 N. Eutaw St.

A. E. Putts, with J. W. Putts & Co., was in New York last week.

W. Armour Jenkins, of Jacobi & Jenkins, has gone to Philadelphia, Pa., on business.

The Samuel Kerr & Son Co.'s bowling team was defeated two out of three games by the Orioles at Bergen's alleys last week.

Gustav E. Klemm, with Jacobi & Jenkins, returned to the office last Friday after a severe attack of la grippe, which had kept him away since Feb. 21.

Jacob Katz & Co. have moved to their new store at 34 W. Lexington St. The interior is decorated with maroon and white, while the front is in black and gold.

Baltimore St. merchants have complained to the police that their plate glass windows are being disfigured by some vandal with either a glass or diamond ring. Jacob Levi, 416 E. Baltimore St., is among the complainants.

The handsome past master's jewel of the Masonic order last week presented to Chas. P. Lantz was made by Charles F. Kramer, 541 N. Gay St. It weighs 41½ pennyweights and is 18-karat gold, with a carat diamond in the center of the compass.

Edward M. Oppenheimer, of M. J. Oppenheimer & Sons, was married last Friday evening at Lehmann's Hall to Miss Florence Hamburger. The ceremony was performed by Rev. Dr. Rosenau, of Eutaw Pl. Temple. A reception followed the ceremony, at which 250 guests were present. The bride and groom have left for a trip to the south and on their return will reside at 2135 Linden Ave.

Lancaster, Pa.

E. P. Zane, Christiana, Pa., visited the trade in Lancaster last week.

Miss Irene Smith, with Augustus Rhoads, has been confined to her home for the past week.

L. R. Herrick, formerly of Lyons, N. Y., has accepted a position with L. C. Reisner & Co. as one of their traveling salesmen.

Howard Gurley, Meyersdale, Pa., is taking a finishing course in watchmaking with A. Jette, of this city, as also is Mr. Shookers, Mountville Pa.

Sale of Silver Jewelry and Watches Belonging to the Calvert Family.

THERE was considerable interest evinced by the jewelry trade, as well as the general public in the recent administrators' sale of the silver portraits and jewelry of the old Calvert family of Maryland, which took place at Sloan's Gallery, 1407 G St., Washington, D. C., a few weeks ago. The members of this branch of the Calvert family are the direct descendants of the Lords Baltimore, and the sale was by order of the administrators, George E. Calvert, Finley H. Calvert and Madison R. Calvert.

A large part of the Washington and out of town dealers attended the sale and the prices realized were very high, many of the pieces of silver selling for as much as from $200 to $300 each. This silver was brought over from England by the early members of the family and bore the family coat of arms.

A Swiss watch set with brilliants brought $100, a coffee pot brought $240, two small silver waiters were purchased for $300, while a large silver waiter sold for $205. Among the other articles were a host of chains, lockets, pins, gold buckles, rings, etc.

The Diamond Fields of British Guiana.

BY ALFRED DE ANDRADE.

IT may safely be asserted that no more important event has happened in British Guiana than the discovery of diamonds, and now that the discovery has become an established fact it may be interesting to write something on the subject. The beneficial effects of the discovery are apparent today in every corner of British Guiana, and it is claimed by many that diamond mining will soon be a prominent factor in the productive element of this colony. It is already spreading new life and energy throughout the country, which, a couple of years ago, was in a languishing and impoverished condition, and will no doubt in a few years convert some of the most despised possessions into sources of revenue to the mother country, as well as provide fields of ever widening enterprise for her sons.

A full review of the results which have followed the discovery of diamonds would entail writing a great part of the history of British Guiana, but among the most evident of these results are the increase of importations and trade generally, the greater employment of native labor, the progress of developing work, the general but gradual dissemination of wealth throughout all classes of the community, the greater spreading powers of the people, and last, but not least, the steady advance of civilization into hitherto unexplored regions.

Before diamonds and gold were discovered, the wealth of the country was derived almost exclusively from sugar. During the 12 months ending June 30, 1902, 132,077 diamonds have been declared at the Department of Mines. One of the largest shipments was made by the Royal Mail Steamship Co. in September, and one of the largest individual shipments from the mines, of 18,000 stones, was made in June. The British Guiana Diamond Syndicate also made the very decent shipment of 18,705 stones (as from March to December, 1901). One of the encouraging signs has been the discovery quite lately of stones larger than the ordinary run, the first stones discovered being very small in size. Out of the 132,077 diamonds declared in British Guiana for the past 12 months ending June 30, 1902, 132,636 were taken from the Mazoumi district.

Speaking of the location of the diamond mines, United States Consul G. H. Moulton, in a recent report to the State Department, said:

The route from Georgetown is up the coast 20 miles, and then by steamer to Bartica 50 miles up the Essequibo River. From there to San-San-Kopai landing, about one-half mile above Putareg Creek, on the left bank of the Mazoumi, the route is covered in small boats in the average time of 14 days.

The principal diggings now being worked are five miles back from the river, and all provisions and supplies are carried there on the heads of laborers. Over 1,200 laborers registered at the local department of mines this Winter and left for Bartica.

There are about a dozen companies now in the diamond district. Capital and mining experience will be needed to intelligently develop these fields. Manufacturers of structural material should closely observe conditions here, with a view to supplying the machinery and electrical equipment which will be required.

I believe that now is a favorable time for anyone having capital and the inclination to invest it in a British Colony, to consider the invitin features presented in the construction and operation of an electric or steam railway to the M. zoumi River to the heart of the mines.

The need of easy and quick communica tion between the coast and the diamon fields will be causing roads, railways an telegraphs to be shortly constructed on larger scale and thus affording further de velopment for the natives. The nativ laborers have proved themselves admirabl adapted to the work and the use of th pick and shovel.

There was £70,000,000 sterling realize from diamonds found at Kimberly during th first 20 years of its discovery, which ha benefited all the sections of the populatio and enriched the whole of South Africa and I predict that British Guiana will fee a proportionate advantage from the devel opment of diamond mining within the ter ritory. But for the discovery of diamonds the Mazoumi basin, or diamondiferous are of British Guiana, would probably still hav remained in almost undisturbed possessio of the aboriginal Indian or native.

It was five or six years after the findin of Mr. Gilkes's first parcel of diamonds i the San-San-Kopai region of the Mas souim district before the more systemati surface diamond diggings were pursued and among the other two pioneers were a Scotchman and myself. It was about eigh years ago that Mr. Gilkes went up th Massouim River with a gold expedition and it was while prospecting for gold tha he discovered his first diamond from one o his prospecting holes, and after a more per sistent search he collected a nice little par cel and returned to Georgetown. He hand ed one of the gems over to his partner, who in time shipped it away to England. The diamonds were very small and the smal amount realized from the sales did not warrant a future expedition. Gilkes was never daunted by the unfavorable and low sales, but, after the death of his father, he again risked another expedition, with better results, finding 700 diamonds.

Some few weeks later a Scotch prospector by name of Marshal organized an expedition and also went up the same river, and almost simultaneously with him I also resolved to try an exploring expedition in the said river, which resulted in the finding of my present holdings, part of which I have organized into a company, which is practically the first large company with American capital to pursue work of diamond mining on a large scale.

Now the attention of everyone is turned to seeking diamonds, but in my mind the best territory or diamondiferous area is already taken up.

(To be continued.)

Germany's Exhibit to Be Large.

A dispatch from Berlin, Wednesday, stated that Germany's exhibit at the St. Louis Fair will be far more comprehensive than the Ministry of the Interior at first designed. Dr. Lewald, the German Commissioner, said that the porcelain manufacturers of Berlin and Dresden would both send comprehensive exhibits, as also would the glass industry of Ehrenfeld, near Cologne.

The German Commissioner has obtained satisfactory assurances from the manufacturers of cutlery and arms and other lines.

The German Jewelry Trade.*

BY W. AUGUSTUS STEWARD.

Chief Instructor in Gold and Silverworking at the Central School of Arts and Crafts, London.

(*Continued from issue of March 4.*)

Electricity generated upon the premises illuminates Mr. Glebe's establishment and also provides the power for driving the machinery.

The polishing department, it will be observed, is as large and well-lighted as the main workshop. It would surprise a good many of our manufacturers to find how clean this department is kept and how fresh and healthy the women-folk look, but then it must be remembered that the breath of the pine is continually floating across Pforzheim, and helps very materially in sweetening the atmosphere of the town; this, however, would be of little avail were the factories badly built and ventilated, but, as I am endeavoring to impress upon my readers, the reverse is the case.

Each new factory which rises on the virgin soil bordering the city; each new building reared upon the site of those considered obsolete, is built not only with an artistic frontage, but with every consideration that appeals to the scientific architect.

POLISHING DEPARTMENT, J. F. GLEBE'S FACTORY.

If we take as other examples those large establishments which produce almost exclusively rolled-gold jewelry—an industry, by the way, which is of comparatively recent birth—we shall find the same careful consideration as to arrangement of the workshops and the application of hygienic principles.

This industry is a modern application of the methods employed in the production of "Old Sheffield Plate." The sweating of a precious metal on to the surface of an inferior can claim a much greater antiquity, however, for the versatile Benvenuto Cellini covered small bronze figures with a thin film of gold. The modern process is comparatively simple owing to the application of cleverly conceived machinery. The *modus operandi* is as follows: A thin layer of gold is placed after fluxing, on one or both sides of a thicker sheet of base metal, preferably gilding metal because of its strength and likeness when polished to gold; the metals are then placed in a muffle and sweated together; but in order to harden and still further knit the metals together they are placed, after withdrawal from the muffle, under hydraulic pressure. The prepared metals are then subjected to various machine processes according to the necessity of the article to be produced. If, for example, after going through the mills, the rolled gold is destined for utilization in the making of knot brooches or hollow tubular bracelets, a sheet of the metal is taken to a large machine (it is generally of American manufacture) and gradually pressed into a cup-shaped form and reduced in diameter until it can be safely drawn through the largest hole in the drawplate, and so on until the required size seamless hollow wire is obtained.

Let us first take up Andreas Daub's factory. This business founded in 1874 for the manufacture of silver-plated and gilt jewelry, during the early years after its foundation did not employ more than 50 workpeople. When, however, the making of genuine rolled-gold jewelry was taken up in earnest the factory was gradually enlarged in order to accommodate more workpeople, until to-day no less than 700 are constantly employed. It is significant of the change which has taken place concerning the wearing of jewelry the base of which is of an inferior metal, that, leaving out of account the many smaller houses, there are five important houses in Pforzheim each employing, on an average, 400 employes in the production of rolled-gold goods.

POLISHING DEPARTMENT, A. DAUB'S FACTORY.

CABINET-MEISTER'S OFFICE, A. DAUB'S FACTORY.

To-day, not only do the working classes purchase rolled-gold ornaments, but, owing to the artistic nature of a proportion of the output and the clever application of enamel, many members of the middle-class are counted among the enormous numbers of people who purchase this class of personal ornaments.

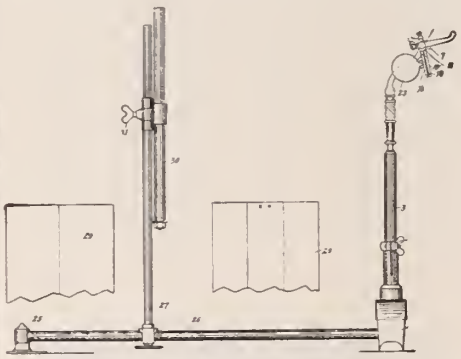
The Latest Patents.

ISSUED MARCH 4 1903.

721,692. FASTENING FOR SETTINGS FOR PRECIOUS STONES. Morris L. J. Girdany, Boston, Mass. Filed April 19, 1902. Serial No. 103,835. (No model.)



The combination of a setting for precious stones,

a screw fitted with a spherical, conical, or other shaped knob or cam, a traveling nut or clamp, and springs carried by the traveling nut or clamp for engaging with the knob or cam.

721,773. OPTICAL APPARATUS. Eugene W. Beebe, Milwaukee, Wis. Filed March 14, 1901. Serial No. 51,068. (No model.)

In an optical apparatus, a standard, a cross-bar mounted rotatively and thereby adjustably in the standard and extending laterally in both directions to considerable distance from the standard, and

optical-medium holders mounted severally one at each side of the standard directly on the cross-bar and adjustable laterally thereon toward and from each other, the medium-holders being in a radial plane of the cross-bar and adjustable to different angles in radial planes of the cross-bar by the rotation thereof about its longitudinal axis.

721,881. SPECTACLE-HOLDER. Edna H. Ford, Waupun, Wis. Filed July 25, 1902. Serial No. 116,963. (No model.)

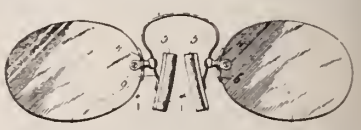
In a spectacle-holder, the combination of a base; means of attaching the base to a dress, and two reversely-turned hooks located at the opposite ends of the base for holding the spectacles.

722,013. FOUNTAIN-PEN. Robert A. Hamilton, Brooklyn, N. Y. Filed April 17, 1902. Serial No. 103,258. (No model.)

A fountain-pen provided with a supply-reservoir a writing-pen, a second capillary reservoir to sup

ply it with ink, and a communication between said two reservoirs, located above the normal ink-level in the pen when in use.

722,059. EYEGLASS. Johann F. Volle, Scranton, Miss. Filed Nov. 12, 1900. Serial No. 36,239. (No model.)

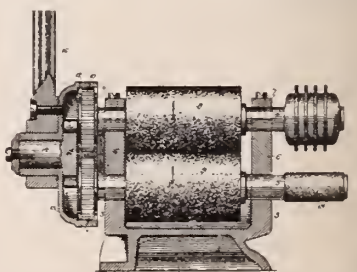


An eyeglass comprising a lens constructed in concavo-convex shape so as to conform to the con-

figuration of the ball of the eye when resting thereon, and provided with a rearwardly-curved surrounding edge portion to engage the inner surface of the eyelids of the eye.

722,080. EYEGLASS-GUARD. Samuel A. Bromberg, Richmond, Va. Filed Nov. 1, 1902. Serial No. 129,673. (No model.)

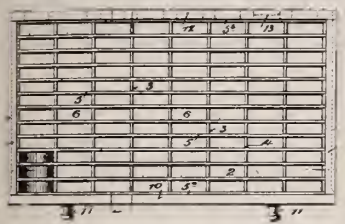
A nose-guard, comprising an arm and a clamp, the arm being connected at an intermediate point to the other side of the clamp and the latter having the opposite side edges for their full length



turned inwardly to provide inclined flanges, the opposite ends of the clamp being fully open, and a pad having a normally substantially triangular-shaped base-flange and a tubular body, the pad between the base-flange and adjacent portion of the tubular body being constricted and solid, the pad extending the full length of the clamp and the opposite side portions of the base-flange thereof engaged by the latter, the tubular portion of the pad being fully projected from the clamp and open at opposite ends.

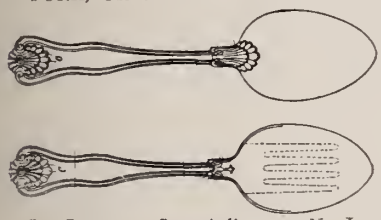
722,148. SILVER-PLATING OR GILDING PROCESS. Josepha Schiele, Brussels, Belgium. Filed Sept. 2, 1902. Serial No. 121,869. (No specimens.)

A silver-plating or gilding process for iron, steel nickel and other metal without the use of copper, consisting in submitting the articles to be plated to an electrolytic tinning-bath having an addition of a solution of salts of aluminium and of magnesium in order to cover them with an intermediate deposit composed of mixture of tin aluminium and of magnetism and then silver-plating and gilding the articles in the ordinary manner.



722,174. KNIFE AND FORK CLEANER. Thomas Davidson, Jr., Philadelphia, Pa.,

assignor of one-half to William Beatty, Philadelphia, Pa. Filed Oct. 2, 1902. Serial No. 125,702. (No model.)



The combination of the fixed frame, upper and lower shafts mounted therein and each carrying a cleaning-roller, a spur-wheel at one end of each of said shafts, a yoke projecting from the fixed frame and having a projecting stud in the vertical plane passing through said upper and lower shafts, and a disk rotatably mounted on said stud and having an internal annular rack meshing with the spur-wheels.

722,180. WATCH-GLASS TRAY OR DRAWER. Ernest U. Kinsey, New York, assignor to Jacob W. Riglander, Leopold Hammel and Mark J. Straus, composing firm of Hammel, Riglander & Co., New York. Filed March 26, 1901. Renewed Dec. 30, 1902. Serial No. 137,120. (No model.)

In an article, the combination with the baseboard, the septums 3, the slats extending between the septums to form compartments, and a channel below the slots communicating with each compartment, substantially as described.

Design **36,240.** HANDLE FOR A SPOON, FORK, OR SIMILAR ARTICLE. Gilbert

L. Crowell, Jr., Arlington, N. J. Filed Sept. 8, 1902. Serial No. 122,634. Term of patent 14 years.

Trade-Mark **39,882.** EARTHENWARE, POTTERY, AND CERAMIC ARTICLES. The Acheson Co., Niagara Falls, N. Y. Filed Jan. 27, 1903.

The representation of Egyptian bieroglyphics representing the English characters "E. A. C." Used since Jan. 5, 1903.

Trade-Mark **39,883.** CUT GLASS AND ENGRAVED GLASS. T. G. Hawkes & Co., Corning, N. Y. Filed Jan. 7, 1903.

GRAVIC.

The word "Gravic." Used since Dec. 13, 1902.

Trade-Mark **39,884.** ENGRAVED AND CUT GLASS. T. G. Hawkes & Co., Corning, N. Y. Filed Feb. 5, 1903.

Three segmental lines connected together to form a trefoiled ring inclosing a central ornament and the pictorial representation of two hawks placed within the lower parts of the trefoiled ring. Used since July 1, 1890.

Trade-Mark **39,885.** CERTAIN NAMED LAMPS. Frederic E. Baldwin, New York, N. Y. Filed Feb. 5, 1903.

AUTOLYTE

The word "Autolyte." Used since Feb. 27, 1900.

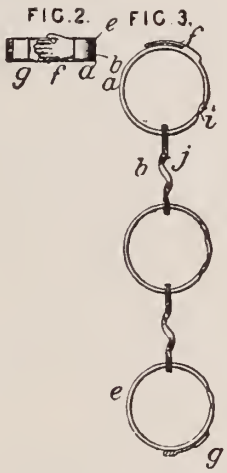
ENGLISH PATENTS.

(Abridgements of Specifications from *The Illustrated Official Journal.*)

ISSUE OF FEB. 11, 1903.

20,608. STUDS AND SOLITAIRES. H. Owen, Caroline St., Birmingbam. Oct. 15.



Sbirt studs, solitaires, and the like with tilting or

detacbable heads A are provided with wings or lateral extensions *b*, *b*¹ on the stem B to prevent rotation.

20,671. FINGER-RINGS. J. Sava, 1339 7th St., N. W., Wasbington, D. C., U. S. A. Oct. 15.

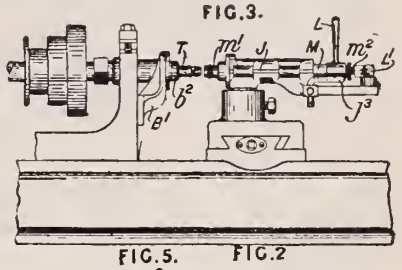
Finger-rings, especially wedding rings, are

formed of a series of links witb a crest or clasp portion, as shown assembled in Fig. 2, and extended to form a chain in Fig. 3. The link *a* has an overlapping slide portion *f*, preferably in the form of a hand, and the link *e* has a corresponding portion *g*. Curved channels *i*, *j* on the links *a*, *b* engage in the assembled position, and similar channels are provided for the other links.

20,713. SIGNET, ETC., RINGS. C. P. Deykin, Roslyn, Lyttleton Road, Edgbaston, Birmingbam. Oct. 16.

Work-holders for use in finishing tbe interior, exterior, and seal, etc., portions of signet and otber rings are shown in Figs. 2, 3 and 5, respectively. Tbe ring is first clamped between dies, D, D¹, Fig. 2, in a stock C adjusted hy a screw, etc., *s*¹ on a lever L, which is mounted on a spindle or guide G carried at one end on a bracket B of an ordinary headstock H, and free at tbe other end, or, preferably, supported hy a bracket on a movable headstock. The lever L is adjusted by band to hold the work against a revolving rimering, etc., tool T, which is afterwards changed for a lapping-tool. The ring is then placed on a shaft or mandrel M, Fig 3, provided with a tapered end m^1, which may he separable, and carried by an adjustable headstock J in the first or another machine. The mandrel M can be turned through a certain angle, to operate on tbe desired portion of the ring, by means of a handle L limited hy stops j^3. The end m^1 is projected against a milling-tool T by means of a lever L^1 and stop-piece m^2, and is returned hy a spring. A recessed nose b^2 on a bracket B^1 may be used for forcing the ring on the mondrel M. The ring

FIG.3.



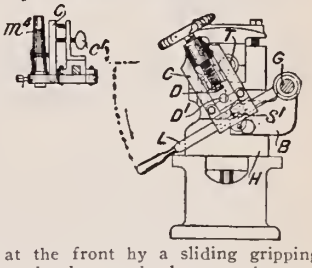


FIG.5. FIG.2

may be held at the front hy a sliding gripping-device. Turret heads or chucks may he used for bolding several rings of different sizes. Tbe ring is finally placed on a mandrel or nose-piece m^4, Fig. 5, provided with a spring clip C and screw c^1, and adapted to slide on the lever L, Fig. 2, and a flattened rose milling-cutter is used.

Complete specifications accepted Feb. 11, 1903. 1902.

5,428. INKSTAND. Suffield.

7,619. PORTABLE INKSTAND. Suffield.

24,125. BELT ADJUSTER. Knight.

26,734. CLOCK STRIKING AND CHIMING MECHANISM. Ingram.

Applications filed Feb. 2 *to Feb.* 7, 1903.

RETAIL MERCHANDISING

That this department shall prove mutually beneficial to our readers, it is desirable that the members of the trade generally communicate with THE JEWELERS' CIRCULAR-WEEKLY regarding any advantageous device or plan that they are utilizing in connection with their business.

PRIZE ESSAY COMPETITION, NO. 10.

SUBJECT:

"How to Develop a Watch and Watch-Repairing Department."

LET us now take up the watch sales department, and consider how we can improve that.

The reputation for ability, integrity and good judgment established by our careful and painstaking attention given each and every watch coming under our supervision will be a great factor in the building up of our watch business. Our watch stock will consist only of goods which are thoroughly reliable. The movements which we will handle will be only the best American makes, and the cases will be gold, gold-filled, silver and nickel.

We will handle no gold-filled cases of lower grade than the 20-year guaranteed cases of the best factories. Ten-year and plated cases we will let severely alone. The small profit we will lose by omitting them from our stock will be more than made up by the increasing sales of better watches to those who have learned from others how long a plated case will wear, and who know that we do not carry the cheap cases in stock. People nowadays want to be sure that they are getting their money's worth when they buy anything. A watch sale is one that is made to a customer but once or twice in a lifetime, and we must make each watch, and each watch-wearer, a continual advertisement for us, so that we may sell other watches to his friends and acquaintances. A man with a good watch will do more talking for the seller of that watch than can be estimated. So, too, if it is a poor one.

Guarantee each watch, and make good each guarantee. If, for any reason, a watch fails to perform satisfactorily to the purchaser, exchange the movement, unless it is mere regulating which is required. If a customer is once dissatisfied with a watch, no matter how much you try, he will still think he did not get a good movement; but if the movement is exchanged, and the cause of complaint removed, perfect satisfaction will result. It is always well, however, to assure the customer that the movement returned can be made to run correctly, but, in order to give him perfect satisfaction, the exchange is made.

Let me impress upon the reader the benefits to be derived from the running and regulation of new movements, so that there will be fewer complaints.

In showing watches, as a general rule, it is advisable to show the more expensive ones first, because if we show moderate priced watches first, and draw heavily on our supply of adjectives to correctly describe their many good points, what more can we say about the higher priced watches? Better start at the top and show the solid gold watches, explaining the advantages of the ownership of a high-grade watch, and, in this way, you will sell a better grade of watches. At any rate, we have several steps in the descending scale which we can make, to 25-year filled, 20-year filled and silver and nickel, each change making a substantial difference in the price.

Of course, much depends on sizing up a customer, and not wasting our eloquence in declaiming the virtues of a $75 watch, when he is only prepared to spend two or three dollars. Then, too, some customers who had thought of getting a filled case, may decide to wait and get a gold one, thus delaying the sale indefinitely. Still, with all these disadvantages, I say, "show your best goods first."

Advertise watches by your window displays, by display and reading notices in the newspapers, and by personal advertising through the mails. The several watch factories are generous in their efforts to furnish retail jewelers with cuts for newspaper use and printed matter for personal distribution. Every package leaving our stores should contain one of these ads.

"Continual dropping will wear away the stone," so, too, continual hammering will impress the public that "we sell watches." Quote information regarding watches in your ads., such as the number of times a balance vibrates per hour, day, year, etc. Tell about some of the watches famous in history; of the kind of watch some notable character carried. All this information will impress the public with your knowledge of watches.

Have fixed prices marked in plain figures. Do not attempt to have a sliding scale of prices, as customers do not like that way of doing business. Make your prices right, and, having once established a price, hold to it. Then, when you show a watch for $20, and the customer tells you that he has a friend who bought one from you for $18, you can say "No" in a positive manner. People are being educated to the one price idea, and like it.

Fine engraving adds beauty to the most inexpensive watch, and the ability and willingness to engrave a watch with the monogram, together with the date of the gift, will often sell the watch. Be sure, however, that the engraving is creditable, and you will find that your engraving will make customers for you. Some people think more of having their name on an article than they do about the article itself, and will go to the place where artistic engraving is done.

Have leather and velvet cases to give

Prize Essay Competition—No. 11.

Three prizes, $20, $10 and $5, will be given to writers of essays on the subject:

"How a Jeweler Can Profitably Conduct a Camera Department."

The prizes will be awarded to the writers of the best and most reasonable essays. The ideas expressed, rather than the language used, will be considered in making the awards. The essays will be lettered when received and the judges will not know the identity of the writers until after the decisions have been made.

Essays must be in the office of THE CIRCULAR-WEEKLY by April 15. Write plainly and legibly and on one side of the paper only.

The right is reserved to publish any or all of the essays received. Only those connected with the trade are allowed to enter this competition.

Grand Hints to Jewelers

with the watches, as these add to the appearance of the goods, and should be given with every watch costing $15 and upward.

C. T. E.

Easter Opportunities for the Jeweler.

EASTER presents an opportunity for the jewelry dealer such as he would be extremely unwise to overlook or neglect. That the guild is beginning to recognize the golden chance it presents is evinced by the fact that year by year more cognizance is taken of the opportunity.

The advertising jewelers are naturally those who seem to take the greatest notice of the occasion. But all the craft show by some means or other that a great holiday is approaching. This is because the day falls so auspiciously. For not alone does it follow so closely upon the season of Lent, when that contingent of mankind which believes in and observes it is freed from the observance of asceticism, but it also ushers in the glorious Springtime. Even Nature is freed of her fetters, and imparts a general joyousness to mankind, which is foreign to all other times and seasons of the year. Coincident with the disappearance of ice and snow, and the appearance of Nature in her gladsome and brilliant vestments, mankind, by common consent, has also taken advantage of the occasion to doff his rusty and wornout suits of solemn Winter garmenture, and appears in the blithesome and inspiring array of what the fancy directs as most pleasing and fitting. Man will still cling on the whole to Puritanical raiment, but even he confesses to a quickened pulse and appreciation of the occasion by variegated neckwear and other means, even if in the majority of cases he will not wear light habiliments.

But woman springs from the embrace of Winter and of Lent to revel in the most variegated and most glorious of encoloring. By an innate sense of refinement, she knows how to deck herself in the colors of the rainbow, yet does so with such taste that one is scarcely aware of the fact, meanwhile presenting such a *tout ensemble* of loveliness that one cannot fail to be charmed.

And have jewels no place in her array—or even in his? Doubt it not, oh altrurian or Martian. The sheen of the fabric may be ever so great, yet that sparkle can come from naught less than from gems "of purest ray serene." And, lacking these, would she be "the thing of beauty, and the joy forever" that they constitute her? No, they crown that radiant vision; they give it the casket; it is the very sign and insignia of beauty.

Jewelry, if selected with good taste, and not worn with barbaric profusion, is in good taste at all times. But most is it to be shown properly on an occasion when heaven and earth unite to make all mankind rejoice. Tradition, legends, the fancy and the season conjoin in a happy conspiracy to make the Easter-tide—the Noel—the most felicitous of occasions for presenting to the gaze of admiration the loveliest objects of the jeweler's and goldsmith's art.

THE ONLOOKER.

For An Easter Window Display.

A SUBSCRIBER submits this idea for Easter: For an Easter window display what can be prettier than the following: The technical part of the description is entirely omitted, both because the designer of the window did not himself attempt that utilitarian part of the question, and because he feels that though he may not himself be able to cope with it, those who construct such windows know how to do so better without his feeble aid, and instinctively would grasp a simpler method to do so, than any which he might suggest or devise.

The window is intended to represent Spring, rather than Easter. In the foreground let there be an arbor or little Summer house. With the assistance of cotton, crinkly paper, imitation silver wire and artificial flowers let the arbor show melting snow and struggling blossoms. Artificial leaves should entwine the flowers, and these should be shown rather on and near the ground by the side of the arbor than higher up. Flora, the goddess of the flowers, should be shown in the background, a beautiful lay-figure, dressed in white, also trimmed with flowers and leaves, flowers also sprouting at her feet.

Let a little stream, represented by mirrors, meander through or across the window. In the background let it appear to be icebound, which effect can also be obtained by glass. As it nears and reaches the fore part of the window let it show flowers on the bank and a rippling surface.

It should be comparatively easy to display a beautiful blue sky overhead, softened by fleecy clouds. A landscape, rude in the distance, but becoming more vernal as it nears, will complete the pretty illusion.

L. S.

M. Berman, Altoona, Pa., has a novel window display in the shape of three pedestals covered with watches of every description. On top of the center pedestal, which is six feet high, is a massive watch, with smaller watches tucked away inside. Nearly 1,000 watches figure in the display.

A Matter of Methods.

THE difference between a large business and a small business is simply a difference in methods, says *The Advisor.*

Two men may start out on the same day with the same amount of capital and in a few years one will be conducting a large paying business—the other be "broke and busted" or shambling along in a half-hearted, haphazard way and be "head over heels" in debt. It is a question of methods which leads one to success—the other to failure.

Let two men decide to enter the mail order field. One will seek for a line which runs into a volume of money. He will pay heavily for his introduction to people who have money, but he will get some of their business. When he makes a sale it will be one of two, five, 10, 20, 50, a hundred dollars—possibly more.

The other takes up 25-cent jewelry, a 10-cent article or something cheap—he operates on the false principle that volume of sales in numbers, not in value, will pay best—and he piddles along, doing a tremendous amount of physical and mental labor to accomplish much less than the man who strikes higher and makes one sale pay more profit than the other earns on a hundred or thousand.

People do send vast sums of money through the mails—but they are the people who have plenty of money, not those who pinch pennies and chew the dimes.

It is simply a matter of choosing good lines to deal in—selecting the better class to deal with—a matter of method rather than one of luck.

So in general advertising, too. The results to be achieved are measured by the methods adopted—the plane upon which one chooses to operate.

If a man places his mark at a business of $10,000 a year the chances are he will fall under it rather than reach above it.

If he places his ambition at the $100,000 mark he may not attain it but he will come nearer to it than the $10,000 man. He will operate on a $100,000 plan.

Advertising and energy will accomplieh anything that is reasonable, but it will not sell $100,000 worth of goods for a man who pinches his appropriation and the size of his advertisement down to a $10,000 basis.

Getting business in large volume is only a question of going after it and keeping after it. Put your mark up high, then go out after business and try to realize on your ambitions.

Aim at big things—talk big things—advertise big—and with a moderate amount of judicious management your results will be "big."

Dr. Bull's New Cure for Astigmatism.

BY E. LE ROY RYER.

IT has been reported that Dr. George J. Bull, of Paris, claims to have made a discovery whereby many forms of astigmatism can be cured. Advancing the hypothesis that astigmatism could, in some cases, be caused by an undue tension of the ocular muscles upon some portion of the eyeball, causing that particular portion to become flattened, he continues along this line of reasoning until the conclusion is reached that, by performing a tenotomy, this tension could be diminished, and consequently the astigmatism cured.

A question at once arises: While it is possible that excessive tension might cause that portion of the eyeball along which it is exerted to lose some of its curvature, what constitutes excessive tension, or, to go still further, are the muscles in question capable of exerting sufficient force to change the formation of such a tough tissue as the sclerotic? The office of these muscles, which is to rotate the eyeballs, has never varied, and why, therefore, is it not reasonable to presume that provision was made to supply the eyeball with a tunic of sufficient resisting power to withstand the force necessarily exerted upon it by these motor muscles while performing their functions?

Furthermore, would not these muscles, pulling, as they do, at six different points, be liable to counterbalance each other's influence in this respect, and, granting even that the muscles could flatten the cornea, would they not flatten it equally in all meridians, thereby eliminating all probability of any single set creating astigmatism? But, it will be argued, the internus and externus recti exert, respectively, two and six times as much strain as do the superior and inferior recti, and, consequently, are apt to flatten the horizontal meridian. There seems at first glance to be much in this argument, but there is nothing, because if we grant that these muscles have this power to change the shape of the eyeball, then we must grant, which would be ridiculous, (1) that all eyes must be astigmatic in which the muscular balance was perfect or anywhere near perfect; (2) that the flattening should always take place in the horizontal meridian; (3) that the degree of astigmatism would be regulated by the amount of esophoria or exophoria existing.

In fact, far more would have to be granted than it is possible to allow, for how could we then reconcile this with the facts that daily come under our notice, wherein, in many cases, no astigmatism whatever exists; in others, where the chief meridians, *i. e.*, the meridians of greatest and least error, run obliquely; or, where there is an excessive amount of exophoria or esophoria present, yet a lack of astigmatism and as a rule in young children, too, whose sclerotic would be more highly susceptible to overtension. These facts cannot be reconciled, and yet we must either fly in the face of reason or admit that the form of the eyeball is not readily changed by its motor muscles' strain.

Suppose, however, we allow that in some cases astigmatism might be due to this excessive tension of the extrinsic muscles, would Dr. Bull's operation be of real value? I fear serious obstacles lie in the path of this method's success. We all know the degree of success which attends operations of this kind for strabismus—an incision of the muscle slightly too great or two small still leaves strabismus—the operation proving successful from a cosmetic standpoint only, the perfect alignment of the visual axes not being obtained, but here something is gained and nothing lost.

But, suppose one's muscular condition were perfect, would it be wise to tamper with this merely to cure astigmatism—a defect far more preferable than strabismus, and, furthermore, a defect easily corrected by perfectly formed lenses—a means entirely free from danger? Grant that the astigmatism could be cured, might not strabismus be created, and who would, if they realized the danger, take the chance? How many conscientious men would employ this means in their practice with such terrible odds against them? Its unreliability evinces itself at once in the following way:

Suppose two cases were presented whose muscular alignments were perfect, but who had different degrees of astigmatism, could the varying amounts of astigmatism be cured and a perfect muscular alignment retained in both cases? That, I think, is still to be proven. If it cannot be estimated, how much must be cut to procure alignment in cases of strabismus, can it be expected that anyone will be able to determine how much variation must be allowed in the incisions made to cure varying degrees of astigmatism?

One patient might have an amount of astigmatism equal to that of another, yet the same sized incision might cure one and not the other. Why? Because the sclerotic in one case might be harder than in the other or the relations between the muscular tissue and the sclerotic might, probably would, be unequal. Trouble might be encountered at the very outset, because it would be extremely important to know exactly how much astigmatism existed, and that is not always ascertained unerringly. The accommodation, the consistence of the cornea and sclerotic, the relative power of each muscle and of each part thereof, the degree of astigmatism, the retention of a perfect muscular alignment, the age, the change of consistenc that takes place with age, the habits, and th axis of the astigmatism, are all factors tha must needs be considered and contende with, and any one of which, were it no properly accounted and allowed for, coul render any operation a failure.

These factors are too numerous, too com plicated and of too much individual impor tance to allow much chance of Dr. Bull' method becoming of general value, especial ly to the optician in the field, who can cor rect the astigmatism with lenses without sub jecting the patient to pain, inconvenience o danger.

You could extract a man's tooth with a 90-ton crane, but a little pair of forceps backed by a dentist's strength and skill doe it ever so much better. Dr. Bull may cure astigmatism with his 90-ton-crane method, but a neat little pair of lenses, backed by an optician's skill, is a better and safer remedial agent.

Meeting of the Optical Society of the City of New York.

THE regular monthly meeting of the O. S. C. N. Y. will be held in the Laboratory of the College of the City of New York (Lexington Ave., between 22d and 23d Sts.), this evening, March 11th, at 8.30 P. M.

Prof. Fox and Dr. Bryan have now advanced to such stages in the courses of their lectures upon "Refraction," and "Tissue," respectively, that the interest and value of the lectures are of such moment as to be indispensable to any optician seeking advancement.

These meetings are growing more interesting every month and are doing much to elevate the standard of the optical profession, contributing, as they do, toward the advancement of the social, educational, commercial and professional interests of the optician.

Optical Notes and Briefs.

J. C. Dart, optician, formerly of Winterset, Ia., has accepted a position with J. M. McGee, Cherokee, Ia.

The Oliver Abel Optical Co. was incorporated in St. Louis, Mo., last week with a capital stock of $5,000, all paid in. The incorporators are Oliver Abel, S. N. Sanfelder and Morris Rich.

T. L. Harrington, a former optician of Winona, Wis., a short time ago was found dead in his sleigh near Taylor, Wis. Death is said to have been caused by alcoholism. Mr. Harrington was 65 years of age.

(Additional Optical News on page 54.)

Optical Department.

The Active and Passive Tissues of Sight.

(Lecture by Dr. W. Bryan before the Optical Society of the City of New York, at a Meeting held Feb. 11, 1903, in the College of the City of New York.)

A TISSUE, in the simplest sense, is a group of cells of the same kind held together and arranged in a definite way suited to the physiological work to be done. It consists of cells more or less specialized or modified and . . . matrix, holding cells together. This may be liquid, solid or fibrous, etc.

Tissues do active physiological work, such as the contraction of muscle tissues resulting in the movement of parts, the perception and transmission of impulses performed by the nervous tissues and secretion of useful liquids accomplished by the glands, or, they are passive, i. e., protect and hold in place the active tissues; finally, circulatory tissues, blood and lymph, in which the matrix is liquid, supply the preceding with nutriment and oxygen and carry off waste matters and carbon dioxide due to their life activities. In many instances one tissue becomes the supporting framework for another as the delicate connective tissue (neuroglia) which supports nerve cells.

Tissues are combined to form organs as blood vessels, glands, etc.; a number of organs doing mutual physiological work and suitably arranged form a system as the circulatory, the respiratory and the nervous system.

The eye is a complex mass of organs arranged and adapted to perceive images; its nerves are part of the general nervous system; its blood vessels are fed by the pulsations of the common blood pump of the body, its lymph channels are part of the general lymphatic system; it may then be considered as made up of a number of parts of systems; these parts being again suitably modified and specialized to perform the physiological work incidental to sight.

The passive tissues of the eye are the connective tissues and epithelium (some forms).

The connective tissues hold together and fill in spaces between active tissues, muscle, gland and nerve; they consist of several kinds of cells. If tissues of the eye were removed excepting connective tissue, the latter would appear as a complete sponge-like cast of eye, each microscopic mesh representing the former position of an active cell.

Fixed cells are more or less stellate in form, in which protoplasm is gradually transformed into cell wall, the latter developing processes which either form a sponge-like mesh work enclosing lymph spaces or become the supporting framework of organs as ocular muscles, lachrymal glands, etc. Sometimes these cells assume a marked stellate form and develop and accumulate pigment as in choroid and iris; these latter may, to a limited extent, when influenced by light, alter their shape.

Sometimes large cells with numerous vacuoles occur and around blood vessels occasional granule cells are found which play a part in the formation of fat. Colorless blood cells wander at will through the spaces of connective tissue.

Connective tissue cells arranged in parallel bundles form tendons and in sheets of flattened cells provide basement layers for membranes; in cartilage and bone the cells occupy spaces which are connected by minute canals.

White fibrous tissue is a form occurring in bundles more or less wavy and consisting of fibrils which may be parallel or may form interlacing fibres. To the naked eye this tissue is white, silvery, pliable and inextensile. Scattered through the white fibrous tissue is a more or less scanty network of somewhat larger elastic fibres, the yellow elastic tissue; upon the quantity of this depends the elasticity.

The cornea consists of interlacing sheets of white fibrous tissue containing spaces in which the stellate forms of connective tissue cells occur; the sclerotic presents a somewhat denser and less typical structure. In tendons, bundles of white fibrous tissue separated by clefts occur with a few special flattened connective-tissue cells. The posterior limiting membrane of the cornea consists of yellow elastic tissue in the form of an elastic sheet. Surrounding the eye ball is a quantity of fat or adipose tissue; in this a number of connective tissue cells are separated by bundles of fibrils, each cell swollen by a globule of fat which is enclosed in its delicate envelope of protoplasm. In bone the interstitial spaces have become filled with calcium salts, principally calcium phosphate.

Two forms of bone are recognized, compact and spongy bone. In compact bone the cells are concentrically arranged around minute canals, the Haversion canals, which are continuous with the central marrow canal; in spongy bone the spaces between the bone lamellae contain red marrow. (In development spongy bone is an earlier form of compact bone.) The bones of the orbit consist of two layers of compact bone with spongy bone between, and form a cavity shaped roughly like a cone with the tip removed, the base of which is directed forward.

An extremely fluid connective tissue forms the matured vitreous body which contains about 98⅓ per cent. of water. Through its center runs a hyaloid canal, a sort of lymph channel, through which in foetal life an artery extends to the posterior wall of the lens; in the adult this canal serves as a passage for lymph to nourish the vitreous body.

The flattened epithelium, forming outer layers of a corneal membrane, and the modified epithelium, forming, in the adult eye, the greater part of the lens, may also be regarded as passive.

The active tissues of the eye are nerve tissues, muscle tissues, glandular tissues and some forms of specialized epithelium.

Nerve cells are the units of the nervous system, part of which is utilized for the function of sight. A typical nerve cell consists of a body with nucleus, branched, tree-like processes, and one or more fibre like processes, which may be many centimeters long, and which, invested with a sheet of fat, surrounded by delicate connective tissue, transmit impulses from other cells or from visual cells to the nerve cells of the brain. The rod and cone-visual cells of the retina, which contain the visual purple, are connected with these nerve cells. Two kinds of the fibre-like processes, bundles of which when bound together are called nerves, exist. Through one, the sensory fibres, impulses of sensation pass to the brain. Through the other motor, secretory of the fibres governing nutrition, impulses pass from the brain to the muscles, secreting cells of glands, or send out impulses governing nutrition.

Muscle cells, bundles and masses of which form the organs called muscles, are of two kinds, smooth or involuntary, and cross striped or involuntary. The former occurs in the iris, eyelids and ciliary body (the ciliary muscle, the muscle of accommodation, although of unstriped muscle cells, is under the control of the will). Cross striped muscle cells occur in muscles moving the eye-ball and lids.

Smooth muscle forms layers of spindle-shaped cells, with rod-like nuclei; each cell contains a number of extremely minute fibrils of contractile substance, irregularly scattered through the cell body, the larger masses of these cells are held together by sheets of connective tissue.

The cross-striped muscle cells are cylindricoid and have several nuclei; in them the contractile substance occurs in bands of fibrils giving the muscle cell under high power a cross-striped appearance. Each muscle cell is surrounded by a delicate sheath of connective tissue and a mesh work of capillary blood vessels; from each a sensory nerve fibre passes to the central nervous system; to each runs a motor nerve-fibre which terminates in a disc plate in a muscle cell.

Epithelium occurs as stratified epithelium on the surface of the cornea; in mucous membranes it forms one or more layers supported by a basement membrane of fibrous tissue, a sort of mosaic of cells; in glands the type is like a mucous membrane indented with numerous folds, each cup-like termination opening into a sort of canal. These in turn join to form a larger duct through which the secretion is poured out. The rod and cone visual cells are a specially modified form of sensory epithelium.

The Capsule of Tenon is lined on its free surface by a layer of flat cells which secrete a serous liquid, the two free surfaces separated by this liquid allowing free rotation and movement of the eye ball with the least possible friction.

The eye ball is a spheroidal body located in a conical bony cavity the axis of which is directed forward. Surrounding it and filling in spaces between it and the orbital wall are cushions of adipose and connective tissue; it is provided with a serous cup, or sac, the Capsule of Tenon above referred to, whose free surfaces, moistened by serous fluid, reduce friction very much, after the plan of a joint membrane (synovial sac). The optical axis is an imaginary line, passing through the cornea perpendicular to its apparent center. The visual axis passes to the most sensitive portion of the retina, a little to the outer side of the optical axis.

The eye ball is a hollow globe, its walls consisting of three coats, a dense outer coat of fibrous tissue, the sclera, the ante-

Optical Department.

rior, 1/6 of which, the cornea, is transparent and somewhat more convex, a middle tunic or coat, the choroid, rich in blood vessels, and containing pigmented cells, which, in front, terminates in a circular muscular diaphragm, the iris. A circular set of unstriped muscle fibres contract the pupil, a radial set dilates it. The innermost coat is the retina. This is incomplete in front and consists of the terminal fibres of the optic nerve and of sensory epithelium. The optic nerve pierces the sclera a little to the inside of the optical axis, and passing through the choroid spreads out into the retina, its fibres connecting with the rod and cone visual cells.

To the sclera are attached the voluntary muscles moving the eye ball, their tendons merging with its fibrous tissue. Suspended across the cavity of the eye ball near its front is the lens, which separates the cavity into a larger posterior portion containing the vitreous body and a smaller anterior portion lying between the front of lens and the rear surface of the cornea, and containing a serous fluid in which the iris is suspended. The space in front of the iris and behind the cornea is the anterior chamber, that behind the iris, and in front of the lens, is the posterior chamber.

Surrounding the vitreous body is a delicate membrane, the hyaloid membrane, which is continued in front and along the sides of the lens capsule and forms there the suspensory ligament of the lens.

The eye is nourished by four systems of blood vessels, one of which enters the retina through the optic nerve; another set pierces the posterior part of the sclerotic, and, passing into choroid, supplies the ciliary body and the iris; an anterior set entering sclera just behind the cornea and a set derived from the blood vessels of the conjunctiva. These are separate to a considerable extent from the general blood system, intraocular pressure thus depending very largely upon nerve impulses regulating size of blood vessels.

A short summary may be of value:

The sclera consists of white fibrous and yellow elastic tissue with some stellate connective tissue cells, the structure being more transparent in the cornea; the choroid consisting of numerous blood vessels, loops of capillaries supported by connective tissue and containing pigmented cells, is continued in front as a muscular diaphragm with a set of circular unstriped muscle fibres for contracting, and a set of radial for dilating pupil; the retina, the innermost tunic, is made up of 10 layers of nerve fibres, nerve cells and epithelial cells, the last containing the visual purple. In front, where the retina terminates, is the ciliary body, the front portion of which forms a corrugated ring (pars plicata), from which the suspensory ligament of the lens runs to the lens capsule; within the capsule is a modified epithelial, lenticular mass, more convex behind the crystalline lens.

The eye ball is nourished by blood vessels which form a cup shaped mass incomplete in front and each part is supplied by suitable sensory and motor nerve fibres. At the upper and outer part of the orbital roof lies the lachrymal gland. The fluid escaping from it moistens the front surface of the cornea and conjunctiva, and escapes at the inner corner of the eye by minute openings into a duct leading into the nasal cavity, the nasal duct. A fold of mucous membrane lines the eye ball immediately around the cornea and is reflected over the inner surface of lids. Its protective structures are the lids, with their lubricating glands, the Meibomian glands, the bony arches of the malar and frontal bones, the nasal bones internally and the eye brows and eye lashes. The globe to which are attached various muscles, is surrounded by a friction reducing sac, the Capsule of Tenon, and is imbedded in connective and adipose tissues.

Montana Grindstones For Optical Work.

THE eighth biennial report on Agriculture, Labor and Industry in Montana contains some interesting and valuable facts on what is comparatively a new industry in the State, viz., the quarrying and manufacture of grindstones for optical purposes. During 1901, 150 tons of these stones were produced in the State. To those familiar with the quarrying, manufacture and sale of this article this is significant.

It is a commercial challenge from Montana to seven States in the Union whose total product in 1900 amounted to $761,241, of which Ohio produced considerably more than one-half. It serves notice upon the grindstone trust that it will soon have to deal with a formidable competitor, for, according to data at hand, there is no such quality of grindstone on the market to-day from any other quarry in the country, and it equals those of foreign countries which are used in the most delicate operations of opticians in the manufacture of eyeglasses.

An instance in point attesting the truth of this statement is that of a manufacturing optician who made a small grindstone from a piece of stone taken from a car shipped to the Northern Pacific Co., and which he claims to have demonstrated to be equal to stones used by opticians generally for the grinding of lenses and which are produced only in Wales. Such a stone sells readily in the market in this country at $4 a pound. This expert states that the fine, even-grained sandstone from the quarry of a Montana company does the identical work that he had formerly employed the Welsh stone to do.

In the course of four years of practical use it has been demonstrated that the Montana product is immensely superior to anything theretofore purchasable in the market in points of evenness of texture, durability and the saving of time in the grinding of tools. The evenness of texture of this stone is at once apparent to any experienced observer. It is claimed that the life of a 60-inch stone from the Berea or Cleveland quarries in Ohio was only approximately 30 days, while the same sized stone from the Montana company's quarry lasted as long as eight months and would grind tools in from one-quarter to one-half the time required by the eastern product.

The market for these grindstones has thus far been practically confined to the State, but it is proposed to enlarge the plant at an early time with a view to pushing this particular part of the product commercially into the eastern market where will undoubtedly find ready sale to large manufacturing establishments where quantities of edged tools are used.

California Opticians Advocate Bill Providing for Appointment of State Board of Optometry.

SAN FRANCISCO, Cal., March 4.—The opticians here are said to be in favor of a bill to regulate the practice of optometry and to provide for the appointment of a board of examiners, and this bill will be urged for passage in the Legislature. The bill provides for the appointment by the Governor of a board of three examiners. Three important sections follow:

Section 5. Every person before beginning to practice optometry in this State, after the passage of this act, shall pass an examination before said board of examiners. Such examination shall be confined to such knowledge as is essential to the practice of optometry. Any person having signified to said board his desire to be examined by them shall appear before them at such time and place as they may designate, and before beginning such examination shall pay to the secretary of said board, for the use of said board, the sum of $10, and if he shall successfully pass such examination, shall pay to said secretary, for the use of said board, a further sum of $5 on the issuance to him of a certificate.

All persons successfully passing such examination shall be registered in the board register which shall be kept by said secretary, as licensed to practice optometry, and shall also receive a certificate of such registration, to be signed by the president and secretary of said board, which shall be filed as hereinbefore provided.

Section 6. Every person who is actually engaged in the practice of optometry in the State of California at the time of the passage of this act shall, within six months thereafter, file an affidavit in proof thereof with said board, who shall make and keep record of such person, and shall, in the consideration of the sum of five dollars, issue to him a certificate of registration.

Section 7. All persons entitled to a certificate of registration under the full provisions of Section 6 shall be exempt from the provisions of Section 5 of this act.

The bill provides the fees that shall be paid in, makes provision for the revocation of certificates for conviction of crime, habitual drunkenness, affliction with contagious or infectious disease or gross incompetence.

For violation of the act the penalty is a fine of from $20 to $100 or an imprisonment in a county jail of from one to three months.

"The Evolution of the Eye Glass" is the title of a daintily designed 12-page booklet 6x3½ inches, used by the E. Kirstein Sons Co., Rochester, N. Y., to supplement their regular advertising campaign. The cover pages are gray, printed in brown. The front cover page represents an old legendary castle with its romantic swinging window, which literally opens, displaying the smiling face of a pretty girl wearing the "Shur-On" eye glass. On this window design is printed the first half of the catch phrase, "You'll be happy if you wear a Shur-On glass." The last half of the sentence, "Wear a Shur-On glass," is printed on the first inside page. The inner pages, which are of heavy gloss paper, are of a deep natural tint which harmonizes beautifully with the brown printing. The text is interesting and convincingly written, and embellished by appropriate illustrations.

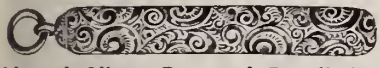
MIGHTY MEN O' THE HAMMER.

The services of the two best-known auctioneers at the cost of one.

A Tremendous Triumph!

Without the shadow of a doubt, the sale we are now conducting for Chas. W. Crankshaw, of Atlanta, Ga., is one of the most successful ever made in this country, from every point of view. We especially solicit large dealers who are in any way interested to personally write to the above well-known jeweler.

Recently we sold out the stock of Jos. Brown & Co., 176 E. Madison St., Chicago, which was damaged by fire. Just prior to that we conducted a four weeks' sale for the Gem Jewelry Co., of Norfolk, Va., the largest and most successful sale ever made in that city. Preceding that we made a record-breaking sale for Geo. Winder, of Troy, N. Y., after another firm of auctioneers had made a failure. One success has followed another. We have to our credit a greater number of sales, higher average of goods sold and a better percentage of profit than any other auctioneer in the trade.



Jewelers desiring our services must write months in advance, as our time is booked for several months.

SILVERWORK AND JEWELRY: A TEXTBOOK FOR STUDENTS AND WORKERS IN METAL. By H. Wilson. With 160 diagrams and 16 full page illustrations. 12mo, $1.40 net. Published by D. Appleton & Co., New York.

THIS work is the second volume in "The Artistic Crafts Handbooks," edited by W. R. Lethaby, who says in his preface that it is the "wish to provide trustworthy textbooks . . . putting aside vain survivals . . . and to set up a standard of quality in the crafts which are more especially associated with design." A laudable object is set forth when the author says, "It is desirable in every way that men of good education should be brought back into the productive crafts," a sentiment admirably associated with work in the nobler metals and the gems of nature. The volume, aiming as it does to be a students' guide to craftsmanship, treats very liberally of design in the practical working of the silversmiths' and jewelers' arts.

The consecutive chapters discuss materials, tools, work-benches, wire drawing, repoussé work, hammer work, candlesticks, spoons, solder and soldering, settings, rings, necklaces, brooches, pendants, hair ornaments and combs, bracelets, gold work, lockets, carving, casting and enamel work, moldings, polishing, coloring, gilding, shaping and cutting precious stones, piece-molding, casting by waste-wax process, inlaying, a chapter on "Old Work and Old Methods," ending with a rather incomplete group of practical recipes and a glossary of metallurgical terms.

The book is ambitious and covers a very wide range of subjects, many of which deserve and have received the separate and fuller treatment which their importance in these precious arts and the trade warrants. A strong impulse in the book is the impression which it gives to design and the old styles and forms which the author takes as the very essence and models of beauty. Mr. Wilson seems to bring to his work the practical knowledge of an expert craftsman and devout admirer of art. In his treatment of different topics of the work he sustains a high view of his subject and no young worker in precious metals can peruse his book without having a better and more enthusiastic regard for his craft.

The author says in his preface: "It is intended as a practical guide to some of the more simple processes of the craft," and writes it as a textbook for students and workers. It is unfortunate that there are so few schools where metal-working, especially in the precious metals, may be pursued, so that the aim of the author may find a fuller scope. The ordinary worker, however, is he who is earning a living as an humble employe in a factory or at the solitary bench. For the student the book may contain truths that will aid to better endeavor and to higher art, and give him a truer conception of the elements of the craft, though he may not find the descriptive text very complete in the exposition of the minute details which are so frequently desired by the workman at the bench. There is little doubt but that the book will be a satisfactory treatise to the ordinary reader on the processes of silver and jewelry working, and it is to be hoped that it will find readers among that increasing class which seeks practical knowledge of the productive arts. It will also commend itself readily to the worker who has the leisure, taste and elementary technique to pursue work in precious metals as an art or fad, rather than as a vocation.

Mr. Wilson has brought an excellent style to his subject, and his lucid explanations will be pleasing to the reader. The book is printed well, profusely but not well illustrated in the text. The final chapter is one lovingly written to an ideal in productive art, and is an epitome of the preceding sentiments very nobly expressed.

The work ends with an excellent group of full-page photogravures of old pieces of precious metal work and jewelry, each of which is well explained in the text. Two notable pieces of rare art and beauty which among those illustrated are, The Processional Cross (Villingen) and the front view of the Alfred Jewel (Ashmolean Museum).

Tariff Decisions & Regulations.

The Board of Classification of the United States General Appraisers recently handed down a decision sustaining the protest of Albert Lorsch & Co., of New York, against the duty assessed on a quantity of imitation precious stones imported under the Tariff Act of 1894. The goods in question consisted of imitations of garnets, turquoise, onyx, half pearls, etc., and were assessed for duty at the rate of 25 per cent. ad valorem as "manufactures of paste," under Paragraph 351 of the Tariff Act of 1894. They were claimed to be dutiable at the rate of 10 per cent. ad valorem as imitations of precious stones under the provisions of Paragraph 383 of the same act.

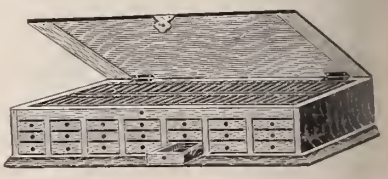
In a previous case the Board has found that similar articles were not dutiable as imitations of precious stones, but were dutiable according to the component material of chief value. This decision, upon an appeal to the United States Circuit Court at New York, was reversed, and the Board, following the court's decision in that case, has now held that the merchandise imported by Alfred Lorsch & Co. was dutiable as claimed, and accordingly reversed the decision of the collector.

REAPPRAISEMENTS.

Among the reappraisements of merchandise handed down by the Board of United States Appraisers recently were the following:

Jewelry from A. A. Villani, Torre del Greco, Jan. 1, 1903: Parchi No. 88 Runtuille, cm. 150, Saute No. 528, entered at 40., advanced to 60 lire per 100 (coral chains); do., No. 22, Margheritern, cm. 140, Saute No. 528, entered at 40., advanced to 60 lire per 100. Discount, 2 per cent.

Manufactures of marble from Dorigo Cav. Francesco, Venice, Jan. 6, 1902. Four Colonne Rosso Semplice, entered at 250; advanced to 350 lire for all; two Putti Pietra, entered at 200, advanced to 300 lire for both.



A disastrous fire recently swept over Pine Bluff, Ark., and destroyed the stock of several jewelers of that place.

The wife of Miller Robinson, Saugatuck, Mich., died suddenly of consumption while recently returning home from Florida.

A Useful Cabinet.

THE illustration represents a fine finished watch material cabinet ma of oak. Its upper compartment conta 56 bottles, which, as all watchmakers kno is the best and most convenient storage f jewel holes, cap jewels, ruby pins, anch pallets, balance staffs, screws and otl such small things which can thus be fou at a glance. This is a great advantage, there is nothing more annoying to t watchmaker than to be obliged to lose l time in hunting for the right thing in sorts of small boxes.

In this cabinet there are three ranges drawers, just the kind required to sto away all sizes and shapes of hands, mai springs, clicks and click springs, steel ba rels, pendant winding arbors, their sleev and crowns, etc., etc. These all are m terials of which a watch repairer is in dai need and for which the intelligent man w

not allow time to be wasted in daily errand to the material dealer.

For the sake of economy, many watch makers keep their material in paper or card board boxes, and such boxes are expected t last an eternity. Even when the covers a gone, or the bottom hangs loose, the pape box has to do service; this is what th French call *économie de bouts de chandell* (economy of saving the ends of candles as the material which drops through th bottom is generally lost, scattered throug the drawer, or dropped on the floor. If th floor is in bad condition, which is not se dom the case, the workmen hardly take th trouble to pick it up.

Speaking of cracked or rotten floor every watchmaker of experience knows hov many hours are daily wasted in certai shops where several watchmakers work to gether. The awkwardness of some watch makers is such that they drop somethin all the time, and many fail to provide thei bench with an apron or an apron drawer The consequences are that they lay on th floor half the day hunting for the lost ar ticle. It would be cheaper for them to buy a new piece, but not wishing the foreman to know that they need so much new ma terial, they prefer to hunt for it. It is thu easy to calculate that the hunting of los pieces worth only a few cents every week costs the employer who believes in *economi de bouts de chandelles* several dollars.

The mindful and intelligent employer and watchmaker will therefore comprehend tha it is more economical to spend a few dollars for a good storage for precious material than to keep the latter in paper boxes or to think that cracked or rotten floors are good enough for the watch repairer. The use of a bench cabinet, 22½ inches in length, 5 inches in width and 5½ inches in height, known as "Our Perfect, No. D." and furnished to the trade by Swartchild & Co., Chicago, is one good adjunct to the watch repairer's equipment to prevent squandering of material.

Precious Stones

Manufacturing Jewelers

New York Office:
180 Broadway—Samples only.

NORTH ATTLEBORO, MASS.

LARGEST AND MOST SELECT LINE OF

Secret Joint and Catch Bracelets

Made in Solid Gold, 1-10 Gold and Sterling Silver.

"An Equivalent for Value Received" is our motto.

ESTABLISHED 1877.

Frank Dederick. *Established 58 Years.* James E. Dederick.

James H. Dederick's Sons,

Assayers and Bullion Dealers.

All qualities of Gold and Silver, in Plate, Square and Round Wire, Rolled to any gauge.

ALL QUALITIES OF GOLD AND SILVER SOLDER.

16 Maiden Lane, ... NEW YORK.

We buy Old Gold and Silver.

ALOIS KOHN & CO.,

Established 1850. 16-18 MAIDEN LANE, NEW YORK.

Manufacturers, Exclusively, of

SOLID GOLD CHAINS.

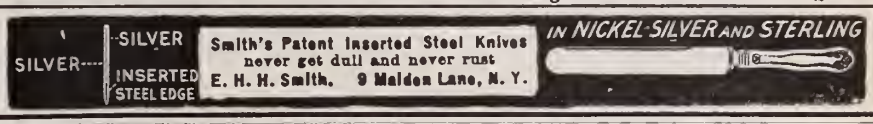
We will send samples on consignment on receipt of satisfactory reference. Correspondence Solicited.

Established 1879. Manufacturer of

LOUIS W. HRABA, & Fine Leather Goods,

29 East 19th St., New York. Exclusively for the Jewelry Trade.

WM. SMITH & CO., GILL BLDG., 9-13 MAIDEN LANE, N.Y. 61 PECK ST., PROVIDENCE, R. I.



ESTABLISHED 1854.

MANUFACTURERS OF

Gold, Silver and Rolled Plate Chains and Jewelry.

Novelties in Gold and Silver Bracelets. Also a large line of Chain Trimmings.

CANDO.

THE - - - -

Royal Silver Polish.

We have taken hold of "Cando" silver polish, and propose to sell it to the retail jewelry trade for the two following reasons:

1st. That the price is maintained throughout by the Cando people.
2d. That it is as good as the very best.

We have on hand now, and in process of making, the handsomest line of Elk Buttons on the market. We would be pleased to send you a memorandum package, if you wish us to do so.

L. C. REISNER & CO., Lancaster, Pa.

THE PURCHASE OF A . . . .

Mainspring

SHOULD RECEIVE CAREFUL CONSIDERATION.

A reasonable expenditure is a safe investment as every dollar you put into a reliable Mainspring will show rich returns in the satisfaction you and your customers get out of it.

The LONGEVAL is the result of steady progress in Mainspring making, reliable to an absolute certainty. These springs you may buy with a confident feeling that complete satisfaction will be the only result.

QUALITY—Springs are made of highest grade Steel, fine in grain, rich in Carbon, and carefully finished by hand.

SAFEGUARDS. The "Best," if not properly safeguarded, is liable to go astray. This is true of Mainsprings as well as of humanity. The methods employed to protect the LONGEVAL leave nothing to be desired, giving protection:—FIRST, against rust, as each spring is wrapped in oiled anti-rust tissue paper, then placed in an individual paper box. SECOND, against climatic changes, as every box containing a Spring is enclosed in tin foil. THIRD, against useless handling. We all know that more Springs are ruined by coming in contact with perspiring fingers or by being exposed to the air than by anything else.

SELECTION IS MADE EASY. Twelve Springs, each in an individual box, are placed in a strong, Sliding Box, properly labeled, showing the contents.

A neatly made Cabinet is furnished gratis with every order for 1 gross of LONGEVAL SPRINGS. These cabinets are built on the principle of the Sectional Book Case, permitting you to build them to any desired size.

Feeling confident that this is an article of the highest order, we submit them to the test of the most exacting critic.

Your jobber will supply you. If for reasons of his own he will not do so, write to the Importers, HAMMEL, RIGLANDER & CO., 35 Maiden Lane, New York, who will inform you of the nearest jobber who will fill your order.

NOTICE.

The importers of these mainsprings are the first to have employed the idea of putting each spring in a separate box, thus protecting them against rust and climatic changes, and to place a number of these small boxes in a box or case.

They have taken expert advice as to their sole and exclusive right to this manner of "dressing" mainsprings, and have been advised that they have a proprietary right thereto.

The trade is hereby notified that any infringement of this manner of "dressing" mainsprings for the market will be vigorously prosecuted.

GET THE BEST—

The "Longeval" Mainspring

FOR AMERICAN WATCHES.

The Motive Power of a Watch.

By Puteanus.

(Continued from issue of Feb. 18.)

THE 18 size American mainspring, of which the preceding is an imitation, registered the following weights.

(II.) WINDING UP.

FIRST TRIAL.

First turn	265 grams
Second turn	348 "
Third turn	410 "
Fourth turn	500 "
Fifth turn	± 570 "
Sixth turn	± 620 "

SECOND TRIAL.

First turn	265 grams
Second turn	348 "
Third turn	410 "
Fourth turn	475 "
Fifth turn	± 530 "
Sixth turn	± 540 "

UNWINDING.

FIRST TRIAL.

Fifth turn	475 grams
Fourth turn	460 "
Third turn	383 "
Second turn	295 "
First turn	240 "

SECOND TRIAL.

Fifth turn	± 530 grams
Fourth turn	460 "
Third turn	383 "
Second turn	295 "
First turn	240 "

To derive the mean power of this mainspring, we proceed as before and take for our calculation the first four turns of unwinding, *i. e.*, in the first trial, 620 grams, 475 grams, 460 grams, 383 grams, and, to be more correct, we will say, finishing at 295 grams, when the watch is again wound up for the next day. The mean of these numbers is 446.6 grams. The same number of turns of the second trial gives:

Beginning of unwinding	540 grams
Beginning of second turn	530 "
Beginning of third turn	460 "
Beginning of fourth turn	383 "
Ending with	295 "
Total	2,208 grams

of which the mean is 441.6 grams, which shows a small difference with the mean power of the first trial. To have the correct power as near as possible, we divide the difference between the results of the two trials and we obtain the mean power of the spring such as it exerts in daily use, which is 444 grams.

Other trials were made with the mainspring of an English fusee watch not of the largest size; the barrel is 17½mm. in diameter and 4mm. in height, the mainspring itself being 3mm. in height. Such springs are said to be very strong and it was therefore interesting to compare them with the 18 size American mainspring.

The barrel makes 5½ turns, of which the last half turn is left unwound in the watch and the first turn remains always wound up. This spring showed the following features:

(III.) WINDING UP.

FIRST TRIAL.

First turn	276 grams
Second turn	400 "
Third turn	448 "
Fourth turn	± 500 "
Fifth turn	± 570 "

SECOND TRIAL.

First turn	276 grams
Second turn	400 "
Third turn	448 "
Fourth turn	± 500 "
Fifth turn	± 570 "

UNWINDING.

FIRST TRIAL.

Fourth turn	475 grams
Third turn	410 "
Second turn	348 "
First turn	260 "

SECOND TRIAL.

Fourth turn	500 grams
Third turn	422 "
Second turn	355 "
First turn	270 "

Proceeding with our calculation in the same manner as before, we find the mean power to be 418 grams.

A watch of medium size, generally called a gents' watch, and of Swiss manufacture, showed the following:

(IV.) WINDING UP.

FIRST TRIAL.

First turn	210 grams
Second turn	252 "
Third turn	294 "
Fourth turn	336 "
Fifth turn	392 "

SECOND TRIAL.

First turn	196 grams
Second turn	252 "
Third turn	308 "
Fourth turn	350 "
Fifth turn	350 to 364 "

UNWINDING.

FIRST TRIAL.

Fourth turn	315 grams
Third turn	252 "
Second turn	210 "
First turn	175 "

SECOND TRIAL.

Fourth turn	315 grams
Third turn	266 "
Second turn	210 "
First turn	175 "

The mean power exerted by this spring is 267 grams.

We tried the mainspring of another watch of about the same size but of a flatter shape. The diameter of the mainspring barrel was 18mm., the same as that of watch IV., the height of its mainspring being, instead of 2.25mm., like the latter, only 1.5mm. The result of the trials are the following:

(V.) WINDING UP.

FIRST TRIAL.

First turn	114 grams
Second turn	185 "
Third turn	200 "
Fourth turn	214 "
Fifth turn	250 "

SECOND TRIAL.

First turn	114 grams
Second turn	185 "
Third turn	200 "
Fourth turn	214 "
Fifth turn	250 "

UNWINDING.

FIRST TRIAL.

Fourth turn	214 grams
Third turn	185 "
Second turn	142 "
First turn	107 "

SECOND TRIAL.

Fourth turn	200 grams
Third turn	185 "
Second turn	142 "
First turn	107 "

The mean power of this watch is 178.5 grams.

From this it can be noticed how little difference there is in both trials, which shows that the regularity of expansion and developing of the weaker mainsprings is proportionately not hampered so much by friction in the barrel as is the stronger mainspring.

A lady's watch, also of Swiss make, and not one of the smallest size, showed the following force:

(VI.) WINDING UP.

FIRST TRIAL.

First turn	28 grams
Second turn	56 "
Third turn	70 "
Fourth turn	84 "
Fifth turn	98 "

SECOND TRIAL.

First turn	35 grams
Second turn	60 "
Third turn	70 "
Fourth turn	77 "
Fifth turn	91 "

UNWINDING.

FIRST TRIAL.

Fourth turn	80.5 grams
Third turn	63 "
Second turn	45.6 "
First turn	28 "

SECOND TRIAL.

Fourth turn	77 grams
Third turn	63 "
Second turn	42 "
First turn	28 "

The mean power of this small watch is only 61.61 grams.

The calculation of the mean power in

case I., for the 18 size imitation American watch, ought to be corrected before making a summing up of the diverse findings.

The watch being wound up again, when four turns have run down, *i. e.*, when the spring shows a force of 348 grams in the first trial, or 360 grams in the second trial, the mean force of these two numbers should also be considered, which would bring the mean force of each turn at 464 grams instead of 516 grams.

The mean power for six different sizes of watches, as we have found, is:

I.	For the 18 size imitation American watch	464 grams
II.	For an 18 size American watch..	441.6 "
III.	For an English fusee watch.....	418 "
IV.	For a medium size Swiss watch..	267 "
V.	For a medium size Swiss watch (flat)	178.5 "
VI.	For a lady's watch (small size)...	61.61 "

Before continuing these calculations let us see what a horse-power in machinery is, and how smaller powers are generally calculated. As a general rule physicians and mechanics measure the amount of mechanical work in the same manner as volumes or solidity is reckoned. Instead of length, width and height, mechanical work is represented, (1), by the effort or pressure exerted, (2), by the space passed through, and (3), by the time required.

For heavy machinery a unit of mechanical effect (corresponding to the geometrical cubical unit) adopted in the United States and England, is the horse-power, which is equal to 33,000 pounds weight, or pressure, raised or moved through a space of one foot in one minute of time, or which will be the same as 550 pounds raised one foot per second.

The corresponding unit employed by those who make use of the metric system is the horse-power which is equal to 75 kilograms, raised one meter high in one second. The former has as a base the foot-pound, which means one pound raised one foot, and the latter the kilogram-meter which means one kilogram raised one meter. Both horse-powers are of about the same value.

Having started our calculations with decimal weights, we will continue to do so. The amount of small mechanical work is generally calculated with smaller measures and weights, such as the decimeter, the centimeter and millimeter, and the decigram, centigram and milligram. Instead of kilogram-meter, we will have the hectogram-meter, the decigram-meter, etc. The most suitable for our purpose will be the millimeter-gram-second, which may be written by abbreviation mm.g.s. It represents the power which is required to raise one gram one millimeter high in one second of time. This being well understood, let us see how many mm.g.s. each of the different kinds of watches needs as a motive power.

(I). The barrel of the imitation American watch has a pitch diameter of 20mm.; it makes one turn every six hours and exerts a pressure of 464 grams. One turn of a barrel of 20mm. diameter represents a length of 20mm. $\times$ π or 20mm. $\times$ 3.14 = 62.8mm.; this length multiplied by the weight, 464 grams, gives us the amount of millimeter-gram (mm.g.) exerted by one turn of the barrel performed in six hours, or 21,600 seconds; consequently, we find for the amount of pressure exerted in one second the following:

$$\frac{\text{Length mm.} \times \text{pressure g.}}{\text{Time 21,600 S.}} = \frac{62.8 \times 464}{21{,}600\text{ S.}} = 1.349 \text{ mm. g. s. (millimeter-gram-second).}$$

(II.) Proceeding in the same manner with the 18 size American watch, whose barrel is of the same diameter and makes one turn in the same length of time, we have:

$$\frac{\text{Length mm.} \times \text{pressure g.}}{\text{Time 21,600 S.}} = \frac{62.8 \times 441.6}{21{,}600\text{ S.}} = 1.2839 \text{ mm. g. s.}$$

Not possessing the fusee and center-wheel of the English watch, we will pass that one and proceed with the Swiss watches.

(IV). The barrel of this watch has a pitch diameter of 18mm. and makes one turn every eight hours, which makes the length to be 18mm. $\times$ 3.14 = 56.52mm. We then have:

$$\frac{\text{Length mm.} \times \text{pressure g.}}{\text{Time 28,800 S.}} = \frac{56.52 \times 267}{28{,}800\text{ S.}} = 0.524 \text{ mm. g. s.}$$

(V). The flat Swiss watch has a barrel of the same diameter and makes also one full turn in eight hours. We have here:

$$\frac{\text{Length mm.} \times \text{pressure g.}}{\text{Time 28,800 S.}} = \frac{56.52 \times 178.5}{28{,}800\text{ S.}} = 0.35 \text{ mm. g. s.}$$

(VI). Very interesting indeed is it to see what minuscule power the small Swiss has. Its barrel has a pitch diameter of 12mm., and, like the other two Swiss watches, makes one turn every eight hours, of which the length is 12 $\times$ 3.14 = 37.68mm. We have here:

$$\frac{\text{Length mm.} \times \text{pressure g.}}{\text{Time 28,800 S.}} = \frac{37.68 \times 61.61}{28{,}800\text{ S.}} = 0.08 \text{ mm. g. s.}$$

This small force represents only 1/16 part of the force required to drive the 18 size American watch (II.), or which is the same, 16 small Swiss watches, (VI.), may be run by the power of the 18 size mainspring. The motive power of diverse watches having been ascertained, we can now easily find in what proportion their power stands to that of a horse-power, or, in other words, how many watches of different sizes it would require in order to make the total of their power represent one horse-power.

Many readers, not being very well acquainted with the divisions of the measures and weights of the metric system, we will try to make the calculation plain to all.

A horse-power, as we have said before, is 75 kilogram-meter-second, and, in order to enable us to see how many times the power of diverse watches is contained in this number, we must either convert the watch-power into kilogram-meter-seconds, or else the horse-power into millimeter-gram-seconds by which the watch power is expressed. The latter being more convenient, we say, (1), one meter contains 1,000 millimeters, therefore a horse-power is also 75,000 kilogram-millimeter-seconds; (2), one kilogram contains 1,000 grams, therefore we have also 75,000,000 millimeter-gram-seconds.

It does not make any difference if we say gram-millimeter-second or millimeter-gram-second, the latter being merely done for the sake of euphony; it is the same as if we say, length, width, height, or heig length, width.

A horse-power being 75,000,000mm.g there are contained in it:

(I). $\frac{75{,}000{,}000}{1\ 349} = 55{,}000{,}000$ of 18 s imitation American watches; say 55,000,0 omitting fractions.

(II). $\frac{75{,}000{,}000}{1.283} = 58{,}000{,}000$ of 18 s American watches.

(IV). $\frac{75{,}000{,}000}{0.524} = 143{,}000{,}000$ of n dium size Swiss watches.

(V). $\frac{75{,}000{,}000}{0\ 35} = 214{,}000{,}000$ of fl medium size Swiss gents' watches.

And amazing as it may seem,

(VI). $\frac{75{,}000{,}000}{0.08} = 937{,}000{,}000$ of sm Swiss watches (ladies' size).

We can find many small watches Maiden Lane and other great stores of t country which run by a much smaller pow than the above watch, (VI).

The Manipulation of Steel in Watch-Work

(By John J. Bowman, of the Ezra F. Bowm Technical School, Lancaster, Pa.)

(*Continued from issue of March 4.*)

LATHE cement is much less trouble th solder to work with, and should l used except when the work exceeds about inches in diameter. The cement is easily ove heated, and then becomes brittle and u tenacious. If it commences to bubble ar smoke, clean it off and use fresh cement.

For all work requiring the use of an a cohol lamp good grain alcohol should l used. Wood alcohol is cheaper, but it rus all steel with which its flame comes in co tact and should not be used in the lamp.

Flat work is generally commenced by saw ing a blank from sheet metal with a jewe er's saw. This leaves rough and irregul edges, which must be turned down, an necessitates the use of a cement brass, eve if the size is such that a self-centering chuc could be used. When a punched circul blank may be used, however, or for a sec ond operation on a piece which has bee edged from a cement brass, when the size i suitable it saves a great deal of time to us a step or wheel chuck, or a true "bez chuck," which has not suffered from abus After soldered work has been finished th solder can be cleaned from it by heating an rubbing it off with a piece of burlap, or i may be filed off if the surface is not grea

Cement is removed by scraping or break ing off most of it, then boiling in alcohol o immersing it for a time in cold alcohol an finishing with a stiff brush.

PIVOTING AND STAFFING.

Pivoting and staffing are among the mos common operations in horological stee working, and, as every workman is familia with these subjects, it should not be neces sary to go into a general discussion of them but as everyone is likely to gain some goo ideas from the experience of others we wil note some methods we believe to be best fo their several purposes.

Quite a number of watchmakers consider it a rather exceptional case when they get a pivoting job completed without some acci

ent during the work. These accidents are, f course, liable to happen even when every are has been taken; but in nine cases out of 0 they are due to neglect of some little oint in preparing or executing the work.

In the first place, the piece to be drilled nust be well annealed. Hold the staff or rbor in a pair of brass-lined pliers, and fter heating the annealing tool (Fig. 11) nearly or quite red-hot, press it onto the taff, and if necessary repeat this until the teel is colored a blue-black.

Then the work, of course, must be set up rue in the lathe. To assure truth the hucks should fit the work exactly. For this eason, if your chucks are numbered metri- ally, the half sizes should be included in he numbers used for pivoting and staff vork, as the full sizes vary by tenths of nillimeters, and this is too large a step in

Fig. 11.

size to allow of the best results in this work. If your chucks are true, they may be used as safely as cement. When, however, you find you cannot run the work true in one of the chucks, take a cement brass of ¼-inch diam- eter and turn a deep V-shaped center in it (Fig. 12). Use a strong eyeglass and make sure that there is no projecting point at the bottom of the taper. This is a little difficult to prevent, but if you have much trouble in avoiding it, take a heavy sewing needle in a pin vise and sharpen its point on an oil- stone, as you would a graver. With this you can see clearly what you are doing, and can remove the projection easily and leave a perfect center inside.

Fill the V with cement while the brass re- volves and allow the cement to form outside like a cushion (*a*, Fig. 12); warm the staff in the lamp flame and thrust it into the soft wax, pushing it clear to the bottom and holding it true with a peg-wood point while the work revolves. Keep the peg-wood against the work until the wax is hard. A matter of importance here is to have the cushion of wax true. If it is not pretty well balanced it will in cooling tend to draw the work out of true. With

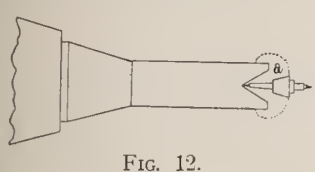


Fig. 12.

an oilstone slip flatten the end of the broken pivot and center it with a thin lozenge grav- er, using the same care to prevent a projec- tion at the bottom, as in the case of the cement brass.

Now all is ready for the drilling. The drill must be evenly and keenly faced on both cutting sides, and the sides equal in length. A very light, thin pin vise is best as being sensitive to any catching of the drill. Two good forms are shown in Fig. 13. Moisten the drill with saliva or alcohol and "line up" the shank or pin vise with the eye, so as to assure its being held straight in the axis of the revolving work. Run the lathe at only moderate speed and keep a firm pressure on the drill, but be careful not to allow any side pressure, and see that the end of the drill does all the cutting, while the sides keep clear of the hole.

Occasionally the steel in the end of the hole will "burnish" under the drill. If this happens, sharpen the drill so the sides stand at a different angle, either flatter or higher than before. This will then act on only a small portion of the burnished surface at a time, and thus clear it away. If the drill

Fig. 13.

happens to break in the hole, first remove the lathe head and, holding it with the pivot- hole down, tap it with a mallet; the broken piece may drop out. Should this not suffice, take a sharp needle in a pin-vise and try to work out the broken drill point. Sometimes the drill will not yield even to this; in which case the staff must be reheated and re- drilled with a somewhat larger drill than the one first used.

Drill to a depth equal to about three times the diameter of the pivot and clean out the hole by blowing into it with a blowpipe or use a bristle—peg-wood is too apt to break in the hole. File your plug of wire, tem- pered bright blue (a sewing needle does very well), on a very slight taper and drive it tightly into the hole. Cut off the end of the plug, leaving just enough for the length of the pivot. Face off the end with an oil- stone slip and turn the pivot with a light graver, starting at the end and working back toward the cone or shoulder. A graver with slightly rounded point is convenient for

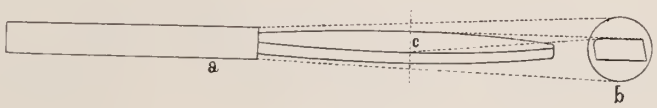

Fig. 14.

turning conical shoulders on pivots. Turn the pivot very nearly to size, then grind the surface even with an iron slip and powdered oilstone.

This slip may be filed from ¼-inch round iron, leaving enough of the rod for a handle. Its shape will be understood by referring to *a*, Fig. 14, in which *b* is an enlarged end view, assuming the body of the tool to be cut through at *c* in order to show its cross- section. Both faces of this tool are to be filed perfectly flat, the sides curved and somewhat "undercut" and one corner round- ed off for grinding conical pivots, while the opposite corner on the other side is left square for shoulder pivots and shoulders on staffs. The file strokes must be across the grinding surface to hold the powder to the best advantage. File the rounded corner with a gradually increasing curve (speaking of its cross-section), so that a fit may be found somewhere along its length for any curve to which the pivot may have been turned.

Of the various substances used for grind- ing, either to produce a flat, gray surface or as preparatory to polishing, we believe the best is powdered oilstone. One of its most valuable characteristics is the absence of a tendency to imbed itself in the steel, which cannot be claimed for many of the other abrasives; the lack of this property makes a substance unfit for finishing, which is to be followed by polishing.

The oilstone powder should be mixed with sperm oil in such proportions that it is a stiff paste, not too oily. Rub the iron slip over the paste so that it will be lightly charged with the powder. While running the work at moderate speed hold the grinder under it and work it slowly back and forth. Observe by the blackening of the slip whether the whole surface of the pivot is being ground. After the grinding is finished clean the work carefully with pith dipped in benzine, and it is ready for polishing.

The polisher is of the same shape as the grinder, and is made of bell-metal. This can be had with the rough scale resulting from casting planed off, and the piece just the proper size, and it should be bought in this way, as the scale is ruinous to files used in removing it. Finish this slip with a very fine file. There are polishing compounds without number; most of them do the work quite well, but there are many "secret" prep- arations which are merely nostrums.

Grinding and polishing are one and the same operation as far as the action of the abrasives on the metal is concerned—the difference is entirely one of degree. The finer the surface is wanted, the finer must the grinding material be. The hardness of the steel also makes a great difference— the harder it is, the finer the polish it will take. A mixture of rouge, diamantine and oil, kneaded well to a stiff paste, works a little better than anything else we have tried. Diamantine alone seems a little too coarse— steel polished with it is apt to appear some- what "milky" when looked at closely, on ac- count of minute scratches on it. Fine rouge of itself does not seem to cut—has no "life," as we might express it; but mix the two together, about two-thirds diamantine and one-third rouge, with filtered lard or sperm oil, and if everything entering into the com- pound is perfectly clean the result is a ma- terial with which the finest possible polish can be produced.

The best way to keep the oilstone powder and polishing material is in one of the or- dinary receptacles with two or three divi- sions of wood, fitting one on top of the other, with a metal plate inside of each, on which the different materials may be mixed. Keep the oilstone powder in the lower compart- ment and the polishing compound in the upper. After mixing together the diaman- tine and rouge, add oil slowly, kneading the mixture with a piece of clean metal, until it has reached the consistency of a very stiff paste. Keep it thus, and whenever it be- comes necessary to have some of more liquid consistency, put a drop of clean oil on top of the paste and rub until you have what is desired.

(To be continued.)

Chas. McDonald, Almonta, Ont., is about to erect in Gananoque, Ont., a town clock to the memory of his father, the late Wm. S. McDonald.

Workshop Notes and Queries.

[Answers are solicited from our readers to the questions published weekly on this page.]

QUESTION No. 397.—**Cheap Mirrors.**—*How is quicksilver made to adhere to glass, or how can cheap mirrors be produced?* *C. A. H.*

ANSWER:—Two distinct methods are adopted for this purpose. The one falsely called quicksilver consists of the application of a lacquer of an amalgam of tin, or a similar alloy, to the surface of the glass; the other is a coating of real silver, precipitated from a solution of that metal. For a cheap method we would refer you to answer to question No. 73, issue of THE CIRCULAR-WEEKLY of April 2.

QUESTION No. 398.—**Glass Decorating.**—*On page 2 of the Feb. 11th issue of* THE CIRCULAR-WEEKLY *there is an illustration of something which I want to know. How is the silver coating made to adhere to the glass at the start? I understand that the glass is first painted and that the silver is then deposited by means of a dynamo or the substance used as a paint. Where can it be bought and how is the work treated?* *T. W. C. C.*

ANSWER:—The process is patented and you may, by writing for a copy of the patent, get an idea how it is done. Still we believe that the manufacturers, after years of trials and experimenting, keep most of their processes secret, for which one cannot blame them.

QUESTION No. 399.—**Second-Hand Tools.**—*I was burned out and lost everything. Do you know of a good second-hand set of tools, lathe, bench staking-tools, etc., for sale cheap?* *L. L. W.*

ANSWER:—We do not know of anybody who has cheap tools for sale. One single advertisement under "Wanted to Purchase" may bring you a number of offers.

QUESTION No. 400.—**Tarnished Window Stock.**—*I have a very large, deep and high show window and I can make it very attractive, but everything allowed to remain in it for two or three days becomes badly tarnished. I notice this to be the only window in our city thus affected. Now will you kindly inform me of some remedy and the cause?* *D. L.*

ANSWER:—It is difficult for us to give the cause of your goods tarnishing in the windows. We would suggest that you put some unslaked lime in saucers, and place one in each corner of your window. We think that it will have a beneficial effect, if it does not remedy the trouble entirely.

QUESTION No. 401.—**Springing.**—*I wish to ask you if there is any difference in springing a watch to run without a regulator and with a regulator, and if so, where lies the difference?* *D. G. H.*

ANSWER:—All watches except pocket chronometers with a cylindrical hairspring, carry a regulator. Box or marine chronometers have no regulator. Springing of a pocket watch is somewhat different from that of a box chronometer. The reason, however, is not because the latter has no regulator, but because of the difference in construction of the balance and because the box chronometer is adjusted only in one position. Watches which are made to be carried in the pocket while one is walking, jumping, dancing, horseback riding, etc., are supposed to get more readily out of adjustment than box chronometers, and it is for that reason that they are provided with a regulator so as to enable one to correct easily the slight deficiencies in rate caused by wear and tear.

QUESTION No. 402.—**Broken Mainspring.**—*Enclosed find a bit of mainspring. Please tell me if it could be used again by fixing nicely a new hooking hole in the spring?* *I. N. I.*

ANSWER:—If the small piece which you send us has been broken off in the central end of the mainspring, it is better to replace the latter by a new mainspring. If, however, it is the outside end of the mainspring which is broken off, then it will be as good as a new one if a new hooking hole be properly made in it. We described in answer to Question No. 199, issue of Aug. 6, 1902, how to use a mainspring which is broken near the end of the center. This method, however, cannot be recommended for fine watches.

QUESTION No. 403.—**Hole Jewels.**—*Of what kind of precious stones are the hole jewels made and which ones are the best, the very red or the pale colored jewels?* *T. S.*

ANSWER:—The stone mostly used is the ruby. This jewel, frequently of a rich pigeon-blood color, exists in three principal varieties: oriental, spinel and balas rubies, which differ as regards their chemical composition. From a jeweler's point of view, the value of a ruby is enhanced by its rich color and transparency; but this is not the case in regard to its applications in horology, for which hardness and capability of taking a high polish are mainly necessary.

QUESTION No. 404.—**Time Keeping.**—*I have a 14 size Waltham seven jeweled watch which I wind up at night and set right. In the morning it will be one minute fast, but through the day it will keep very good time. Can you tell me the cause of its going that way?* *J. J. C.*

ANSWER:—In asking questions like the above it is always necessary, in order to receive the most exact answer, to give every possible detail pertaining to the case, as, for instance, at what hour of the night is the winding done; at what hour in the morning is the discovery made of the one minute difference; in what position is the watch kept during the night time and in what position during the day time; has the watch been cleaned recently and are you sure that the escapement is in perfect order; or do you hear upon placing the watch to the ear, some squeaking, scratching or unusual sound in one of the different positions. When we know such details, we may be able to point out the probable cause of the discrepancy in time.

QUESTION No. 405.—**Tempering Gravers.**—*I would like to ask, through Workshop Notes, what is the correct method of tempering gravers?* *F. L. H.*

ANSWER:—Being unable to understand what you mean by "tempering gravers," as some watchmakers mean by it, "hardening," which is just the reverse of what the word really expresses, we might refer you to a series of articles on the manipulation of steel, now being published in THE CIRCULAR-WEEKLY. This article is exhaustive and will probably be of benefit and interest to you. See also answer to Question No. 126 in the issue of May 21, 1902.

QUESTION No. 406.—**Steel Barrel.**—*We note your answer in Workshop Notes to Question No. 386, but you do not state whether hook is to be soldered or what. The steel barrels referred to in Waltham movements are very thin, and originally there is no hook put in them separately, but a piece is stamped inward to catch spring, and thus acts as a hook. It seems if barrel be annealed, hole drilled and a brass or steel hook inserted, as directed, the barrel itself being very delicate, would not hold the hook if the latter were soldered. Any further information on this subject will be appreciated.* *L. K.*

ANSWER:—Knowing you to be an old subscriber who takes great interest in horological matter, we thought it would be useless to enter into details to explain how to make a hook in a barrel. If, however, our explanation has been too short, we will gladly add to it, as our aim in editing these workshop notes is not to write them for the sake of ornamenting the paper, but to help our subscribers. The art of the watchmaker is entirely different from that of the jeweler. The latter should be a master in soldering, while the former must avoid all soldering as much as possible. It is with this end in view that we make a hook in the steel barrel without soldering it. We know that the hooking in steel barrels is punched in it, but we do not like such hooking, for the simple reason that it is bad, and therefore we prefer to make a hook that has successfully stood the test of time. Although the steel barrel is thin, we can fasten a steel hook in it that will have a firm hold, but, as we have said before, that hook must be much thinner than a brass hook. When you look at the drawing, which we made purposely for you, you will see how it is drilled in the barrel. You can see that the wire is threaded and filed to a tapering point. After having drilled a hole through the rim of the barrel, thread the hole with a fine tap, then, after having filed a piece of steel wire, thread it in the same number of hole of the screw plate as the tap that has served to thread the drilled hole in the barrel. Now pass your piece of wire through the threaded hole of the barrel, and, grasping it with a pair of plyers, screw it as tight as you can in the barrel; then mark the place where the wire should be cut off inside, unscrew it again and remove it from the barrel. Put the wire in the pinvise, cut off there where the mark had been previously made, file smooth and again screw the wire very tight in the barrel, such as was shown in the sketch already published. All there is to do now is to cut off the wire on the outside close to the barrel, and to file it smooth, either with a fine file or an emery file.

THE RAMBLER'S NOTES.

WHAT THE RAMBLER SAW AND HEARD AMONG THE DEALERS IN ART POTTERY, CUT GLASS, BRONZES, ETC.

ARTISTIC CLOCKS AND BRONZES.

ARTISTIC clocks that combine all the characteristics of the style of the time of Napoleon, together with the modern improvements that have been made in timepieces may be found in the show rooms of Harris & Harrington, 32 Vesey St., New York. This concern has long made a feature of Empire clocks, and the line has been noted for the excellence of workmanship as well as the artistic acteristics which the pieces possess, but the line recently added to their stock surpasses in every respect anything ever before carried by the concern. Mr. Harrington has the happy faculty and ability of demonstrating to the designer and art director of the clock factories, the particular effects which he wishes to produce, so that each year the Empire clock line of the firm possesses some added charm and is a distinct improvement over the products of the year before. The distinctive feature of this year's line consists of the artistic application on white marble of mercury gilt or bronze. The designs are the same as in former years, but the contrasts in colors are different. The bright yellow metal against a background of snow white marble makes a combination extremely chaste and delicate, and the clocks of this design are undoubtedly destined to become extremely popular with buyers of high class jewelry. The general treatment of the decorations, both in regard to color and their application on the white marble, originated with Mr. Harrington, and the clocks are the result of his instructions to the manufacturer. Each of these clocks is accompanied by two candelabra of similar style. This house has just added a line of bronzes, representing historical characters and famous works of art. Some of the pieces are exact reproductions of famous pieces of statuary in the Louvre and Luxembourg, Paris. One of the figures is a reproduction of the Narcissus taken from the ruins of old Pompeii. The distinguishing characteristic of these bronzes is their finish; the color is distinctly different than anything heretofore seen in bronze and might perhaps best be described as a shade between a very dark bronze and a black. It has a high polish which brings out the detail of the work to which it is applied and gives it at the same time a peculiarly subdued and soft effect, yet in no respect does it give the article a dull appearance. The new bronzes and clocks are well worthy of inspection by connoisseurs, art dealers and jewelry buyers.

*

UNIQUE EFFECTS IN POTTERY.

A VARIETY of pottery artistically decorated with female figures, posed in various positions, are now displayed in the "green room" of Geo. Borgfeldt & Co.'s building, 4th and Wooster Sts., New York. The pottery comes from Germany and Austria, and embraces many colors, styles and finishes. One particular variety which shows original effects in the use of Greek and Roman mythological characters is of a Quaker gray color, has a dull, rough finish, and in some instances is tinged with purple or gold. The figures, which come in original and artistic poses, include Mermaids, Goddesses of War and of Peace, and figures representing the Sunrise, Sunset, Silence, Patience, Fortitude, and a great number of other subjects. The subjects have been treated in such an artistic manner and effect that they furnish food for study and thought, and are bound to awaken something more than a mere appreciation of the pottery because it *is* pottery. They bring the beauty of antique art and the original conception of subjects by people in the time of Homer, up to the present day, and combine this treatment with present day art effects in a manner that is both pleasing and instructive. Had the present day art been entirely eliminated, the objects might be considered simply reproductions of crude wares, but the touch of the modern potter has made them something more than objects of historical interest. This pottery is made up into vases, card trays, ash receivers, center pieces and all other articles now common to ceramics.

*

NOVELTIES IN GLASS AND METAL.

AMONG the import samples of art goods now arriving in New York should be mentioned the lines carried by H. B. Hollis, 64 Murray St., New York. Mr. Hollis was formerly a dealer in domestic terra cotta and cut glass, but in addition to those lines he decided to embark in the importing business. He spent several months abroad during the latter part of 1902 and the early part of this year, visiting many glass, china, metal and bric-à-brac manufacturers in Germany, France, Austria and Switzerland, and a large number of the samples he selected have already arrived, though more are still to come. Those on display in his show rooms at the present time em-

brace many novelties never before seen in New York, among which is a variety of white opaque glass flaked with splashes of green, blue, yellow and purple, on which a deposit of gold in a figure or floral design has been made. Other new varieties of opaque, iridescent, colored and white glass metal mounted or decorated with gold or silver deposit, are also shown. A number of copper, bronze and metal desk and mantel picture frames, made in odd designs and in new colors, and novelties in Royal Bonn showing a new treatment, are also to be found in Mr. Hollis's present line.

THE RAMBLER.

Ruby Mining in Burmah.

RUBIES have been mined in Burmah and Siam from time immemorial, and it is probable that the most of the historic rubies came from the Burmese mines. The Siamese ruby districts are little known and scarcely explored, and it is probable that Burmah will remain, for many years to come, as it is now, the chief ruby producing district of the world. The most important locality whence the stones are obtained is in the vicinity of the Mogok Valley in Upper Burmah, some 90 miles north of Mandalay, among a range of hills 6,000 feet high. The chief mines at present worked are in the valleys of Mogok and Kyatprin, some 4,000 feet above the sea level.

After the British annexation of Upper Burmah the ruby-bearing tract, it is said, was taken up by a British company, which has carried on operations ever since. At first mining was carried on in the calcspar formation near Kyatprin, but these operations, proving unsuccessful, attention was turned to the great tracts of alluvial ground in the many valleys, nearly every one of which had been superficially "scratched" by the native miners. To explore and drain the deep alluvial deposits at as great a depth as possible, the system was adopted of driving up deep tunnels beneath and through the hard bars of gneissic rock which dam the mouths of these valleys. In one or two cases where this was impracticable a pumping pit was sunk at the lower end of the valley, and a powerful steam plant erected for draining the water.

Both this and the tunnel method have been very successful, and large tracts of profitable ruby-bearing ground have been laid open and quarried or mined. It is pointed out that fuel is becoming scarce in the ruby-mining districts, the wood having to be brought in from a constantly increasing distance, and in the near future it is probable that an electrical plant will b adopted for power purposes, there being ample water power in the vicinity for generating the electricity required. Sapphire are occasionally met with, as well as rubie and other pretty but not valuable stones Although the Mogok district is by no mean worked out and is still extensive, other ruby-bearing tracts have been discovered o late years, notably at a place in the Chi country, some miles northwest of Mogoung which may at some future time prove a important a ruby district as that at Mogok —*Allahabad Pioneer Mail.*

Pearl Fishing Concession on German East African Coast Granted to Dr. Aurel Schulz.

IT has been learned that Dr. Aurel Schulz, the well-known South African explorer, has secured a concession over the whole of the German East African coast for mother-of-pearl and pearl fishing, which in other countries has developed into a great industry and given large returns. The discovery of genuine mother-of-pearl shell on the German east coast of Africa is expected to result in the development of a solid industry.

Dr. Schulz states that the islands lying off the coast form coral banks of enormous extent, which fulfil all the natural conditions requisite for the maturing of mother-of-pearl shell in large quantities, while the conditions for diving are very favorable, as the water lies shallow over great areas. Red mussel, out of which he extracted some good white pearls, is plentiful over a distance of at least 400 miles in length. South of the island of Mafia, off Ras Kisimans, and in other places he found beds of the large pinna shell of extraordinary size, which yielded black seed pearls.

No great amount of foresight is necessary to prophesy a large sale for the new silver plated girdles now being shown to buyers. These girdles are of quadruple plate and are made in a variety of rope and chain designs, the latter with both plain curb and fancy chased links in a range of sizes. They are shown in oxidized and gun-metal finishes and each has a fancy buckle in *art nouveau* style and pendant balls and tassels of the same style of links as the chain, but of a smaller size. A line of these goods shown by Bernard Rice's Sons, 542 Broadway, New York, includes a variety of girdle belts, consisting of chains and ornaments of silver plate on satin and taffeta.

ILVER AND COPPER ARTISTICALLY COMBINED IN NAVAL PUNCH SET.

NE of the most beautiful examples of the silversmith's art, presented to a t of the United States Navy in recent rs, is the handsome punch set given by citizens of the city of Denver to the iser named after that city. This set, which was universally admired when exhibited at the store of Boyd Park, 1008 16th St., Denver, Colo., last January, consists of a bowl, tray, ladle and 12 cups. The service was furnished by Mr. Park and was manufactured by Dominick & Haff, New York. In design and material it is thoroughly appropriate for the purpose for which it was intended, and the metals used in making it, gold, silver and copper, are the great products of the State of Colorado.

PUNCH SET PRESENTED TO THE UNITED STATES CRUISER "DENVER."

(Continued on page 11.)

ALVIN DEPOSIT WARE

There is perhaps no one article to which we have given so much attention and thought as the Cologne Bottle. We have a line of Colognes of all sizes and styles. The engraving, which is all done by hand, embraces the most artistic designs faithfully carried out. We have some new effects in French Grey finish that are particularly attractive. We also have a large display of Jewel Cases, and atomizers to complete a lady's dressing table.

Alvin Manufacturing Company,

NEW YORK.

Brooklyn 14 Karat Solid Gold Cases.

B.W.C.C.O.

FINISH

This is a qualification to be judged by the eye of the critical, the knowing, the connoisseur.

A Brooklyn 14 Karat Solid Gold Watch Case will bear close examination. The finish in one place is as faithful as in another, and everywhere alike it exhibits the work of the most skilled artisans. But as they are for the very finest trade, these cases are made to attract at first sight, and to hold that attraction permanently. The customer who leaves your store with a watch enclosed in a Brooklyn 14 Karat Solid Gold Case will congratulate himself for years on the fine finish in every particular, and will not confine this expression of pleasure in his purchase to himself either. It often happens that one case sells many by such hearty advertising as such people gladly give you.

GET IN LINE.

You will have to buy diamonds somewhere—they are an absolute necessity in your business. . . . . .
There are roundabout methods, but they are costly. . . . . .
The direct method is to buy of the diamond cutter, save all middlemen's profits and get the lowest price that it is possible to secure. . . . . .
If you will get in line and look through our end of the telescope for a moment, we can show you some values that will interest you—stones at their actual price in the rough, with the addition of the cost of cutting and one small profit instead of several large ones. . . . . .

The Strength of a Chain

Foster's Strong Links.

LINK THE THIRD—THIRTY YEARS' EXPERIENCE.

The fact that we have been in business thirty years means two things to every buyer of chains and lockets.

First, no house stays in business thirty years unless its goods give satisfaction.

Second, thirty years' experience must necessarily enable the house that has it to do better work than a house which has not had so thorough a training.

In our thirty years of manufacturing chains we have learned to give the best quality for the money. The chains we make look better and present a better appearance than ordinary chains. Every single one is manufactured of seamless wire by us in our own plant, so that when we guarantee them we know exactly what we are saying.

F&B TRADE MARK REGISTERED

This mark means the best vest chains that can be bought for the money.

Silver and Copper Artistically Combined in Naval Punch Set.

(*Continued from page* 1.)

The bowl, which is 18 inches high and 25 inches across the rim, has a capacity of 40 quarts. Among the essential features of the design are the panel showing in relief a fac simile of the cruiser *Denver*, the seals of the city of Denver and of the Navy on each side of the panel, and the two beautiful figures of nymphs, which, holding wreaths of laurel in their outstretched arms, form the handles of the piece. Around the edge of the bowl is a large rope of twisted silver, festooned in sailor knots, while at the base of the bowl two golden eagles appear, respectively at the front and back.

The tray, which measures 36 inches in diameter, is of silver in gray finish and edged with copper, and at either side are wrought spread eagles in native copper. The birds appear with outstretched wings, and the figures, which are in relief, form the handles of the tray.

The ladle, the bowl of which is of gold, follows in design the same lines as the other pieces, having at the top of the handle a figure of a spread eagle in copper, above the seal of the city of Denver. Around the full length of the handle is entwined the columbine vine.

The inscription on the bowl appears on the reverse, in a space corresponding to that occupied by the panel shown in the illustration.

The vessels whose services have been illustrated and described in THE CIRCULAR-WEEKLY, and the dates of the issues in which these illustrations and descriptions appeared, are as follows:

One can have little but praise for the terse, forceful, comprehensive arguments contained in 'A Short Discourse on Trade,' a booklet issued by THE JEWELERS' CIRCULAR-WEEKLY, New York. Besides an outline of the development of trade from the earliest times, with reference to its advertising side, there is a reproduction of an interesting editorial on advertising that recently appeared in the New York *Sun*."—*Printers' Ink.*

Copies of the above-mentioned booklet will be cheerfully and promptly furnished to wholesalers and manufacturers on application.

"Something Different."

In all the arts and crafts it is the man who stamps his own individuality upon his work, and who imparts to his productions his own genius that is a true artist. The workman who is able to only imitate is a mechanic, not an artist.

The making of jewelry is an art-craft, and most susceptible of artistic expression. There are many mechanics but few artists. The productions of the artists are what we seek. We select those pieces that possess a character and originality of their own, which are the qualities that make them salable. Take watch cases for instance, some have all the ear-marks of regularity, while others have an appearance of "something different" that will attract the eye of a prospective purchaser at once. This is especially true of the productions of the Dubois Watch Case Company. Our mounted diamond pieces are of high artistic merit. We believe in advertising the truth only, and therefore solicit selection orders that we may demonstrate that our stock is always as good as we say it is.

United States Consuls Report on Markets for American Silver and Plated Ware.

WASHINGTON, D. C., March 11.—In a report to the State Department Consul-General Gowdy at Paris says there are in the city about 250 silversmiths, employing about 3,000 workmen. There is a corporation of masters, entitled Chambre Syndicale des Orfevres. Working silversmiths earn from 15 cents to 20 cents per hour, according to their ability. Designers are paid from 30 cents to 40 cents per hour; the chasers from $1.50 to $2.50 per day.

Paris being without doubt the center of art, a large amount of silver goods are manufactured and sold in that district. In one year, 1901, silver ingots to the value of $7,778,480 were imported into France, 40 per cent. of which came from England. Of $225,700 of worked silver goods were imported in that year, while silver jewelry imported in that year was valued at $771,6[illegible] Plated goods imported into France in 19[illegible] amounted to about $342,000. None of these goods are classed as coming from the United States, although several American firms have branch houses in Paris and sell American goods.

Touching the outlook for American wares Consul General Gowdy says, silver goods should be imported through a reliable agent understanding the businesss in France, and one who can see that the articles are properly stamped and appraised. To be successful in France the goods must be of good taste and artistic, and the fact must not be overlooked that there are many excellent silversmiths in Paris, who are able to turn out the finest work. Such goods as silver and plated teapots, tea services, knives, umbrella handles, mugs, crumb trays, etc., might find a market.

Consul Hollis, at Lourenço Marques, Portuguese East Africa, says: "The customs duty here on silver and plated ware is 3 per cent. ad valorem, and owing to the fact that in the customs returns such goods are simply lumped with a great many other articles subject to the same rate of duty, no statistics of the importation of silver and plated ware can be obtained. Before the war there was a considerable amount of business done here in these lines. As nothing of the sort is manufactured here, the local dealers imported their stocks from Germany, France, the United States and England. A considerable quantity of India silverware is imported from Ceylon by the Cingalese jewelers, who can be found all over this province.

"There is a good market here for silver and plated ware for the table and sideboard. I would suggest that parties wishing to do business in these lines write to the following named firms, all of whom are located here in Lourenço Marques: F. Bridler & Co., Leuders & Wandschneider, Charles Woolf, A. W. Bayly & Co., Bendahan, Abecid & Co., Allen, Wack & Co.; Casa Isaac Benoliel, Carlos Augusto Fernandes, Baptista Carvalho, and David Carvalho, P. A. Collot and Oswald Hoffman."

Consul Bergholz, at Erzerum, Turkey in Asia, says: "The consumption of silverware amounts to no more than $4,500 annually. Bracelets, rings, girdles, chains and a few ornaments made of silver, valued at about

,000, is the extent of the local manufac-
ıre. There are no obstacles to the intro-
ıction of American goods in this line be-
ınd the lack of a demand for work of such
tistic finish as is produced in the United
tates. The taste in this country, in the
ovinces at least, runs to articles of heavy
ake and of gaudy design."

Vice-Consul Magelssen, at Beirut, Tur-
y in Asia, says: "Until quite recently the
anufacture of articles in silver was quite
ı important industry in Damascus and
eirut. In Damascus some 25 shops are
ill working. Official records show that dur-
g 1901 there were imported 10,473 pounds
silver in bars into Beirut, most of it com-
g from France. No small part of this sil-
r is shipped to Damascus, where it is
ade up into threads and turned over to
easant women, who make belts and brace-
ts, working for 14 cents a day, and finish-
g on belts some 2½ drams per day. A
lt weighs from 100 to 150 drams. Most
this Damascus filigree work is sold in
gypt, at the great native fairs at Tanta,
r instance. Damascus silversmiths are
ther famous in this part of the world.
Vealthy Egyptians frequently send silver to
yria to have it made up into various kinds
ornamental articles. Silver manufactured
Damascus not shipped to Egypt is sold
tourists and natives.

"Although it was shown by an American
ommercial traveler last Fall that Ameri-
ın silver and plated ware can compete in
yria with the European manufacture, both
price and quality, no orders were taken
him, largely on account of the distance
ıd the slow delivery. On account of neces-
ıry transshipments great care should be
ken in packing. Leading importers are:
ucher & Co., Weber & Co., Fr. Wehner.
hese firms supply Beirut, as well as the
terior.

Consul Harris, at Mannheim, says that sil-
er and plated ware are not manufactured
ı that consular district. The trade in sil-
erware is perhaps larger than in a corre-
ponding manufacturing locality in the
Inited States, partly because cut glass and
ne china are less common there than here.
n knives, forks and spoons the styles are
ss varied and not so handsome as
ıose to be seen in the United States,
hile fruit and cake dishes, bon-bon
ishes, goblets, wine tankards, vases
ıd silverware mainly for purposes
f ornament present designs which are
andsome, varied and original. The same
true of cane handles, the metal parts of
ilet articles, cigarette cases, etc.

There is a marked tendency in this line
f manufacture to depart from antique de-
igns of ornamentation and to adopt new
tyles and patterns, the so-called "Jugend"
esigns. In these, flower decorations, such
roses, violets, etc., are preferred.
his class of wares is for the
ıost part unburnished, with oxidized,
ilded or "patiniert" finish, exhibiting
eautiful rich colors in several shades and
ith rich, artistic effects.

Silverware of the various styles is made
ı many parts of Germany. Heilbronn, in
Vurttemburg, has an important factory.
Pforzheim, in Baden, an important center
f the jewelry trade, has several factories
ı which silverware novelties of many
inds are made. The product of three of

these factories recently visited by Consul Harris shows a marked tendency toward the adoption of new and modern designs in great variety. The manufacturers talk with emphasis of this as one of the features of their recent trade. Mannheim dealers confirm this fact.

American manufacturers who would gain a foothold in this branch in Germany would doubtless have to recognize the trend of the trade. The factories recently visited by Consul Harris are equipped with machinery of German and of French make. Manufacturers report that on standard designs machinery is used as far as practicable, special designs only being made by hand.

Jewelry in Booty Secured by Thief Who Robbed Mail Bags.

NORRISTOWN, Pa., March 11.—The official list of the booty secured by Herbert Simcox, the Norristown mail bag thief, has been furnished the newspapers by Chief Postoffice Inspector W. W. Dickson, of the Pennsylvania-New Jersey Division, and fills almost two columns of the ordinary daily journal. It includes the following:

One nickel watch and chain, one nickel watch, open face; one lady's gold watch, hair chain, ring and charm; one watch fob, one lady's silver watch, open face; lady's turquoise necklace, lady's gold watch case, one gold locket, one ring, pearls and rubies, small ring and shoe, on card; four gold teeth, box cheap jewelry, two rings—one electric, one with setting; bottle dental gold, one silver match safe, one pair pocket scissors, one silver ink blotter, one set, knife, fork and spoon; one lady's gold chain, one sugar spoon, three silver spoons, one butter knife, one table knife, one butcher knife, two children's wrist bangles, one dog's head breastpin, three napkin rings, three-pieced children's set (knife missing), three dessert spoons, six teaspoons, two silver saltcellars, one butter knife, one lady's Golden Eagle badge, one gold ring, without setting; two pearl pens and holder, one bone handle pen, three belt buckles, one breastpin, black and gold; one gold filled hatpin, one dozen collar buttons, plated; three gold filled pins (brilliants), one gold ring, opal setting; five fountain pens, one bead purse, metal top; two college fountain pens, one college fountain pen, one fountain pen, diamond point; one child's chamois purse, one bill purse, one card case, alligator; one black card case, one pearl handle penholder, one diary, one pair gold rim spectacles without glasses, one pair gold rim spectacles, one pair bow spectacles, two pairs bow spectacles, broken; two pair or noseglasses.

Calvin S. Ball Completes His 50th Year in the Jewelry Business.

SYRACUSE, N. Y., March 11.—Calvin S. Ball, 127 S. Salina St., the oldest jewelry merchant in this city, yesterday completed his half century in the jewelry business. When he first began business here in 1848, the year that Syracuse was made a city, there were six jewelry stores here, and now there are 54.

Mr. Ball, who was born in 1832, began business for himself on March 10, 1853. His father was a jeweler and watchmaker at Pompey, and Mr. Ball naturally followed in his footsteps so far as his business occupation was concerned. After three years of schooling, Mr. Ball, then 16 years old, came to this city to engage as an apprentice with B. R. Norton & Co., jewelers, whose store was located in the building which stood on the site of the present Gridley block. Mr. Ball's salary was $25 a year, and included board and medical attendance.

Before he reached his 21st birthday, in company with Seymour H. Stone, of this city, he bought out the business of his employers, and the new firm set up in business, continuing in the same location for a period of four years. The store was then removed to a better location, where the business was conducted for 25 years. The firm dissolved in 1867, and since that time Mr. Ball has carried on the business alone.

When he started in business, says Mr. Ball, a first class jewelry store in Syracuse kept in stock about two gold watches and a dozen silver watches, which was stock enough for the town. The stock also included a few watch chains and clocks. The stores were kept open until 9 P. M., and every storekeeper was compelled by the city ordinance to sweep half the street in front of his store every Friday morning.

Exports of Jewelry, Clocks and Silverware to Alaska, Porto Rico and the Philippine Islands.

WASHINGTON, D. C., March 11.—The Treasury Department has compiled some interesting figures showing the shipments of merchandise from the United States to its non-contiguous territories during certain periods. Those of interest to the trade are as follows:

Alaska.—The shipments of clocks and watches to Alaska during January last were valued at $128, while the value for the seven months ending January was $5,562. The value of the jewelry and manufactures of gold and silver shipped to Alaska in January was $535. The value for the seven months was $21,295.

Porto Rico.—Jewelry and manufactures of gold and silver to the value of $411 were shipped to Porto Rico in January. During the seven months ending January, 1903, the value of these shipments was $7,679, as against $2,210 for the corresponding period of last year.

Philippine Islands.—During the month of January clocks and watches to the value of $1,576 were shipped to the Philippines, while during the seven months ending January last, the value was $8,928, a decrease from $32,146, the value of the shipments for the corresponding period of 1902.

Pittsburgh Men Patent Process for We- ing Copper.

PITTSBURGH, Pa., March 11.—Letters p- ent on an invention that will finally show world how to weld copper have been gra- ed to Pittsburgh men. These letters rived recently for Thomas Fitzgerald, blacksmith, and his son.

The Fitzgeralds live in the 32d wa and for nearly three years father and s have been studying the question of weldi copper and experimenting with their proc in a little shop which they built for t purpose.

Test upon test was made by the blac smith and his son until they were satisfi that they had a process by which copp could be welded and they are now confide that the art is theirs. Within the ne future a public display of the work do by the new process will be made in th city, when it is expected that a heretofo unsolved question will be settled. At private exhibit recently, Mr. Fitzge ald welded two sections of a troll wire together and then put the welded se tion in a pulling machine. The weld he firmly while the wire was pulled apart another place.

According to reports, the authorities the Patent Office were somewhat skeptica and were inclined to doubt the success the process, so many different ones havi been tried and failed. Demonstratio were made before the authorities until th finally agreed that the formula was a su cess.

Questions for the Retail Jeweler:

J. B. Lippincott Company, Publishers.

The Diamond Markets.

ANTWERP, Feb. 27.—The inclement weather and the carnival festivities are probably the reasons for the quietness of the diamond market at present. The factories are busy, however, and all hands are employed.

The following foreign buyers were at the "Diamant Club:" Y. & S. Ginsberg, Berlin; Mr. Stavenhagen, of Messrs. Oppenheimer & Co., Franfort-on-Main; Mr. Rosenhardt, Hamburg; S. Fink, of Fink, Bodenheimer & Co., New York, and Mr. Hofmann, of Eichberg & Co., New York. There will be several American buyers here next week. A Paris firm bought several lots of mêlée in this market.

By royal decree Feb. 9, Louis Coetermans, the well known diamond merchant, was named a member of the Superior Council of Industry and Commerce.

The officers of the "Diamant Club van Antwerpen" are as follows: A. De Ridder, president; L. Grewel, vice-president; H. De Gueldre, treasurer; Th. Courtoit, first secretary; E. Couzyn, second secretary; A. Antoine, J. Beruck, F. deBom, Y. Schermant, J. Van der Veken, F. Voordeckers, members; V. Roslant and A. Werbrouck, commissioners.

An exhibition of masterpieces in jewelry by Philippe Wolfers, of Brussels, was opened here on Feb. 18 at the "Salle Verlat," Rue des 12 mois, and will be closed March 1. The numerous visitors had an opportunity of admiring a fine selection of real art works, consisting of neck pendants, buckles, hair combs in ivory adorned with gems, etc. A local paper describes Philippe Wolfers as a modern Benvenuto Cellini, whose jewels are pure productions of sculpture with true Florentine beauty. Each jewel is an original work, because this artist never repeats a design, his high imagination producing something new each time. He makes use of extraordinary stones, such as the tourmaline and pearls of unusual form, among the latter being rose pearl, which he made the center of a beautiful work. The exhibition was a great success.

AMSTERDAM, Feb. 26.—The diamond trade is rather quiet here, though everybody is expecting a better demand for cut goods in the near future, as fine weather is needed for proper examination of these goods.

The following diamond merchants returned from Antwerp: Messrs. Bas, Mukant and Speelman.

LONDON, Feb. 26.—February was again very satisfactory month for the diam industry in general. Notwithstanding t recent rise on some rough varieties, goo are finding easy buyers. Antwerp and A sterdam do their best to take mêlée, whi always remain staple. Several lots of Cap were also sold this week by the syndica Messrs. Backes and Strauss have been Antwerp, where they bought a selection small brilliants.

PARIS, Feb. 26.—Business conditions he remain unchanged. There seems to be considerable demand at present for A werp roses and other flat goods. This d not mean that large goods are not in d mand, for there is always a scarcity of the varieties. Present indications point to good trade for the Spring season.

Mr. Roulina, one of our prominent di mond merchants, was in Antwerp last wee Pearls are still advancing and prices r extraordinarily high for the pear or e shaped forms.

Successful Meeting of the Pennsylvan Optical Society.

PHILADELPHIA, Pa., March 11.—A meeting of the Pennsylvania Optical Socie was held here yesterday in Parlor 4 the Continental Hotel. In the afternoo there was an examination for the dioptricia grade. Many applicants were examined i the theory and practice of optics, trial cas work, and frame fitting.

At the evening session the executive com mittee reported the following opticians ha been elected members of the association: G. Willson, Reading, Pa.; David A. Kau man, Clarion, Pa.; H. D. Huber, and J. H Hartsch, Philadelphia, and Willetts Corson of Cape May Court House. At this sessio also A. J. Cross delivered a very interest ing lecture on Skiascopy, both static an dynamic.

At both sessions there was a large attend ance, many coming from Lancaster, Scran ton, Wyalusing, and other parts of the State One came from South Carolina.

As the meeting adjourned there wer heard many expressions to the effect that i had been one of the most instructive meet ings that the association had ever held.

"Rolling in Wealth."

The pursuit of prosperity is at best attended by many difficulties, but those reach the goal first who are most particular about little things.

No man ever yet rolled in wealth who neglected the apparent trifles in his business.

You may think that the question of where you send your scraps and filings is an unimportant matter, but we want to assure you that it is not. In the long run it will pay you well to send them where you can get the most for them—to us.

We can absolutely prove to you that the prices we pay are higher than you can get anywhere else, and, such being the case, why consider anybody else?

Send us your gold and silver sweepings, send us your filings and scraps. Ship us one lot and ask us what we will pay for it. If the price doesn't suit you, we will send it back at our own expense. This shows that we have the courage of our convictions.

We make remittances for old gold and silver the day of receipt, and for sweepings five days after receipt.

I. S. Co.'s Annual Report.

Director of the International Silver Co. Explains Fight Against the Company's Stock.

The governors of the New York Stock Exchange have ordered that the securities of the International Silver Co., which were formerly quoted in the unlisted department of the Exchange, be stricken from the list. This action of the governors is said to have been taken because the voting trustees, who hold a majority of the preferred stock and indirectly control a majority of the common stock, declined to dissolve the "voting trust." It is claimed in other circles, however, that the real cause of the retirement of the securities was because of the action of certain hostile interests working behind the Stock Exchange governors. It is believed that these interests have used every effort to depreciate the value of the stock in the eyes of the public, and have been largely responsible for the adverse newspaper reports which appeared last week.

The existence of the so-called "voting trust" is the outgrowth of the deal consummated last Fall and Winter by the United States Silver Corporation. This corporation first obtained control of the stock of the International Silver Co. before the officers of that company were aware of the fact and afterward sold the control back to the International Silver Co. for bonds and preferred stock of the latter concern. After the International officers had regained control of the property they took steps to safeguard their interests and prevent a recurrence of the event.

In order to do this, it is said, certain of the trustees formed a combination, which has frequently been referred to as the "voting trust" for the preferred stock, under which a majority of that stock was deposited with the trustees and voting trust certificates were issued. It is said by those hostile to the International Silver Co. that the supply of stock was thereby so reduced that a corner could have been manipulated in it. These same interests, it is said, frustrated an attempt of the company to have the voting trust certificates listed.

A director of the company was seen by a CIRCULAR-WEEKLY reporter Friday and explained the matter in detail as follows:

"Hostile interests," said this officer, "have been knocking us in the "Street" ever since the International Silver Co. bought back control from the United States Silver Corporation. Those interests have been pounding our stock on the Exchange, and it is through them and their influence with the Stock Exchange authorities that it was finally ordered to be stricken from the list. After getting it on the curb they have continued to pound it, making 'wash' sales at ridiculously low figures. Every person who is at all interested in the International Silver Co. knows that there are no voting certificates for sale at low prices, and cannot obtain even one certificate for any amount of money. It is because of this that they are pounding us. They have been very desirous of obtaining these certificates, in order to give them voting interest in the company, but we mean to keep them out and will do so in spite of all the adverse stories they circulate."

The annual report of the company, which is more favorable than it has been for years, was made public Thursday. An abstract of the figures showing the earnings, assets and liabilities of the company is given as follows:

	1902.	1901.
Net earnings	$881,197	$614,934
Interest on bonds	220,022	223,391
Balance	$661,175	$391,543
Preferred dividends	204,300	51,075
Balance	$456,875	$340,469
Depreciation	242,657	113,551
Surplus	$214,218	$226,917
Previous surplus	1,905,300	1,678,383
Profit and loss, surplus.	$2,119,518	$1,905,300

The general balance sheet shows.

JEWELERS' CLUB, PHILADELPHIA

Eighth Annual Banquet.

Wednesday Evening, March 11, at 6.30 o'clock,

at

Horticultural Hall.

PHILADELPHIA, Pa., March 12.—In the annals of the jewelry trade of Philadelphia, Wednesday, March 11, 1903, must be marked with rubrics. It was the occasion of the eighth annual banquet of the Philadelphia Jewelers' Club, one of the foremost organizations in the trade, and a club which enjoys a well merited reputation throughout the country for generous hospitality. In very truth it was a "red letter" day in the trade of the entire east, for there was scarcely a jewelry house of any prominence in this part of the country which did not have one or more representatives at the dinner. Altogether there were nearly 500 guests, among whom as guest of honor was Nelson A. Miles, the commanding general of the United States Army. His presence contributed to give the dinner a kind of national importance, and his response to a toast aroused the assembled diners to a high pitch of patriotic enthusiasm.

The event was one for which preparations have been made for nearly two months and the New York contingent of the club, which comprises about half the membership, had been more active this year than ever before. The arrangements for the banquet had been intrusted to the following members, who comprised the banquet committee: L. P. White, chairman; J. Warner Hutchins, William P. Sackett, T. J. Mooney, William H. Long, William G. Earle, James H. Kelley, William J. Bruehl and A. G. Lee. Each member of this committee has served on the banquet committees of other years, and their experience enabled them to plan the dinner on a more liberal scale than any ever before given by the club. Horticultural Hall, at Broad and Locust Sts., which is perhaps the most elaborately adorned banqueting hall in Philadelphia, was again the scene of the anniversary dinner. The spacious room had been beautifully decorated for the occasion under the supervision of Mr. Sackett, and with material contributed by John Wanamaker. The speakers' table had been placed at the north end of the hall, with eight long tables at right angles, extending to the south end of the room. Each table was designated by a huge floral letter, as has been the method in other years. "The Jewelers' Club," in bright electric bulbs, shone brilliantly from the west end of the hall over the stage, where, hidden by a mass of potted palms and exotics, were a brass band and a stringed orchestra, the two alternating during the evening to enliven the banqueters. Thousands of electric lights studded the ceiling.

GEORGE W. READ,
PRESIDENT OF THE PHILADELPHIA JEWELERS' CLUB.

One of the most pleasing features of the dinner and one which helped the club members to enjoy themselves was a booklet bound in a pretty red cover, with the insignia of the club embossed in gold letters in the center, which contained snatches from a dozen of the popular songs of the day, such as "Mr. Dooley," "Under the Bamboo Tree," "The Smoke Goes Up the Chimney Just the Same" and "Bill Bailey." Throughout the dinner rousing choruses rang forth, and no opportunity was missed to accompany the band whenever any of the popular airs were played. From the high electrolier in the center of the room were suspended yards of bright bunting caught up at each corner of the room.

There were many features of the banquet which reflected great credit on the committee having charge of the details. As has been the custom of the Jewelers' Club for the past five years, souvenirs were given to each guest, but not until the hour of departure, so that the lasting memorial of the dinner should be to each guest a pleasant surprise. L. P. White distributed at the door as the banqueters left the hall boxes which when opened were found to contain a pretty souvenir plate. The plate was of Austrian ware with a border of blue and yellow, the club colors. In the center was a monogram of the club in gold, and bordering it were the words, "Eighth Annual Banquet, Philadelphia, March 11, 1903." These plates had been designed in December last, by Mr. Mooney, of the banquet committee, who is manager of the engraving department of Wanamaker's store. The menu, which was also designed by Mr. Mooney, was, perhaps, the most artistic achievement. The cover, a hand painted *l'Art Nouveau* design, represented the

gure of a woman with a richly jeweled obe.

Half-past 6 was the hour set for dinner, ut it was long after 7 o'clock before the ssembled guests left the reception room for he banquet hall. During this time the fol-owing officiated as a reception committee: Matthias Stratton, Jr.; John D. Batton, I. V. Burton, James M. Bennett, Henry odenheimer, Charles E. Berry, H. H. Hamilton, Joseph E. Cadwallader, Charles . Duffy, E. H. Eckfeldt, N. B. Eltinge, W. . L. Fullerton, William Linker, H. C.

EX-PREST. L. P. WHITE,
Chairman Banquet Committee.

Larter, J. A. Lehman, F. L. Wood, E. B. Midlen, Ludwig Nissen, Harry Oliver, J. D. Pettingill, W. F. Parry, Jr.; W. S. Quinn, A. Rutherford, F. Ruckdeschel, H. L. Roberts, E. M. Riley, J. E. Simonson, F. W. Stanbrough, John N. Taylor, T. M. Woodland and Frank I. Lochlin.

After the guests had been seated General Miles was ushered in on the arm of George W. Read, the new president of the club. The distinguished soldier, who has only recently completed a tour of the world, was given a great ovation. It was his first appearance at a public function since his return and he remarked after the banquet that he was touched by the heartiness of his reception.

At the speaker's table were also seated Samuel H. Ashbridge, Mayor of Philadelphia; the Rev. Joseph Krauskopf and Col. John L. Sheppard, president of the 24-Carat club. Governor Hunn, of Delaware, and J. Frank Allee, the Dover jeweler, who has recently been elected United States Senator, and Senator Boies Penrose, all of whom had been invited, were unable to be present. Former Mayor Warwick, whose post prandial efforts at previous banquets of the club made him a welcome guest, was unavoidably detained in New York and did not reach the city until the banquet was over, but when he did arrive the genial Philadelphia lawyer went at once to the headquarters of the club and there delivered the address which he had intended to make at the banquet.

After the elaborate menu had been thoroughly enjoyed Mr. Read rose to deliver his address. Before he could begin, however, Ludwig Nissen jumped to his feet and after a few remarks called for three cheers for the new president. These were given with a will. Then Mr. Read said:

THE PRESIDENT'S ADDRESS.

Fellow Members of Jewelers' Club, our Friends and Our Honored Guests:

It is fitting that we observe our anniversaries by occasions of this nature. They not only offer us the pleasure of entertaining our friends with a night of feasting and good fellowship, but they afford us the opportunity of publicly evidencing our growth as an organization.

We are proud of our growth and equally proud of the high character of the membership it has brought us. From a modest inception we have progressed steadily until to-day the position of our club is assured, and its success a source of gratification to every individual member. The successful establishment of a trade club such as ours, founded as it is for the propagation of trade friendships, is dependent on such a multitude of favorable considerations, that its promoters are apt to discourage of their task ere it nears completion. In this respect our club has been singularly fortunate; founded as it was by men of tenacious tendencies who were impressed with the need and usefulness of such an institution to our trade, they labored hard and persistently in surmounting the obstacles met with in its establishment.

To-day, fellow members of the Jewelers' Club, you are enjoying the fruits of that labor in the possession of a club with a membership combining congeniality and club loyalty; that is in a financial condition relatively as good as any club in our city, and which is further fortified with that unmistakable proof of prosperity, a waiting list of substantial proportion. This condition we have achieved not alone by the loyalty of our members, but rather more through the generous and self-sacrificing efforts of our officers, all of whom for years past have stood ever ready to contribute time and money in serving the club's purposes and promoting its interests.

While enjoying the fruits of success our ambition is far from satisfied, nor will it be until we have acquired that moral and substantial support from certain quarters of our trade still lacking, but necessary to the perfection of our institution and its extension to the proportions outlined for it.

Our condition to-day warrants a general trade support. Our club stands for trade unity and in bringing the active workers of it into closer bonds of intimacy and friendship we are filling a distinctive mission, and performing a service of inestimable value to our trade. We desire for our club classification with our older trade organizations, all of which illustrate the homogeneous spirit existing between us. The Jewelers Association and Board of Trade, the Jewelers Security Alliance, the Jewelers' Protective Union, the Jewelers' League, and others, all ably fill their respective spheres, yet all have the single purpose of advancing trade interest and protecting them.

VICE-PREST. M. S. STRATTON,
Chairman Reception Committee.

This unified trade spirit is almost exclusively the property of the jeweler, and is an object lesson which other trades could acquire with profit. It does not indicate that the spirit of rivalry during the working hours of the day is less keen with us than with others, but exemplifies our knowledge of combining play with work, and profiting by the stimulus which play communicates to labor. In the list of trades ours stands out prominently above the others. It is based upon honor and honesty, its successful expansion is guaranteed by the confidence inspired, and its perpetuation is assured through the education of our younger members in the honored precepts and traditions of our calling.

All hail to our trade. May its luster ever be as brilliant and scintillating as the finest gem it possesses, and may its honor ever be unsullied as that of our glorious nation!

After the applause, following this speech, had subsided, Mr. Read proposed a toast to President Roosevelt, which was drunk standing, and then introduced General Miles with the following remarks:

A country's collective greatness is regulated by the individual strength of its citizens. Measured in this respect our own country is impregnable. This condition is due to the possibilities of our American system, wherein personal worth has no limitation except ambition. It is this stimulus, held up to the youth of our country, that makes our citizen strength and in its turn national greatness. In the person of our particular guest of honor to-night we have exemplified the worth of this system to its fullest. In no other country on earth can success such as he has achieved in his calling be paralleled.

In 1861, at one of the most critical periods in the history of this nation, a young man, just en-

THE MENU.

tering upon a business career in Boston, felt it his duty to sacrifice that opportunity, and obey the call of Abraham Lincoln to volunteer in defense of his country. He entered the army as lieutenant, served all through the Civil War, and at the close of that war, by reason of his ability, courage and bravery in action, had reached the exalted rank of a General. Since that time he has seen active service in almost every important Indian outbreak in the northwest, was present at the surrender of Santiago, and raised the American flag upon the Island of Porto Rico, which act made it American soil. No man has had more active service as a fighter in the history of this country, and no man enjoys more merited honors than he. I take great pleasure in introducing to you Lieutenant General Miles.

When at the conclusion of this introduction General Miles stood up, prolonged cheering broke forth and 500 tiny silken American flags were waved vehemently. When finally the enthusiasm subsided sufficiently General Miles said:

SPEECH OF GEN. NELSON A. MILES.

Such a reception would move the heart of any soldier, and is such a reward as I never had hoped to win. To be again in America and to receive such a welcome is the grandest reward ever paid me on any occasion. It is true, as your president has said, that at the outbreak of the Civil War I was preparing to be a merchant in the city of Boston. That was my ambition. I wished to enter that which then, as now, was a most honorable calling; but in 1861 I thought that my country needed all her young men, and I surrendered my ambition and have followed the flag ever since.

In speaking here to-night I am reminded of a young friend, a son of a jeweler and importer in this city, who, like myself, had planned a mercantile career, intending to follow in the footsteps of his father. But like myself he gave up his hopes and went to the front. He was the brave and gallant Harry McKean, afterwards colonel of the 81st Pennsylvania, and he and I were close comrades until he fell pierced by bullets at Cold Harbor, opposite Richmond.

I am always glad to be in Philadelphia, and am delighted to be with such gentlemen as form your club. Yours is a grand business. The jeweler's work marks all time and adds to the refinement of the world. No place is so ancient but traces of that work and the resultant refinement may be found there. You improve on everything, and your integrity is equal to your skill. You add the useful to the ornamental. That which comes from your hands is essential on the locomotive, on the steamboat and in the astronomer's study.

GEN. MILES.

It is gratifying, after passing around the world and comparing other peoples with our own, to return and see what I see here to-night. I have been in densely populated lands, where there was not enough patriotism to last an American over night, and I tell you it is gratifying to return here and find the most intelligent and progressive people on earth who enjoy the greatest privileges and advantages of any people on earth and who are, at the same time, as deeply concerned for the welfare and integrity of their country and Government as they are for their own business. To find this is one of the glories of being an American.

And now, in closing, let me thank you again for the [illegible] which you have greeted me, and I wish you every happiness and prosperity.

The conclusion of General Miles's speech was marked with loud cheers, which ended with a patriotic song. When the singing and cheering had subsided Mr. Read introduced Mayor Ashbridge, saying:

A municipality's prosperity is evidenced by its public improvements, which are proofs of the substantial worth of its governing heads. Philadelphia stands to-day almost pre-eminent over her sister cities, in the volume and character of her improvements, both under construction and those in prospect. The credit for this record is largely due to our present executive, who, though his official life will not see the fruition of his plans, may in future point to them with justifiable pride as products of his policy and lasting monuments to his administration.

ADDRESS OF HON. SAM H. ASHBRIDGE.

The Mayor, after referring to municipal improvements and the work of his administration, said: "Better, though, than office that ever I held is to look in your faces and call you friends." He complimented the club and declared that he would not say its banquets were the finest he had ever attended for fear he be accused of flattery, but he would say that none others equaled its entertainments in the cordiality and warm friendship always so manifest. He considered the conditions unique, which resulted in the laying aside of trade jealousies and rivalries, and in bringing together men of all branches of the trade and from many cities.

The Mayor then paid a tribute to the patriotism of the city, dwelt on its prominence in the history of the country, and referred to its development and the growth and importance of its financial and industrial institutions, and to its liberal contributions to other localities in times of misfortune and distress.

Referring to his work as Mayor, he said that no monuments were expected by civil officers, such as might be expected by military heroes, but that the monuments that endure longest were the ceremonies that remain in men's hearts.

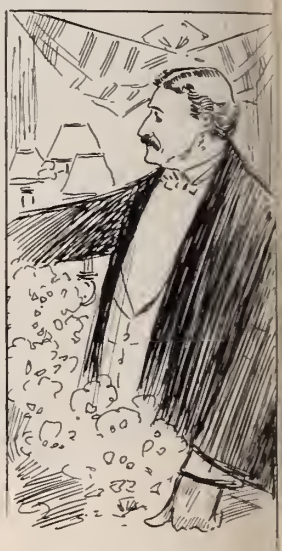
When Mayor Ashbridge resumed his seat the assemblage first cheered and then sang, "For he is a jolly good fellow."

Mr. Read, in introducing the Rev. Dr. Krauskopf, mentioned his life of devotion to the relief of the poor and those in distress.

ADDRESS OF REV. DR. KRAUSKOPF.

Dr. Kranskopf mentioned the efforts that had been made to induce him to move to Cincinnati and take charge of the Hebrew College there, and stated that, while he had assumed the management of it temporarily, he had not been willing to leave his work in Philadelphia.

He told of a tramp, who had had a bountiful repast set before him by an old lady. Just as he was about to eat, the kind, old lady asked him if he had not something to say before eating, meaning grace. "No," said the tramp, "me and Chauncey Depew talk better after feeding." "I am different," said Dr. Krauskopf, "I talk better before."



The speaker then paid a tribute to General Miles, whom he had admired as a great soldier, but had now learned to know him as a brilliant conversationalist. He was reminded of a story told of Abraham Lincoln. Barnum during the war exhibited Gen. Tom Thumb in Washington. President Lincoln visited the show and after he had seen Tom Thumb turned to the showman and said: "Mr. Barnum, you have a very small general; but I think I have some that are smaller." If General Miles had been a general then that speech could not have applied to him, added the speaker.

After telling several good stories, Dr. Krauskopf said:

And now one serious word in closing. There is too much talk about the wickedness of the world, the State and the city. I have studied much, and I say to you the world is better to-day than ever before. Help stop the reviling of this magnificent State and city—both are grand.

So, good-night; and, to quote the inscription on the tombstone erected by the sorrowing widow to the dear departed, "Rest in peace 'till we meet again."

After the members and their guests had sung "Auld Lang Syne" the banquet was declared over.

MAYOR ASHBRIDGE.

Before they took their departure, however, many of those present pressed forward to the guests' table to secure Gen. Miles's autograph and the General good naturedly wrote his name across the menu card of all who asked.

Few of the 400 guests went home immediately after the banquet. The majority of them went at once to the cosy quarters of the club at 1225 Chestnut St., and there the festivities were continued until the wee sma' hours of the morning. It was here that Mayor Warwick turned up and made his speech in the reception room of the club. He also read a long letter of regret from Rev. Dr. Turing, Signor Giannini, who had sung during the banquet; Isaac Elliott, "Syl" Bookhammer, a prominent Philadelphia clubman and bon vivant; Jacob Henderson, the Shakespearean scholar of Common Council and a comedian of considerable repute, all helped to entertain.

Col. John L. Shepperd, who was called for, made an interesting and patriotic speech. After the applause which followed it had subsided J. D. Reynolds, whose patriotism had been stirred by the speech, led in singing "Marching Through Georgia." Harry Oliver followed with an entertaining story.

L. P. White and J. Warner Hutchins presided over this impromptu entertainment.

In the other rooms of the clubhouse were jolly little groups, who kept the urbane steward of the club on the jump helping them to liquid refreshments and the billiard room was turned into a café for the reception of the guests. The Jewelers' Club quarters have been the scene of many other festive occasions, but never when there was more fun and good fellowship than after the banquet.

The Members and Guests.

REPORTERS' TABLE.

North American.	*Inquirer.*	*Press.*
Record Telegraph.	*Bulletin.*	*Ledger.*

Banquet Notes.

"Billy" Ruch, of the *Telegraph,* was sandwiched in at "D" table with a number of city officials and appeared to be quite at home.

* * *

That James Bathgate was prevented from attending by the illness of Mrs. Bathgate was a keen disappointment to his many friends.

* * *

President George W. Read made a great "hit" as toastmaster. He remained over until Saturday to complete taking his degrees in Masonry.

* * *

Among the prominent southern jewelers present was Joseph Linz, Dallas, Tex., who was the guest of George B. Osborn, of William Smith & Co.

* * *

It was the first time that Fred Barry, of Gimbel, had been out late for 10 weeks, but he had a good time and is no worse for the experience.

* * *

L. P. White's popularity was vociferously demonstrated from time to time during the dinner, and he was perhaps the most "toasted" of all the guests.

* * *

William P. Sackett, genial and urbane as ever, was particularly gracious to the newspaper reporters at the table near him, and made staunch friends of them all.

* * *

"Jake" Henderson, the wit of common councils, was there, and his witticisms during the dinner made him perhaps the most popular of the guests at "D" table.

* * *

"Ed" Sickles tanned and sunburned from his tour of the West Indies, related some thrilling experiences of his recent journey for the edification of the guests at "B" table.

* * *

"Del" Lee had as his *vis-à-vis,* A. J. Le Jambre, with "Syl" Bookhammer, a *bon vivant* of considerable local repute, nearby, and the trio made things lively at the end of "B" table.

* * *

Echoes of the banquet were heard at the Continental Hotel throughout the rest of the week. A certain party of convivial New Yorkers were there until Saturday, and even then were loath to part.

* * *

At the club house, after the banquet, Harry Oliver, just to show, perhaps, that he wasn't tired,

OUR LOCKETS ARE THE SUCCESS OF THE SEASON.

SOLID GOLD,
STERLING SILVER,
GOLD FILLED.
(GUARANTEED TWENTY YEARS.)

Hayden Mfg. Co.,
23 Maiden Lane,
New York.

performed a most surprising series of evolutions, and demonstrated that it was easy for him to maintain his equilibrium under the most discouraging conditions.

* * *

C. M. Robbins made a special trip from Attleboro solely to attend the banquet, and is now satisfied that it was worth the journey.

* * *

Henry Starr Richardson, president of the Pen and Pencil Club, by virtue of his office, was an invited guest and made a lot of new friends.

* * *

J. Warner Hutchins and L. P. White, who worked hard for the success of the dinner, left Saturday for Hot Springs, Va., where they will spend two weeks to rest.

* * *

Captain George Bowen, of Bridgeton, N. J.; C. F. Rudolph, of Wilmington, Del.; Herbert Keller, of Allentown, Charles Read, of Reading, and S. K. Zook, of Lancaster, were among the rural retailers who enjoyed the club's hospitality.

* * *

Ludwig Nissen must have made quite a "hit" with the city editor of one of the Philadelphia papers at the banquet, for in the account the following day he was referred to as "New York's famous diamond expert," and otherwise happily complimented.

* * *

There was quite a heated discussion at the end of table "G" over the local political situation, and Andrew Brown, about whom the argument centered, came out triumphant, as might have been expected, considering his confidential relations with Mayor-elect Weaver.

* * *

One of the most amusing incidents of the evening was the demonstration of personal magnetism given by Harry Oliver. Unabashed by the soldierly bearing of General Miles, Mr. Oliver essayed to show the commander of the United States Army how he could make a penny disappear, and after two or three trials succeeded in doing so, much to the General's delight. Mr. Oliver, it is understood, made an appointment with General Miles to teach him the trick.

The menu was as follows:

Warren Rivers.
Sauternes.
Olives. Radishes. Celery.
Clear Scotch Broth.
Oloroso Sherry.
Planked Potomac Shad. Parisienne Potatoes.
Tenderloin of Beef, Mushroom Sauce.
French Peas.
Champagne, Ruinart-Brut.
Punch, a la Jewelers' Club.
Terrapin, Philadelphia Style.
Squab en Casserole.
Lettuce and Tomatoes.
Montrose Pudding.
Cakes. Café.
Cigarettes and Cigars.

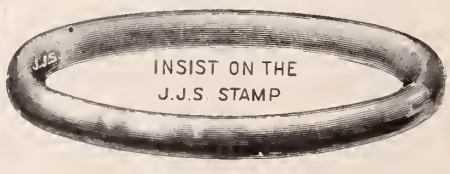
H. W. Alexander, Sac City, Ia., has given a bill of sale for a consideration of $1,000.

Gorham Mfg. Co. to Erect a New Building in New York.

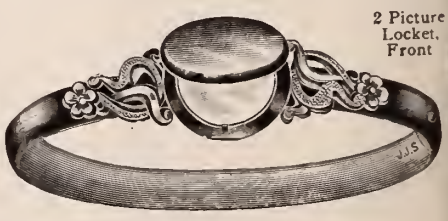
Edward Holbrook, president of the Gorham Mfg. Co., authorized the announcement Saturday that on May 1, the company would begin the erection of an eight or nine story building on the s. w. cor. of Fifth Ave. and 36th St. The structure is expected to be ready for occupancy by May 1, 1904, when the company will move from its present location at Broadway and 19th St., New York. Plans for the new building have already been drawn by McKim, Mead & White, and it will be of the Italian renaissance style. It will be occupied entirely by the company.

The plot on which the building is to be erected has a Fifth Ave. frontage of 67 ft. and a depth of 150 ft. on 36th St. and an "L" in the rear. The property is owned by Wm. Waldorf Astor, and is leased to the company for a term of 21 years with two renewals. At present the site of the future building is occupied by the Lenox Hotel.

In addition to this lot, the Gorham Mfg. Co. also has a lease on the Cambridge at the s. w. cor. of Fifth Ave. and 33d St. This lease dates from 1906 and was acquired with the idea of locating on that site, but the company afterward changed its plans. The plot is owned by John Jacob Astor.



Further details and descriptions of the plans of the building to be erected by the company will be given in a future issue of THE CIRCULAR-WEEKLY.



Los Angeles, Cal., Robber Captured in Port Costa.

LOS ANGELES, Cal., March 11.—Sheriff H. H. White has just made an important capture at Port Costa of a man giving the name of John Burton, who is suspected of having robbed a jewelry store here about a week ago of about $800 worth of gold watches and rings.

One-half of the stolen goods was shipped by express to Port Costa. Sheriff White heard of the shipment and immediately left for Port Costa, where he arrested John Burton, who called for the package. The prisoner was placed in jail at Martinez and will be taken to Los Angeles for trial. The goods so far recovered are valued at $400.

Navy Department Invites Bids for Watches, Clocks and Optical Goods.

WASHINGTON, D. C., March 13.—The Navy Department, through the Bureau of Supplies and Accounts, is inviting sealed proposals until March 24, 1903, for furnishing the Naval Observatory with the following articles:

Thirty comparing watches and 20 stop watches, to be delivered within four months after date of contract; 15 comparing watches and 15 stop watches, to be delivered within six months after date of contract. Comparing and stop watches to be in strict accordance with specifications for the same, Nos. 100 and 101, issued by the Bureau of Equipment, Navy Department, May 25, 1901, and August, 1899, respectively, copies of which may be obtained upon application to that Bureau.

Ninety deck clocks, No. 1, to be delivered within four months from date of contract; 45 deck clocks, No. 1, to be delivered within six months from date of contract. Deck clocks to be in strict accordance with the specifications for same, No. 28, issued by the Bureau of Equipment, Navy Department, Jan. 29, 1903, copies of which may be obtained upon application to that Bureau.

Forty deck clocks, No. 2, to be delivered within four months from date of contract; 30 deck clocks, No. 2, to be delivered within six months of date of contract. Said clocks to be in strict accordance with specifications for same, No. 114, issued by the Bureau of Equipment, Feb. 16, 1900, copies of which may be obtained upon application to that Bureau.

Sixty binocular glasses, day; 90 binocular glasses, night; 160 binocular glasses, day; 200 binocular glasses, night; all to be delivered within six months from date of contract, and to be in strict accordance with specifications, No. 32, issued Feb. 4, 1896, by the Bureau of Equipment, Navy Department.

Fifteen quartermaster's spyglasses, high power; 15 quartermaster's spyglasses, medium power; 30 quartermaster's spyglasses, low power; 30 quartermaster's spyglasses, high power; 50 quartermaster's spyglasses, low power, all to be delivered within six months from date of contract, and to be in accordance with specifications, No. 33, issued Feb. 8, 1896, by the Bureau of Equipment.

Seventy-five spyglasses for the officer of the deck; 150 spyglasses for the officer of the deck, all to be delivered within six months from date of contract, and to be in accordance with specifications, No. 34, issued by the Bureau of Equipment, April 8, 1897.

In addition to the above-named articles, proposals will also be received for supplying barometers, thermometers, artificial horizons, clinometers, drawing instruments, protractors, etc.

Intending bidders can obtain blank forms of proposal by applying to the Bureau of Supplies and Accounts, Navy Department, Washington, while for specifications, application must be made to the Bureau of Equipment, Navy Department, Washington.

PHILADELPHIA WATCH CASE CO.

RIVERSIDE, N. J.

Death of John B. Morris.

COVINGTON, Ky., March 11.—The death of John B. Morris, president of the J. B. Morris Foundry Co., which occurred Friday last at his home, 298 Harrison Ave., removed an old-time member of the jewelry trade who was well known in this city and in Cincinnati for a number of years. Mr. Morris's death was due to pneumonia, and occurred after a brief illness.

The deceased came of Welsh stock, but was born in Ireland 67 years ago. When six years old he was brought to Philadelphia by his parents, and at the age of 13, with his family came to Cincinnati, where he soon became apprenticed to H. Clayton, then a jeweler on Broadway, near 3d St., that city. With Mr. Clayton he remained and thoroughly mastered the trade, finally succeeding his employer in business. During the war Mr. Morris's jewelry store was one of the largest in Cincinnati, and he continued in the jewelry business until 1886, when he purchased the foundry plant of the late Miles Greenwood. In 1870 he incorporated the John B. Morris Foundry Co. and moved the plant to its present location in this city.

Mr. Morris, who was a prominent Mason, was a member of the Knights of Pythias. He was president of the City Decennial Board of Revision and Review and was also president of the City Board of Equalization. He is survived by a widow and a son.

Death of Robert Swinnerton.

LOS ANGELES, Cal., March 10.—Robert Swinnerton, formerly a well-known manufacturing jeweler of this city, died of cerebral hemorrhage at his home on N. Hope St. March 5, aged 58 years. Mr. Swinnerton was a native of Douglass, Isle of Man. He had lived in Los Angeles about 12 years, and during the greater part of that time had been a manufacturing jeweler, with an office in the Stowell Block, and later in the Byrne building, remaining in the latter location until last September, when he retired from active business life on account of failing health.

He leaves a wife and five grown children. Mr. Swinnerton was a high Mason in the land of his birth and, several years after coming to this city, became a member of South Gate Lodge, F. & A. M. He was also a member of the Sons of St. George, and was at one time president of the local lodge.

Death of Robert Lawrence.

Robert Lawrence, for 60 years a jeweler in New York and Brooklyn, died Tuesday, March 10, at his home, 132 Prospect Ave., Brooklyn, from a complication of diseases brought on by la grippe.

Mr. Lawrence was 78 years old and was ill about one week. He learned his trade in Newark, N. J., and for a number of years was engaged in the manufacturing jewelry business in Maiden Lane, New York, under the firm name of Blunt & Lawrence. After the dissolution of this concern the deceased entered the employ of William Wise & Son, Brooklyn, as a diamond setter and remained with that firm 45 years.

The deceased was married and had five children, one of whom, Chas. E. Lawrence, is now a jeweler at Norwalk Conn. The funeral services were held Saturday from the residence of his daughter, 221 11th St., Brooklyn, and the interment was in the family lot in Greenwood Cemetery.

Creditors File Bankruptcy Petition Against Joseph Friedlander, Memphis, Tenn.

MEMPHIS, Tenn., March 11.—An involuntary petition in bankruptcy was filed Monday afternoon against Jos. Friedlander, a Main St. jeweler and pawnbroker, by Caruthers Ewing, an attorney, upon claims aggregating over $1,800, held by three creditors, James M. Cohen & Co., Ciner & Seeleman and Leonard Krower.

The creditors allege in the petition that on Feb. 7, while insolvent, Friedlander made an unlawful preference by transferring a portion of his property to several creditors, with the intention of preferring them. The creditors ask the United States Court to declare Friedlander a bankrupt in order that his estate may be equally divided among all who have claims against him.

B. W. Hirsch, attorney for Mr. Friedlander, stated that he expected to consummate a settlement with the creditors before the bankruptcy proceedings had been pushed to an adjudication, and said that the claims against Mr. Friedlander altogether amounted to over $20,000. The claim of Ciner & Seeleman is said to be $458.55, that of James M. Cohen & Co. $750.02, and that of Leonard Krower $640.

Annual Meeting of the Stockholders of the Trenton Watch Co.

TRENTON, N. J., March 11.—At the annual meeting of the Trenton Watch Co., held yesterday, the members of the board of directors then serving were re-elected. The board consists of James Moses, Thomas R White, Jr., and Frederick J. Moses, of New York, and Lawrence Farrel, Oliver O. Bowman, Edward C. Stokes and Arthur G. Moses, of Trenton.

At a meeting of the directors to be held Monday the present officers will again be chosen. They are: President, James Moses; vice-president, Thomas R. White, Jr.; treasurer, Arthur G. Moses, and secretary, J. M. Cutter.

Last year many improvements were made in the company's mechanical equipment and the prospects for business this year are excellent.

A large jewelry concern writes that it has a demand for a clock which must operate reliably, although it need not be a high grade timepiece. The object is to close an electrical circuit at a predetermined hour and open it at another predetermined hour. This circuit will not carry more than a quarter of an ampere and it will not matter if the timekeeping qualities of the clock were such that an error of 10 or 15 minutes a month was found. The concern prefers to have a marine movement, instead of a pendulum, on account of the space which it occupies, and it ought to run 30 days. The first order will only be for 50, but later the concern would order them in large quantities. Any reader who can supply the order should write at once to THE JEWELERS' CIRCULAR-WEEKLY.

Fourth Annual Banquet of the Illinois Optical Society.

CHICAGO, March 14.—The fourth annual banquet of the Illinois Optical Society was held in the banquet hall of the Palmer House last night. The dinner was scheduled for 6 o'clock and the guests arrived on time to partake of a most enjoyable repast.

After receiving the grip of the society from a member of the reception committee, they spent a pleasant half hour getting acquainted and renewing old acquaintanceships. Many ladies were present, chaperoned by their friends in the optical profession.

The committee on arrangements deserve much praise for the excellent entertainment furnished, and a feature entitled to special notice was the rendition of popular songs by Robert C. Hartzell, who is possessed of a remarkably fine baritone voice. Miss Ruth Dickey and Miss Mabel Best contributed largely to the amusement of the guests by their violin and piano solos respectively.

The following is a page from the menu card:

Mr. Franklin W. Ganse, Toastmaster.
Toastmaster Ganse .....Greetings
Des Fosses' Orchestra.
Rev. Frank D. Sheets .....Spirit of Progress
Miss Ruth Dickey, Violin Solo.
Prof. G. A. Rogers.....Who Are Our Friends?
Mr. Robert C. Hartzell, Baritone Solo.
Mr. John M. Zane.....Need of Associations
Miss Mabel Best, Piano Solo, "Mazurka."
Des Fosses' Orchestra.

New Members of the Jewelers Security Alliance.

The regular monthly meeting of the executive committee of the Jewelers Security Alliance was held at the association's offices, 11 Maiden Lane, Friday, the following members being present: President Sloan, Vice-President Wood, Chairman Butts, Secretary Noyes and Messrs. Brown, Chumenois, Alford, Abbot and Stern, of the committee.

The following members were accepted:

F. E. Bruhl, Macon, Ga.; William E. Crellin, Chillicothe, Mo.; C. B. Graves, Hawarden, Ia.; G. W. Meyer Jewelry Co., Chattanooga, Tenn.; John C. Wagner, Vincennes, Ind.; C. S. Cone, Windom, Minn.; Frank Caskins, Sunbury, Pa.; Harrower Bros., Wilkes Barre, Pa.; Arthur Kroencke, Concordia, Mo.; Park & Morrison, Roswell, N. M.; J. L. Bertz, Stanberry, Mo.; Boasen Bros., Oklahoma City, Okla.; William H. Saxton, Middletown, N. Y.; E. C. Veysey, Boulder, Col.; Marcus Weintraub, Hoboken, N. J.; Aisenstein & Woronock, New York City; Evans & Quirey, Morganfield, Ky.; Phil. Levy, Henderson, Ky.; Gleason & Patten, New York City; George Proper, Schuylerville, N. Y.; J. H. Greer, Fort Worth, Tex.; John B. Erd, Duluth, Minn.; A. Dilsheimer & Co., Philadelphia, Pa.; A. R. Vanderbilt Jewelry Co., Amsterdam, N. Y.; John F. Allen, Providence, R. I.; T. Gilpin Massey, Wilmington, Del.; M. L. Aron, Springfield, O.

Bernard Rice's Sons, 542 Broadway, New York, report that the new silver girdles, in quadruple plate, of which they are the manufacturers, are finding a ready sale. These girdles are furnished in rope and link chain designs and are finished in silver and gun metal effects.

Mellville Snyder, who returned to the Dueber Watch Case Mfg. Co., Canton, O., $107 worth of gold and several thousand watch jewels which he had stolen from that company, last week pleaded guilty to petit larceny and was sentenced to 30 days imprisonment in Massillon, O.

An Effort to Corner Rogers Silverware.

To the Trade:

Do you know that the Trust bought and controls "9 Rogers Trade-Marks" on silver-plated ware?

It is to your interest to patronize an independent concern which will keep prices down where they belong.

When legitimate competition is killed, up go prices.

We are not in the Trust.

Our patterns are new and up-to-date. We sell at living prices, and guarantee our goods to strip as much silver as any Rogers brand on the market.

AVERY & BROWN,

68 Nassau St., New York.

Providence.

J. M. Howard, a jewelry manufacturer, purchased the greater part of the tools of the Providence Findings Co. sold Wednesday. Fair prices were realized.

Miss Ida Reed, a young woman in the employ of Parks Bros. & Rogers, was run down by a wheelman as she stepped from a car on Washington St. one day last week and seriously injured.

The factory of Donley & Co., has been removed to 129 Eddy St. Another removal under contemplation is that of the Colvin Mfg. Co., from 234 Chestnut St. to the new wing of the Champlin building.

A copartnership has been formed by Charles J. Heimberger and William J. Pearson, under the style of Heimberger & Pearson, for the manufacture of jewelers' findings. This step follows the dissolution of the firm of Heimberger & Lind.

William H. Luther, of William H. Luther & Son, who is one of the Police Commissioners of the city of Providence, has won the legal battle which arose over the question of the payment of his salary and involved his title to the office.

A mass meeting of the Jewelry Workers' Union was held in Music Hall Wednesday evening. It was largely attended and speeches were made by International President Vollmer, of New York; Organizer Wind, President Hugh F. Scullia, of the local union, and John Monahan.

At a recent meeting of the Einklang Singing Society the director, Gustav Saacke, well known in jewelry circles, was given a hall clock of elaborate design, whil George C. Rueckert and John Mullen, wh are assistant directors of the society, wer also pleasantly remembered. The presenta tion speeches were made by Henry Ruyter a foreman for the Ostby & Barton Co.

On Thursday a temporary receiver fo the McWilliams Mfg. Co., of this city manufacturers of jewelers' tools, jeweler silversmiths and watch case makers' ma chinery, was appointed by the Appellat Division of the Supreme Court, on petitio of the Builders' Iron Foundry, and the At lantic National Bank. Attorney Frank L Hinckley was appointed temporary receive and on Saturday, in the same court, wa made permanent receiver. The liabilitie of the concern are said to be about $10, 000 and the assets about half that amount The company is capitalized at $20,000. Th late John McWilliams, who died recently was president of the concern. It is sai that since his death the business has no been as brisk as it was before. Two attach ments were recently placed on the plant b Thomas McWilliams, brother of the lat president, and the Thomas & Lowe Ma chine Co.

Attleboro.

Already there is some talk, which has not yet assumed very definite shape, about a display of Attleboro jewelry at the Lou isiana Purchase Exposition in St. Louis At the Chicago and Buffalo exposition single firms made displays, but for St. Louis there is talk among the more ener getic manufacturers of having a group o

Sterling Silverware.

The Roger Williams Silver Co. is located in a city where one-third of the Sterling Silver goods manufactured in this country is made. Our new works are equipped with modern facilities and skilled workmen, the equal of any silver manufactory in the country.

Our productions are carried in stock by jewelers in all principal cities, which fact proves our lines are meeting the demands of the trade and gaining recognition. Our new goods for the spring season are nearly completed. They comprise many original and novel ideas.

For Easter we have a line of hand made Vases, no duplicates, also full line of candlesticks.

Our New York Office and traveling representatives carry a full line of samples for your inspection.

makers of non-conflicting lines combine to take a space in the hall of Varied Industries.

Rufus C. Read, traveling salesman for J. C. Cummings & Co., last week completed his duties as executor of the will of his father, Henry C. Read.

Frank H. Sadler, of F. H. Sadler & Co., has announced the marriage of Miss Ada Newell Sadler, his oldest daughter, and Arthur Lloyd Bottomley, proprietor of a mail order jewelry house, will take place March 25.

John M. Fisher and Fred W. Lincoln, of J. M. Fisher & Co., were members of the committee in charge of an elaborate celebration of its anniversary by the Methodist Church last week. At the reunion plans were laid for costly and valuable educational work among the employes of the jewelry factories.

A jewelry concern at Saing Ghislain, Belgium, called the "Manufacture de Chaines Franco-Belge," last week approached the local chain houses with a proposition to furnish them chain at an extremely low figure.

Clarence M. Dunbar, of the Dunbar, Leach, Garner Co., reported to the police Thursday that during the absence of his entire household his dwelling was entered and ransacked by a bold daylight thief. A considerable sum of money and a valuable gold watch were the only things missed. A quantity of solid silver table ware was not taken, though the thief made it up into a package, ready to carry away. This package was found on the floor of the cellar.

Representative Thomas W. Williams went before the officials of the New York, New Haven & Hartford Railroad Friday in the interests of the scores of North Attleboro jewelers who work in Attleboro, Mansfield and Taunton jewelers who work in Attleboro, and Attleboro jewelers who work in Providence. He urged that the "workingmen's" and commutation tickets, used by nearly all of these persons, be altered so that they might use them to ride Sundays as well as week-days.

David E. Makepeace, of the D. E. Makepeace Co.; Clarence M. Dunbar, of the Dunbar, Leach, Garner Co., and George

THIS WEEK—16,000 JEWELERS

WHO ARE NOT SUPPLIED WITH "1847 ROGERS BROS." GOODS DIRECT FROM FACTORY WILL RECEIVE ONE OF THESE CARDS, PRINTED IN TWO COLORS:—

WHEN POLK WAS PRESIDENT

IN 1847 the Rogers Bros. began making silver plate that gained world-wide fame for quality. As the productions of the original Rogers Bros. became celebrated and popular, all kinds of "1847" imitations were put out under the name of Rogers, and being inferior to the genuine and original Rogers', trusted to the reputation of the name to sell the goods. As these imitations became more common it was necessary to distinguish the genuine from the imitations. The year in which the genuine Rogers Bros. was first made, "1847," was adopted as part of the name, thus:

"1847 ROGERS BROS." 

Spoons, forks and knives so stamped are the genuine "Rogers Bros." brand, are the ones advertised in all leading magazines, and should be in every jeweler's stock. Made only by the successors to Rogers Bros.

MERIDEN BRITANNIA COMPANY, Meriden, Conn.
(INTERNATIONAL SILVER COMPANY, SUCCESSOR)

Show this card to your jobber. Ask to see "1847 ROGERS BROS." samples. Get his prices.

This card is the FIRST of a series of twelve—ELEVEN to follow—one each week.

EVERY LEADING JOBBER

Should be able to supply the demand, but an order placed in advance of immediate requirements will be advisable.

H. Herrick, of G. H. Herrick & Co., were last week elected to office in the Masonic fraternity.

W. H. B. Dowse, president of the silver corporation of Reed & Barton, Taunton, Mass., last week gave $1,000 to the fund for needy students at Harvard University.

Homer M. Daggett, Jr., late of the Daggett Jewelry Co., lost a suit for a large sum last week, which he had instituted against Marsden J. Perry, the Providence banker and railway magnate. Mr. Daggett claimed recompense for a railway deal he claimed to have engineered.

Plainville.

William S. Metcalf, of the Plainville Stock Co., was presented with a Past Master's jewel last week by Bristol Lodge, F. & A. M.

William F. Maintien, of Maintien Bros. & Elliott, has again received the nomination for Selectman, carrying both Republican and Citizens' caucuses.

The report that inducements had been offered the firm of Scofield, Melcher & Scofield to move to Attleboro is denied at the office of the firm. Mr. Melcher is in the south, but his representative states that he knows of no such plan. There is quite a little talk of a new factory in Plainville, and this plan is considered much more probable.

H. H. Van Valkenburg, Klamath Falls, Ore., recently suffered a fire loss. There was no insurance on the property.

North Attleboro.

TRADE CONDITIONS.

Business in North Attleboro is considered better than at this time a year ago. Some concerns are going on to short time, but the general situation shows an improvement when compared with the same months of last year. Not a few firms are running parts of their establishments overtime.

W. H. Bell has returned from a flying trip to Detroit.

John E. Tweedy, of Cheever, Tweedy & Co., has returned from a trip to New York.

The Paye & Baker Mfg. Co. has built a brick engine house at its factory on Richards Ave.

Edwin Cummings has returned from a short western trip in the interests of J. F. Sturdy's Sons.

Alpin Chisholm has returned from a short western trip in the interests of the Bugbee & Niles Co.

G. Herbert French, of Riley, French & Heffron, continues to win cups in golf matches in the south.

John H. Peckham, of J. H. Peckham & Co., has filed a certificate of nomination for the office of Selectman.

J. J. Sommer & Co. have taken additional space in the Totten building and will add a line of fine chains to their samples.

Fred Varno, for 17 years foreman of press hands for the T. I. Smith Co., has severed his connection with the concern.

The addition which Anthony H. Bliss is to erect at the Whitney factory will be about 100x35 feet and three stories high. R. Blackinton & Co. will occupy at least one floor of the addition.

Harry E. Hull, of W. H. Bell & Co., has gone to Florida, where he will spend the next two months. His friends wish him a good time and regained health.

Word comes from Palm Beach, Fla., that Mr. and Mrs. T. I. Smith left there over a week ago for Miami. From there they were to go to Key West, Havana and back to Tampa Bay.

N. B. Simpson, master mechanic for the Guild Machine Co., is slowly recovering from the effects of the serious injury he received recently while hoisting a heavy pulley. The wheel fell and struck him on the shoulder, fracturing the shoulder blade.

Frederick Amos, an elderly jeweler of this town, died March 9 after a short illness. He had been employed by E. Ira Richards & Co., for the greater part of the last half century, the only break being a period of eight years spent in Providence. He was a man of genial disposition and undoubted integrity. The funeral was in charge of the Odd Fellows.

There was a gas explosion in a blower pipe at the factory of J. H. Peckham & Co. last week that made things interesting for a few minutes. Quite a section of the blower pipes was demolished, windows were shattered, a partition thrown down and tools and implements thrown about the factory. No one was hurt, as the explosion occurred while the employes of the concern were all at dinner.

Boston.

Abraham Lipson, a jewelry peddler in the North End section, has been missing for some time, and his family fearing foul play have called upon the local police for assistance in locating him. He is believed to have had considerable money with him.

Henry R. Palmer, a jeweler at 120 Monroe St., Lynn, who is well known in Boston, was assaulted and robbed in Lynn Saturday night by four men. One of the alleged assailants, William Casey, was placed under arrest. An attempt will be made to induce Casey to divulge the names of his alleged associates.

Early Saturday evening a stranger entered the store of Harris Korover, 1204 Tremont St., South End, stole a tray of rings valued at $60 and made his escape. The thief is described as about 25 years old, 5 feet 6 inches tall, weighing about 150 pounds. He was of dark complexion, with a scar on the right side of his face. He wore a dark gray overcoat and a black stiff hat.

Paul Satz, a jeweler, of Ware, Mass., filed his schedule in bankruptcy last week in the United States Court, Boston. According to the statement on file, the total liabilities are $5,004.45 and the total assets $848.53. The claims are all unsecured, the larger creditors being: A. Mendlesohn & Co., $1,241; Hayden W. Wheeler & Co., $1,269; L. Witsenhausen, $530.68, and about 25 smaller creditors. For assets, he has about $800 of stock as his principal item.

Royal Robbins, treasurer of the American Waltham Watch Co., was the guest of honor of the Waltham Business Men's Association Thursday evening. Mr. Robbins

The E. Howard Watch Co.
has ready for delivery

A New Model 16-Size Bridge Movement,
fitting regular model cases. This movement is designed for the very best trade and represents the highest attainment in watch making. Open face and hunting.
Description and full particulars on request.

spoke at considerable length on "The Relations of a Municipality to Its Manufacturing Industries." In closing, Mr. Robbins urged that the association use its influence to obtain at the State House a modification in the tax laws.

Charles E. Durgin, city representative of the Thomas Long Co., has been confined to his house by illness for a few days.

John C. Sawyer has removed from 383 Washington St. to 10 Summer St. and opened his new store last week. Mr. Sawyer now has one of the finest and most attractive jewelry stores in the city.

Among the buyers in town this week were: S. K. Gurney, of Gurney Bros. Co., Brockton; F. S. Thompson, Gloucester; William L. Kelley, New Bedford; W. A. G. Smith, Rockland; M. P. Greenwood, Ashburnham; B. D. Loring, Plymouth; E. F. Welch, Westboro.

The dead body of Alexander Read, well known as an employe of the American Waltham Watch Co., was found near the shore in the Charles River on Friday. Mr. Read had been missing for four or five days, and the suspicions of his friends and relatives as to the cause of his absence were confirmed when it was found that he had shot himself. Despondency, brought on by the death of a brother, is the theory advanced in regard to the unfortunate and untimely end of the deceased. He was employed in the jeweling department of the watch factory, and was held in high esteem by his fellow-workmen. Mr. Read was born in England, and had lived in Waltham for more than 20 years. He leaves a widow and two children.

Connecticut.

Fred. H. Hill and W. H. Blake, Attleboro, Mass., were visitors to Danbury last Thursday.

The Rogers Silver Plate Co., Danbury, has removed its New York office from 3 Maiden Lane to 470 Broadway.

Geo. H. Wilcox, vice-president of the International Silver Co., is on a business trip to Chicago and other western cities.

The old Beardsley clock in Woodbury, concerning the sale of which a great deal has been said of late, was sold at auction last Saturday for $1,460.

The citizens of Wallingford are much elated over the announcement that a large addition is to be erected to factory "L" of the International Silver Co., of that place. Factory "N" is also to erect an addition to its shipping department.

Gen. Geo. H. Ford, who, accompanied by his wife, is now at his residence in Rome, Italy, is the author of an article in the *Connecticut Magazine* for March, entitled "The Struggle for Liberty."

President Walter Camp, of the New Haven Clock Co., appeared before the committee on incorporations last Thursday and explained the resolution increasing the capital stock of the corporation from $600,000 to $1,000,000. He declared that the increase was demanded by an enlarged sphere of the company's business. P. N. Welch and James Wheeler also spoke in favor of the resolution.

Frederick Harth, Danbury, has been appointed to take charge of the City Hall

clock, which has been performing very irregularly of late.

W. H. Sparks, traveling representative of the Seth Thomas Clock Co., Thomaston, is visiting the home office this week.

The National Self-Winding Clock Co., Bristol, will shortly reopen its factory which had been closed for several months.

Edgar Charest has been appointed to the position of foreman of the satin finishing department of factory "E," of the International Silver Co., Meriden.

There was a large deputation from the State Business Men's Association before the Judiciary Committee of New Haven last Thursday afternoon, advocating measures relating to the manufacture of gold and silver articles.

The opening of the bids for the property known as the G. I. Mix estate, Yalesville, which was to take place in New Haven, March 7, was continued over until March 14, because of the proposition made which advocated paying the creditors of W. A. Kendrick 40 cents on the dollar.

Burton C. Rogers, son of Wilbur F. Rogers, who some time ago took the secretaryship of the Rogers Silver Plate Co., Danbury, of which his uncle, N. Burton Rogers, is president, has resigned that position to accept an important engagement with the Connecticut Telephone and Electric Co., Meriden.

Syracuse.

A. J. Stetson spent last week in New York.

L. Rosenau, of Paris, France, who represents a French jewelry house, was registered at The Yates last week.

Calvin S. Ball has been appointed time inspector for the N. Y. Central R. R. to succeed George C. Wilkins, the appointment taking effect April 1. The inspection will be in charge of Alton J. Stetson

The stock of jewelry and fixtures in the store of Arthur M. Felson, Gouverneur, N. Y., was sold at auction there Thursday by Deputy Sheriff Ostler, acting for Trustee in Bankruptcy H. Walter Lee. The stock, which inventoried at $2,965.57, was purchased for S. Weis, of New York, for $1,650. The fixtures, which had been valued at $1,165, also went to Mr. Weis. They brought $3, subject to a chattel mortgage, which, with interest, amounts to $610.50. Accounts of the face value of $316 were purchased by Mr. Weis for $36. A number of Mr. Felson's creditors were present.

L. Hanson, Devils Lake, N. D. contemplates making an eastern trip shortly.

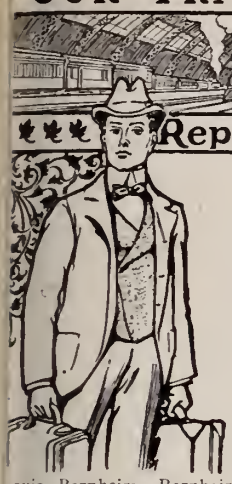
Anthony F. Linnbaum's Body Found in the Waters of Spring Garden.

BALTIMORE, Md., March 15.—The mystery that has surrounded the whereabouts of Anthony G. Linnbaum since his disappearance on Jan. 18, was cleared up last Thursday by the finding of his dead body in the waters of Spring Garden. It was found floating near Long Bridge, at the foot of Light St., by the bridge keeper John Johnson, and two other men, who rowed out to where the body was seen and notified the authorities.

The body was identified at first by an envelope which had the jeweler's name printed on it. It was later identified by his two sons. From the decomposed condition of the body it is thought the body had been in the water since his disappearance on Jan. 18. There was an abrasion over the left eye, which might have occurred either before or after the body entered the water. The family at first thought this pointed to foul play, but the opinion of Coroner Reinhardt, who investigated the case, was that death was caused by accidental drowning, and a certificate was accordingly issued. Owing to the disfigurement of the body, the two sons had difficulty in making their identification sure. The clothing was searched, and two pairs of glasses, two Catholic medals, a pen knife, key and leather purse, containing 23 cents, were found.



The last time that Mr. Linnbaum was seen alive by any member of his family was Sunday, Jan. 18, when he left home about 7 o'clock, stating he was going to St. Peter's Catholic Church. From there he said he would go for his wife, who was visiting her brother, George J. Imhoff, 225 Scott St. Mrs. Linnbaum waited late that night for her husband to call, but he never appeared, so she returned home alone. His habits were always regular, and, as he never visited alone, his disappearance became a source of great worry for his family from the first, and the police were immediately notified, and a description sent out, without any effect.

Mr. Linnbaum was 52 years old, and was born in Baltimore. He learned the trade of watchmaker in early life with John A. Ostendorf, a jeweler at 328 Park Ave., who was at that time located on Saratoga St., near Park Ave. In Oct., 1876, he branched out into the jewelry and watchmaking business for himself, locating at 1223 Pennsylvania Ave., where he had since remained. In 1874 he married Miss Philomenia Imhoff, who survives him with seven children, who are: Joseph William, John George, Frank Vincent, Mary G., Catherine L., Edward J. and Gertrude Linnbaum.

The interment was made yesterday in the Holy Redeemer's Cemetery, the pallbearers being members of the Catholic Benevolent Legion and the Immaculate Conception Catholic Church, of which he was a member.

Lilly Kent and Alice Bell, aged 14 and 15 years respectively, were arrested a short time ago for stealing two gold rings from the store of Arnold Bros., Pine Bluffs, Ark., but were subsequently released by Mayor Bell of that place on account of their tender age.

OUR TRAVELING Representatives

Traveling representatives may consider these columns open for the publication of any news or items of interest regarding themselves or their confreres.

The following eastern traveling representatives were in St. Louis, Mo., last week: K. N. Clarke, Towle Mfg. Co.; Louis Bernheim, Bernheim & Beer; Mr. Boice, White & Mayor.

Among the traveling men who visited Boston, Mass., last week, were: G. H. Birch, Bawo & Dotter; John L. Shepherd, Keystone Watch Case Co.; Mr. Childs, B. A. Ballou & Co.

Among the traveling men in Indianapolis, Ind., last week, were: J. C. Becker, Philadelphia Watch Case Co.; A. R. Dorchester, W. E. Richards & Co.; H. P. Kent, F. W. Weaver & Co.; Fayette Vaslett, Fletcher Burrows & Co.; S. Cohn, S. Cohn & Co.; Gus Rodenberg, Rodenberg & Dunn; Max L. Jacoby, Manchester Mfg. Co.; D. N. Jacoby, Providence Stock Co.; Harry Kennion, Parks Bros. & Rogers; Mr. Allen, C. H. Allen & Co.; M. Klipper, Hipp. Didisheim & Bro.; H. E. Cobb, Daggett & Clap Co.; J. F. Ripley, Watson & Newell Co.; Mr. Mumford, Kent & Woodland.

Traveling men calling on Davenport, Ia., jewelers, during the past week, were: Max Noel, Despres, Bridges & Noel; R. S. G. Edwards, Whiting Mfg. Co.; Herbert A. Reichman, Jos. H. Fink & Co.; Arthur A. Spiegel, Gustave Fox Co.; Louis W. Bruns, Juergens & Andersen Co.; C. W. Thomas, Allsopp Bros.; C. M. Davis, Ansonia Clock Co.; E. B. Frank, Pairpoint Corporation; R. L. REMOVAL

WE beg to call the attention of our friends and patrons to our REMOVAL to more commodious quarters,

No. 28 East 22nd St., New York,

A few doors from Broadway, where we occupy entire eighth and ninth lofts. We will be pleased to receive your esteemed favors as in the past. Very truly yours,

SCHICKERLING BROS. & CO.,

Telephone, 5315 18th St.

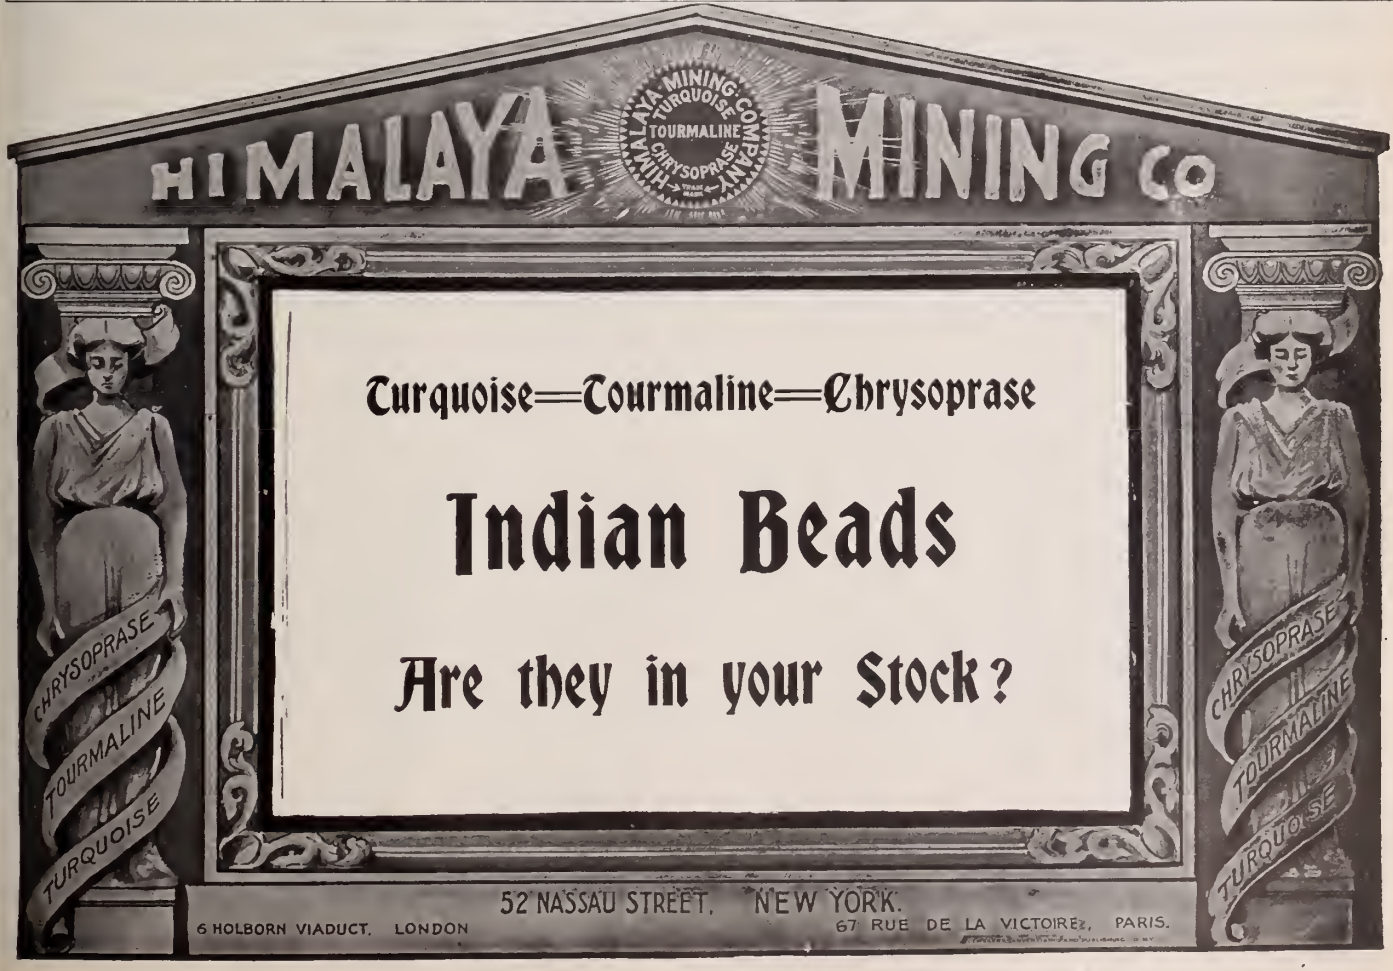
MAKERS OF ARTISTIC DIAMOND AND HIGH ART GOLD JEWELRY.

To Importers and Large Dealers in Diamonds.

We are now operating, and have been for the past ten years, the most extensive and best equipped Diamond Cutting Works in this country, equaling any in Europe.

We are continually buying large series of Rough direct from the Syndicate controlling the output of the associated Diamond mine owners, and can offer to Importers and Large Dealers, Original Lots at prices equal to those of the European Markets, thereby saving the 10 per cent. import duty.

We do NOT solicit memorandum orders.



Stern Bros. & Co.,

DIAMOND CUTTING WORKS,
142 to 146 West 14th Street.

68 Nassau Street, New York.

Chicago Office, 149 State Street.

London Office, 29 Ely Place.

WALTHAM WATCHES.

PRIZE ESSAY WINNERS.

THE essays submitted in Prize Essay Competition No. 9, "How to Make Attractive and Profitable Store Window Displays were exceptionally meritorious. Those who were not fortunate enough to secure prizes, as well as the winners, are tendered herewith the congratulations of THE CIRCULAR-WEEKLY for the honest effort made, and it is hoped that they will continue their endeavors in other contests.

So close was the contest in this competition that the judges could not conscientiously make a distinction between the first and second prize winners, who were consequently ranked *ex aequo,* and between whom the first and second prizes were equally divided. This was the only just way out of the dilemma, and the judges therefore decided that $15 should be awarded to each of the two contestants who ranked first, instead of giving $20 to one and $10 to the other. These two compositions were signed, respectively, "S. D. E." and "Sherlock."

The official announcement of the winners, therefore, is as follows:

First and second prizes—Divided between "S. D. E.," (W. R. Cattele, Tenafly, N. J.) and "Sherlock" (C. T. Evans, Utica, N. Y.).

A Home for Aged Jewelers.

A SUGGESTION that may be well worth discussion and consideration by the leading members of the jewelry trade in New York, and, in fact, of the country generally, is contained in the letter of a subscriber to THE CIRCULAR-WEEKLY, which appears in another column of this issue. Briefly, it is to the effect that wealthy jewelers contribute toward a fund to found a home for the aged and indigent members of the craft, not only manufacturers, but those who are connected with the trade as dealers or salesmen. Another and important suggestion is that in connection with the home a school be endowed for the instruction of the orphans of jewelers in drawing, designing and other subjects requisite to a thorough knowledge of the jewelry business.

Owing to the general prosperous condition of the jewelry trade at the present time the need of such a home may not have made itself manifest, though individual instances where help and aid are needed often come to the notice of the members of the trade. It is a matter of common knowledge that aid to the traveling fraternity is so well looked after by the Brotherhood of Traveling Jewelers, and that the trade in general is seldom called upon to help in charitable work in this line. Whether or no such a home as suggested by the correspondent is actually needed just now will be known best to the executive committee of this Brotherhood and to the officers of the association which so ably came to the relief of the trade during the hard times, eight or nine years ago. The subject is, however, one which is worthy of consideration, and THE CIRCULAR-WEEKLY opens its columns to all members of the trade who wish to discuss the question in all its phases.

The Gorham Mfg. Co.'s Action Against Labor Union Organizers.

PROVIDENCE, R. I., March 14.—To protect men in its employ who are not affiliated with any union the Gorham Mfg. Co. this week discharged six of its employes who are members of the Silver Finishers' League of America. Four of the men are said to be officers of the organization. They are: President Albert V. Tompkins, Recording Secretary John Gardner, Treasurer John Doyle and Vice-President Thomas Paine. The other two men discharged are Richard Pears and John Kilby.

The company's position in the matter is explained by the following statement, issued by Superintendent Lawton:

The attitude of the company, in having discharged certain men who are members of the Silver Finishers' League, has been impelled by the knowledge on their part that action towards an agitation from sources outside of men in their employ has been stated to be the intention of the Union in the near future, and, in accordance with precedents, they have dismissed the officers of the Union and also those who they find have been agitators.

Many of the workmen in this department are not members of the union and the company will not permit of their being coerced into joining an organization which has already made trouble in their New York factory and expressed its intention of continuing its operations at Providence. On the contrary, their support will be given to those who are not members.

Employes of the polishing and finishing departments, including those discharged, have assured the officers of the company that they have no grievance of any kind. On the contrary, the individual treatment accorded them had resulted in advancement of wages and promotion to better positions as the opportunities offered.

There are about 225 polishers and finishers in the Gorham Mfg. Co.'s works and agitation among them has been carried on by members and agents of the union for some time, it is stated. It was to protect the non-union men from being made to feel that it was almost obligatory upon them to become affiliated with the union that the company has taken the step that it has.

Superintendent Lawton said, when seen, that he had little or nothing to say in addition to the statement issued by the company. He said that this explained the position of the company fully. He said that the company encouraged its men to bring to them their individual grievances, and held that it was better for all concerned for the company to treat with individuals. It is well known that the company has treated its workmen at all times with fairness and justice. Mr. Lawton said that there was nothing against the men discharged personally, and the men were told when discharged that the company would be glad to hire them as individuals, but they must come back untrammeled and without any affiliations with a union.

The action of the Gorham Mfg. Co. was taken wholly independently and without consultation with other silver manufacturing concerns in the city, it is stated. Mr. Lawton declined to outline what the future course of the company would be in regard to men known to be members of the union.

On Wednesday night President Tompkins and Treasurer Doyle went to New York to confer with the national officers of the union there. What the result of this will be is problematical.

The Gorham Mfg. Co. recently posted notices that during May, June, July and August 55 hours will constitute a full week's pay, as against 58 hours at the present time. This change will go into effect May 2. Last year less hours with the same pay were given during the months of June, July and August, but this year the company is even more liberal, increasing the time by one month.

Heretofore in order for an employe to obtain 60 hours' pay for 55 hours' work it has been necessary for him to work the full 55 hours. Under the new schedule, if an employe is late, his time will be computed at 59 hours instead of 60, less whatever time he is late. For instance, if he is late half an hour, he will receive his pay for 58½ hours for 54½ hours' work.

This action on the part of the company was wholly voluntary, as no request for shorter hours and the same pay has been made recently.

LETTERS TO THE EDITOR.

Need of a Home for Aged Jewelers.

NEW YORK, March 11, 1903.

Editor of THE JEWELERS' CIRCULAR-WEEKLY:

It would be a laudable object if some of the wealthier jewelers could found a home for aged and indigent jewelers and those engaged in the sale of jewelry, such as salesmen, traveling or otherwise. In connection with such a home it might be possible to create a school for the orphans of jewelers, who could be instructed by the jewelers themselves in drawing, designing, the manufacture of jewelry, and possibly in the business methods.

It would seem quite natural that the children of men who have been successful in a profession would likewise succeed if educated. Such a school should be located either in or in the immediate vicinity of New York, so that the museums, libraries and jewelry establishments, as well as the shops from which the material could be bought, could be readily visited.

Yours truly, JEWELER.

A jeweler is included among the merchants who have united to erect a large arcade store in Sharon, Pa., at a cost of $50,000.

Last Week's New York Arrivals.

THE CIRCULAR-WEEKLY each day posts in its office a bulletin of the latest buyers visiting New York, which every member of the trade is cordially invited to copy.

New York Notes.

A judgment for $201.31 against Joseph Wender in favor of the Photo Jewelry Mfg. Co. was filed Friday.

A judgment for $87.16 against Adolph Gender in favor of Kastenhuber & Lehrfeld was filed Wednesday.

A judgment for $271.69 against Solomon Goldberg, in favor of Kastenhuber & Lehrfeld, was entered Wednesday.

Julius Van Vliet, of the Berlin office of Van Vliet, Latz Co., 434 Broadway, will visit New York during April.

N. Shiman, of Shiman Bros., and M. H. Shiman, who on April 1 will be associated with that concern, are spending a brief vacation in Atlantic City.

The Enterprise Engraving Co., of New York, was incorporated last week at Albany with a capital of $3,000. The directors are Augustine J. Powers, F. T. Powers and F. P. Reynolds.

The police of New York are looking for a watch owned by Edward L. Burdick, the man who was murdered three weeks ago in Buffalo. The watch is supposed to have been pawned in this city. It is described as a stemwinder, having a gold hunting case, and size 16, Elgin movement. No. 1792013. The police and detectives have been instructed to search every pawnshop.

At the regular monthly meeting of the directors of the Jewelers Association and Board of Trade, held Thursday at the Board rooms, 170 Broadway, the following firms were elected members of the association: The Clauer, Calvin Co., Chicago, Ill.; Herpers Bros., Newark, N. J.; Tiffany Jewelry Co., Boston, Mass.; Whiting & Davis, Plainville, Mass., and the Year Clock Co., New York.

Tiffany & Co. are offering a reward of $500 for the return of a carved ivory statuette, which was stolen from their store about a year ago. The statuette is 18½ inches high, and is made in the figure of a Buddhist priest, decorated with all the insignia of his rank. Anyone who will furnish information that will lead to the recovery of the stolen article will be paid for his services.

Two men who are known to the police as professional crooks and whose pictures are said to be in the Rogues' Gallery under the names of "Holley Crawley" and "John Woods" were arrested Friday night by Central Office detectives. After the arrest one of the men dropped a bundle containing 52 rings and some other small pieces of jewelry. The police state that a 14th St. jeweler had reported that 60 rings had been stolen from his show case and they think that the rings the men were carrying belonged to him.

A fire in the flue of the chimney of the five story brick building at 64-66 John St., last week caused considerable excitement among the tenants. The damage was very slight, however, and none of those in the building suffered any loss. Among the tenants were Abel Bros. & Co., manufacturers of diamond mountings; Silbermann & Co., manufacturers of diamond jewelry, and W. D. Arthur & Co.

The corporation of C. Rogers & Bros., silverware manufacturers, which was recently absorbed by the United States Silver Corporation and subsequently taken over by the International Silver Co., has given up its New York office at 3 Maiden Lane, and customers and friends will find the New York office united with that of the International Silver Co. at 9 Maiden Lane. Pending arrangements being made to combine the products of this plant with those of other factories of the company, the samples formerly exhibited at 3 Maiden Lane have been returned to the factory.

To assist in properly investigating and verifying its reports, the Jewelers Association and Board of Trade has adopted a new form of inquiry ticket and has sent a quantity to each member. The new system was suggested by Mr. Safford, secretary of the association, and endorsed and recommended by the finance committee. By the filling out of the tickets by the members of the association, the organization is enabled to keep in close touch with the trade and prevent fraud by those persons who would place large orders for special grade with the intention of loading up and then going into bankruptcy. All information regarding sales and records of this kind will be held in strict confidence by the association.

The strike in the factory of Ciner & Seeleman, manufacturing jewelers at 87 Maiden Lane, has been settled and the strikers returned to work Thursday. As was stated in the last issue of THE CIRCULAR-WEEKLY, the strike was for an extra half hour at noon time. The agreement, on which the strike was settled, is said by Ernest Koeppicus, financial secretary and business agent of the International Jewelry Workers' Union, to be a victory for the men and one of the first agreements reached by arbitration with the local in New York. By the terms of the agreement Ciner & Seeleman will allow its employes one hour at noon time, the extra half hour to be made up by working until 5:30 at night, will employ none but union men, and in future, when in need of employes, will go to the union for them. By the agreement, the concern will not pay the wages of the men while they were on strike, as was demanded by the union.

A petition in involuntary bankruptcy was filed Friday against the Rochester Lamp Co., manufacturers of lamps, 38 Park Pl., by the following creditors: Rose & Hastie, $176; Dartt & Co., $147, and Zucker, Levett & Loeb, $222. James Harold Warner, attorney for the company, said that the liabilities are $100,000 and the nominal assets between $90,000 and $95,000, not including good will and trade-marks. The plant cost $40,000 and special tools cost $22,000. Lack of capital was the cause of the trouble. Deputy Sheriff Snedden received an execution Friday against the company for $314 in favor of A. H. Hoag, and a keeper was placed in the office, but later in the day the Sheriff was enjoined by the United States District Court from further proceedings. The business was established 20 years ago by Charles S. Upton, of Rochester, and the company was incorporated Dec. 19, 1888, with a capital stock of $100,000, which has since been increased three times, to $700,000.

The police are looking for a man who has been endeavoring to obtain jewelry from several up-town jewelry houses on false pretenses and misrepresentation. The man dresses like a butler, and has a decided English accent. He goes to jewelry stores, stating that he is a representative of some English noblewoman, says his mistress is about to give a dinner and wants some fine ornaments, which he picks out and orders sent to the hotel. What he intends to do with them, after the goods arrive at the hotel, none of the jewelers have yet been able to discover, for all of them who have called up the hotel to see if a British noblewoman stopped there have discovered that she did not, and consequently they did not send the jewelry. Friday the would-be swindler ordered $5,000 worth of jewelry and candelabras from the jewelry store of John Wells, 385 Fifth Ave., and told the same story about the British noblewoman, using the name of Lady Turnbull. When the firm called up the particular hotel at which Lady Turnbull was alleged to have been stopping they found that no such person was there.

In a motion made by the public administrator of Kings County to compel a plaintiff to file securities for cost, before Justice Maddox in the Supreme Court of

Fine Glassware for the Table.

Plain, Engraved, Etched, Cut, and Rock Crystal Decorations.

C. DORFLINGER & SONS, 36 Murray Street, New York.

Brooklyn, Friday, it was disclosed that Edward Douglass, a jeweler who lived and worked at his trade in a little house at 252 Myrtle Ave., Brooklyn, and who died May 9, 1902, at the age of 90, left a fortune of more than $50,000 in realty and personal property. According to facts brought out in court, Mr. Douglass had been a miser. For many years he had lived with Mrs. Mary Smith, plaintiff in the suit, who, when he was ill, attended his store. She claims $5,366 for her services. The real estate of the deceased is said to include a house on Columbia Heights, two houses on Sands St. and two houses on Hudson Ave., Brooklyn. The public administrator, Wm. B. Davenport, claims that the entire personal property belonging to the deceased that came into his hands was $810.81, but it is found that Wm. P. Cook, real estate dealer, had kept $600 for Douglass and that he owned the property as described. The deceased has a wife in Scotland and two children, who have been notified to come to Brooklyn and prove their claims to his estate.

The Manhattan Jewelry Co., of New York, was incorporated Saturday at Albany with a capital of $5,000. The directors are S. Samodoritz, J. Berland and M. Samodoritz.

Katherine Weinberg, mother of Isaac H. Weinberg, diamond dealer at 14 Maiden Lane, died Thursday. The funeral services were held Sunday from her late residence, 101 W. 88th St.

Schickerling Bros. have removed from 857 Broadway to fine new quarters at No. 28 E. 22d St. The new quarters are much larger and finer than the old ones, as the firm occupy the eighth and ninth floors. They will employ 100 hands.

The Lemkuhl Jewelry Co. was incorporated Monday at Albany, with a capital of $25,000. The incorporators are: Lewis B. Dailey, Joseph M. Mitchell, Kenneth K. McLaren, Warren B. Akers and H. O. Coughlan.

Mrs. Sophia Ettinger, mother of Isaac B. Ettinger, of Gattle, Ettinger & Hammel, 68 Nassau St., died Friday at Syracuse, N. Y. The funeral services were held from her late residence, 2 Hammel Block, Syracuse.

Silbermann & Co., manufacturing jewelers at 64 John St., will remove about April 10 to 87 Maiden Lane, where they will have increased facilities for looking after their trade. The move will be made because the concern must have a larger factory and office than formerly.

The New York office of Bruhl Bros., 68 Nassau St., has been entirely changed around, and the result gives very much improved facilities for displaying goods. Partitions have been put up, a private office has been set apart from the main office and a bookkeeper's cage has been built.

The Jewelers' League of New York expects to give a dinner about May 15. The dinner will be $4 or $5 per plate and will be in some first class restaurant or hotel uptown. According to present indications this dinner will be on a larger scale than any ever given by the League. More new members have been obtained by the League thus far this year than for the same period in any previous year.

The amount of subscriptions obtained from the New York jewelers for the Hospital Saturday and Sunday Association of New York this year was little more than $700, which is more than three times the amount obtained last year, which was then about $225. The increase reflects great credit upon the committee appointed by the association to solicit the subscriptions from the jewelry trade. The committee consisted of E. Untermeyer, of Chas. Keller & Co., and Leopold Stern, of Stern Bros. & Co.

Benedickt Fischer, vice-president of the Mauser Mfg. Co., died Monday morning in the Hudson St. Hospital from heart disease, with which he was stricken on a Ninth Ave. elevated railroad train Friday. Mr. Fischer was 64 years old and was president of the American Encaustic Tiling Co., of 1123 Broadway, and a member of the Colonial, Union and Merchants' Clubs and of the Leiderkranz. After Mr. Fischer had been stricken with heart disease he was removed to the Hudson St. Hospital from the Franklin St. station of the Ninth Ave. "L," and members of his family immediately summoned. When the family arrived Mr. Fisher was unable to recognize any of them. He remained unconscious almost to the time of his death, his condition being such that it was not deemed advisable to remove him from the hospital.

Jewelers' Gold Bars Withdrawn and Exchanged at New York.

Week Ended March 14, 1903.

The U. S. Assay Office reports:

Gold bars exchanged for gold coin	$282,747.87
Gold bars paid depositors	160,727.65
Total	$443,475.52

Of these the gold bars exchanged for gold coin are reported by the Sub-Treasury as follows:

March 9	$72,294.97
" 10	56,831.04
" 11	21,071.83
" 12	92,190.78

Death of Samuel Laubheim.

Samuel Laubheim, of Laubheim Bros., wholesale dealers in jewelry and diamonds at 65 Nassau St., New York, died suddenly Monday morning in a sanitorium at 863 Lexington Ave., New York, as the result of an operation performed on his ear less than a week ago.

Mr. Laubheim was 44 years old and was well known to the trade and unusually popular in New York and elsewhere. He was formerly a salesman for Adolph Goldsmith & Son at 68 Nassau St., having traveled for that concern 20 years. He left the employ of that house in January, 1895, together with his brother, Leopold, and with a third brother, Max Laubheim, formed the firm known as Laubheim Bros.

Mr. Laubheim's death was very sudden and much lamented, as outside of the trouble to his ear he was strong and healthy. The funeral services will be held from his late residence, 318 E. 121st St., to-day at 9.30 A. M.

Death of Henry Waterman.

WOONSOCKET, R. I., March 12.—North Smithfield lost one of its oldest and most respected citizens yesterday in the death of Henry Waterman, who for over 40 years was a jeweler and watchmaker on Main St., this city. Death was due to old age.

The deceased was born in Warwick, R. I., March 23, 1816, and was educated in the schools of Warwick and Providence. He later served an apprenticeship with Edward Miller of Providence as watchmaker and engraver and then removed to Millbury, Mass., where he conducted a jewelry store, and was postmaster for several years. In the Spring of 1852 he moved to Woonsocket and after 40 years as a jeweler of this city retired in 1891.

Mr. Waterman in June, 1841, married Sarah L. Greene of Warwick, who survives him, as do also two sons, John R. and Benoni, Deceased was a member of the First Light Infantry Veteran association of Providence at the time of his demise.

The funeral will be held Saturday at 1.30 P. M. from the home of his son.

Diamonds Improperly Shipped by Mail Instead of by Parcels Post.

A large invoice of dutiable diamonds, estimated to be worth about $200,000. was held up Saturday by Collector Stranahan. of the Port of New York, because they had been shipped by international mail instead of by parcels post.

At the Custom House in New York Monday it was stated that United States authorities were convinced that there was no attempt to defraud on the part of the importers, and that they had been shipped by international mail through error; also that as the case was only a technical violation of the law, the goods, upon payment of duty, would be turned over to the owners.

An entirely wrong interpretation was put upon the seizure by the daily newspapers which reported the event. The Government officers refused to disclose the name of the importers.

John G. Erickson & Co., Marfa, Tex., have gone out of business.

The Giant of Collar Buttons

IN QUALITY,
IN SALES.

One Million Five Hundred Thousand Krementz One-Piece Collar Buttons made and sold within the last year. . . . . .

WHY? Because of their HIGHEST QUALITY, BEST CONSTRUCTION, GIVING THE MOST WEAR, AND GREATEST COMFORT and their IRON-CLAD GUARANTEE.

To verify this we invite the trade to read **"The Story of a Collar Button, with Illustrations,"** which may be had **FREE** for the asking, and to try the experiment suggested on page 5 of that booklet.

Extract from "Printers' Ink," Nov. 23, 1898.

The Little Schoolmaster now suggests, to every pupil in his class, to send a two-cent stamp to Krementz & Co., 49 Chestnut Street, Newark, N. J., and ask to be favored with a copy of their leaflet, "The Story of a Collar Button." Afterward, if any pupil will send to *Printers' Ink* another leaflet, new or old, that is half as good as this one, or that approaches it in excellence, the deserving student will be rewarded with one of *Printers' Ink's* souvenir spoons as an acknowledgment of his discovery and contribution. "The Story of a Collar Button" is the best piece of advertisement construction that has come to *Printers' Ink's* attention in the yeat of our Lord 1898.

Should you wish to utilize this booklet to increase your collar button business, we will, on receipt of your order, print your card upon and send you a quantity of them.

Krementz One-Piece Collar Buttons are stamped as follows, ON BACKS:

Patent sustained by United States Supreme Court.

Quality and Construction have made our reputation.

All Krementz Collar Buttons are Manufactured by

KREMENTZ & CO.,

George Jurgens, Barnum, Minn., will engage in the jewelry business at Virginia, Minn.

Chas. L. Griswold's stock at Bancroft, Ia., is offered for sale, Mr. Griswold's sight failing.

M. C. Weyer, Faribault, Minn., has installed a gas plant in his jewelry establishment.

Aug. Maneeke, Wausau, Wis., contemplates visiting his home in Germany next Summer.

J. William Brown, Ortonville, Minn., is about to erect a handsome brick building for his store.

D. Watterson has purchased the entire stock of jewelry, etc., of Mrs. W. De Noyelles, Garner, Ia.

J. Knocke, formerly of Cincinnati, O., has accepted a position with Victor Bogaert, Lexington, Ky.

L. F. Summers has disposed of his entire stock of jewelry and drugs in Milton, Ia., to John Fobes.

C. A. Vanderberg, Superior, Wis., has made extensive changes and improvements in his jewelry store.

W. T. Bradley has sold his interest in the jewelry business at Crystal, N. D., to his partner, L. M. Follett.

R. W. Main, Cando, N. D., is back in his store, after representing his district in the Legislature for the late session.

J. K. Wiggins, formerly in the jewelry business at Middltown, N. Y., has gone to Los Angeles, Cal., where he will reside permanently.

Peter Muller, Perham, Minn., has bought a building which he will have remodeled and refitted for his jewelry business.

W. J. Watson, Great Falls, Mont., has taken charge of the jewelry department of the Berg Hardware Co., Townsend, Mont.

E. Brandon has discontinued his jewelry business in Le Mars, Ia., and moved to Colorado, where he will continue business.

E. Watenscheidt, established since 1857 in Baltimore, Md., has removed his business from 238 N. Howard St. to 229 W. Franklin St.

Jaeger Bros., Portland, Ore., are making arrangements to add a new front to their store. The designs have been accepted and work will be begun this month.

Amendments were recently made to the articles of organization of the C. Preusser Jewelry Co., Milwaukee, Wis., anent the article relating to officers of the company.

Benj. T. & Wm. E. Ash, Binghamton, N. Y., are closing out their stock of men's furnishing goods and will hereafter devote their entire store space to the jewelry and kindred lines.

W. H. Saxton, who for the past few years had been watchmaker for H. S. Dusenberry & Son, Middletown, N. Y., has purchased the stock of J. K. Wiggins and will hereafter conduct that business at the old stand.

George Miller, Mahanoy City, Pa., recently accused of larceny by a man who left a clock with him for repairs, and who later accused the jeweler of failing to return it, has been acquitted, the complainant failing to prove the intent to defraud.

W. H. Becken, Beaver Dam, Wis., has made extensive improvements in the interior of his store to meet the requirements of a rapidly increasing business.

The store of J. T. Hinkle, Greenbrier, Tenn., was broken into by thieves a short time ago, who escaped with $25 worth of miscellaneous jewelry. Bloodhounds were placed on the trail, but with no success.

A charter has just been granted by the Secretary of the State of North Carolina to Rosenblatt & Co., Greensboro, N. C., who have been organized with a capital stock of $25,000.

The death is announced of Charles D. Homrighaus, son of Ervin Homrighaus, a jeweler of Shelbyville, Ill. Mr. Homrighaus died in San Antonio, Tex., where he had gone in an effort to recover his health.

Samuel I. Snyder, Clearfield, Pa., has retired after a business career of over 30 years in that town, and has turned over his trade to his son, Clark Snyder, and Richard Kennard. The firm name will be changed to Kennard & Snyder.

Judge Swan, in the United States District Court, Detroit, Mich., last Thursday, issued an order for the sale of the 581 diamonds, seized from Louis Bush, who was convicted of smuggling them into the United States. The jewels have been appraised at $15,000, but it is estimated that they are worth fully $18,000.

C. Hemenway, North Adams, Mass., has invented an improvement on the ordinary thimble which is designed to grip

the needle when inserted into a thickness of cloth, and thus enable the sewer to pull it through with the thread after it. A full description of the invention will be given in a future issue of THE CIRCULAR-WEEKLY.

Hugo Rohwedder, Davenport, Ia., was married March 11 to Miss Elsie H. C. Sauerberg, of that city.

E. H. Morin, who formerly conducted a business in Wilton, Me., has sold out to Mr. King, of Waltham, Mass.

J. Eastwood, Waynesburg, Pa., is selling his entire stock at cost preparatory to retiring from business in that city.

The Chicago Branch Jewelry Co. has established itself in business in Darlington, Wis., to succeed Howard Oates.

Geo. H. Pacaud, Fall River, Mass., is suffering from a severe attack of la grippe and his store is temporarily closed.

W. C. Grigsby, Blandinsville, Ill., has sold his business to W. H. Yates. Mr. Grigsby will probably locate in North Carolina.

The stock of Wm. S. Townsend, Perry, Okla., was entirely destroyed by fire a short time ago. Insurance covers about half the loss.

F. Zimmerly, an old and trusted employe of the Elgin National Watch Co., Elgin, Ill., recently committed suicide by taking poison.

The Poole Silver Co., Taunton, Mass., was a contributor to the success of the recent fair of the St. Vincent Home Association of Taunton.

Geo. B. Rose, La Crosse, Wis., is displaying in his show window a handsome brooch recently made to the order of an eastern patron for $8,500.

The home of M. E. Nabstedt, Davenport, Ia., was the scene, March 11, of the marriage of Miss Johanna W. Nabstedt and Edw. H. Donovan, of Rock Island, Ill.

Moses E. Lippitt, Cooperstown, N. Y., is making extensive improvements in the interior of his establishment preparatory to the installing of a large Spring stock.

L. H. Bellesfield, Allentown, Pa., is the proud possessor of an antique arm chair 135 years old. It is made of hickory, square shaped, and is in excellent condition.

The bankrupt stock of Wm. Miller & Co., Parkersburg, Ia., was recently sold at sheriff's sale for $1,190. The failure of the firm was announced last Fall and John Shirley was named as trustee. The liabilities amounted to $5,600.

The wife of J. L. Mitchell, Houston, Tex., who recently wandered away from home while in a demented condition, was found a short time ago about 10 miles north of Houston, on the tracks of the Arkansas Pass Railroad.

Alonzo T. Ward, Saginaw, Mich., is attracting attention to his display window by exhibiting a working model of the tugboat *H. B. Abbott.* The model measures 28 inches in length and is perfectly equipped from stem to stern.

News has just been received from Monroe, Wis., that James Mitchell, who recently confessed to robbing the store of N. A. Speck, of that place, and who subsequently escaped to Freeport, Ill., has been captured and will be brought back to Monroe from Freeport, Ill., to stand trial for burglary.

DID you ever stop to think how much in this world is artificiality?

What pains some manufacturers go to to make something that looks like something else and represent to the storekeeper that "It is just as good!"

We know some manufacturers represent that their CHAFING DISHES are made of solid copper, which are in fact made of brass, with soft metal trimmings and iron legs. Not one of these three metals will give satisfaction in an article like a chafing dish, kettle, etc., and it is the storekeeper who is blamed when the goods fail. For their own protection they should insist on all CHAFING DISHES and METAL WARES in general bearing this trade-mark

which is stamped on all of our goods, and all goods bearing this trade-mark are guaranteed. Our goods are all made of the most carefully selected material, and the greatest care and skill are exercised in their production. You have often heard the claim "As good as Sternau's," but have you ever *seen* as good?

Our Supplement No. 18 is full of new goods. Shall we send you a copy?

S. Sternau & Co.,

Manufacturers of Everything in Metal Wares,

Factory: Brooklyn, N. Y.

204 CHURCH STREET, Cor. Thomas, New York.

Optical Notes and Briefs.

Dr. F. M. Barnes, optician, Omaha, Neb., was a recent visitor to Wisner, Neb.

Henry Pollard has established himself in the optical business in Wilmington, Del.

L. Kreielsheimer has opened new optical parlors at 122 Smith St., Perth Amboy, N. J.

J. Riesland, optician, will open offices at Miles City, Mont., about the end of this month.

W. E. Boggis, optician, now located in Angola, Ind., contemplates removing to Elkhart, Ind.

Edwin Beckwith, of the New York Mutual Optical Co., returned last week from a trip through New York State.

L. B. Elliott recently lectured on the process of lens making before the Rochester Camera Club, Rochester, N. Y.

Dr. Franklin has leased a store at 217 Broadway, Troy, N. Y., where he will open a first-class optical establishment about April 1.

The practice of optometry in North Dakota has been placed under State regulation, with provision for a State board of examiners.

E. E. Lindeman, optician, announces that he will be at Dr. W. C. Ralston's office on River St., Milford, Conn., the first and third Saturday of every month.

Sol. Newmayer has brought suit in the Philadelphia, Pa., courts against the J. E. Limeburner Co., opticians, 1702 Chestnut St., to recover for personal injuries.

W. J. Kettles, for 23 years with Charles Porter, optician, Toronto, Ont., has opened an establishment at 23 Leader Lane, Toronto, and will make a specialty of prescription work.

The Dallas Optical Co., Dallas, Tex., was recently incorporated, with a capital stock of $20,000. The incorporators were: J. I. Chappell, R. V. Rogers and W. C. McCahan.

Edwin P. Wells, president of the Globe Optical Co., Boston, Mass., intends to sail March 28 for an extended trip to Europe, which will include an absence of about six months.

Dr. W. E. Dodd, optician, well known in Helena, Mont., and who is shortly to open offices in Butte, has temporarily located in Great Falls, where he will probably remain this month.

M. H. Tappan has removed his stock of optical goods and jewelry from Beaver Dam to Greenville, Ky., and will enlarge his quarters to meet the requirements and possibilities of his new location.

Thieves recently entered the optical store of F. Speth's Sons, Cincinnati, O., and stole 30 opera glasses, 10 field glasses, and about eight telescopes. Entrance was effected by forcing apart the iron bars in a window 10 feet from the ground.

The National Optical Co. has just been incorporated in Washington, D. C., to deal in optical goods of all kinds. The capital stock is $2,000 divided into 40 shares. The incorporators were S. H. Hecht, L. L. Harding and J. E. Campbell.

The Chicago Optical Society met recently in the rooms of the Chicago Jewelers' Association. After the usual business Prof. George A. Rogers gave a demonstration of the action of the muscles of the eyes, which was very instructive and greatly appreciated by those present.

A woman living in Oak Park, near Stillwater, Minn., was recently defrauded by a fakir, who sold her a cheap pair of spectacles for $12. He examined her eyes and said she needed new glasses, but declared that all the glasses he had were gold-bowed and worth $25 a pair. She had but $12, and he accepted that and departed.

Word comes from New Jersey that the bill, No. 125, defining the violation of the Medical Practice Act of New Jersey, against which many opticians protested, has been withdrawn by Edgar Williams, who introduced it. Mr. Williams, in a letter to one of his constituents, said that he may introduce a bill providing a standard of requirement which would protect both the competent optician and the public, providing he can get such a bill in proper shape.

Canada Notes.

The Western Jewelry Co., London, Ont., has gone out of business.

The Empire Jewelry Co. is opening a store at 248 Yonge St., Toronto.

S. M. Grossman, Toronto, is removing from 177 Yonge St. to 236 Yonge St.

Abraham Rosenthal, Toronto, is preparing to start on a trip to Europe about the end of the month.

Henry Birks & Sons, Montreal, Can., have leased premises for a Winnipeg branch store which will be handsomely furnished.

J. A. Mackenzie, Thorold, Ont., is giving up business and leaving for Calgary, N. W. T., where he will take a position with L. H. Doll.

L. B. Forsyth, well known in connection with the Montreal Optical Co., has opened a jewelry store at 70 Queen St. W., in the new Manning building.

Out of town buyers visiting the Toronto trade last week included: Thomas Lees, Hamilton; Mrs. C. Cross, Sutton; E. Marchand, Milton; A. Marchand, Port Elgin; B. Savage & Co., Guelph.

Ambrose Kent & Son, Toronto, are putting a number of new souvenir designs on the market in brooches, belts, buckles and spoons, consisting largely of coats-of-arms and emblematic devices representing different provinces and cities.

Ambrose Kent, of Ambrose Kent & Sons, Toronto, will leave April 7 on a purchasing trip to Europe, via Boston. He will sail for Italy and return by way of France, Germany and England, after making extensive purchases of art goods and silverware.

C. H. Harris, Portsmouth, O., will move into more commodious quarters about April 1.

Charles Ball, formerly engaged in business in Chico, Cal., died recently in that city, aged 74 years.

F. J. Loeper, Lansford, Pa., was a visitor to this city last week.

H. F. Bachman, manufacturing jeweler, has removed from 715 to 724 Sansom St.

Ralph Homer, a watchmaker from New York, has secured a position with J. E. Caldwell & Co.

William A. Shick will move, Wednesday next, from 318 South St. to his new store, 1602 Market St.

G. William Reisner, of the Lancaster house of L. C. Reisner & Co., was here on business last Saturday.

Joseph Hand, son of a prominent Cape May, N. J., jeweler, has accepted a position with Joseph Deschamps.

D. Lazarson, watchmaker for F. W. Layre & Co., 146 N. 8th St., is confined to his home with rheumatism.

Walter T. Thompson, of the Elgin National Watch Co., made a canvass of the local trade during the week.

Irving Smith, treasurer of the Crescent Watch Case Co., was one of the prominent visitors to the trade here last week.

Emlen Massey, Middletown, Del., spent a few days here during the week, with his wife, combining business and pleasure.

William Scherr, watchmaker for Al Bonsall, 260 S. 2d St., and a nephew of George Scherr, is reported to be gravely ill.

Sol Sickles, of M. Sickles & Sons, was recalled suddenly from Pittsburgh last week on account of the critical illness of his son, Morton.

Charles H. Dean, diamond broker, 715 Sansom St., who has been ill with la grippe, is at the Hotel Dunlop, Atlantic City, to recuperate.

J. Warner Hutchins, L. P. White and T. Zurbrugg, president of the Philadelphia Watch Case Co., left Saturday for the Virginia Hot Springs on a pleasure trip, to be gone three weeks.

Mr. Morse resigned last week his position as buyer of the china and bric-à-brac department of Strawbridge & Clothier's store. He has been succeeded by Mr. Walsh, formerly of N. Snellenburg & Co.'s store.

Ed Sickles, of M. Sickles & Sons, who recently returned from the West Indies, has a cane which he brought back and had mounted, made from the wood of the wrecked steamer *Madiana,* whose crew he assisted in rescuing.

Louis Clarke, of L. Straus & Sons, New York, has taken his father's place at N. Snellenberg & Co.'s store. The senior Mr. Clarke, who had also been associated with

Union Braiding Co.,

L. Straus & Sons, died recently.

Lou Sickles, of M. Sickles & Son, spent the best part of the week at Atlantic City on a pleasure trip.

Hugh S. Mitchell, a jeweler of Wilmington, Del., secured a marriage license here last week for his wedding to Miss Amelia Beckerle, also of Wilmington.

United States Senator J. Frank Allee, a Dover jeweler, last week secured the appointment of his brother, Douglass C. Allee, as the postmaster at Dover.

Abe Sickles, of M. Sickles & Sons, left Saturday for a trip to Mobile, Ala. After his return he will sail for Europe with his family for an extensive pleasure trip.

The Johnson Electric Service Co., which erected the City Hall tower clock, brought suit last week in Common Pleas Court No. 2 against the Wills Warming and Ventilating Co. on a contract.

S. Aisenstein moved, Wednesday last, from 420 S. 5th St. to the S. W. cor. of 4th and Lombard Sts., and has equipped his new place with all the latest fixtures for a complete stock of watchmakers' and jewelers' materials and tools.

Jules J. Hovey, who represents the Philadelphia Jewelers' Club in the interclub billiard tourney, last week won both of his matches, and is expected to make second place easily, if not to win the championship.

James L. Pequignot, associated in business with his father, Z. J. Pequignot, at 1322 Chestnut St., successfully presented an Augustin Daly play with a company of amateurs at St. James's Hall, Saturday evening, for the benefit of the Hospital for Poor Consumptives.

Extensive alterations are being made to the building at 715 Sansom St., which is occupied by manufacturing jewelers and lapidists. The establishment of Charles Dean in the building, when completed, will be one of the most attractive of the Quaker City's jewelry district.

The Keystone Watch Case Co., whose big plant is situated at 19th and Brown Sts., last week purchased from the Colonial Biscuit Co. the property at 809 N. 19th St., for $17,500. The company is gradually acquiring much of the real estate in that neighborhood.

Among the retail jewelers from nearby towns here last week were: E. D. Oliver, Burlington, N. J.; Capt. George W. Bowen, Bridgeton, N. J.; C. F. Rudolph, Wilmington, Del.; Charles M. Evans, Reading, Pa.; Herbert Keller, of E. Keller & Sons, Allentown, Pa.; S. K. Zook, Lancaster, Pa.

Elmer E. Welkert, the Lancaster watchmaker, accused of gilding and milling five-cent pieces and passing them on small retailers for $5 gold pieces, pleaded guilty when tried last week and was sentenced to two years in the Eastern Penitentiary. Welkert is supposed to have made considerable money out of his scheme.

Henry Tiedemann, manufacturer of jewelers' cases and counters at 19th St. and Washington Ave., has been awarded the contract for the equipment of the new jewelry department of N. Snellenberg & Co.'s store. The new cases will be particularly elaborate, of rosewood, after the style of Louis XV. The contract for the jewelry trays has been given to C. L. Le Cato, 730 Sansom St.

"Sol" Kaiser, representing Louis Strasburger's Son & Co., was called in from the road last week on account of the death of his father-in-law.

C. J. Slick, formerly with Frank C. Toepp, South Bend, Ind., has opened a store at Mishawaka, Ind., and was in Chicago last week buying his stock.

Max Ellbogen, of the Stein & Ellbogen Co., accompanied by his wife, returned the early part of last week from an extensive pleasure trip through California.

M. E. O'Donnell, western representative for the Courvoisier, Wilcox Mfg. Co., was married Feb. 24 to Miss Clara Geise, at the home of the bride, at Newark, N. J.

Jas. Lowery, formerly with Andrew J. Lloyd & Co., Boston, Mass., and late with W. G. Beak, of this city, will in future call on the local trade for the Geneva Optical Co.

Among the buyers in Chicago last week not elsewhere mentioned were: J. Peterson, Dundee, Ill.; F. Mayr, South Bend, Ind., and C. B. Morse, Chippewa Falls, Wis.

A. T. Hashim, of N. T. Hashim & Co., Manila, P. I., called on the trade in this city last week, previous to a trip to New York, from which place he will sail for Europe.

J. E. Yohe, formerly with Herman Post & Son, Decatur, Ill., who recently bought the store of Mr. Harpstrite in that town, was in Chicago last week placing orders for a Spring stock.

An involuntary petition in bankruptcy has been filed against Hans Hemken in the United States District Court. E. D. Day has been appointed by that court temporary receiver of the assets.

P. Reimer, Henderson, Neb., who has closed out his business in that town, called on members of the trade in this city last week. Mr. Reimer is on his way to Russia, where he will spend a year.

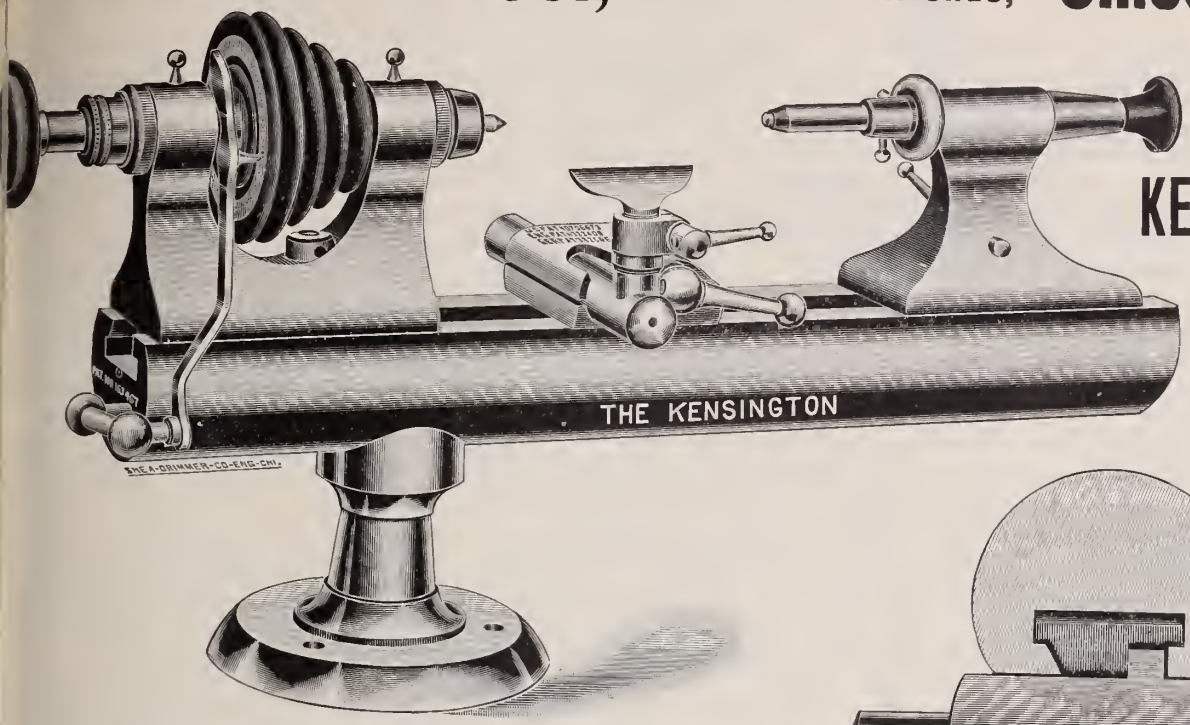
Henry Reinhard, with the Jurgens & Andersen Co., returned from a southern trip last week. Franz Eschenburg and Louis Bruns, with the same company, left for their respective territories last week.

O. F. Hall, manager of the Murine Eye Remedy Co., who has been confined to his home for several weeks, suffering from a stroke of paralysis, is now very much improved and expects to be at his office again shortly.

W. S. Bennett, Meeteetse, Wyo., accompanied by his wife, was in this city last week looking over the various lines. Mr. Bennett and his wife paid a visit to their old home at Friendship, Wis., before returning to Meeteetse.

The business of Wendell & Co. was incorporated last week, with a capital of $100,000. The company is to do a manufacturing jewelry business, and its incorporators are J. C. Mitchell, C. B. Robinson and G. A. Hinterleiter.

The estate of George K. Harrington & Co., against whom an involuntary petition in bankruptcy was filed Jan. 27, 1902, has been settled up. The trustee has paid 10.6 cents on the dollar as a first and final dividend. This was all that could be expected, as the assets sold for $1,100. The liabilities were about $8,000.



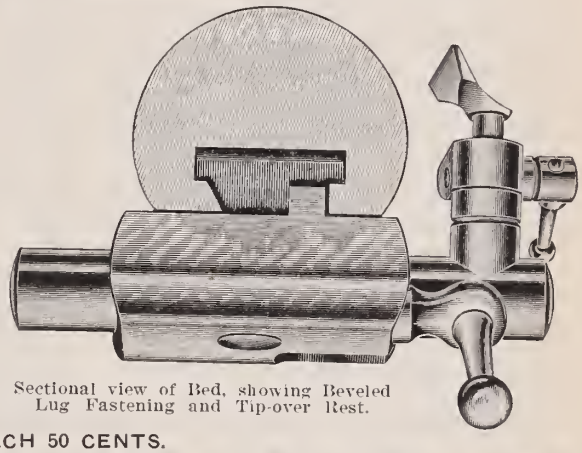
George H. Wilcox, 1st vice-president of the International Silver Co., was in Chicago last week, accompanied by Mr. Munson, representative of factories "H" and "P" of this company. H. O. Sherman, W. H. Adams and H. E. Vincent, all representing factory "L" of the company, leave for their territories this week.

The charges against Bessie Palmer, the actress who was arrested on the charge of refusing to return or pay for a $490 diamond ring, which was purchased on the installment plan from Loftis Bros. & Co., as reported in the last issue of THE CIRCULAR WEEKLY, have been dismissed, as the case was settled out of court.

Philip Lampele, alias Philip Bailey, who was arrested Oct. 27 in connection with the robbery of $8,000 worth of diamonds from Wechter & Weiman, Masonic Temple, which occurred Oct. 25, as reported in THE CIRCULAR-WEEKLY, Nov. 5, and who was subsequently discharged for lack of evidence, was, with three accomplices, held for the Criminal Court last week to answer to a charge of murder. The prisoners were held in accordance with the finding of a Coroner's Jury, which had been making inquiries into the death of William B. Tracy, who died as the result of a beating received in Kantzler's saloon, 2101 State St., March 3. The police went through Bailey's flat on Indiana Ave. and, it is alleged, secured diamond mounted jewelry valued at about $1,500, which will be held pending the outcome of the present charges against Bailey.

It is reported from Jefferson City, Mo., that Senator Lee, of Carter, has introduced a bill in the Missouri Legislature to expend $5,000 on a silver service for the battleship *Missouri*.

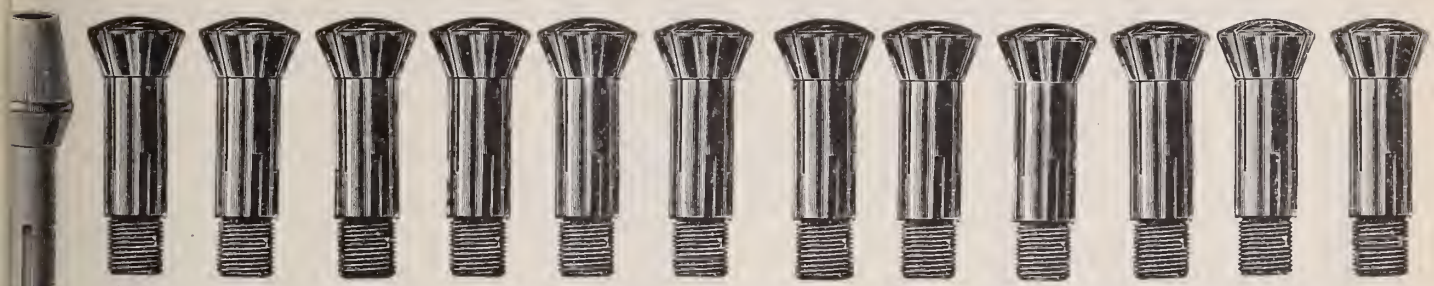
WARTCHILD & CO., Silversmiths' Bldg., 133 Wabash Avenue, Chicago, Ill.



THE KENSINGTON

Patent Numbers 706673 and 163467.

We are Sole Agents for the United States and Canada.

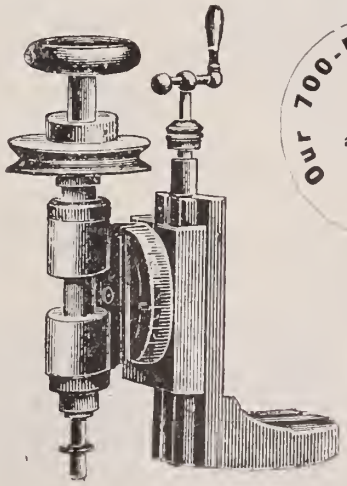


Price, $31.00

including 12 Wire Chucks, 1 Taper and 1 Screw Chucks, 6¼-in. Cement Chucks and Belting.

Sectional view of Bed, showing Beveled Lug Fastening and Tip-over Rest.

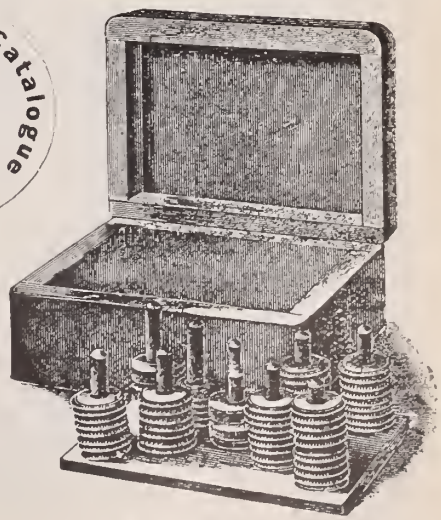
Additional Wire Chucks, Nos. 5 to 50, EACH 50 CENTS.



"THE KENSINGTON" is equipped with all the latest patented improvements which must be seen and tested to be appreciated. Particular attention is called to the style of fastening the Rest, Head and Tailstock to the bed of Lathe. These attachments are fastened by means of a beveled lug (see sect. view), which will always bring these parts in perfect alignment. With this improvement the lathe must remain in perfect line, something which can never be maintained in the old-style shoe fastening. Another special feature is the Sliding Tip-Over Rest which can be adjusted to all positions and can be tightened with one motion of the hand.

The Kensington Slide Rest.

Price, $16.00.



The Kensington Wheel and Cutting Fixture

Will fit any make of Slide Rest, adjustable to height and angle.

The latest construction of a very practical and universal attachment for wheel cutting, drilling and polishing.

Price, $18.00.

Our 700-Page Catalogue sent upon application.

Set of 24 Wheel Cutters in Box, consisting of 8 flat bottom, 8 round bottom, 4 ratchet and 4 wolf teeth cutters of assorted sizes.

Price, per set, $7.00. Single Cutters, each, 35c.

Minneapolis and St. Paul.

The Cohen Jewelry Co. has opened a retail store at 235 Nicollet Ave., Minneapolis.

G. Hallauer, watchmaker for the Reed-Bennett Co., is the proud father of a baby girl.

L. Metzger, with S. Jacobs & Co., Minneapolis, has returned from a trip to New York.

J. M. Bennett, of the Reed-Bennett Co., Minneapolis, is back from a trip to New York.

C. H. Carpenter, of the Minneapolis Jewelry Mfg. Co., Minneapolis, has been ill for several days.

Fred Banfield has resigned his position as watchmaker for the Leber Jewelry Mfg. Co., Minneapolis.

The wife of E. C. Bennett, Zumbrota Minn., was in the Twin Cities recently attending the W. R. C. convention.

The store of L. L. Williamson, on Franklin Ave., East, Minneapolis, was robbed by a sneak thief a short time ago.

J. F. Macomber, an aged watchmaker and jeweler of Minneapolis, is reported dead at the age of 72 years. He had been in business in Minneapolis for several years.

The suit of W. F. Main against the Western Mfg. Co., wholesale jewelers of Minneapolis, notice of which was given in last week's issue of THE CIRCULAR-WEEKLY, has been settled out of court and the suit withdrawn.

A. Pretzfelder, representative of an eastern jewelry house, while recently in Minneapolis, missed his valise containing $400 worth of jewelry. The police force hunted everywhere for the missing valise, when word was received from Berwick, N. D., that it had turned up there. A porter at the depot had innocently checked it for Berwick.

W. F. Main recently published the following rather peculiarly worded announcement of dissolution of partnership: "The partnership heretofore existing between myself and W. F. Roebuck and F. A. Roebuck, under the firm name of the Western Mfg. Co., alias the Twin City Jewelry Co., expired by limitation. Personally I am responsible for the firm contracts subsequent to Feb. 17, 1903. W. F. Main."

Sanford W. Devore, E. D. Ziesel and N. A Sprong, officers of the Devore Diamond Co., Minneapolis, were recently indicted by the federal grand jury on three charges, one of conducting a lottery, one of using the mails to defraud and another of fraud The company operated an investment scheme whereby patrons were promised cash or a diamond when their investments matured. In some respects the plan is similar to that conducted by the Tonti Savings Co., which was dissolved by ord of the courts a year ago, and of which t above were officers.

Kansas City.

J. S. Scott, of Woodstock, Hoefer & C is ill at his home.

Andrew Manifold, Beloit, Kan., was Kansas City two weeks.

Mr. and Mrs. Walter Jaccard have r turned from a trip to the east.

Albert Hansen, Seattle, Wash., spent se eral days in Kansas City last week.

The Streicher Watch and Jewelry Co. h just completed decorating its store.

George A. Hitchcock, watchmaker for I B. Carswell, has been sick for the last tw weeks.

Miss Ferne Abbott has just accepted position with Gurney & Ware as bookkeep and cashier.

A. C. Smalley, salesman for the Colu bian Optical Co. was in this city last we for a few days.

Mr. Bennett, a wholesale jeweler of Mi neapolis, Minn., spent a few days in Ka sas City last week.

Mr. Schreiner, of Gurney & Ware, h just returned from a few days' visit to h old home and his parents in Fairfield, Ia.

W. H. Fitzsimmons, for many years e graver for the Cady & Olmstead Jewel Co., died recently at his home in Pottstow Pa., from heart trouble.

H. B. Carswell supplied the handsome I Meylan repeating watch, worth $650.0 which is to be presented to Major A. Hammond, of the 8th U. S. Cavalry.

Joe McKenna, manager of the Bauma Massa Jewelry Co., St. Louis, Mo., and M Nevins, of the Meyer Jewelry Co., of th city, returned last week from a trip to Ne York. They went together to get new m terial and ideas for their business.

A beautiful bronze medal was received the Armour Packing Co.'s office in Kans City last week. It came from Benjamin Woodward, who was assistant commissione general at the Paris Exposition in 1900, an was awarded to the Armour Packing C for its exhibit.

The following out of town merchants vi ited Kansas City during the past week: D. F. Dudley, Arkansas City, Kan.; S. Dabney, Atlanta, Mo.; G. E. Moore, Den ton, Tex.; J. E. Griffin, Elk City, Mo.; J. Huey, Excelsior Springs, Mo.; Geor Killiam, Pittsburg, Kan.; B. S. Wilhan Cawker City, Kan.; Amos Plank, Hutchi son, Kan.; I. W. Plank, Lyons, Kan.; J. Pupping, Parsons, Kan.; J. M. Coffman Polo, Mo.; G. W. Chase, Moberly, Mo.

St. Louis.

TRADE CONDITIONS.

Business with the retail jewelers was encouraging, last week, considering the season of the year. The wholesale dealers and manufacturers continue to do a good business and the orders coming in show prosperity in the jewelry line all over this territory.

The World's Fair managers anticipate a big display of art and jewelry from Germany.

John Bolland, of the Jno. Bolland Jewelry Co., is back from a business trip to New York, whither he had gone to replenish stock.

Wm. Weidlich & Bro.'s traveling force is located as follows: E. C. Weidlich is in the west, O. K. Strouver is in Kansas and will shortly visit Texas, and John T. Sluggett is in the south.

Solomon Davis, a well-known salesman of cheap jewelry, despondent over the loss of $1,000 which he had been induced to invest in the Arnold "get-rich-quick" concern, jumped off the wharf boat above the Eads bridge in East St. Louis, Friday morning, but was rescued by employes of the Wiggins Ferry Co.

L. J. Weiler, formerly of the traveling force of the Bauman-Massa Jewelry Co., has gone into the retail business at Centralia, Ill. The business will be conducted under the firm style of Weiler Bros. Leo Bauman will supersede Mr. Weiler. The Bauman-Massa Jewelry Co. has increased its capital from $60,000 to $200,000.

Montana.

A. N. Yoder, a jeweler of So. Main St., Butte, who has been attending the meetings of the Legislature at Helena, is back at his store again.

James K. Moore, recently of Boulder, has gone to Billings, where he has purchased the business of A. C. Hoose, which he will continue in the future.

Richard Roberts, who has been in the jewelry business at Big Timber for some time, will leave this week for Crookston, Minn., where he will locate in business.

J. H. Leyson, Butte, has been anxious to conduct a sale in the evening as well as morning and afternoon. He recently made application to the Clerks' Union to be allowed to do so. The matter received consideration, but his application was refused.

Cleveland.

R. J. Gilger, Norwalk, O., was in the city Wednesday.

Harry Downs, Bellevue, O., was a visitor to this city last week.

Frank Sumner, Akron, O., visited the wholesale houses of this city last week.

The Great Diamond & Watch Co. has opened an office on the second floor of the Arcade building.

The C. C. Sigler Co. has put in a very handsome 15-foot wall case for silverware and flat ware of various kinds.

The Scribner & Loehr Co. is having a lot of new furniture and fixtures made for the watch, clock and silverware department, which will be installed in the new building on Erie St in a short time. The

Use the

MOE Diamond Weight Gauge and Calculator

to determine the weight of stones while in the mounting. The gauge measures the diameter and depth and by referring those to measurements in the book of tables that accompanies each gauge, the correct weight is shown. The book has 26 tables, showing weight of 1,700 diamonds from ¼ to 7⅝ carats inclusive. By its use you avoid chipping stones through removal from settings to weigh.

Gauge and book sent to any address: prepaid $5.00. Send for descriptive booklet and testimonials.

stock room for this department will be a separate one and will be connected with the salesroom by a stairway and elevator.

W. H. Deuble, Canton, O., was a business visitor in Cleveland last week.

J. H. Helfrich, Carrollton, O., local inspector of the Wheeling & Lake Erie road at that point, visited the trade last week.

W. J. Eroe, of Hanna & Eroe, New Castle, Pa., was in this city last week, on his way to Chicago, where he expects to spend several days.

W. R. Meese was in the city several days last week purchasing stock for a new store which he is about to open at Louisville, O. Mr. Meese will conduct a repair department and an optical business.

The Wingate-Nusbaum Co. will get its new store open about April 1, the contractors for the cases and furnishings having disappointed them in not having their work completed at the time agreed upon.

H. W. Burdick, of the Bowler & Burdick Co., made a trip last week to call upon some special customers and renew old friendships. He does not travel much, but occasionally takes a little trip of this kind, as much for the pleasure as for business.

Cincinnati.

V. A. Gebhardt, of Gebhardt Bros., starts out on his regular trip this week.

Chas. Gebhardt, of the Albert Bros., is preparing to start out on a trip through Indiana. Louis Albert was down the Ohio river viewing the big waters.

Joseph Noterman & Co. have every wheel turning on special order work for Spring trade. The Miller Jewelry Co. is also taxing its factory to its utmost capacity to fill orders.

The Gustave Fox Co. is taking stock, after which the travelers, Arthur Spiegel, Mr. Scooler, and Bert Ganz, who are now home, will start on their respective trips. Leonard Fox, who had been confined to his home by illness, has returned to the office.

Walter Herschede, son of Frank Herschede, of the Herschede Hall Clock Co., met with a severe accident at the factory on Plum St. last week. While doing some work his left hand was caught in the r saw and two fingers were cut off. Jol Herschede, of this company, has return from a successful tour of the easte cities.

The Spring trade is very gratifying the jobbers, and the manufacturers are al busy on emblem and school badges. The orders come in earlier this year than ev before, as dealers desire to have ther selves in readiness before the close of t school year. The number of school pin etc., is increasing every year, and it is no an important feature with the trade.

The wreckers employed to clear aw the débris at the scene of the late big fir have unearthed a lot of valuables in t buildings occupied by Duhme Bros. Co., which have been placed in the floor of the Plaut building. The articl will later be sold at a salvage sale, a may be conducted by Duhme Bros. & C for the insurance companies. The men bers of this firm are superintending t removal of the goods. Their big sa which is the largest of any in the ruin weighs over eight tons, and has now be lifted from the sub-cellar. Duhme Bro & Co. consider it lucky that the safe w found to have fallen on its face, as t would show somewhat its contents we protected from damage by water. Th insurance companies have taken charge the salvage and will no doubt realize a goo deal out of it after it has been placed proper shape. Herman Duhme state that the firm has not yet selected a ne store, and will not do so before anothe week, as they want to get their insuranc settled up and place their orders for a entirely new stock. They will probabl take a store on 4th St., as the busines has never been off that Street.

D. A. Hixson & Co., Lockport, N. Y are giving their customers 10 per cent. di count on certain articles purchased durin the month of March.

The entire stock and furnishings fo A. H. Pike's new jewelry store, which wa about to be opened in Rockford, Ill., were destroyed by fire a short time ago in th establishment of the Stevens & Deuel Mfg Co., where they were stored.

23-25 LOOIJERSGRACHT, AMSTERDAM, HOLLAND.

San Francisco.

TRADE CONDITIONS.

Traveling men of the local wholesale houses who have been out through portions of this coast and have returned, report the whole territory to be in an unusually prosperous condition and that nearly all the jewelry stores are making improvements and alterations. The trade in San Francisco is improving every week.

The wife of W. H. Copp died in this city last week.

George Bangle, Vallejo, Cal., was a visitor to the trade in this city last week.

F. S. Geirrine, with W. B. Glidden, has just returned from a trip to the northern part of the State.

Jos. Schulte, Jr., Monterey, Cal., spent a few days of last week in this city looking over his old friends.

Al Cantor has just started out on a trip through the central part of the State in the interests of Nordman Bros.

C. H. Wright, who had been in San Francisco for some time past, has completely refitted his store in Eureka, Cal.

Paul Walsh, formerly a traveler for Armer & Weinshenk, is now in this city representing the Dueber Watch Case Mfg. Co.

J. M. Sinclair has just returned from Washington and Oregon, whither he had gone in the interests of Armer & Weinshenk.

H. C. Van Ness, coast representative for Durand & Co. and Wm. B. Kerr & Co., has just left for New York to be gone about a month.

Fred. Ewart, Woodland, Cal., paid a visit to this city last week. Ed. Praet, of the same place, spent last week here making purchases.

Fred Roth, of M. Schussler & Co., will leave Amsterdam for New York March 24. Mr. Roth made some large purchases of diamonds while abroad.

Paul and Ernest Schultz are on trial here on charges of receiving stolen property. It was the purchase of articles from Charles Johnson, a desperate burglar, captured about a week ago, that led to the arrest of the above. In Schultz's stores was also found some of the plunder stolen from the home of a Mrs. Kingsland on Haight St.

The retail jewelry clerks of San Francisco have succeeded in organizing a local union, No. 763. This is affiliated with all of the unions of retail clerks and all of the labor unions of the Pacific Coast. They have instituted a six o'clock closing movement, which has been universally adopted by the retail jewelers and pawnbrokers of San Francisco. The union has so far received a hearty welcome, not only from the retail dealers, but also from all of the wholesale jewelers in business in San Francisco.

Pacific Coast Notes.

S. D. Levy has removed his watchmaking and jewelry business to new quarters at Clifton, Ariz.

E. J. Carpenter, representing the Empire Diamond Co., made a business trip to Stockton, Cal., last week.

The show windows in the store of F. C. Trickey, Pomona, Cal., have been considerably enlarged and improved.

J. M. Wallace, formerly with A. & C. Feldenheimer, Portland, Ore., has just accepted a position with the A. Starr Co., Oakland, Cal.

H. L. Truax, a recent arrival at Santa Monica, Cal., from the east, has taken quarters at 215 3d St., where he is putting in a complete stock of jewelry, watches, clocks, etc.

J. H. Porter, a jeweler at Colusa, Cal., sustained a painful injury a few days ago by the explosion of the magazine of his 22-cal. rifle, which sent four bullets through his left hand.

Five men were recently imprisoned in Bakersfield, Cal., charged with looting the store of A. H. Grennell, of that place. Among the stolen property were 33 watches, about half of which are solid gold. All but two of the watches have since been recovered.

P. Christian is again the proprietor of the jewelry business on Franklin St., Santa Clara, Cal., succeeding F. J. Martin. He will largely increase the stock. Mr. Martin, it is said, will remove to Palo Alto.

M. A. Ray, representing the Clear Lake Jewelry Co., Lakeport, Cal., has returned from a week's business trip to Lower Lake and surrounding towns, where he had been doing jewelry work. The Lower Lake people want the company to start a branch at that place.

A. M. Rich and O. G. Voss, who have leased temporary quarters on 13th St., Oakland, Cal., preparatory to opening a large establishment, have incorporated under the name of the Voss & Rich Co., with a capital stock of $25,000. The directors of the company are: O. C. Voss, Bertha Voss, E. M. Rich, S. H. Rich and Milton Bernard.

T. PRIGOFF,

MAKER OF

FINE DIAMOND WORK

and also Repairer of all kinds,

HAS REMOVED

from 216 Granger Block to 1 MUNROE BLOC.

Corner Railroad and S. Salina Streets,

SYRACUSE, N. Y.

Albany.

R. L. Davidson, a jeweler of Buffalo, visited Albany friends last week.

Webb C. Ball, Cleveland, O., chief watch inspector of the N. Y. C. and H. R. R. R., was in town for a few days last week.

The estate of John G. Myers, which conducts a large department store in Albany, has on exhibition a fine lot of jewelry and cut glass at the Merchants' exposition, military carnival and circus being held at the State Armory in this city, under the auspices of the 10th Battalion.

Harvey G. Kimmey, dealer in jewelry boxes, of this city, and the Hartford Sterling Co., of Philadelphia, are making a united and determined effort to apprehend Walter G. Porter, their former employe. Porter, it is alleged, stole about $6,000 from the two above named firms. The latter has engaged special detectives to work on the case.

A man whose appearance would indicate that he represented a first class house has been in Albany selling fake jewelry. He offered for sale collar and cuff buttons and stickpins and made a canvass of the prominent offices in the principal part of Albany. The man stated he was the representative of a large jewelry house in Philadelphia. The goods exhibited by him when making a sale were good jewelry, but in the envelopes which he delivered to customers after they paid their money was an imitation article. The police are looking for the stranger.

Trenton, N. J.

A bill making the purchase of jewelry from children under the age of 15 years a misdemeanor is being considered by the New Jersey Legislature. The object of the measure is to make it more difficult for thieves to dispose of stolen goods.

The American Export Co. was incorporated yesterday by Theodore S. Herrmann, Albert Welsch and Charles N. King. The capital stock of $100,000 is divided into 1,000 shares, of which Mr. Herrmann owns six and each of the other incorporators two shares. The company will manufacture and sell watches and all kinds of jewelry.

Trans-Atlantic Voyagers.

TO EUROPE.

Arthur Henius, of Bruhl Bros., New York, sailed last week on the *Kaiser Wilhelm der Grosse.*

Leon Carrau, of Carrau & Green, San Francisco, and Geo. Greenzweig, San Francisco, sailed this week.

Indianapolis.

Horace A. Comstock, Indianapolis, spent last week on a hunting trip.

J. W. Cooper has sold out his jewelry business at Salem, Ind., and gone west.

James Norris, Osgood, Ind., has bought out the business of the Osgood Jewelry Co., of that place.

D. J. Reagan last week returned from a three weeks' trip to Illinois and Iowa for the Baldwin, Miller Co., Indianapolis, Ind.

H. L. Rost, Columbus, Ind., has been elected vice-president of a new savings bank association recently organized in his town.

George W. Keifner, Loogotee, Ind., recently sustained considerable loss by a fire which started in the building where his jewelry store is located.

Jackson & Tinder, Seymour, Ind., have been succeeded by Jackson & Son. Mr. Jackson has been in the jewelry and watch repairing business for over 30 years.

Last week's visitors to the trade in Indianapolis, Ind., included: Philip Diels, Marion, Ind.; E. S. Murphy, New Castle, Ind.; George S. Drake, Pendleton, Ind.

Columbus, O.

T. T. Tress has been ill for the past week with la grippe.

R. N. Whitford, manager of the Hofman Jewelry Co., returned Thursday from a two weeks' trip to the eastern markets.

Alexander W. Krumm, receiver of the old Columbus Watch Co., last week filed his third and final report and took an order to sell claims alleged to be uncollectable. The litigation has been in progress for years. Among the claims to be sold are uncollected stock liabilities amounting to over $125,000.

Jerome A. Booth, who lately obtained two watches from local jewelers on worthless checks after being vouched for by responsible men, returned to town last week. Booth, who is an attorney, in order to clear himself of the charges against him, returned the watches and made the checks good. Shortly after doing this he again disappeared and his present whereabouts are unknown.

The trustee of the estate of W. S. Tussing has filed with Referee Rogers a list of exemptions amounting to $500, which the wife of the missing jeweler wants set off, in lieu of a homestead. The exemptions consist chiefly of horses and wagons. The creditors may take exception to the allowance on the ground that Mr. Tussing admitted that he took at least $200 with him. Trustee Thurman sold the stock of goods at 19 E. Gay St. last week to Samuel Friedner for $3,485.64, which is about 75 per cent. of its appraised value.

J. C. Schmidt, Lebanon, Pa., recently presented a handsome trophy to the Keystone Gun Club of that place in the shape of a beautiful silver urn. About 39 members will shortly contest for this urn in a series of handicap shooting matches.

The establishment of E. Deney, Thibodeaux, La., was entered a short time ago by burglars, who escaped with several gold rings. The thieves secured the rings by breaking an opening in one of the show windows just large enough to admit the hand.

Pittsburgh.

C. W. Wattles, of W. W. Wattles Sons, who has been in Pasadena, Cal., several weeks, has returned home.

E. A. Bloser, New Kensington, Pa., a F. M. Benner, Lisbon, O., were among retail jewelers who visited Pittsbur wholesale houses during the week.

L. W. Vilsack and Charles O'Brien, L. W. Vilsack & Co., returned Thursd from the eastern markets, where they h been purchasing a stock for their n store.

Mrs. Louisa Denig Stevenson, widow John Stevenson, formerly a jeweler Market St., this city, died Wednesd morning. She was 80 years old and dea was caused by old age.

J. R. Reed & Co., 439 Market St., a the official watch inspectors in this city f the Pennsylvania Lines, which include t Fort Wayne, the Panhandle, the Erie Ashtabula and all the local branch roa of the Pennsylvania lines. This firm al examines the watches of the Pittsburgh Lake Erie employes and a circular issued Supt. Duer names him as one of the i spectors for the Baltimore & Ohio employ in this district. During the semi-annual i inspection recently completed the fir examined 581 watches for the Pittsburg & Lake Erie, 641 for the Panhandle and 3 for the Fort Wayne companies.

Harrisburg, Pa.

Jermyn Borough Council has given th Jermyn Cut Glass Co. a 15 years' exone ation from taxes on its plant.

E. L. Rinkenbach, 1215 N. 3d St., ha been appointed a member of the Real E tate Committee of the Board of Trade.

Harry Janowitz, a Johnstown jewele has returned from the Philadelphia Hosp tal, to which he went several weeks ag He is much benefited in health as a resu of his stay there.

The bill requiring opticians to pass a examination before a State board befor practicing their calling, has been favorabl reported from the Judiciary General Com mittee of the Senate.

Becker & Nilson, cut glass manufactur ers of Brooklyn, are in correspondenc with the Board of Trade of this city, wit a view to locating here. A representativ of the company will be here this week.

Lancaster, Pa.

John Messmer, with Stewart & Son Huntingdon, Pa., visited Lancaster on purchasing trip last week.

H. J. Hallock, Wyalusing, Pa., has bee visiting the trade in this city.

J. M. Jencks has again resumed his du ties on the road, after an illness of severa weeks.

The members of the firm of Vander Voor Bros., Buffalo, N. Y., who attended the ban quet at Philadelphia, Wednesday, on thei way home stopped off at Lancaster an spent a half a day going through the Hamil ton Watch Co.'s factory. W. H. Wheeler of Hayden W. Wheeler & Co., New York also visited the Hamilton Watch Co.'s fac tory last week

Baltimore.

Henry Castelberg was in New York last week.

The business of the late John F. Feldmann, who died Feb. 20, will be continued at its location, 1107 Light St., by his widow.

Since the death of his wife Wm. F. Jacobi, of Jacobi & Jenkins, has sold his house and effects at 3 W. Lafayette Ave. and will discontinue housekeeping.

Mrs. Philipine Persohn, mother of Frank Persohn, died, March 7, at her son's home, 701 N. Gay St., aged 76 years. She lived at Steubenville, O., and was on a visit to her son during the last six months. The remains were forwarded to her home for burial.

The Old Town Merchants and Manufacturers' Association is arranging for an Easter trip to Savannah, Ga. The members will leave Baltimore, Thursday, March 26, and return Friday, April 3. All places of interest in the neighborhood will be visited. I. George Gehring, Jr., is one of the committee in charge.

Charles C. Stieff, manager of the Baltimore Sterling Silver Co., returned last Saturday with his family from an extended trip to California. The office force, under the leadership of Joseph M. Smith, who was in charge during Mr. Stieff's absence, had a pleasant surprise in the shape of flower decorations, six dozen large American Beauty roses being placed about in handsome vases.

John Hampton, 2339 Druid Hill Ave., has come into conflict with the city authorities for insisting on maintaining a peculiar looking old shanty at the foot of Marshall St., near the Spring Gardens, which is erected on land belonging to the city. Mr. Hampton says he was given permission to build the shanty on the land of John S. Gittings, but this was sold recently, and when he refused to leave, after being ordered to do so, the house was taken up and placed on a large wagon in the road. The jeweler then removed the house across the road and proceeded to erect it on the city's land and was warned not to do so by the building inspector. He replied his attorney had secured a permit to move the shanty there, and, despite threats at arrest, there it stands, with a wire cable around it and the jeweler and the public awaiting the next move.

E. C. Lewis, Lawler, Ia., is erecting an addition to the rear of his store.

Birmingham, Ala.

TRADE CONDITIONS.

There is no abatement in the run of good trade among the Birmingham jewelers. Everyone reports splendid conditions with remarkably heavy sales of high class goods. Diamonds aggregating $10,000 have been sold within the last 60 days, along with one chest of silver at $1,000. Collections on all credits are especially good. Drummers coming this way regard Birmingham as the best town of its size from New York to New Orleans.

J. J. B. McElrath, formerly in business in Center, Ala., and in this city, and an old Confederate veteran, has been appointed Clerk of the Police Court.

J. Lowinsohn has just returned from a purchasing trip to New York. He says there is more talk in the metropolis about Birmingham than all the other southern cities combined.

F. W. Bromberg recently sold to the vestry and congregation of the Church of the Advent a presentation silver service for $1,000. The design is a raised lily pattern. It was made by the Whiting Mfg. Co., New York, which also made the handsome service presented some time ago to the battleship *Alabama* by the citizens of the State.

A peculiar case arose here last week. A high salaried man in the employ of one of the leading jewelers sold a customer of the house who desired a diamond a handsome stone of his own. The proprietor took the ground that as he was paying the man wages and the latter was in his place, he, the proprietor, had a right to a portion of the employe's profits. The salesman thought otherwise and the proprietor discharged him.

Utica, N. Y.

At the annual meeting last week in Utica of the Commercial Travelers' Mutual Accident Association of America, Benjamin Westervelt, of Mount Vernon, N. Y., New York State representative of the New England Watch Co., was elected a vice-president for New York State.

Judge Ray has issued an order returnable March 24 at 10 A. M. to show cause why Frank V. Morris, a jeweler at Carthage, N. Y., who recently went into bankruptcy, should not be discharged from his debts. A copy of the order is ordered served all creditors of Morris. Morris failed Jan. 26.

MOST COMPACT

AND THINNEST DUST-PROOF

OPEN FACE

GOLD CASE

MADE IN THE WORLD FOR AMERICAN MOVEMENTS.

Made in all shapes, engine turned, engraved or plain.

Colby Patent, April 24, 1894.

DUBOIS WATCH CASE CO.

"PRACTICAL COURSE IN ADJUSTING."

A review of the laws governing the motion of the balance and balance spring in watches and chronometers, and application of the principles deduced therefrom in the correction of variations of rate arising from want of isochronism, change of position and variation of temperature.

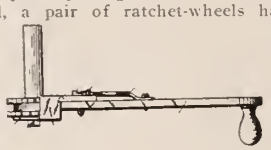
ISSUE OF MARCH 10, 1903.

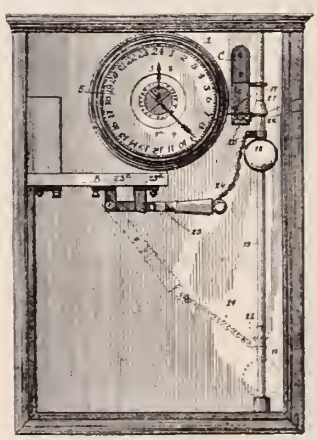
722,213. COFFEE-POT. Tazwell C. De Hart, Oakland, Cal. Filed July 24, 1902. Serial No. 116,841. (No model.)



An article of the class described consisting of a hollow cylindrical vessel adapted to fit into the

mouth of a coffee-pot, a funnel at the lower extremity of said vessel, a screen covering the lower extremity of said vessel, said funnel being of a less diameter than the screen whereby liquid may pass through the screen outside said funnel.

722,290. CLOCK-KEY. Otto C. Eggers, Atlantic, Ia. Filed June 5, 1902. Serial No. 110,347. (No model.)



A clock-key comprising a stem having a socket at one end, a pair of ratchet-wheels having re-

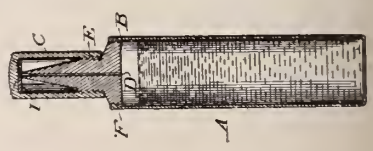
versely-directed teeth, re ovably secured to the opposite end of the stem and non-revoluble thereon, a handle detachably pivoted on the stem between said ratchet-wheels, and a spring-pressed double-ended pawl pivoted to the handle and adapted to be engaged with either of the ratchet-wheels at will.

722,292. ELECTRIC-TIME-SWITCH. Henry C. Froelich, Chicago, Ill., assignor to Baird Mfg. Co., Chicago, Ill. Filed Dec. 30, 1901. Serial No. 87,653. (No model.)

A time-switch mechanism for electrical circuits, comprising in combination a clock mechanism, a

trigger mechanism, operative connections between the clock and trigger mechanisms, an electric switch, a switch-operating weight held in its raised position by the trigger mechanism, a headed mechanism on the weight, a collar sliding thereon, and a section of chain forming a slack connection between the weight and the movable member of the switch.

722,361. CUTTLEBONE MOLD. Albert A. Geiger and Daniel C. Bauer, Newark, N. J., and Josef Pejchar, New York. Filed April 19, 1902. Serial No. 103,719. (No model.)



As a new article of manufacture in the art of producing molds from the cuttlebones or dorsal

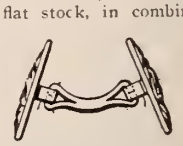
plates of the cuttlefish, the combination, with a dorsal plate or cuttlebone, of a reinforcing material arranged against the skin surface of said plate or bone, all arranged and constructed to produce a plate or bone which is resistible against breakage due to pressure.

722,508. RESERVOIR-FOUNTAIN-PEN FILLER. May T. Horn, Jersey City, N. J. Filed Aug. 12, 1902. Serial No. 119,380. (No model.)

As an article of manufacture, an ink-reservoir and fountain-pen filler consisting of an ink-chamber A of flexible material as celluloid; a con-

ical head-piece B having a longitudinal central perforation D of minute size, and threaded to receive a closing cap C and packing I, said ink-chamber A being constructed as shown and described with a threaded end to receive a threaded closing-piece, whereby the chamber A may be opened for refilling and closed to retain ink.

722,521. EYEGLASSES. Emil L. Lembke, New York, assignor to Gall & Lembke, New York. Filed May 6, 1902. Serial No. 106,157. (No model.)



In an eyeglass-fitting a post having a recessed head, a spring, a nose-guard and a screw screwing

in the said head for securing the ends of the nose-guard and spring in position in the said recess in combination with a U-shaped cap secured to the post and having an arched solid middle portion engaging the outer face of the head of the screw to prevent the screw from unscrewing in the post.

722,529. LINK-BUTTON. Eugene W. Morehouse, Providence, R. I., assignor to Barton A. Ballou and Frederick A. Ballou, trading as B. A. Ballou & Co., Providence, R. I. Filed Sept. 19, 1902. Serial No. 124,045. (No model.)

The improved link-button herein described, consisting of two button-heads, each having a button eye or loop of flat stock, in combination with a

curved link-bar having at each end two square prongs bent in divergent angles and each terminating in an inwardly-directed curve, which prongs project through and are butted within the eye or loop of the adjacent button-head, said parts being so constructed and combined that each button-head is capable of a limited oscillation in one plane only by the loose mounting of its eye in the adjacent bent and closed prongs of the link-bar.

The Diamond Fields of British Guiana.

BY ALFRED DE ANDRADE.

(Continued from issue of March 11.)

THE American Consul in one of his latest reports, the text of which was given last week, calls the attention of manufacturers of machinery and electrical equipments to closely observe conditions of British Guiana in view to supplying the machinery; he also invites and advises the attention of American capitalists who are inclined to invest in a British colony.

The present Governor and Government Secretary are doing everything to encourage the opening up of the diamond fields and our loans are very favorable. With the cheap conditions of labor and Government encouragement with good laws, the region of these discoveries is, in my mind, destined to open a new chapter in British Guiana and South America, which has been regarded for ages as the white man's grave and too valueless to need a rigid definition of ownership. When its mineral wealth was suddenly revealed rival claims naturally arose, which have now been definitely settled by the convention of 1901. What may be called the diamondiferous area is, in my mind, embraced from the right border of the Puruni River and the left bank of the Putarery Creek, and these are two tributaries of the Mazaruni River; it it, therefore, evident that the diamondiferous wealth of the country lies entirely within the territory described.

The locality of the diamond fields would hardly be chosen as a desirable residence by any one not in search of diamonds or unconnected with the industry: but one of the extraordinary pleasing features of the Mazaruni is its luxurious forests and the manner in which various kinds of ground provisions thrive and grow in abundance at the various Indian villages which exist along the river. The Mazaruni, with its mountain scenery, not only abounds in wealth, but with its forest shades and natural waterways, could be turned into one of the most flourishing agricultural districts of the colony.

The trip is accomplished first 25 miles up the coast and then 45 miles up the Rossequibo River by steamer to Bartica. Then 93 miles to San-San-Kopai landing, all in small boats, sometimes walking about one or two miles around rapids and cataracts and lugging the boats on improvised sledges. The trip with a loaded boat usually occupies about 12 to 14 days, but I have already accomplished the trip in seven days; it is full of excitement and a certain amount of danger.

The principal diggings now being operated are about from four to six miles back of the river on the Putarery and Saramand Creeks and their tributaries. Neither of these creeks are navigable, and all supplies have to be carried from the river on the heads of laborers. Nearly 3,000 of these laborers reached Bartica during the month of February last year, and the majority of them were for the diamond fields. In the fitting out of new expeditions it is necessary to secure experienced and practical miners who are thoroughly versed with the local conditions—which is one of the chief points essential to success.

My first diamond was got from undulating ground between a series of low hills, forming a sort of valley bed. The indications make me believe that the Putarery and its banks will in time prove very rich. Some of the gravel banks of the Putarery Creek are of a diamondiferous class. In my prospecting some of the overburden or stripping was found to be about two feet of brownish or gray, sandy soil, in which gravel is seldom found; then there is a sort of pulverant, cloggy sand, under which is an admixture of pebbly gravel with pieces of jasper and so-called carbons, as well as a quantity of other colored and well assorted pebbles of different shades and color. I find that the diamonds exist in the lower or more compact part of this gravel, which lies over the clay, as well as one of first layer of a first quarter inch of clay. It must be borne in mind that these formations seem to be peculiar to the Brazilian diamond fields.

In the surrounding country of the Putarery and Saramand Creeks, porphyry and diabase are some of the predominating rock productions exposed. I also came across some promising looking quartz carrying gold. In all my travels about the Mazaruni I had no difficulty in panning out strong color of gold.

(To be Continued.)

AWARDING OF PRIZES.

The names of the successful contestants in the prize essay competition, No. 9, "How to Make Attractive and Profitable Store Window Displays," will be found on the editorial page of this issue.

PRIZE ESSAY COMPETITION, NO. 10.

SUBJECT:

"How to Develop a Watch and Watch-Repairing Department."

THE building up of a good watch business requires the same methods and tact necessary in any other branch of the mercantile trade. The first requisite is to secure the good will of every customer. Make that the first aim whether a sale is made or not. Every watch sold should be the means of selling another, and this is impossible if the watch buyer is not pleased and does not stay pleased. If you have not the watch in stock which perfectly suits the customer, don't try to sell him one which he does not want, but send for the right one. Use great care not to offend him by word or look of disappointment should he fail to buy.

Interest your customer. Know everything about your watches and awaken his interest in them and his confidence in you. If he wants to talk, be interested in all he has to say—a good listener often sells as many watches as a good talker. Above all things, do not be caught running down your competitor. Have one price on each watch. It is a good plan to have this price to include the cost of a watch case and engraving, then these can be deducted if the buyer so desires.

See to it that your watches are all well regulated and in good running order before putting them into the display stock.

Now, one word about the stock on display. It should be in prime condition—shining and bright—no accumulated dust on the trays nor on the show cases. Everything should be in order and attractively arranged. Let your customers always find a good assortment and as complete a stock as possible.

Keep an attractive display in the window and be as scrupulously careful of the cleanliness of your window and its display as you are of the stock; one is the index of the other. The display can be varied by the use of attractive placards.

Advertising pays if properly done. Look to attractiveness in that as well as in all the appointments of the store, but do not indulge in fancy flourishes and staring lines. Use good, plain, readable type and have something worth reading. Be bright, if you wish, but don't be funny. In every way arouse the interest and the confidence of the people in you and your business. This is as essential in the repairing department as in the salesroom. Of course you must know how everything is to be done before hoping to build up a good paying watch repairing business.

There should be a good equipment of tools and materials. It is as essential t have what is needed in repairing a cu tomer's watch as it is to have a watc which will suit him. Be careful not t promise more than can be finished on tim The job should always be ready when th customer calls for it. Do not take in watch which has passed its days of relia bility and usefulness, as it will cause annoy ance later and tend to injure your reputa tion as a good watchmaker. In this wa your work can be guaranteed. Should an customer be dissatisfied, do all within th bounds of reason to please him, for please customers multiply fast. You can affor to cater to no others.

Keep a record of all repair work done, a it is often necessary for future reference Have the watch rack numbered to corre spond with the watch checks, so the han can instantly be placed on the watch calle for. Of course, this department should b included in the advertising, but do no use the words, "Fine Watch Repairing." These words have been worn threadbare Let the people know what class of worl you are doing and make this fact know in an interesting and convincing manner.

L. O. S.

Jewelers' Ideas and Schemes.

A NOVEL advertising scheme was put i practice when the auction sale opene at J. H. Leyson's jewelry store, Butte, Mont. about two weeks ago. Frederick Warde the veteran actor, who was then in the city appeared in a new role, that of the auc tioneer. It was arranged to have him auc tion off, to the highest bidder, a lady's soli gold watch, the proceeds to go to the as sociated charities of Butte. The whol thing is the outcome of a joke. Mr. Ward was dared to play the part of a public auc tioneer. The conversation was overhear by Mr. Magnes, manager of J. H. Leyson' store, and eventually the compact was en tered into with the result that Mr. Ward appeared at 2 o'clock on the date named It is safe to say that in all his experience he has never appeared in a role of this kin and a large crowd was present to see th eminent actor in his new part.

Henry A. Schroder, 33 W. Lexington St., Baltimore, Md., introduced a novel advertising scheme several weeks ago by placing in his window a handsome clock with candelabra to match, with a card announcing the set would be started at $40 and reduced $1 each day until sold. Many shoppers watched the result with interest a each day reduced the price, until it was finally sold for $17.

Alex. Kaiser, Stockton, Cal., recently held a successful "grab sale." Mr. Kaiser had made up a number of packages containing articles of jewelry that cost not less than 25 cents and in some instances valued at over $5, and then, for 25 cents, he al-

Prize Essay Competition—No. 11.

Three prizes, $20, $10 and $5, will be given to writers of essays on the subject:

"How a Jeweler Can Profitably Conduct a Camera Department."

The prizes will be awarded to the writers of the best and most reasonable essays. The ideas expressed, rather than the language used, will be considered in making the awards. The essays will be lettered when received and the judges will not know the identity of the writers until after the decisions have been made.

Essays must be in the office of THE CIRCULAR-WEEKLY by April 15. Write plainly and legibly and on one side of the paper only.

The right is reserved to publish any or all of the essays received. Only those connected with the trade are allowed to enter this competition.

Gand HINTS to JEWELERS

lowed patrons to select a package without opening it. About 1,000 packages had been made up, and all were disposed of in a very short time. Men and women who had drawn prizes suitable to the opposite sex exchanged with one another.

Sylvester Mussina, Williamsport, Pa., is attracting attention to his show window by a unique display consisting of a column entirely covered with watches of endless variety and artistically arranged.

J. Lucas, Houston, Tex., has attracted attention to his display window by exhibiting therein a rare old volume of the laws of the United States, printed in 1796. Although more than 100 years old, the book is in a fair state of preservation and can easily be read, except on pages where bookworms have eaten holes in the paper.

P. H. Loeper, Ashland, Pa., has concluded a 25-cent package sale, by which he succeeded in disposing of his stock preparatory to the purchasing of a new Spring stock. About 1,000 articles, ranging in price from 25 cents to $15, were selected from the stock and carefully placed in packages of different sizes, so that the contents could not be known or surmised. These packages were placed in the show window and the purchaser was allowed to select any one which he chose.

Three policemen were kept busy recently at Wilkes Barre, Pa., regulating the crowds that attended a "grab sale" at the store of Henry G. Shupp, 36 W. Market St. Mr. Shupp advertised the sale extensively, using half pages in the Wilkes Barre papers for the purpose. Many of the articles secured by lucky purchasers were so valuable that the owners secured many times their outlay at a loan office opposite. "Grab sales" are in great vogue in the coal regions, and the stores offering them often present scenes closely resembling raids in the New York Stock Exchange.

An exceptionally fine display of gold chains is being made in the show windows of A. Andrew's store, San Francisco, Cal.

A recently invented device for attracting attention to store windows, etc., described in the *American Inventor,* is an automatic soap bubble blower. The apparatus is provided with a little pump like a bicycle pump and a few strokes of this will furnish air enough to keep it blowing bubbles for half an hour.

Where a contract for the sale of goods to be delivered in instalments is silent as to the time of payment, in the absence of evidence to aid in the interpretation of the contract, payment is to be made for each instalment on delivery of same. (63 N. E. Rep. 409.)

Useful Advice for the Jeweler.

IN starting out to try to advise the retail jewelry dealer how to advertise, one is immediately assailed by a number of obstacles. In the first place, in assuming to be able to teach that development of modern trade to even the veriest tyro, he who has had the greatest and longest experience, if he has profited at all by that experience, will find his confidence oozing, in the inverse ratio of the length of his service. One may accept it as an axiom from the writer, who has served, and is still serving, an apprenticeship, which seems to be growing more interminable the longer he serves, tnat no man knows quite as much about the science—or is it an art?—of advertising as he who has been writing, or constructing, or placing advertisements, say six months.

And there is another axiom, directly springing from the foregoing one, that no advertiser, or rather other advertiser, bar none, knows quite so much about advertising as the aforesaid one. And there is a third axiom, and this is a clincher, *i. e.,* something that clinches, freely rendered; a rivet which has been driven through and locked on the further side.

This third axiom, which, I trust, will offend none, not even the enviable mortal who may feel himself singled out by it, is that man who knows all about advertising after a six months' study of the science or art, will never, never, never again, if he lives to be 200 years old, and spends them all in continuing to study the s—ubject—confess you thought the next word was going to be "science"—know quite as much about advertising, as he does at this all-sufficient and self-sufficient moment. With this exhaustive preface, the reader ought to find it clear that all that may be said in what follows is as though it came from a somewhat older student—one who has studied the subject a little longer than those who follow his teachings, sometimes given with confidence, oftener with trepidation; who is a little too wise, therefore, to be dogmatic, and who shall not be ashamed or afraid to confess that he is wrong when, or rather if he has made a statement which cannot be verified. This advanced pupil, if he may call himself such, claims only that by reason of his longer study of the subject, he has acquired certain fundamental truths, basic ones, not many.

By the aid of these, never transgressing that common sense which is implanted in the bosoms of most men, the fellow-pupils ought speedily to acquire sufficient of a knowledge of advertising to be able to construct advertisements which will answer all their reasonable purposes. Let the reader divert himself of the false and absurd idea that there are esoteric truths in advertising; that there are facts beyond the comprehension of ordinary, everyday mankind; that some are "called" and that few are chosen who can master its comprehension; that advertising is anything but the common sense way of letting the public know that you are in a favorable position to supply some of their wants, and that it will be your constant effort to do so. That's absolutely all there is to advertising, and though there are many schools that profess to teach advertising, the wonder is that men can be found who are such gulls that they will believe that advertising is to be learned elsewhere than in the school of life and experience. Observation, practice and common sense are the three branches required in the curriculum of this school. And under observation comes the reading to be done upon the subject. There you are.

The first great truth to be remembered in advertising jewelry is that these wares are not necessary to the buyer. Jewelry is not an essential like food and clothing. Therefore, people can, if required, get along without jewelry, and indeed a large proportion of the public does so. This primary fact should never be forgotten. While the fact that jewelry is not a staple may be a drawback from one point of view, from another it is a great advantage. In advertising staples one is often hampered in every direction by limitations; whereas in advertising luxuries, under which head jewelry is always to be classified, one is free to call on the imagination, one can exercise greater powers of mind.

The advertising of jewelry is upon a greatly higher plane than the advertising of almost any other line of goods. The constant endeavor of the advertiser should therefore be to inspire the public with a realizing sense that "one cannot live by bread alone." That if mankind were only placed upon earth to supply his material and grosser wants, he would be little above the brutes and the beasts. This should be the foundation thought of all jewelry advertising. Not that it must be present in every advertisement. And that leads to a slight diversion.

(To be Continued.)

A principal is bound to concede that one is acting as his agent whenever a reasonably prudent man, under like circumstances, would conclude that the party was so acting. (10 O. & C. P. 58).

In the absence of fraud or notice to a carrier to stop goods in transit, the seller cannot recover the same from the assignee of the buyer, who has taken them into possession for the benefit of creditors as part of his assignor's stock. (89 N. W. Rep. 971.)

Retail Jewelers' Advertising.

[The use of this department is open to every retail jeweler and optician. Forward for criticism your newspaper ads., booklets, catalogues, novelties, circulars, etc. Ask advice and offer suggestions. Replies in these columns are unbiased. Make letters as full and particular as you desire. Every letter and ad. sent will receive full attention, though the publication of the matter may sometimes be delayed several weeks. Address all letters and other matters to THE JEWELERS' CIRCULAR PUB. CO., 11 John St., cor. Broadway, New York.]

AT this time the jeweler should exert himself to the utmost to secure a large amount of repair work, for this will materially increase his revenue and attract trade to his store. To secure this work, he must "push" this part of his business, which necessarily means advertising it.

A recent case in point was that of a manufacturer who informed the writer that he is doing an immense business in class and school pins, and when asked for the reason, replied that he "pushed it hard,' meaning that he advertised that part of his business in the trade and daily papers, and had his travelers "push" the line on the road. Now, if this man could make this one line forge ahead—and, of course, it benefited his whole business—by pushing it, the retailer should be able to do the same with his repair department.

THE JEWELERS' CIRCULAR-WEEKLY, therefore, will continue to present original advertisements for repair work, as well as for the other departments of the retail jeweler's business.

Herewith, we present several, which may be used as here given, or in any other form that our readers may desire.

We Repair Anything

that is bought in a jewelry store and many other things that are bought in other stores. If others cannot repair your broken articles bring them to us and we'll repair them for you if it is possible to do so.

The charges will be moderate.

J. B. SAMSON,
322 East Orange St.

We Buy Old Gold and Silver

and pay the highest market price for it.

If you have any which you would like to have made up into new jewelry we will be pleased to give you an estimate, and guarantee that none but your old gold will be used.

J. B. SAMSON,
322 East Orange St.

If Your Clock

stops, loses, gains or does not strike properly drop us a postal or call us up over the 'phone — number 2752 — and we will call for it and see that it is put in good running order.

When repaired we will deliver it free of charge.

J. B. SAMSON,
322 East Orange St.

Jewelry Repairing

has been an important feature of our business for many years and our success is due entirely to high grade work, prompt service and reasonable charges.

If you have a broken piece of jewelry—no matter how cheap or valuable—bring it to us and we will restore it to its original beauty at a reasonable cost.

J. B. SAMSON,
322 East Orange St.

Booklet Advertising.

THE booklet and circular letter are being successfully employed by many retailers to increase their business. These mediums give more detailed information than is possible in a newspaper advertisement. The latter is seen by most of the readers of the paper, but the booklet and circular letter are intended for persons who are known to be interested in any manner with the store or with anything about which the booklet treats.

To this class of people the booklet and circular letter are directed with much benefit if they are interestingly written and typographically pleasing. The retail jeweler who hitherto has not made use of either of these mediums and particularly that of the booklet is unaware of its great possibilities.

At this season of the year the jeweler could with profit send booklets to persons owning diamonds, in which he could describe their care, the care of the mountings and when treating of the latter he could mention that the wearing of gloves over the rings is very hard on the cramps, which when worn, or broken off, endanger the safety of the stone. This and many other interesting points could be made which, if told in a convincing manner, would materially increase the diamond repair business.

To secure a list of several hundred names of diamond owners is not a difficult matter if the retailer will make a note of each job of this kind which is brought in. This list can be greatly augmented by his clerks and with the records of his diamond sales book.

This system of informing patrons concerning such matters as the above is a good one and the jeweler can profitably employ it for all his specialties and particularly so for his optical line. J. G. K.

Wording of Ads.

A BUSINESS man who has spent hundreds of dollars a month for advertising space for years had need of a girl for housework, says *White's Sayings*.

He advertised: "Small family wants a girl for light housework."

For two weeks the ad. ran along, with but one or two inquiries. The business man began to doubt the value of the advertising medium, and he wasn't afraid to say so.

An advertising man who was interested in supporting the reputation of the medium asked permission to write an ad. He advertised:

"Family of three wants girl for light housework; pleasant rooms; no washing; one block from car line."

The first day the ad. ran there were six replies.

The second ad. gave definite information. The reader had no trouble to decide about the desirability of the place when definite information was given.

There is food for considerable thought in this. No matter how simple the thing advertised you cannot give too much information.

S. M. Smith, Woodstown, N. J., is a patient at the N. J. State Hospital.

Jewelry, Clocks and Optical Goods Exported From New York.

THE exports of jewelry, silverware, clocks, watches and kindred lines from the port of New York for the week ended March 11 were as follows:

Argentine Republic.—One package optical goods, $185; 10 packages clocks, $245; 34 packages plated ware, $2,736; one package watches, $768.

Antwerp.—One package silverware, $57; two boxes clocks, $1,295.

Bremen.—Four packages optical goods, $945; one package plated ware, $610.

Bristol.—One package plated ware, $48.

British West Indies.—Four packages optical goods, $29; nine packages clocks, $254; four packages jewelry, $439; four packages plated ware, $296; four packages watches, $215.

British East Indies.—Sixty-four packages clocks, $914; two packages plated ware, $31.

British Australia.—Two hundred and seven packages clocks, $2,107; one package plated ware, $170; one package watches, $60; one package jewelry, $112.

Brazil.—Thirteen packages clocks, $256.

British Possessions in Africa.—Seventy-three packages clocks, $1,311; two packages silverware, $707; two packages watches, $565; three packages plated ware, $346; one package jewelry, $125.

Columbia.—One case plated ware, $38.

Christiania.—One case plated ware, $65; two cases clocks, $125.

Copenhagen.—Four packages clocks, $122.

Central America.—One package plated ware, $48.

Chili.—One package jewelry, $100.

China.—Thirty-four packages clocks, $726; 13 packages plated ware, $1,334; seven packages watches, $198.

Constantinople.—One package watches, $94; one package plated ware, $13; one package clocks, $14.

Cuba.—Two cases plated ware, $255; two cases silverware, $445; two cases optical goods, $645; 14 cases clocks, $173; one case jewelry, $106.

Danish West Indies.—One package plated ware, $93; one package watches, $38.

Dutch West Indies.—Two packages silverware, $25; one package watches, $15.

Dutch Guiana.—Two packages watches, $33.

Ecuador.—Four packages clocks, $68; one package jewelry, $147.

Glasgow.—Sixty-nine packages clocks, $586; one package optical goods, $250.

Havre.—One package plated ware, $28; two packages optical goods, $300; one package silver ware, $18; one package jewelry, $525.

Hamburg.—One package plated ware, $150; one package silverware, $42; one package optical goods, $56; 13 packages clocks, $260; three packages jewelry, $108; one package watches, $386.

Hong Kong.—Seventy-seven packages clocks, $822; two packages watches, $330.

Hayti.—One package silverware, $12; one package plated ware, $20.

Japan.—Two packages watches, $65; 15 cases clocks, $529; one package jewelry, $600.

Liverpool.—One hundred and five packages clocks, $2,153; six packages jewelry, $5,882; three packages watches, $400; two packages silverware, $400.

London.—Five packages plated ware, $1,088; 13 packages optical goods, $1,322; 108 packages clocks, $2,594; five packages watches, $608; two packages silverware, $157.

Mexico.—Two cases clocks, $54; three packages plated ware, $339.

Malta.—Twenty-two cases clocks, $237.

Newfoundland.—Two packages clocks, $38.

Peru.—One package jewelry, $155; one package plated ware, $12.

Portuguese Possessions in Africa.—Five cases plated ware, $660.

Philippines.—Nine cases plated ware, $520.

Southampton.—One package optical goods, $150; one package watches, $50.

Sheffield.—One barrel jewelers' sweepings, $300.

Siam.—Twenty packages clocks, $238.

Turkey in Asia.—Fifty packages pearl shells, $350.

Uruguay.—One hundred and fifty-three packages clocks, $1,900; six packages plated ware, $689.

Venezuela.—One package optical goods, $257; one package clocks, $25.

The discovery of valuable pearls is reported from Fish Lake, near Greenville, Ala., and fishing for the gems promises to become general in that section.

Watch Fobs.

We have a nice selection suitable for mountings.

Purchasers and Sellers of infringements will be prosecuted.

Julius King Optical Co's Suit on Eyeglass Guard Patent.

H. A. WEST and Wm. C. Strawbridge, the two opposing attorneys in the patent suit brought by the Julius King Optical Co. against Bilhoefer & McCoy for an infringement of an eyeglass guard, argued their briefs last week before Judge Ray, in the United States Circuit Court, at New York.

The suit in question was begun in December, 1901, against Fred. F. Bilhoefer and Arthur W. McCoy, trading as Bilhoefer & McCoy, opticians, at 41 E. 42d St., New York. An answer to the complaint was filed Jan. 2, 1902. Subsequently Mr. Bilhoefer transferred his interest in the firm to Richard E. Stillwell, and the business was continued at the same place under the style of McCoy & Stillwell. A supplemental bill, brought in Mr. Stillwell as a party defendant.

The patent involved in the action was granted to Walter S. Wells in 1899, and six years later was transferred to Leo Wormser of the Julius King Optical Co. From this patent the complainant developed what is known as the "Anchor" guard. About July, 1901, the defendants put an article on the market known as the "Lasso" guard. This guard was manufactured by the Fox Optical Co., of Philadelphia.

It is claimed by the complainant that the "Lasso" guard is an infringement of the "Anchor" guard by virtue of the fact that both contain two pads, one of which is arranged in the same plane as the lenses, and the other arranged above and in the rear of the first pad. This second and upper pad is adapted to grasp the fleshy portion of the nose, while the pad which is on the plane of the lenses is adapted to grasp the bony part of the nose and act as a steadiment, prohibiting the glasses from swiveling, or turning on the axis formed by the two upper pads.

Testimony in this suit has been taken at various intervals since February, 1902, and was finished about a month ago, having consumed a year's time in its completion. Several witnesses, including members of the firms interested, experts and practical opticians, were examined and the mass of evidence in typewritten form presented to Judge Ray. When the attorneys, representing the two opposing factions, came before the Court, it was seen that each was fortified with an almost innumerable variety of eyeglass nose guards and with models, representing almost every kind of eyeglass guard patent issued by the patent authorities at Washington in the last half century.

The arguments of both attorneys consisted largely of practical demonstrations of the difference or similarity, as the case might be, in the patents in the case.

H. A. West, for the complainant, stated that his client had built up considerable business with their "Anchor" guard patent, and that the defendants' alleged infringement has injured them considerably.

Wm. C. Strawbridge, for the defendants, declared that the "Lasso" guard was not an infringement on the "Anchor" guard, because it was an improvement of the old Fox Off-set Guard, which was patented in 1884, and since this date was previous to that on which the "Anchor" guard or Wells patent was issued, it could not possibly be an infringement.

Decision was reserved.

Interesting Meeting of the Optical Society of the City of New York.

President Marchant called the regular monthly meeting of the Optical Society of the City of New York to order at 8:30 Wednesday evening at the College of the City of New York. From the meeting rooms the members were asked to adjourn to the Laboratory, where Professor Fox delivered a most interesting lecture upon Refraction, demonstrating by experiments that the refractive index of glass is 1.5 plus.

The attendance was so great that all the members could not be accommodated in the Laboratory at once, large as it is and some were therefore requested to remain away from the tables. This was done without the least complaint by those who considered they could forego the work better than could others..

While Dr. Bryan took time to arrange his lantern for his lecture, the business session of the meeting went on. Secretary Ryer read the minutes of the February meeting, which, upon motion, were adopted as read.

The communications reported consisted of a letter from H. B. Wyckins, of the committee drafting the constitution and by-laws for a Buffalo optical society, and asked for a copy of the O. S. of N. Y.'s constitution and other papers that would be of service.

Applications for membership were then called for, and Messrs. C. F. Hughes, Brooklyn; H. Albert Heath, Jersey City; Arthur Frank, New York, and R. M. Lockwood, of New York, were proposed respectively by Messrs. W. Curtis, Chas. Rippier, E. T. Connet and E. Le Roy Ryer. It was then ordered that the secretary cast one ballot for the election to membership of the following candidates: Lewis S. Levy and Chas. J. Smith. Louis Kahn moved that the secretary be empowered to have application blanks printed for the use of future applicants, and this was carried.

The society's bills were then presented and ordered paid. Mr. Ryer then asked permission to offer the suggestion as a matter of consideration by the society that a society pin be adopted, urging that it could do no harm and might do good, inasmuch as interest in the organization would thereby be increased. Mr. Dilworth objected, saying that the pin would be superfluous, and then moved that the suggestion be laid on the table for consideration. Mr. Ryer seconded the motion, which was carried.

Upon further motion the business session was brought to a close and the members were asked to adjourn to the Natural History Hall of the College, where Dr. Bryan delivered a fine lecture upon "Tissues of the Eye," illustrating the text with lantern views, microscopic specimens, and views of 30 dissected eyes. This caused great interest, and the lecturer was roundly applauded when he finished.

Annual Meeting of the Ohio Optical Association to be Held April 13.

SANDUSKY, O., March 12.—Edward L. Jones, secretary of the Ohio Optical Association, announces that the first annual meeting of the association will be held in Columbus, O., at the Neil House, Monday, April 13. The officers of the association are already at work completing arrangements, and it is their intention to make this first meeting one of the utmost interest and benefit to those who attend.

A very interesting and instructive programme has been prepared, among the main features of which will be a lecture by Dr. Earl J. Brown, of Chicago, on the anatomy and psychology of the eye, illustrating his address by stereopticon views. Dr. A. Timberman, of the Ohio Medical University, will also give a lecture on "The Relation Between the Occulist and the Optician." A number of leading opticians will read papers on subjects pertaining to optometry.

A special feature of the meeting will be a clinic, which will be conducted for new and original ideas. There will be several exhibits for those wishing to acquaint themselves with the latest instruments, etc. The meeting will be concluded by a banquet in the evening. All opticians are invited to attend and bring their friends in the trade

For Optical Notes and Briefs See Page 52.

Optical Department.

Glass for Optical Purposes.

From an illustrated lecture by Dr. Glazebrook, F. R. S., reported in the *Optician and Photographic Trades Review.*)

I AM to speak to-night and in the remaining lectures of this course on Glass for Optical Purposes," and especially I take it on the modern glass that is now so generally used. At the same time I think it desirable, by way more or

FIG. 1.

less of introduction to the subject, to say something in this first lecture as to what the optical purposes are for which we wish to use the glass, and as to what it is that the glass which we use has to do. I take it that in almost all cases we wish to make an optical image of some object, be it a distant object or a near object, and the problem before us is how to utilize our material to the best advantage in order to make that image.

Now let me ask what do I mean by an optical image of an object? Suppose for a moment that I take a single point from

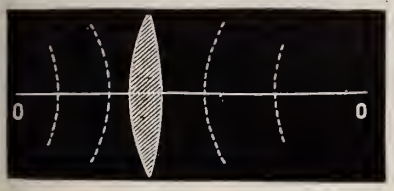

FIG. 2.

which rays of light or preferably waves of light are traveling, these waves diverge outward from the point O, Fig. 1, in spheres, and the radii of the spheres constitute what we call the rays of light. If I wish to form an optical image of that point somewhere else—at O′ for example—I must so arrange things that these diverging spheres may be transformed into converging spheres, converging on to the point O′. So that instead of having the light diverging from a point, after passing my optical sys-

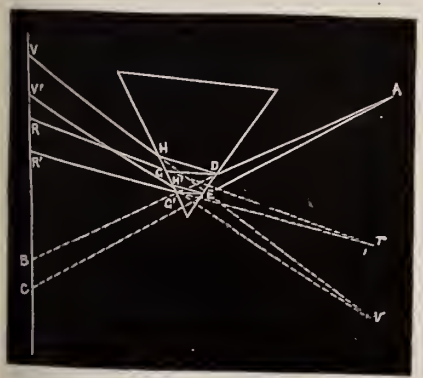

FIG. 3.

tem—a series of lenses—the waves are made to converge in spherical form to the point at which I wish to produce the image.

And now, how comes it about that we can obtain this result, and cause the waves of light to change from diverging into converging spheres? We are able to do this in consequence of one or other of two prop-

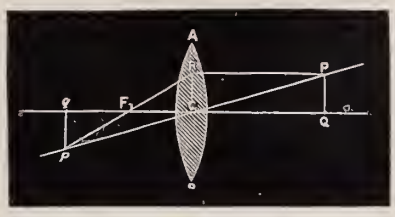

FIG. 4.

erties. We can do it either by the reflection of the waves from some surface or we can do it by the refraction of the waves. The waves diverging from O fall on a lens or series of lenses, Fig. 2. Now in order that I may change the waves from diverging spheres to converging spheres, I need to flatten the center part and bring the edges forward. We take advantage of the fact that in most transparent media

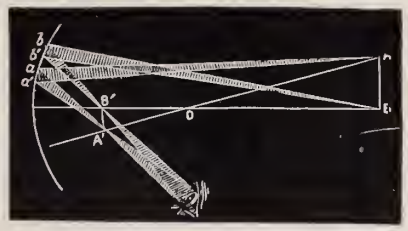

FIG. 5.

light travels more slowly than in air, so that if we put a considerable thickness of our medium in the way of the center portion of the wave, and less thickness of the medium in the way of the outer portion of the wave, it will be possible so to retard the center relatively to the edges that the form of the waves is changed from a series of diverging to a series of converging spheres, and that is exactly what we wish to do. And by this process the rays are bent. With all the optical apparatus with which we are concerned, we make use of the refraction or bending that takes place when light passes from one medium to an-

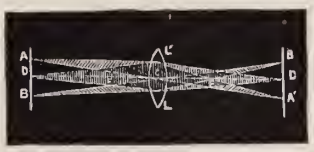

FIG. 6.

other. And I want in the first instance to show on the screen a number of slides which will illustrate that refraction and bending of light in various cases.

The first case shown in Fig. 3 is the very simple one of the passage of a ray of light or a series of rays of light through a prism. A pencil of light diverging from A along the lines A B D and A C E is bent, in consequence of the refraction of the glass, and is split up into its component colored rays, the red rays diverging from *r*, the violet from *v*, and a colored blurr of light extending from V R′ is seen on a screen behind the prism. I think this is probably known to all. I want you to notice, however, that the rays of light are bent upward toward the thicker end of the prism or refracting medium, and we see then if we want to get a greater amount of refraction or bending we can do it by increasing the angle between the two refracting surfaces. If we want to make a lesser amount of bending we do it by decreasing that angle.

The next slide is intended to show the passage of a ray of light through a convex lens, a portion of a transparent medium with two spherical surfaces. A ray coming in along P R is refracted downward. If the lens were perfect then all rays from P

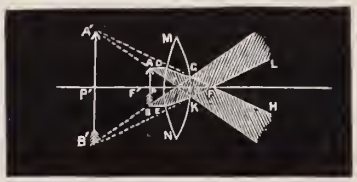

FIG. 7.

would be so refracted by the lens as to be brought by a focus at *p*, an optical image of P would be formed at *p*. But now, lenses, as we shall see, differ in reality from perfection and produce quite other effects than those which are produced by a perfect lens. It is these defects with which we are particularly concerned.

This next figure again shows the production of an image, in this case, not by a lens, but by reflection, by a mirror. Here the action is practically the same, and of course in a number of our optical instruments we are concerned with the action of

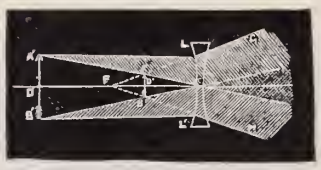

FIG. 8.

a mirror. The waves of light traveling from A as a series of diverging spheres are made by the action of the mirror to form a series of converging spheres with A′ as center, and all the rays of light from A unite at A′ and form at A′ an image of the point A. In this figure the image formed is a perfect image, because all the rays are made to unite at A′.

On the next slide we have shown a number of such images formed by refraction. Fig. 6 shows the formation of a real image by a convex lens. Rays of light coming from A are made by this convex lens, to

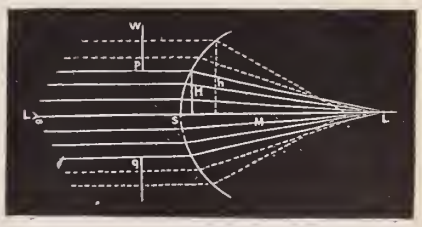

FIG. 9.

converge to A′ rays from B to B′ and so on, and an image A′ D′ B′ is formed here of the object A D B. Such an image is called a real image because the rays of light that start from A converge to A′ and actually pass through A′; so that if we put a screen at A′ B′ we could see from any point of the room the real image of A B.

Optical Department.

In Fig. 7 again our object is A B. Rays of light falling on the convex lens are bent by the lens, and are made in this case not to converge to a point to the right of the lens but to appear to diverge from a more distant point A′, behind the lens; while rays from the point B are made to appear to diverge from the more distant point B′; and therefore if I were to place my eye behind this lens, the light, that falls on the eye, instead of appearing to come from A B, would appear to come from A′ B′ and we should see a magnified image A′ B′.

In Fig. 8 is a concave lens, or diverging lens, which spreads the light rays out more. The rays of light traveling along A C are made to diverge more, and appear to come from A′. Rays from B appear to come from B′. The rays issuing from the lens are more divergent than the rays issuing from the object. Such a lens would of course diminish the object.

So far then for the action of what may be called perfect lenses. Now on the next slide we shall see what some of the defects are. Fig. 9 is drawn somewhat carefully to illustrate the refraction of rays of light coming from a considerable distance away to the left and incident upon a spherical surface. Consider the rays that are fairly close to the line L *l* which is called the axis of this system; those rays are made by refraction to converge and to meet with considerable accuracy at this point *l*; but

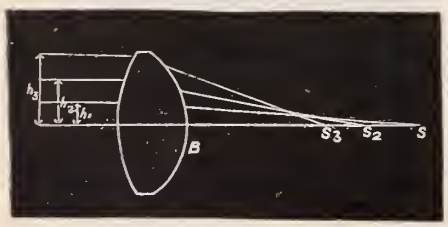

Fig. 10.

if we go to a greater distance away from the center line, then, owing to the action of refraction, the upper rays are refracted more than is sufficient to bring them to a focus at *l*. They travel along the dotted lines.

So that, if we had the whole of this spherical surface refracting light, instead of getting formed at the point *l* a clear and distinct image of our distant course of light, instead of, that is to say, having a series of spherical waves all converging to *l*, we have waves from the center converging approximately to *l*; from the outer portion of the surface they converge to a point much nearer the surface than *l*, and from intermediate portions to points on the axis between these. There is in that case produced what is called spherical aberration. The next slide will illustrate in Fig 10 the same thing, only with a more complete lens drawn. Here is a lens with light falling on it, the center portion of the rays are brought to a focus at S. From points further from the axis they come to S_2, from the outermost point to S_3, and so we do not get a simple image anywhere of our distant object but a series of more or less blurred spots.

(To be Continued.)

How We See Single.

(By N. P. Hackett, M.D., in the *American Inventor.*)

ONE of the most interesting facts about vision is how we see a single object, although looking at it with two eyes, and there being two images, one on each retina. Single, or as it is called, binocular, vision, is a wise provision of nature; it is a necessity; for, seeing two objects where only one existed would cause endless confusion. We would be as apt to grasp the ideal as the real object. We could not read, eat comfortably, or even kiss our sweethearts with any certainty and precision. There would be no accuracy in anything that we do by sight, unless there existed some means to distinguish the real from the ideal.

This question, how we see one object with two eyes, is often asked, and frequently answered incorrectly, or not answered at all. If we had only one eye in the center of the forehead, like the ancient Cyclops, as described by the Greek poets, there would be nothing to explain. It is obvious that looking at an object with two eyes, there must be an image of the object on each retina. The retina is the most complex part of the eye, consisting of ten different layers, the most important of these being the layer of rods and cones.

These rods and cones, as far as we can understand, are the perceptive parts of the retina. The whole retina is often (and correctly) compared to the sensitized plate of the photographer's camera. Upon it the image is formed. The image continues on the retina as long as we look at anything, and for a fraction of a second after the gaze is changed to another object. This fact causes the spokes of a wheel to appear continuous when the wheel is rapidly revolved; for the image of one spoke remaining a very brief space of time, another comes into view, and so the images overlap, and convey the idea of one solid body. The same explanation is true of the lighted end of a stick appearing as a circle of light, when the stick is rapidly revolved. There is one single spot of the retina which is more sensitive than the rest.

It is the center of the "yellow spot," and is called the fovea centralis. This is situated a little to the temporal side of the optic nerve entrance, and on a slightly lower level. Whenever we fix the gaze on an object, we so direct the eyes that the image may fall on the fovea centralis.

The fibers of the optic nerve, although they enter into the formation of the retina, are capable only of conveying images to the visual center in the brain; they are not adapted to receiving an image, are not even sensitive to light. The optic disc, the place where the nerve enters the eye, is called the "blind spot." When an image falls there, we do not see it. One eye is an exact facsimile of the other, when both are normal.

Now, in order to have single vision, it is necessary for the image to fall on corresponding points of each retina; for example, if it falls on the fovea centralis of the right eye, it must be on the fovea centralis of the left eye; and so of every other part of the retina. To explain the point still further, I will show what is meant by corresponding parts of the eye.

We will suppose each retina to be divided into quadrants by a vertical and a horizontal line passing through the fovea. Now let one retina be placed in the other, as one-half of an egg shell might be placed in another. The upper and lower half of one retina would be in contact, or correspond, with the upper and lower half of the other; but the nasal or inner half of the left retina would join the temporal, or outer, half of the right; and the nasal half of the retina blend with those from the temporal side of left. These larger divisions, and every point contained in them, are corresponding points.

(To be continued.)

Board of United States Appraisers Defines Projecting Lenses.

There are several points of interest to the optical trade in the decision of the Board of Classification of the United States General Appraisers overruling the protest of Hammel, Riglander & Co., 35 Maiden Lane, regarding the classification of optical goods. A note about this decision was published in The Circular-Weekly last week. The goods covered by the protest consisted of lenses of glass, ground, and were assessed for duty at the rate of 45 per cent. ad valorem and 10 cents per dozen pairs under the provision of paragraph 109 of the tariff act of 1897. They were claimed to be dutiable under the provisions of paragraph 111 of the act at the rate of 45 per cent. ad valorem as "projecting lenses."

The question involved in this protest was passed upon by the Board adversely to the Government in an unpublished decision dated April 20, 1900, but that decision was rendered, however, only on slight evidence. It appeared from the testimony in the case decided last week that the chief use of the lenses is in bicycle lanterns, although it is understood the Board's decision will affect lanterns for automobile lenses and similar uses.

The importers contended that the articles were not included under the provision of paragraph 109, claiming that the phrase "per dozen pairs" related only to spectacle lenses, but that the lenses under discussion were more properly projecting lenses as described in paragraph 111. The Government contended that the term "projecting lenses" referred only to mounted articles.

General Appraiser Fischer, who wrote the opinion for the Board, reasoned that the term "projecting lenses" was a commercial phrase, and covered only instruments consisting of a number of lenses arranged together in a mounting with devices for their regulation, and that the term "projecting lenses" in paragraph 111 did not relate to unmounted lenses. "The phrase in that paragraph," says his opinion, "must mean that the mounted combination of lenses, for otherwise either that provision or the provision in paragraph 109 would have no effect. Furthermore, it should be noted that the articles provided for in paragraph 111, with the exception of projecting lenses are mounted articles in the nature of optical instruments."

L. C. REISNER & CO., Lancaster, Pa.

Special Run on the following numbers of **RIVETT STEPPED WIRE CHUCKS, at 40c. Each.** Cash with order. These Chucks will not be duplicated, as the firm declines to make any more stepped chucks. So buy these while you can. Every one guaranteed to be absolutely perfect, of the following numbers: 2, 3, 4, 6, 7, 8, 9, 13, 14, 16, 17, 19, 21, 23, 27, 29, 31, 33, 34.

Don't Forget This

That in coming to our school you are not only getting the best instruction, but you will be able to live BETTER for LESS money in Lancaster than in any other place.

This is not a "line of talk," but an absolute fact conceded by all who have sojourned in Lancaster after experience elsewhere.

While comfortable living is important, the "main point" is the excellence of the instruction you will receive here. You will find that we fulfill all promises, and back the reputation we have earned of being "One of the Best of the VERY BEST."

Send for prospectus, etc.

The Ezra F. Bowman Technical School,

A school for the thorough teaching of Watchmaking, Engraving and Jewelry Repairing. **Lancaster, Pa.**

28 out of 45 PRIZES

were awarded to

PATEK, PHILIPPE & CO.

in the timing contest of the Astronomical Observatory in Geneva, for the year 1901, comprising the First Series Prize, all the three First Prizes, the only Second Prize, four Third Prizes out of six, three Fourth Prizes out of six, four Honorable Mentions out of eight, and twelve Single Mentions out of nineteen.

68 NASSAU ST., NEW YORK. GENEVA, SWITZERLAND.

100,000 American Watches have ABBOTT'S PATENT STEM-WINDING ATTACHMENT

A few more KEY-WINDERS are still in use. Send them to us for alteration and MAKE A FEW DOLLARS FOR YOURSELF.

WATCHES DEMAGNETIZED.

12 SIZE SPLITS.

HAVE YOU TRIED

The "Longeval" Mainspring

FOR AMERICAN WATCHES?

This handsome Oak Cabinet furnished gratis with every order for 1 gross of

"Longeval"

mainsprings. The cabinets are constructed on the principle of the sectional bookcase — you can build them to any required size.

IF NOT, we want you to send for a sample dozen to your jobber. The "LONGEVAL," as its name implies, has long life; it is made with unsparing pains, it is impossible to conceive of any methods which produce greater and better safeguards and protection for mainsprings, than have been adopted in putting this spring on the market.

BRIEFLY, the chief features are: The springs are manufactured by the best maker in Europe, with years of successful reputation, and an experience handed down from ancestors of mainspring makers, all of whom excelled in the manufacture of springs. The "Longeval" springs are protected against all climatic changes; each spring is wrapped in anti-rust paper, then packed in an individual paper box, which is in turn wrapped in lead foil, as shown in the above illustration, which excludes all possibility of dampness reaching the spring. Twelve boxes, each containing a spring are placed in a strong sliding box, bearing a label describing the watch for which the springs are intended.

The advantages are: no springs exposed to the air and endangered by moisture or climatic changes; only one spring has to be handled at a time, and not a full dozen, as heretofore; a guarantee accompanies every dozen springs; the "Longeval" spring is made of highest grade steel, fine in grain, high in carbon, and carefully finished down by hand, the only method that will ensure a spring to stand up well after years of daily use in a watch. Nothing has been left undone to make the "Longeval" mainspring the finest possible.

GET THE BEST—THE "LONGEVAL."

Order a sample dozen from your jobber; if you cannot obtain them there, write direct to the importers, **HAMMEL, RIGLANDER & CO., 35 Maiden Lane, New York,** who will inform you of the nearest jobber who will supply you.

NOTICE.

The importers of these mainsprings are the first to have employed the idea of putting each spring in a separate box, thus protecting them against rust and climatic changes, and to place a number of these small boxes in a box or case.

They have taken expert advice as to their sole and exclusive right to this manner of "dressing" mainsprings, and have been advised that they have a proprietary right thereto.

The trade is hereby notified that any infringement of this manner of "dressing" mainsprings for the market will be vigorously prosecuted.

PROBLEMS OF THE WATCHMAKER'S BENCH.

[*Copyright, 1902, by The Jewelers' Circular Pub. Co.*]

By Puteanus.

Repairing of American Watches.

THE most useful knowledge an American watchmaker can possess is undoubtedly a thorough understanding of the principles of the construction of the watches of his country and the ways of repairing the same. Only when he knows their working principles thoroughly should he venture to repair any foreign watches. Experience has convinced the writer that a great many young watchmakers may derive benefit and help by a short and comprehensive explanation of the principles on which watches are built and by studying and executing good methods of repairing. In order that such articles may indeed be of benefit, and be read with interest, they must be void of incomprehensible, technical terms, and of all tiresome and dry explanations, which even the learned men cannot enjoy reading very long. Remembering what happened to the great watchmaker Berthoud, when he explained in the Academy the theory of the escapement before an assembly of learned men, my intention will be to try to avoid the same fate by providing some of the much-wanted popular instructions on principles of construction and repairing of watches by making all explanations in workshop language. It shall depend on the appreciation of these discussions shown by the readers of The Circular-Weekly whether or not the discussions will be continued and extended to include the repairing of watches of foreign make.

Speaking about the Berthoud incident, although this occurred a long time ago, it is probably not known by many watchmakers, and therefore it might be well retold here. When the great watchmaker had been talking during an hour or more on the escapement people began to gape and to look at each other amazed. One of the learned men wrote a quatrain on a piece of paper, passed it to his neighbor, and then furtively slipped out of the room. Smilingly the neighbor passed it to the next neighbor, and then he, too, slipped away. Everybody except Berthoud, who, in the heat of his explanations saw nothing, got interested in the verses and wanted to know what it contained, but as soon as it was read the reader vanished, and lastly Berthoud was left to explain the theory to empty chairs. When the great man discovered that he was alone he also saw the slip of paper, which the last of his audience had kindly left to him; it contained a four-line verse, which translated into English would read: "Berthoud, when of the escapement thou explainist the theory, happy he, who without being seen can escape from the Academy."

With this in mind, we start by saying that American watches, being made by the most improved, complicated and ingenious machinery, can be easily repaired. This can almost be called child's work; yet there are still many watchmakers who do not take the time to do that little work properly. Examinations of depth of gearings, of thickness of wheels, of correctness in cut of teeth, etc., which is a very tiresome feature of all foreign watches, is all saved to the American watch repairer, for in all American watches all wheels of the same category are exactly alike in size, thickness, form of teeth, sharpness of cut, etc., their centers of rotation being planted with the same accuracy by improved machinery, so that wheels may be even interchanged from one movement into another. Therefore, instead of first calling attention to the gearing, it will be better to begin with the escapement, which many repairers do not thoroughly understand. In order to make the escapement matter well understood, we think accurate and simple drawings may be of more benefit than a great deal of talking, although they require great care and attention in their execution.

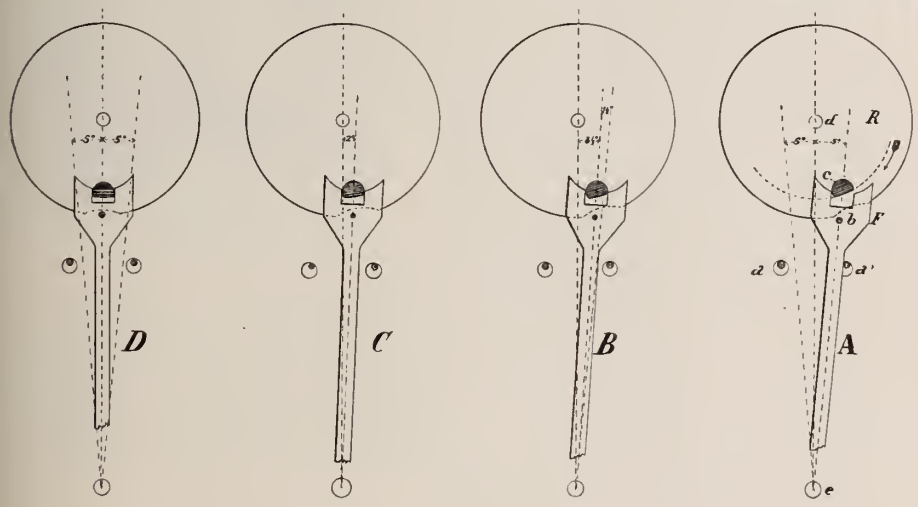

Fig. 1.

THE RUBY PIN.

Desiring to avoid too much complication every part of the escapement will be treated separately beginning with the action of the fork, roller and roller pin, generally called the ruby pin, which is shown by the enlarged illustration of Fig. 1. The diverse positions of the roller and fork shown in A, B, C, and D are those of a faultless working device. When the roller, which is attached to the balance and vibrates in unison with it, is coming from a direction, as indicated by the arrow in sketch A, following the dotted curve, the ruby pin, c, passes freely the right horn of the fork, F, and butts against the left side of the slot of the fork. The action of the roller against the fork lasts only during a small part of the lift of the fork, 1½ degrees, which is a little less than a seventh part of the whole. At that stage, which is illustrated at B, the fork has been unlocked and then a tooth of the escape wheel sliding down on the inclined plane of one of the pallets, as we know, form a solid part of the leverage of the fork, causes the latter in turn to impart an impulse to the ruby pin of the roller. This impulse lasts about seven times as long as the unlocking, by which the force, which is lost in the momentum of the balance to do the unlocking, is given back many times. This it is which causes the vibrations to become successively greater and greater after the watch has started to run until their length is checked by the thereby increased tension in the winding up of the hairspring. Suppose that this locking be greater (in some watches

we see 2 and even 2½ degrees of locking, or 1/5 to 1/4 of the entire lift), it can easily be deduced from such an arrangement that they are not favorable to produce great vibrations. Small vibrations or momentum of the balance make the unlocking more difficult, uncertain and irregular.

We see at B, after the unlocking period has taken place, *i. e.*, after the fork has been pushed out of its resting place by the ruby pin, this latter is being pushed in turn by the fork itself, and as we see it would need very little inaccuracy in the construction of the device, to make the side of the slot miss striking the side of the ruby pin, and instead of imparting an impulse to it slip underneath the pin. This could easily happen if, for instance, the ruby pin were too thin or its cementing had become loose; also, if it were not fastened perfectly straight (perpendicular) in the roller (which unfortunately is sometimes done by careless workmen), or if the fork were not long enough. This would cause either a stopping of the watch or make proper adjustment impossible.

Diagram C illustrates the ruby pin and fork when they are about half-way in the performance of their work. This position is mainly shown with the intention of illustrating the fact that the American ruby pin always acts in the slot of the fork over its entire diameter, *i. e.*, that it has not more play in the fork at one period of the lift than at another. It is necessary, in order to make the device work correctly that the ruby pin fits easily in the slot, that both sides of the slot be perfectly straight and parallel to each other, and that they be smooth and well polished. Incidentally we will say that no oil is ever given to either ruby pin or put in the slot of the fork.

Diagram D shows the position where ruby pin and fork have performed half of their work; it is also the position when the watch is unwound, *i. e.*, if the hairspring is placed correctly in beat upon the balance.

In A and D are shown by dotted lines the limits of motion of the fork, which in total is an angle of 10 degrees. The line of centers running through the axis of oscillation, *e*, of the fork and the axis of oscillation, *d*, of the roller should divide that angle in equal parts. The banking screws, *a*, *a*, serve to prevent the fork from going too far, and by means of these screws the locking can be regulated, because the banking pin, being placed eccentric in the screws, the angle of motion of the fork can be increased or lessened.

(To be continued.)

A New Clock for Altoona, Pa.

A NEW $750 clock has been installed in the tower of St. Mark's Church, Altoona, Pa., and the wiring for the illumination of the dials completed.

The clock was purchased by popular subscription among Eighth ward citizens, who will formally present it to the trustees of St. Mark's Church in the near future, when a banquet will signalize the event.

The project to purchase the clock was inaugurated just a year ago. The striking of the hour can be heard distinctly all over the eastern part of the city and will give the time to residents in that section.

Calculation for a Compensated Pendulum of Nickel-Steel.

(Translated for THE JEWELERS' CIRCULAR-WEEKLY from the French of DR. CH. ED. GUILLAUME in the *Journal Suisse d'Horlogerie.*)

(Continued from issue of March 4.)

WE will suppose, though not strictly exact in the present case, that the complete compensation has been realized by the choice of metals, and that we are no longer concerned with the very slight variation of each of the quantities a_1 and a_2, their ratio being supposed the same at every temperature.

If we neglect the mass of the pendulum rod, we take as an elementary condition of the compensation the constancy of the distance between the axis of suspension and the center of gravity of the cylinder. This condition is written thus: $\left(L + \frac{l}{2}\right) a_1 = \frac{l}{2} a_2$; whence we have

$$l = \frac{2 L a_1}{a_2 - a_1} \quad \ldots\ldots\ldots\ldots\ldots\ldots (2)$$

On introducing the numerical values of the true dilatations at 15 degrees, and supposing L = 100, which is very near reality, we find

$$l = \frac{200 \times 1.153}{18.185 - 1.153} = 13.54.$$

The elementary calculation indicates, therefore, that in the particular case we are considering, the cylinder, whose dilatation compensates that of the pendulum rod, ought to have a total length of 13.54 centimeters. But the action of this cylinder has been exaggerated in the elementary calculation, since we have not taken account of the mass of the rod. By introducing the latter into the calculation we will diminish the action of the cylinder, which must be longer to produce the compensating effect desired. Its exact length will be given by the calculation of the second approximation, which will be made by setting out from the near value of the dimensions of the cylinder. We will approach exactness by increasing for the data of this calculation, the value found for the height of the cylinder. To simplify the numerical calculation we admit provisionally a height of 14 cm., which will be corrected ultimately.

Let us now calculate the length of rod for which the pendulum will beat the second. For this, we must resolve with reference to the length L, the equation:

$$L = \pi \sqrt{\frac{\text{moment of inertia}}{\text{static moment}}} \quad \ldots\ldots\ldots (3)$$

Taking for units the centimeter and the second, and designating respectively by m and M the mass of the rod and that of the cylinder, we can write, allowing some corrective terms, and giving to the rod the length $L + \frac{1}{2}$ (see formula 1):

$$l = \pi \sqrt{\frac{\frac{1}{3}(L + \frac{1}{2})^2 m + L^2 M}{[\frac{1}{2}(L + \frac{1}{2}) m + L M] 981}} \quad \ldots\ldots\ldots (3^1)$$

The numerator and the denominator under the radical contain, respectively, the static moments and the moments of inertia of the compensated cylinder, for which we have seen that the corrective terms may be neglected, and of the rod, for which we have neglected only the very small corrective terms pertaining to the radius.

In the present case the mass of the rod was essentially equal to 500 grams, and that of the cylinder to 6 kilograms. We have seen that half the height of the cylinder is about 7 cm. Introducing the numerical values in the formula above, and causing the radicals to disappear, we will have, therefore, for determining L, the relation:

$$981 [\tfrac{1}{2}(L + 7) + 12 L] = \pi^2 [\tfrac{1}{3}(L + 7)^2 + 12 L^2]$$

which gives for L two values; one corresponding to the pendulum mounted in metronome; the other L = 100.63, which resolves the problem.

In taking account of the slight correction for the length of the cylinder mentioned above and neglected in the calculation, we will have in round numbers the value 100.5 cm. for the length of the rod from its suspension to the center of gravity of the cylinder.

Second Approximation.—We have now to rectify the calculation of the compensation by taking account of the approximative values which we have calculated. The true condition of the compensation is the following:

$$\frac{I}{S} = \frac{\text{moment of inertia}}{\text{static moment}} = \text{constant.}$$

For simplifying we will give $\frac{m}{M} = A$.

Our condition will become by introducing 981 in the constant quantity:

$$981 \times \frac{I}{S} = \frac{\frac{1}{3}\left(L + \frac{1}{2}\right)^2 + A L^2}{\frac{1}{3}\left(L + \frac{1}{2}\right) + A L} =$$

$$\text{constant} \ldots\ldots \ldots\ldots (4)$$

If we cause the dilatations to intervene for an interval of temperature Δt, the term relating to the movement of the center of gravity of the cylinder, must be written: $(L + \frac{1}{2})(1 + a_1 \Delta t) - \frac{1}{2}(1 + a_2 \Delta t)$.

Making the calculations and dividing the numerator and the denominator by Δt, the condition of compensation, neglecting the square of the variations, may be written:

$$981 \times \frac{\Delta l}{\Delta S} =$$

$$\frac{L(2L + l)^2 a_1 + 3 A L (2 L a_1 + l a_1 - l a_2)}{3 (2 L + l) a_1 + 2 A (2 L a_1 + L a_1 - L a_2)} \quad (5)$$

The condition $\frac{I}{S} = constant$ is equivalent to: $\frac{\Delta l}{\Delta S}$.

Introducing the numerical values in formula (4) we have:

$$981 \times \frac{I}{S} = \tfrac{2}{3} \times \frac{107.5^2 + 36 \times 100\ 5^2}{107.5 + 24 \times 100.5} =$$

$$99.27 \text{ cm.} \ldots\ldots\ldots\ldots (4^1)$$

The only quantity for modifying ΔI or ΔS is the length l of the cylinder. We can resolve the equation directly with reference to l; but it is simpler to write $l = 14 + \varepsilon$, and to consider ε as the only corrective term to determine. Making the calculations and neglecting the very small term containing the square of ε we find:

$$981 \times \frac{\Delta l}{\Delta S} = \frac{4}{3} \times \frac{29{,}057 - 61{,}128\varepsilon}{87.c - 407.61\varepsilon} = 99.27,$$

whence we have $\varepsilon = +0.73$.

(To be continued.)

The Manipulation of Steel in Watch-Work.

(By John J. Bowman, of the Ezra F. Bowman Technical School, Lancaster, Pa.)

(*Continued from issue of March* 11.)

THE bell-metal slip is used on the work in the same manner as the iron grinder, except that the lathe is run at the highest speed. For the first part of the operation use the compound rather wet, until the surface of the steel assumes a sort of dull polish. Then wipe the polisher on a clean rag or chamois and rub it over the very stiff compound until it has taken a thin coating. Now do the final polishing, watching the slip as you move it to see that the pivot makes a black track for its full length. After a bright polish appears clean the pivot with pith and give the work a few finishing strokes, running at highest possible speed.

Balance staffs or arbors are made either by turning a rough blank out of soft steel and finishing it after hardening and tempering it, or by hardening and tempering a

Fig. 15.

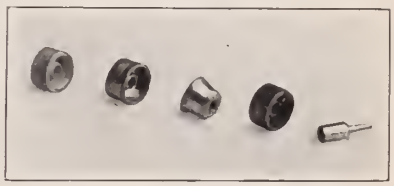
piece of wire and turning and finishing it complete in that condition. The latter method is preferable for making a single staff at a time; as steel at the temper used (bright blue) is not difficult to turn, very little time would be saved by making a soft steel blank, while much of the subsequent chucking or cementing required by the latter plan is obviated.

Take steel a little larger than the body of the proposed staff, and after hardening and tempering it turn a shoulder almost the size for the balance seat, using the balance itself as a gauge. Right here is where a tipover T rest will be appreciated. The advantages are obvious when measuring work. Allowing enough height above the top of the balance arm for staking, turn down the next shoulder, which will form the hub for the hair-spring collet. Next turn the pivot, with its offset or back-taper, as the case may be. Grind all the shoulders and polish the pivot, and the collet hub if the staff is for a fine watch. Try to pivot directly in the jewel in which it is to run.

The top of the staff being finished, roughly turn the shape of the lower part back of the balance shoulder; cut it off by turning carefully down to about where the lower pivot will be and then breaking off the staff. Before rechucking it file the lower end to bring it to the proper length, as found by calipering over the upper and lower hole jewels in their seats, the cap jewels having been removed. Now reverse and rechuck or cement the partly finished work, and true it by the portion which was turned conically to the breaking point.

Turn the seat for the roller-table, the taper for the body of the staff, and the lower pivot, and, after grinding and polishing, the staff is complete. The pivot ends should be slightly rounded off, with the face of the iron slip and polished with the bell metal, taking care that no minute burr is left at the corners.

We suggest the use of a "Grossmann" caliper gauge of the simple sextant pattern and a "Boley" sliding Vernier gauge, both reading millimeters and tenths. The "Grossmann" form is now also made with a Vernier attached, reading hundredths of a millimeter. There are many advantages in the metric system for watchwork, as the millimeter is a very convenient unit for such work, and the divisions are easily reckoned. The "Grossmann" gauge is principally used for diameters and the Boley for lengths. The manner of gauging the different dimensions in staff work is so generally known as to need no repetition here.



THE ROTARY PIVOT-POLISHER.

While nice work may be done in grinding and polishing turned work by hand, still the workmen who are skilful in this are few and far between, and even they cannot equal the work done by a mechanical pivot-polisher, when it comes to work such as a full polished square shoulder a short beveled surface, etc. Besides the production of much better work in the more difficult cases, the rotary polisher will do the less difficult class of work, such as staff bodies, etc., more expeditiously than it can be done by hand.

All rotary pivot-polishers (Fig. 15) consist essentially of a spindle revolving in two bearings and arranged to allow also a longitudinal motion. The bearings are mounted on a revolving circular base, graduated in degree, so that any angle may be set off and ground or polished on the work. The attachment is fastened to the lathe bed. On one end of the spindle is a knob arranged to be held in the fingers while the spindle revolves, by which the lengthwise motion may be imparted to the spindle. On the other end of the spindle is an outside taper which carries the grinding and polishing laps, and often also a small inside taper to hold male tapers mounted with small laps for special purposes. In addition to the rotary and lengthwise motions of the spindle, the bearings are mounted on the graduated base, so that there is a vibratory motion of the spindle, and, its carriage to and from the work being operated on, this motion being limited by one of two adjustable stop screws.

The laps (Fig. 16) are turned from iron or soft steel for grinding, and usually from bell metal for polishing. A belt from a large separate pulley on the countershaft rotates the spindle. When the work to be polished requires the spindle to be set at an angle the position of the pulley makes it necessary to use "idler pulleys," which are simply two separate loose pulleys side by side on a shaft above the polisher spindle, over which the belt from the countershaft pulley passes down to the spindle, allowing the latter to be set even at right angles to its normal or parallel position. The stand on which these idlers are mounted is adjustable for height and positions, and is mounted either on the attachment, on the bench (as in Fig. 15), or on the countershaft. The base of the polisher generally slides on to the shoe of the lathe and has a coarse adjustment to and from the work in this way, being clamped to the shoe by the hand-nut underneath the bed. The fine adjustment is then secured by the stop screws which limit the motion of the spindle carriage.

Grinding and polishing laps as they come from the manufacturer usually have the sides turned off flat (Fig. 16, *a*). Before using them they must be prepared to better hold the abrasive material than they would in the former condition. Take a solid steel chuck with a projecting point tapered similar to that on the end of the polisher spindle, and placing the lap on this friction-tight, turn out in the middle of the lap a recess equal to about one-third its width and one-half millimeter deep (Fig. 16 *b*). The surface now must be scored or corrugated finely with a file, and these marks should be in a direction nearly parallel or slanting to the length of the spindle.

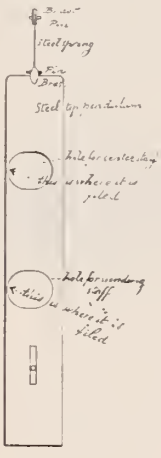
a *b* *c* *d* *e*

Fig. 16.

We have found an extremely quick and accurate manner of doing this to be as follows: Wear a chamois skin cap or "finger cot" on the forefinger of the left hand, and take the lap lightly between it and the thumb. Select a long pillar file, say, ½ inch in width and cut No. 4 or 5. Apply the tip of the file diagonally across the surface of the lap and advance it with moderate pressure, guiding by one of the "safe edges" against the chamois skin. The file, moving diagonally to the axis of the lap, will rotate the lap between the thumb and finger, and the result of its action will be a grinding or polishing surface superior in both truth and structure to any produced by following the surface around with a file and holding the lap stationary. In Fig. 17 we will illustrate this method. Use a file with the least possible curve for this work, since too great a curve would concave the surface. If one had much of this work to do it might pay to take time to make a revolving taper mounted on a handle, to use instead of holding the lap in the fingers.

Hold the file as nearly parallel to the axis of the work as will rotate it. In the case of the rounded edge of a lap for polishing conical pivots, minute burrs may be raised which should be lightly skimmed off with a very fine file while the lap revolves on the taper chuck in the lathe. After dressing the sides the end of the lap is to be faced off by cross-filing, so that the marks show in every direction.

(*To be continued.*)



Fred H. Corthell, foreman of the train department of the Elgin National Watch Co.'s factory, has resigned that position to devote his time to the oil and mining companies in which he is interested.

Workshop Notes and Queries.

[Answers are solicited from our readers to the questions published weekly on this page.]

QUESTION No. 407.—**Isochronism.**—*I notice that the article by the late H. H. Heinrich on the pendulum differs from your letter of advice dated Dec. 1, 1902. How can a regulator keep good time unless it is adjusted to isochronism?* C. E. C.

ANSWER:—Our answer was different because your question was also entirely different. You asked us, "Should not the pendulum of a high grade regulator be in perfect line with the pallet arbor and escape pinion? I found that in order to clear the center and winding staff, the maker had to file the hole in the pendulum to one side, as illustrated in my drawing. What

result will it have if it remains in this condition? The regulator runs very well since I repaired some few troubles which occurred in transportation. Please don't publish this nor the answer, but write to me personally." This we did. Your sketch, which we here reproduce, did not show that the suspension point of the pendulum did not correspond with the center of the pallet arbor. It not being necessary that it be in a perpendicular line with the escape pinion and, furthermore, the regulator keeping good time, as you said, we supposed that the only trouble in the pendulum was the filing out of its center line of two holes, as shown in the drawing. Since we have not the time to write long articles privately to each of our readers, we answered you briefly as follows: "The hole in the pendulum, as explained by your sketch, although it does not agree with ideal symmetrical work, will not interfere with the good timekeeping qualities of the regulator. You undoubtedly might have encountered some bent pendulum which, notwithstanding its peculiar curve, kept good time. The hole being hidden by the movement, our advice would be, not to worry about it, the principal object to you being that your regulator shall keep good time." We did not say that it is unnecessary to have the center of suspension of the pendulum in a straight line with the center line of the pallet arbor, but we answered you in regard to the holes in the pendulum, and as we said before, it does not matter if the pinion arbor of the escape wheel (not the pallet arbor) is not in the perpendicular center line of the suspension of the pendulum. When the holes are filed out of the center line of the pendulum they can cause no other trouble than to make the pendulum a little out of plumb in relation to the movement or the case of the clock, which, however, can be easily corrected by every watchmaker. From this you see that our answer is not in contradiction with any of the statements made by Mr. Heinrich.

QUESTION No. 408.—**Regulator Pins.**—*Kindly explain through your Workshop Notes how the regulator pins of a watch ought to be arranged. I have often found new watches with the regulator off to one side and have adjusted the regulating pins so that they would keep correct time with the regulator in the center. Is this method practical?* C. E. C.

ANSWER:—The regulating pins of a watch ought to be set close to each other, but they should not squeeze the hairspring so tight that the least move of the regulator would throw the hairspring out of center. They should be just distant enough from each other to allow the hairspring to pass between them. The hairspring must also be correctly centered, at least that part of the coil which can be described by the regulator. It is always advisable to convince one's self that this is the case—that is, that the hairspring coil comes naturally in the middle between the two pins and does not push more against one pin than the other. You say you have often found new watches with the regulator off to one side, and have adjusted the regulating pins so that they would keep correct time with the regulator in the center, and ask if this method is practical. Its practicability depends on circumstances. For instance, if the regulator points too fast and the regulating pins are a little open, you can certainly make an improvement by closing the pins and moving the regulator to the middle; if, on the contrary, the regulator points too slow and the regulator pins are close to each other, you would commit a great error in opening the pins in order to get the regulator in the middle. The only method to be followed in this case is to put a little more weight on the balance by placing a washer under two opposite screws, or by unscrewing the regulating screws a little, if the balance has any. The washers should be laid under screws nearest to the arms, because if placed under those near to the cut end of the rim, they would impair the compensating of the balance and cause the displacement of greater weight by changes of temperature.

QUESTION No. 409.—**Gut Cord.**—*The gut cord I have for clock lines is hard and stiff. Should it not be moistened with some good oil?* J. W. B.

ANSWER:—Rubbing it in with vaseline is a good way to keep its soft and pliable.

QUESTION No. 410.—**To Drill Glass.**—*I want a good kind of a drill to drill holes in spectacle lenses—a practical tool.* J. W. B.

ANSWER:—The simplest and most handy tool for that purpose is a graver sharpened to a long point. It is twisted between the fingers and the point moistened from time to time with turpentine. When the hole is finished half way, the drilling should be commenced from the other side. The starting should be done with care, as otherwise the graver is likely to slide out and scratch the lens. It is advisable to mark the point of drilling with a diamond and not to apply too great pressure when twisting the graver.

QUESTION No. 411.—**Shop Light.**—*How strong must the light in a shop be in order that the workman's eyesight will not be injured by a too weak light, and how can one measure the amount of light necessary? My eyes have been suffering and I think the cause of it may be the dim light of my shop.* D. Z. D.

ANSWER:—"Experience has shown," says the *Zeitschrift für Gewerbe Hygiene*, "that the amount of light suitable for an office, a workshop, a school, etc., should be greater than that which corresponds to a 50 normal candle light. With this fact in mind, Mr. Wing, an engineer of Bonn, has devised a simple method of measuring, which method can be easily applied everywhere. It consists in ascertaining the influence of light upon photographic paper which should change to a certain shade quickly or slowly, according to the strength of the light. For this purpose the paper prepared from chloride of silver is taken, and exposed for a certain time, say one hour, in the place where the light is to be tested. When this is done, the paper is compared with a sample specimen, the latter being a paper that had been exposed for the same time to a 50 normal candle light. In all places where the exposed trial paper appears a darker shade than the sample specimen the light can be considered favorable; in those places where the paper appears lighter, the light is unfavorable. After having fixed the trial papers in a hyposulphite bath, they can be placed in a covered case for future reference. It is thus that Mr. Wing has been able to ascertain the decrease in light due to the planting of trees, of new buildings and other obstructions erected before or near the windows at which work is to be done."

QUESTION No. 412.—**Enameling.**—*Will you kindly give me some idea of enameling with a blowpipe, fineness of the enamel, how applied, etc., through the columns of* THE CIRCULAR-WEEKLY? F. D. H.

ANSWER:—Answers to similar questions have been given in the issues of THE CIRCULAR-WEEKLY under No. 285, Nov. 5; No. 300, Nov. 26, and No. 323, Dec. 24, 1902. If you intend to study the art of enameling more thoroughly, the "Theory and Practice of Art-Enameling Upon Metals," by Henry Cunynghame, M.A., recently published, will undoubtedly be a great help to you. We can procure this book for you if you desire us to do so.

The Wadsworth Watch Case Co.'s new line of 14 karat gold with a 25 year guarantee is one of the Spring announcements that have kept the company busy to meet the demand. Both the eastern and western depots are doing, this year, a fine business, which is already in advance of all former years.

THE RAMBLER'S NOTES.

WHAT THE RAMBLER SAW AND HEARD AMONG THE DEALERS IN ART POTTERY, CUT GLASS, BRONZES, ETC.

NOVEL AND RICH GLASS WARE.

SAMPLES of a new Bohemian glass ware have just been received by Bawo & Dotter, 32 Barclay St., New York, and are now on display in that concern's show rooms. The ware possesses what is technically known as a marble finish, has a dull iridescent glow and is ornamented with gold deposit in floral and conventional designs. This gold decoration gives to the pieces a richness in appearance and artistic quality seldom seen in Bohemian glass products. Even without the gold deposit the glass would come well within the sphere of the retail jeweler, but with the gold incrustation it is a product especially adapted to a high class trade and should prove a valuable addition to any line of art goods. In addition to this line the concern also has a number of import samples of fine decorated glass on the order of the American Favrille products, made up with an unusually high iridescent finish in odd shapes and sizes. A good part of this ware has a mottled surface, and a number of pieces are made up in the shape of sea shells.

*

NEW ELECTROLIERS.

AS electricity is used more and more each year for illuminating purposes, manufacturers of art wares have tried to keep pace with its growth by making new electric lamps that would at once be useful and ornamental. The old style electrolier, with its primitive shapes, lack of decoration and inartistic properties, has been gradually superseded by electric lamps that show decided merit and originality. Each year witnesses something new in the evolution of these lamps, and the present season is no exception, as an inspection of the line of these goods carried by Ferd. Bing & Co.'s Successors, 10 Washington Pl., New York, will readily show. Besides being one of the largest varieties ever carried, the line shows more marked originality and excellent workmanship than any heretofore carried by the house. The articles are made in conventional and grotesque shapes in polished brass, copper, bronze and shell. The grotesque forms are noticeable in the pieces which are made up in the shape of huge frogs, which, sitting in a natural position, bear in their extended arms, which have been lengthened to an unusual extent, a dome-shaped globe of copper or bronze. The dome is studded with polished knobs of rough cut glass of different colors, mother-of-pearl shell, or panels of silk, while the bottom of the dome is edged with a deep silk fringe. The lamps are lighted by from one to three small electric bulbs and furnish a beautiful light for a library center table. Another variety consists of a coiled snake, the coils forming the base of the lamp; the long neck of the reptile extends upward in a broad curve, while in its mouth it holds a dome-shaped shade, similar to that held by the frog. This style of lamp is peculiarly striking and distinctly Oriental in effect. Other varieties consist of different animals, holding in grotesque and exaggerated positions the dome which contains the electric bulbs. French styles are also among the lamps, as when a dome is supported high in the air by four *art nouveau* standards of bronze or copper. All the lamps are especially adapted to the high class jewelry trade, and any one of them would make a good centerpiece for a window display.

*

CARVED CRYSTAL NOVELTIES.

BEAUTIFUL in design are the samples of hand-carved crystal ware shown by Schwartz Bros. & Co., 561 Broadway, New York. This ware is of heavy glass, in clear white and delicately tinted in green and in purple. It is exquisitely carved in floral designs of great beauty. The carvings are entirely unlike the conventional cut glass designs, being on the order of the *art nouveau*, single flowers and groups of flowers and leaves, carved in intaglio with perfect art. Single pieces include vases, rose and salad bowls, flower stands, cracker jars, liquor and champagne glasses, cordial sets, etc. Other important lines shown by this house are Kaiser Zinn, Goldschneider *art nouveau* statuettes, Vienna bronzes and *art nouveau* bisque ware. THE RAMBLER.

Navajos as Silversmiths.

IN speaking of the products of the Navajo Indians an Oregon paper says that next to rugs the silver industry stands conspicuous. But while the women in most cases do the weaving, the silversmith is always a man. All of his tools are of the most primitive sort, but under his skilled fingers rings, bracelets, belt buckles, buttons, trappings for bridles and saddles, and necklaces with silver pendants and fuschia-like flowers burst into really radiant bloom.

Many of the designs are artistic in the

extreme. Turquoise and silver is a favorite and happy combination, the beautiful blue of the gem showing most effectively against the rich, warm bronze of the skin. Much of the turquoise is found among the old mounds left by the prehistoric peoples, of which there are a great number on the reservation.

Nearly all of the smaller pieces of jewelry, the rings and buttons which they use for fastening coats and moccasins, are almost invariably made from dimes or quarters. Fifty-cent pieces and Mexican or United States dollars serve as the foundation for belt buckles, necklaces, and the larger pieces of silver ornamentation.

If these people can be tided over the Winter, then assisted by the government to provide a proper storage for conserving all the precious water that now goes to waste even in the most infrequent rains, it is safe to predict for them a prosperous future, independent, yet willingly subordinate to the white man's authority.

The Ruling Passion, Strong in Life.

"WE shall be changed in the twinkling of an eye," with more or less accuracy, quoted an old manufacturing jeweler to a CIRCULAR-WEEKLY reporter, "and it will be a change with a vengeance to some of us who have strong characteristics. Some of us are not much else than characteristics. But as Holy Writ says we shall be changed, it will seem odd to meet in the great hereafter those we knew here, but bereft of their earthly personality," and the reporter knew this was only preliminary to something else. So he sat down, metaphorically, at the feet of his elder, and listened.

"Many years ago, in Boston, lived the head of a jewelry house, the successors of which are there to-day and thriving. I shall call him Mr. Jay, because that wasn't his name. He was large, full habited, and dearly loved to get his feet under the mahogany.

"At lunch time he was accustomed to patronize an eating-house, so-called in those days—located on a side street—and famous for its mince pies. Mr. Jay had an abnormal craving for mince pie, and a normal lisp which transformed it into 'minth pie.' It was known that not infrequently he consumed the whole of one of his favorite 'minth pieth' at a lunch. His external conformation was such that a whole mince pie, or even two of them, would not materially disturb his contour, nor his accompanying ample digestive apparatus.

"Mr. Jay's house was successful. Mr. Jay was co-ordinately so, and desired to celebrate it by a journey to San Francisco, which, at that time, was by way of the Isthmus of Panama; it was a notable event, this trip to the growing city of the Pacific Coast. Boston, Providence, and the country-round-about, knew of it. Mr. J did not hide his light under a bushel.

"He went, he stayed, he returned. few days after the latter event, which w announced by the local periodicals of t day, a Providence manufacturer called congratulate him upon his safe return, a asked Mr. Jay: 'What impressed y most in San Francisco?' With a momer ary perplexity expressed by 'Oh, I dunn his eye brightened as he unctuously a nounced his most important discover 'Minth pieth thame ath is ith here; thic thenth a quarter."

Old Signs of Lombard St. Revived.

FAMOUS old Lombard St., in Londo named for the early "Lombard" ban ers who came from Northern Italy a Spain, was the only street during the rece coronation ceremonies which offered a tast ful and interesting appearance as a who The reason is worth noting. The bankii and insurance companies still occupying th narrow passage made a subscription a employed J. Starkie-Gardner, an artist bronze and iron, to decorate it. He revive some of the picturesque signs of the o banks and goldsmith shops of the past.

Each of them is racy of the locality, of a tistic merit, and possessed of its own i dividuality, says a correspondent in t London *Times*, who writes urging that th remain where they are, instead of being to down like the inartistic decorations in t other streets. Waxing eloquent, Mr. Geor Birdwood adds: "These signs are not vu gar and offensive, because ignorant and sel ish advertisements. They are the natura spontaneous, correlative, and concorda embellishments of a constricted, lofty-sha owed, public thoroughfare of inspiring ar fruitful name. They do not impede eith the perspective or the traffic of the stre

"On the contrary, they give to it th iridescent play of light and color much nee ed in a street which, while architectural dignified, is sombre, owing to its narro course lying at right angles to the daily pat of the sun." The eloquent thing to us is t example for use in the future, when Ma hattan must decorate herself for some pr cession or festival. The merchants on ce tain streets or certain blocks along an ave nue should meet together and engage a expert to decorate a given space of stre and housefronts on a plan. Only in this wa can satisfactory results be achieved.

Crystal glass is still much sought for i the decoration of the dinner table. In Pari there was recently shown an original an new Madeira set of cut crystal and silve representing a duck. The flask takes th form of that bird, whose body is of cu crystal, while head and neck are of chase silver. The finger glasses are also of cu crystal, finely engraved, and stand on a foo of chased silver representing a duck's leg.

35TH YEAR. NEW YORK AND CHICAGO, WEDNESDAY, MARCH 25, 1903. VOL. XLVI. No. 8.

THE GOLDSMITH'S ART IN SWORD MAKING.

A HANDSOME naval sword was presented Feb. 23 to Rear Admiral Henry Clay Taylor, of the United States Navy, at the Capitol building, Indianapolis, Ind. The ceremony was one of the most impressive ever held at the State House, and will form a delightful chapter in Indiana's State history. The presentation of the sword was to show the donors' appreciation of the bravery and glory brought upon the State by Rear Admiral Taylor, while commanding the battleship *Indiana* at the battle of Santiago.

The scabbard is made of handsome blued steel inlaid with dainty gold damascened ornamentation. The rings are carried from the etched scene representing the battle of Santiago, showing the battleship *Indiana* in line in pursuit of the Spanish warships. The steel scabbard is etched on the front with the inscription: "By an act of the General Assembly of the State of Indiana, this testimonial is presented to Henry Clay Taylor, U. S. Navy, in recognition of his services as Captain of the battleship *Indiana*, off Santiago, Cuba, July 3, 1898."

At the ceremony when the gift was turned over to Admiral Taylor the address of presentation was made by Winfield T. Durbin, Governor of the State of Indiana. An address was also made by Lieutenant-Governor Newton W. Gilbert. The sword was placed so that all present could see it as they passed. Telegrams of congratulation were received from President Roosevelt, Admiral Dewey and from the District of Columbia Society, Sons of the Revolution, and other prominent men and patriotic organizations of the country.

SWORD PRESENTED TO REAR ADMIRAL TAYLOR.

The sword is a beautiful piece of workmanship, and the contract to make it was secured by Julius C. Walk & Sons, 12 E. Washington St., Indianapolis. From a number of designs submitted to them, the jewelers selected one sent by the Gorham Mfg. Co. and the sword was ultimately made by that company.

In design it conforms to the regulation naval officer's sword, but added to this is a richness of ornamentation and originality of detail seldom seen even in presentation swords. The grip is of white, pebbly, shark skin, bound with gold wire. The top of the hilt has the regulation eagle surrounded by 13 stars and bound with laurel. The guard has the customary dolphin ending and bears on the outer side the seal of the State of Indiana and on the inner side the monogram of the Rear Admiral. All parts are enriched with oak and laurel decoration.

On one side of the blade is a beautifully regulation figure of eight knots, the upper mounting having the Admiral's monogram and the arms of the United States and is also ornamented with a trident, the symbol of Neptune, dolphin and laurel. The tip has the standard dolphin ending with an oak and laurel decoration, signifying strength and victory.

All the metal work throughout the sword, with the exception of the steel blade and steel scabbard, is of solid 14k. gold. There is also provided with the sword a handsome Rear Admiral's dress belt with regulation trimmings in 14k. gold. The sword and belt come in a handsome mahogany case, especially made for them, the case being fitted with gray chamois lining and bearing a 14k. gold plate for the inscription. The sword with all its trappings was displayed 24 hours in the window of Julius C. Walk & Sons, and during that time it was the center of attraction of an admiring throng.

Marble in Hungary.

CONSUL F. D. CHESTER writes from Budapest as follows:

"In answer to inquiries relative to the location of the marble described in my report of July 31 last, I have obtained the following information: Imre Ney, stonecutter, of VI, Városligeti fasor, 3, Budapest, owns property in the valley of the Bisztra River, in Transylvania, containing gray marble; but the largest yield would be gained from the hills in the district of Gyergyó-Szent-Miklós, in Osik County, Transylvania, where there is already one quarry (at Vasláb) of white marble, which is owned by the priest, the town clerk, and another person. The family of Andreas Saxlehner (exporter of Hunyadi water) tried quarrying at the town of Szárhegy, but in the wrong place, at the base of a hill on which stood a church, and had no success.

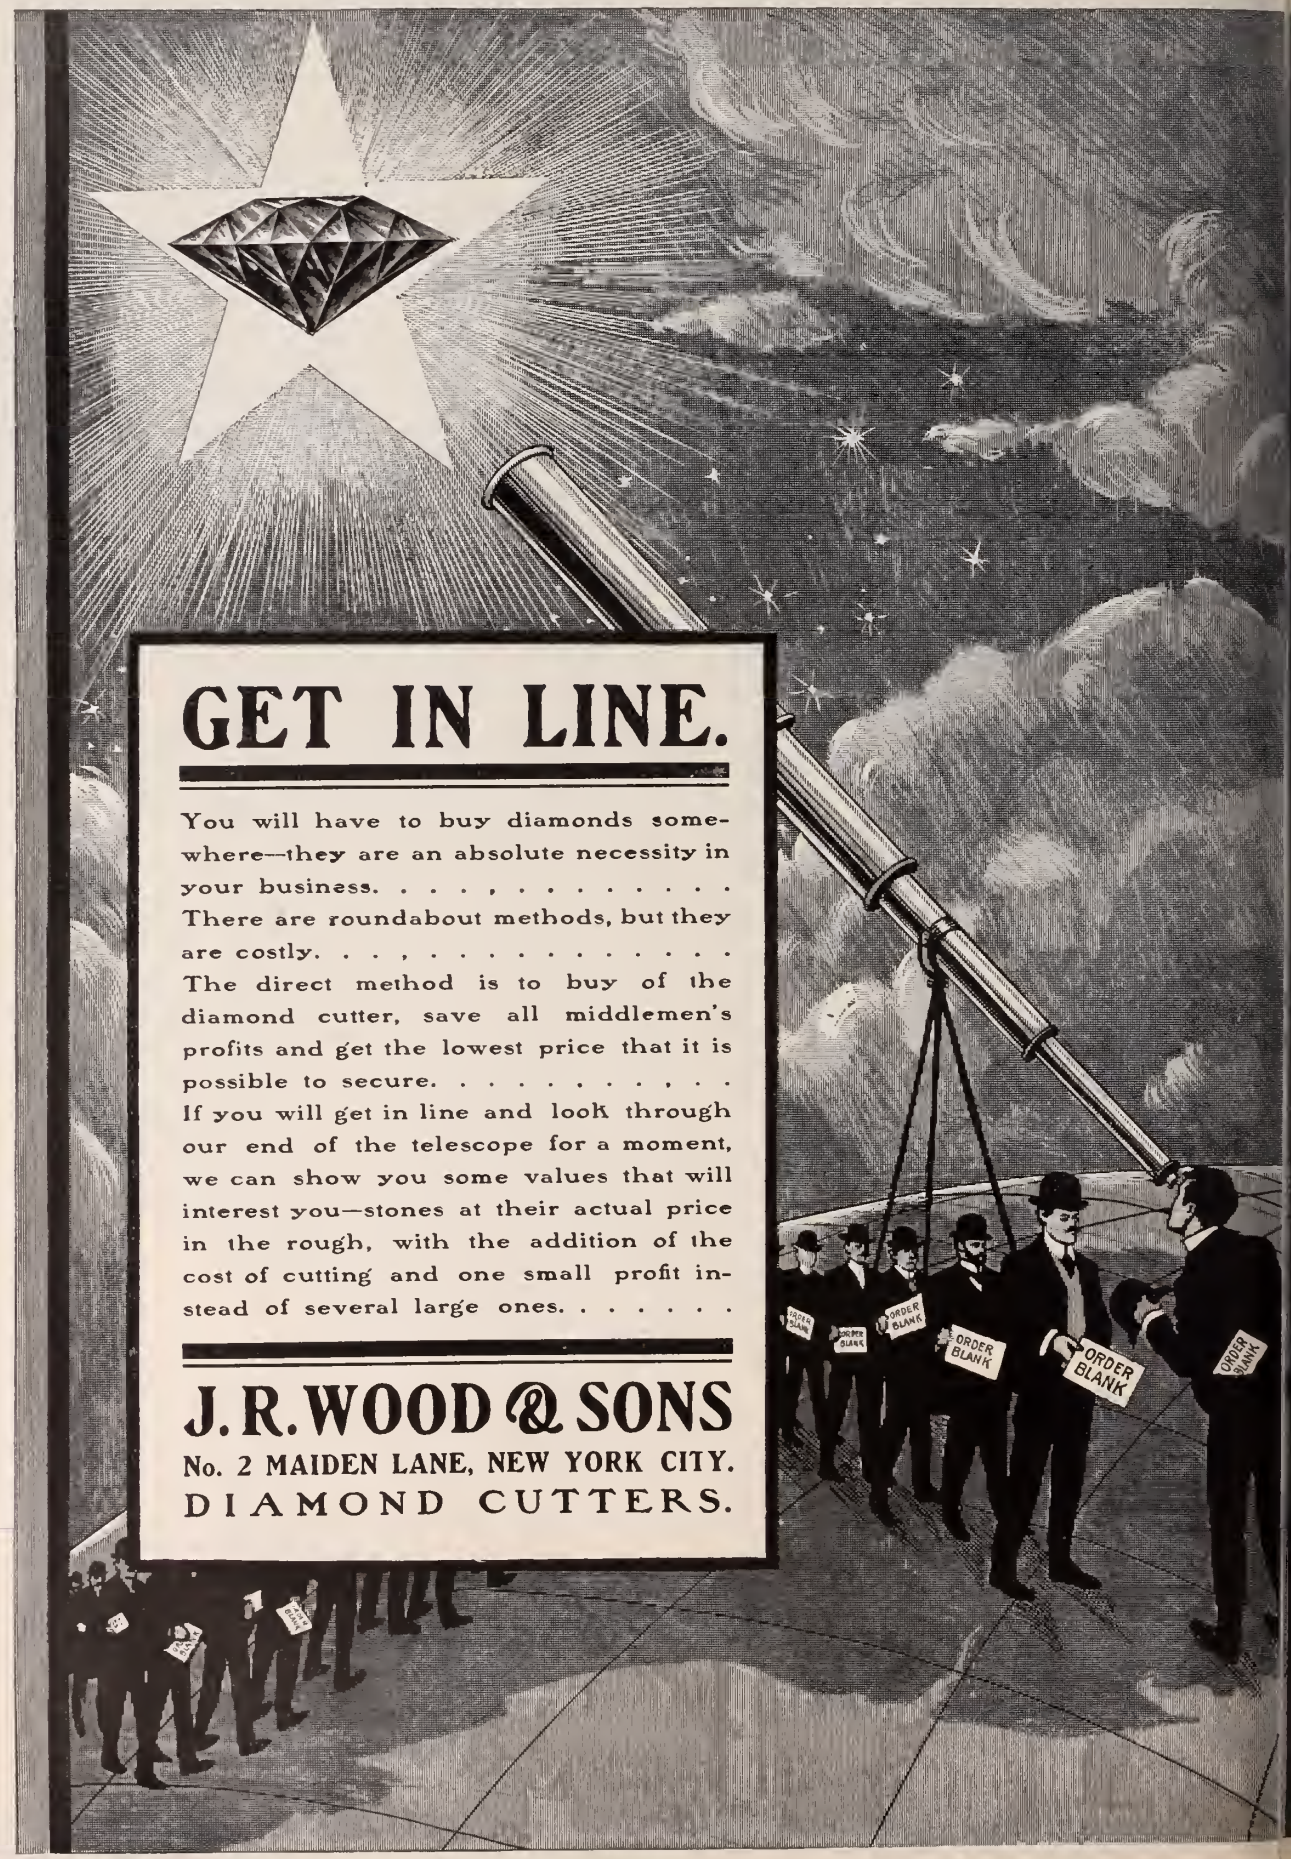
ALVIN DEPOSIT WARE

Bon Bon Dish, No. 1036.—Actual Size.

The exceptional beauty and finish of this Water Lily design Bon Bon Dish will ensure for it a ready sale wherever shown. It is sure to be one of our most popular dishes. t is finished in French Grey, with turned over edges, and is of good weight. For various reasons we do not publish our prices in our advertisements, but the price of this dish will interest all Jewelers. It is made for a winner.

Alvin Manufacturing Company,

54 MAIDEN LANE, 41 UNION SQUARE,



NEW YORK.

You Probably Know

That The Fahys Company were the patentees of the Screw Bezel and Back Watch Case. When the patent ran out "others followed," as they have done with all **Fahys** Cases, and tried to place on the market a "just as good," and the jeweler knows how signally they failed.

The virtue of a Screw Case is all in the manufacture, it must not only be dust proof, but the screw of the thread must be so accurately made that it never binds. No roughened surfaces, no imperfect thread. Here is the secret of the popularity of the **Fahys** screw bezel and back case—the ingenious cutting of the thread keeps the parts from binding.

Fahys Screw Cases are the most perfect of the kind ever manufactured. Their merits are told in a few words. There are over 1,000,000 **Fahys** Screw Bezel Gold Filled Cases in use to-day.

GET IN LINE.

You will have to buy diamonds somewhere—they are an absolute necessity in your business. . . . . There are roundabout methods, but they are costly. . . . . The direct method is to buy of the diamond cutter, save all middlemen's profits and get the lowest price that it is possible to secure. . . . . If you will get in line and look through our end of the telescope for a moment, we can show you some values that will interest you—stones at their actual price in the rough, with the addition of the cost of cutting and one small profit instead of several large ones. . . . . .

Don't Refuse A Job

of any kind.

If you cannot do it yourself, it can be done in our wonderful shops, as we do almost everything; but if we cannot do it, we will have it done for you. This applies to such occasional jobs as *Fan, Pipe, Amber* and *Mother of Pearl Repairing; Ivory* or *Tortoise-Shell Work; New Combs, Mirrors, Brushes, Whisk Brooms* to replace old ones in *Silver Mountings; Bronze Statuary Repairing* and *Refinishing; Scientific* and *Mathematical Instruments, Barometer* and *Compass Repairing*, or any other kind of odd work that is brought to a jeweler to be repaired.

Don't let a Customer go to a Competitor's Store.

The advantage of doing business with us is to have a firm in the city that will attend to everything that you cannot do at home.

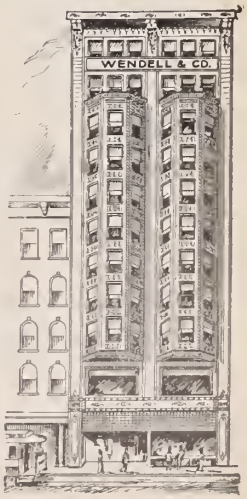
It is no bother—it is part of our business. We know the best place to send every job that is out of our regular lines of work, have messenger boys for that purpose, and the prices will be as low as if sent direct to the repairers or matchers of each particular kind of work.

We want our customers to feel that our shops are theirs, that we attend to their work, whether much or little, the same as if attended to by themselves, and that the oftener we hear from them, the better it pleases us.

Only those jewelers who deal with us regularly, and their name is legion, realize how convenient it is to have a house in the city to attend to all their special order work and repairing in a business-like manner.

Retail jewelers who send work to firms that attend to it as a matter of accommodation have no conception of the advantages of having an account with us.

Wendell & Company,



The only Firm in the Country that makes a separate and distinct business of doing all kinds of Special Order Work and Repairing for the Retail Jewelry Trade.

Two Wonderful Shops always at your service.

The Strength of a Chain

Foster's Strong Links.

LINK THE THIRD—THIRTY YEARS' EXPERIENCE.

The fact that we have been in business thirty years means two things to every buyer of chains and lockets.

First, no house stays in business thirty years unless its goods give satisfaction.

Second, thirty years' experience must necessarily enable the house that has it to do better work than a house which has not had so thorough a training.

In our thirty years of manufacturing chains we have learned to give the best quality for the money. The chains we make look better and present a better appearance than ordinary chains. Every single one is manufactured of seamless wire by us in our own plant, so that when we guarantee them we know exactly what we are saying.

F&B TRADE MARK REGISTERED

This mark means the best vest chains that can be bought for the money.

ELSIE BEE'S FASHIONS.

A LADY'S RAMBLES AMONG THE JEWELERS.

THOSE wide turned-down neck bands and cuffs that have hitherto been considered the prerogative of widows have recently been appropriated by the rest of the feminine world, which appreciates an alluring thing, and with them cuff pins come into play again. Bar pins are also noticeable and suit this style of neckwear excellently.

*

A large amethyst is set in the flat top of a very handsome umbrella handle.

*

Tiny little silver pots holding miniature cherry trees were among the recent notions of interest.

*

Royal copper has invaded the wrist bags, with fish scale and coat-of-mail designs as popular as ever.

*

Turquoise and pink tourmaline in alternation furnish a pretty color scheme in the decoration of gilt purse frames.

*

Boxes and bits of bric-a-brac in pyrography and stained work on wood are enriched with silver or copper trimmings.

*

Exquisitely graceful are some of the flower forms in pins and brooches, achieved by means of pearls set on very slender gold stems.

*

Sweet peas, roses or a cluster of flowers of several kinds, tied with a ribbon bow, represent a pretty brooch in enamel work, designed for the vernal season.

*

A man's seal representing a gay coaching party, and scarfpins with the heads of horses and dogs, done in enamel and enclosed in crystal, are ready for the coming season of sport.

*

College seals in rose gold or enameled finish, to be worn on the fob, furnish a fresh and taking ornament. They are also made with a pin attachment that permits them to serve as a lady's brooch.

*

From time to time some talk is heard of thumb rings, though they are rarely seen. One noted the other day on a lady's thumb was a slender circlet of small brilliants, edged on either side with a line of gold.

*

A pretty brooch that gives a good idea of some of the Spring fancies is a crescent moon of pearls, within which lies a spray of blue enamel forget-me-nots with pearl centers. A fleur-de-lis of enamel inside a golden crescent forms another taking brooch.

*

An exceedingly attractive line of novelties is noted in tankards, steins and mugs for college men. These are in silver, also in pottery of blue, yellow or other color, and each is decorated with the seal of some one of the various large colleges or universities, Yale, Cornell, Harvard and Columbia being among those noted. On the pottery, the seal is of applied silver and colored enamels.

ELSIE BEE.

"Something Different."

In all the arts and crafts it is the man who stamps his own individuality upon his work, and who imparts to his productions his own genius that is a true artist. The workman who is able to only imitate is a mechanic, not an artist.

The making of jewelry is an art-craft, and most susceptible of artistic expression There are many mechanics but few artists. The productions of the artists are what we seek. We select those pieces that possess a character and originality of their own, which are the qualities that make them salable. Take watch cases for instance, some have all the ear-marks of regularity, while others have an appearance of "something different" that will attract the eye of a prospective purchaser at once. This is especially true of the productions of the Dubois Watch Case Company. Our mounted diamond pieces are of high artistic merit. We believe in advertising the truth only, and therefore solicit selection orders that we may demonstrate that our stock is always as good as we say it is.

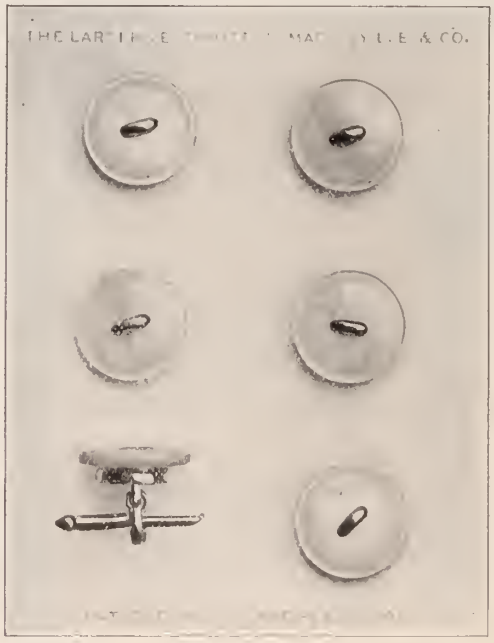
New York.

Headquarters for all that is best in



AMERICAN WATCHES,
DIAMONDS, Mounted and Unmounted.

During this

SPRING AND SUMMER

light vests will form one of the prominent features of men's apparel for both day and evening wear.

The ease of inserting and removing the Larter Vest Buttons, in any style of vest, overcomes one of the chief objections to wearing washable vests.

Therefore there will be an increased demand for Larter Vest Buttons. To meet this want we are now placing on the market some new patterns with mother-of-pearl fronts, so well constructed and so moderately priced that every Progressive Jeweler should carry them in stock. Made in 14K. gold only.

LARTER, ELCOX & CO,

21-23 Maiden Lane,
NEW YORK CITY.

Consul Swalm Reports on the Silver Trade of Uruguay.

Washington, D. C., March 18.—Some timely information is contained in a recent report of Consul Swalm, at Montevideo, Uruguay, on the subject of silver and plated ware in that country. Recent statistics place the average annual imports of ware of this description at about $10,000 annually, of which $4,000 worth comes from Germany and a like amount from France. The United States, Belgium and several other countries make up the balance. The customs classification, it may be said, does not include under this estimate all that is known in this country as silverware, but even adding several other classes, the sum total is not increased by over $4,000.

The stores handling these lines show rather large stocks of the most recent French and German designs, and covering all qualities up to sterling silver. Presents of all kinds, of this nature, as a rule, find a practical free entrance at the customs, which is even extended to elaborate trousseaus. They are not free by edict, but a generous administration of the law has been defined so as to admit from 12 to 20 packages, or trunks, being satisfied that they were really for the purpose named.

There is no manufacture of silverware in Uruguay, though replating is done by several houses and the most approved methods adopted. There are some very excellent exhibitions of American plated goods to be seen, and dealers are well pleased with them, but the taste of the public has been educated on foreign, chiefly French, lines, and so the goods are found slow on sale, for this reason solely, but stand at the head of the list for quality and good service. It has been fortunate that the imports from the United States have been from old and established houses, who did not make special goods as to quality for the South American market.

The duties are: On sterling silver, 39 per cent. on a valuation of 5 cents on the gram (28.4 grams to the ounce); plated ware, 39 per cent., on an ad valorem value, classified after this manner: Cruet stands, $100 per dozen; sugars, $48; table knives and forks, $6; table spoons, $24; teaspoons, $5; washstand sets, eight pieces, $69; tea and coffee sets, $70; soup tureens, $10 each, and so on for the whole list.

The packing of the American goods received in Montevideo has been safe and satisfactory. In fact, none come any better packed against rough usage and sea damage than those which have come from the United States. Some of the drawbacks to the extension of American trade in these lines may be summed up briefly to be: Foreign houses grant much longer time and make the delivery of the goods in port—in fact, try to comply with all business requirements, lack of banking facilities, such as are common with all European and competing countries; lack of speedy freight lines from the United States, though this is now in a measure relieved, but still a week behind on practically the same distance. Some foreign houses maintain quite complete stocks on hand there, either in stores or bond, and so can quickly meet any demand for the market, as during the holidays or national special occasions. This is a great advantage, for it catches the "instant buyers."

When we adopt in some measure the ways and means of our foreign competitors the excellence of our goods will largely give us the market. This applies not only to silver goods, but applies equally well to many other American lines.

Consul McFarland Reports on the Silver Trade of Nottingham.

WASHINGTON, D. C., March 18.—Consul McFarland, at Nottingham, is authority for the statement that silverware is probably more generally used in England than in any other country. In a recent report to the State Department he says that only solid ware is countenanced by the upper classes, but there is an enormous consumption of plated ware by the middle classes. Except for a small proportion of specialties, such as combination of glass and silver in flower stands for table decorations, and which are imported chiefly from Berlin and Geislingen-Sterge, Germany, all of the ware marketed there is of English make, Birmingham being the center of manufacture. It is not made in the Nottingham district, and but little plating is done there.

Consul McFarland has been unable to find a single piece of American ware on that market. No dealer whom he saw would confess that he had any prejudice against American ware. One of the largest dealers in Nottingham was extremely courteous in explaining the situation. "No American goods are even offered in this district to my knowledge," said he. "Some years ago we handled some samples manufactured by a Connecticut company, but they were not satisfactory for our market, and did not compare at all favorably with our English goods, but not having seen any American productions for several years, we cannot offer any present criticism. We do not think there would be any obstacle to extension of American trade in this district if English tastes were studied more." This last sentence emphasizes the greatest obstacle to a larger success which American manufacturers meet at every turn. The English market and English tastes are not studied. English silverware has an indefinable but distinct appearance of its own. Excessive ornamentation and fragile and delicate designs are in disfavor. While there has been a long run upon light silver articles, such as toilet requisites, the demand for plain and heavy goods, such as table plate, is general and constantly growing. The same can be said of plated ware in the same forms.

It is difficult to quote explanatory prices, but solid goods vary in price from 97 cents to $2.43 per ounce for more fancy or chased goods, and prices also vary somewhat according to the weight of article. In plated goods there are three general standards—"A," heavy; "B," medium; "C," light. These do not correspond exactly with American grades, our "triple" carrying about 10 per cent. more of silver than the English.

If patterns and prices can be made to compare favorably with English goods, there is no obstacle to the extension of American trade in this line.

Increase in Trade of the United States with the Philippine Islands.

WASHINGTON, D. C., March 20.—Our trade with the Philippines is steadily gaining as our intercourse gets closer and nearer to a commercial basis. The enforcement of the reduced tariff, which has been in effect since Nov. 15, 1901, has had much to do with increasing the imports, although it has somewhat lessened the revenues in some particular instances. During the fiscal year ending June 30, 1901, there was imported into Manila foreign merchandise to the value of about $28,500,000, upon which the duties collected amounted to about $6,867,000, the average ad valorem rate under the foreign tariff being slightly over 24 per cent. During the fiscal year of 1902 foreign goods were imported to the value of over $36,500,000, upon which the duties collected amounted to approximately $6,289,000, with an average ad valorem rate under the present tariff of something less than 18 per cent.

During the nine months ending Sept. 30, 1902, two watch and clock makers went to the Islands, one of whom was a Japanese. Ten jewelers went over, one of whom was an American, six were East Indians and one each was a Roumanian, Spaniard and Syrian. The imports of clocks during the month of September were valued at $3,259, as against $862 in 1901; the increased amounts being $1,394 from America, as against $704 in 1901; Germany reported $994, and nothing in 1901; China showed an increase from $2 to $337; Hong Kong, $2, and Japan, $153. For the nine months ending Sept. 30, 1902, the imports under this heading were reported to be $15,290, having increased from $11,178 in 1901.

The imports of watches and parts of same in September were $12,693, as against $7,765 in 1901, and for the nine months, $108,326, and in 1901 only $88,037. In each instance the United States is the largest contributor, with $6,920 and $62,391, respectively. The remaining exports for the month were: Germany, $186; France, $2,559; Spain, $66; Switzerland, $2,954; Hong Kong, $8.

The imports of jewelry during September were only valued at $8,658, as compared with $45,415. The decrease was in the receipts from France, the returns being $42,539 in September, 1901, and only $5,221 in 1902. For the nine months there has been a decline from $375,735 in 1901 to $104,820. France again showing the greatest decrease, from $327,802 to $78,064. The imports of plated ware show a very satisfactory result. For the month the receipts were reported as $2,931, as against $529 in 1901, the United States leading with a value of $1,563, Germany standing second, with $305. For the nine months the returns in 1900 showed $403; in 1901 they had increased to $7,933, and in 1902 to $52,131. The United States stands first, with a value of $14,551, France coming a close second, with $12,219, and Germany, third, with $9,575.

Tariff on Silver and Plated Ware Imported Into Spain.

WASHINGTON, D. C., March 13.—Consul R. M. Bartleman, of Valencia, Spain, reports that there is a large demand for silver and plated goods in that country, not only in crosses, chalices and other sacred vessels employed in church services and ornamentation, but also in plain and fancy tableware. Only one important factory of such goods exists in Spain—that of Don Emilio Meneses, at Madrid, founded in 1840, which supplies the greater part of the national wants.

The Spanish tariff on silver and plated ware is annexed. American silver and plated goods are superior in finish to those sold there and the Consul is of the opinion that United States Manufacturers, after allowing for freight and tariff, could compete in price with the Spanish product on these markets.

The consulate at Madrid, where the Meneses factory is established, could give manufacturers more ample details as to particular lines of plated ware, processes and cost of manufacture, demand, discounts allowed to wholesale dealers, etc.

Customs tariff for the Peninsula and Balearic Islands.

Tariff number.	Articles.	Duty. Maximum tariff. Pesetas.	Maximum tariff. Cents.†	Minimum tariff. Pesetas.	Minimum tariff. Cents.†	Mode of collection.
26	Silver in jewelry or plate, even set with pearls or precious stones,* per hectogram (3.5 ounces)	4.20	58.8	3.50	49	Net weight.
27	Gold, silver, or platinum worked into other objects,* per hectogram	3.20	44.8	2.60	36.4	"
	Copper and its alloys (white metals.)					
‡C. 82	The same metals and alloys, in gilt or silvered articles,§ per kilogram (2.2 pounds)	3.75	52.5	2.50	35	"

*In the classification of jewelry or ornaments will be included all small articles of luxury, valuable on account of workmanship and generally intended for the ornamentation of persons of both sexes. In clearing finished articles, including jewelry and articles of gold, silver, or platinum filled with mastic, a reasonable tare allowance shall be made for such mastic. Utensils for domestic use, articles for church use, and, generally, all larger objects used for the ornamentation of houses, are included in this number.

†Taking the market value of the peseta at 14 cents. It should be noted that the maximum rates of duty apply to United States goods.

‡Certificate of origin.

§To detect gilt articles, they will be rubbed with hot alcohol and afterwards touched with one drop of nitric acid. If they are varnished only, the varnish will disappear with the alcohol, and the acid will produce its effect; if they are gilt, neither the alcohol nor the acid will produce any effect. Silvered articles will be filed until the metal underneath the superficial coating appears; moreover, if a portion of the plated metal be dissolved in nitric acid, the silver, should any exist, will be precipitated by adding hydrochloric acid, and a chloride of silver soluble in ammonia, with all the characteristics of this substance, will be formed.

Features of the Arts and Crafts Exhbition to Be Held in Rochester.

ROCHESTER, N. Y., March 18.—By no means the least interesting part of the arts and crafts exhibition to be held in Rochester, April 15 to 25, will be the collection of enamel work, beaten and cast metal and jewelry that will be brought here especially for this exhibition. Among the artists and craftsmen well known throughout the country who are expected to send their work to this exhibition are: Isadore P. Taylor, of Chicago; Amalie Busck, of New York; R. R. Jarvie, of Chicago; Andrew K. Womrath, of New York; Mary S. Hetdock and Arthur J. Stone, of Chicago. There will also be fine specimens of metal work from the Birmingham School of Handicraft, and from the famous workshops of Lalique in Paris, who, with a number of other jewelers, will show beautiful hand-wrought work in that art.

Very interesting will be the exhibition of enamel work, because small indeed must be the art lover's collection of rare bits of handiwork that does not comprise at least one piece of enamel work, particularly in these days when that branch of art work is being brought to such perfection in this country. Almost equally fascinating will be the exhibition of beaten metal work, a branch of art which has a strong hold upon the affections of artists and art lovers.

A feature of widespread interest will be that of showing the application of fragments of ancient glass to jewelry. In effect this work suggests the transparent enamel that has been employed so successfully by Lalique and other famous jewelers.

An attractive novelty just placed on the market by Henry Freund & Bro., 9 Maiden Lane, New York, consists of birth flower pins. These pins, which are suitable for bib and cuff pins, have a different design for each month of the year, the months being represented by appropriate flowers. The pins are made in 10-k. gold with either rose or green gold finish. An assortment of the pins will be sent to responsible jewelers on request.

Amendment to Stamping Law.

Text of Additional Provisions to Sections Regulating Sale of Gold and Silver in Connecticut.

HARTFORD, Conn., March 18.—The full text of the amendment to the Gold and Silver Stamping Law of this State, which provides that manufacturers may protect their customers by filing a bond for their appearance to answer charges, reads:

AN ACT CONCERNING THE MANUFACTURE AND SALE OF GOLD AND SILVER ARTICLES.

Be it enacted by the Senate and House of Representatives in General Assembly convened:

Section 1.—Any manufacturer or dealer of articles constructed in part of gold or silver or any alloy or imitation thereof, upon payment of a fee of $10, may file in the office of the Secretary of State a bond executed by himself as principal, with sufficient surety, which bond shall be approved by the Secretary of State in the sum of $5,000, conditioned that said manufacturer or dealer shall not violate any of the provisions of Sections 1380, 1381, 1382 and 1383, of the General Statutes of this State.

Sec. 2.—If it shall appear to the Court before whom any person shall be prosecuted for the violation of any of the provisions of Sections 1380, 1381, 1382 and 1383, that the article or merchandise concerning which the charge is brought was not made or altered in any way by the defendant, and that it was acquired by him in good faith as an article of the standard purity described in said sections, and without knowledge or information on his part to the contrary, said prosecution shall be dismissed and the defendant discharged, provided the person from whom the defendant acquired the article is within the jurisdiction of the Court or has filed the bond provided for in Section 1, of this Act, and said bond was in full force and effect at the time of the sale by said defendant, and provided also said defendant shall furnish to said court an affidavit stating the name, residence and place of business of the person from whom said article was acquired by the defendant, and the date and circumstances of its acquisition.

Sec. 3. Upon satisfactory proof by affidavit to the Attorney-General of this State of a violation by any person giving bond as provided in Section 1, of this Act, of the terms of said bond, it shall be the duty of said Attorney-General to declare the bond forfeited and to forthwith proceed on behalf of the State of Connecticut to collect as damages the whole of the sum specified therein, from the parties thereto. If, however, at any time before the recovery of judgment upon such forfeiture the principal in the bond shall appear before any magistrate or court in this State having jurisdiction, so that a criminal prosecution for the violation of any of the provisions of said Sections 1380, 1381, 1382 and 1383, may be commenced against him, said proceedings for the forfeiture and collection of said bond shall be discontinued.

American Waltham Watch Co. Brings Suit on Watch Plate Patent.

The American Waltham Watch Co. has commenced an action in the United States Circuit Court at New York against Cross & Beguelin, importers and jobbers in watches and diamonds, to restrain them from selling watches containing an alleged infringement of a watch plate, patented by Duane H. Church Oct. 29, 1894, and transferred to the complainant company Dec. 12, 1895.

The patent, which is No. 527,772, is described in that record as follows: "The combination with a watch movement pillar plate, having a case shoulder and having a recess of less diameter than the diameter of the pillar plate below the case shoulder, said shoulder being above the bottom of the recess of a dial fitted to said recess."

The complaint states that the defendants have infringed by selling a watch plate which is contained in Omega watches, claims covered by the patent granted to Mr. Church. The complaint asks for the usual injunction, restraining the defendants from making or selling this particular style of watch plate, and asks that they may be decreed to account for and pay over to the American Waltham Watch Co. the gain and profits which they have made by reason of the alleged infringement, and also asks that they be compelled to reimburse the complainants for the damages which the American Waltham Watch Co. has sustained thereby.

Subpoenas have been issued, but no answer has yet been filed to the suit.

Abel Brown, now serving a 60 days' sentence in the county jail, Oshkosh, Wis., is said to be the same man who served nine years in the Joliet Penitentiary for looting a jewelry store in Bloomington of over $20,000 worth of watches and gems.

In the Probate Court of Steubenville, O., the administrator of Wm. H. Harter, of the Harter Jewelry and Loan Co., recently filed a report of the appraisement made by H. League, Edward Helms and W. Ruddick. The jewelry stock was appraised at $4,692.58.

Patent Suit Over the Twentieth Century Form of Diamond Cutting.

The answer to the amended complaint of David C. Townsend, of Neresheimer & Co., who on Oct. 3, 1902, brought suit in the United States Circuit Court, at New York, against Schenck & Van Haelen for infringement of his patent on the so-called "20th Century" cutting for diamonds, has been filed.

In the answer the defendants make a general denial of infringement, and sets up additional defences. On information and belief they deny that the complainant ever was the inventor of any improvement in diamonds set forth as described or claimed in his letter patent, and deny that any inventions, alleged to have been patented by Mr. Townsend, had not been made or used by others in this country before the issuance of his patent. They also deny that such alleged invention was not in public use or on sale in this country for more than two years prior to Mr. Townsend's application for the patent.

They claim that Mr. Townsend's patent and each of the claims thereof is void and of no force or effect, because the inventions or improvements claimed therein and purported to be covered thereby, were prior to any invention of the complainant and more than two years prior to his application for a patent therefor, patented and described and fully disclosed in certain patents and in the following printed publications: *L'Opinion*, a newspaper published in Antwerp, Belgium, about Sept. 10, 1885, and in *L'Escaut*, a newspaper published at Antwerp, Belgium, on or before Aug. 19, 1885.

The defendants also claim that the alleged infringements were in force and used prior to any invention by the complainant by the following persons: Peter Bender, New York; Philip Bissinger, New York; J. S. Paillard, New York; Ludwig Hirsch, New York; Henry Rudolph, New York; C. A. Wustlich, Cranford, N. J., and John Van Haelen, New York. The answer states that the defendants are also of the opinion that the complainant's description and discovery contains less than the whole truth.

The outcome of this suit is awaited with interest by the diamond trade, owing to the prominence attained by the new shape in diamond cutting. As told in THE CIRCULAR-WEEKLY, Oct. 8, 1902, Mr. Townsend obtained his patent in January, 1902, and has sued for an injunction restraining the defendants from cutting or selling diamonds which he claims infringe this patent. Testimony in the suit will be taken some time within a month, and the case will be presented to the Court as soon as this testimony is finished.

New Optical Bill.

Act To Regulate Practice of Optometry Introduced in New Jersey Legislature.

TRENTON, N. J., March 19.—An act to regulate the practice of optometry in this State was introduced in the House of Assembly of the New Jersey Legislature yesterday by Mr. Newcorn, of Plainfield, and it is now in the hands of the Committee on Public Health.

The measure is known as Assembly bill No. 357 and its provisions are as follows:

AN ACT TO REGULATE THE PRACTICE OF OPTOMETRY IN THE STATE OF NEW JERSEY.

Be it enacted by the Senate and General Assembly of the State of New Jersey:

It shall be the duty of the Governor of the State of New Jersey, on or before the first Tuesday in May of each year, to appoint four persons versed in optometry who shall compose the State Board of Examiners in Optometry.

It shall be the duty of the Board of Examiners to examine all persons who engage in the practice of optometry in the State of New Jersey, and to keep record of all such qualified persons.

Certificates shall be issued by said Board of Examiners to such duly qualified persons who shall pass the examination and who shall pay a fee of $5 before taking the examination and a fee of $5 upon the issuance of a certificate.

The said Board of Examiners shall confine its examinations to such knowledge as is essential to the practice of optometry.

Every person before beginning to practice optometry in this State, after the passage of this act, shall pass an examination before the Board of Examiners.

Every person who is engaged in the practice of optometry at the time of the passage of this act shall, within 90 days thereafter, file an affidavit in proof thereof with the county clerk of the county in which he or she practices optometry, who shall make and keep record of such person, and shall, in the consideration of the sum of $5, issue to him or her a certificate of registration.

All persons entitled to a certificate of registration under the full provisions of Sec. 6 shall be exempt from the provisions of Secs. 1 to 5, inclusive, of this act.

Any person entitled to a certificate as provided for in Sec. 6 of this act who shall not, within 90 days after the passage thereof, make written application to the county clerk in which he or she practices optometry for a certificate of registration, accompanied by a written statement, signed by him or her and duly verified before an officer authorized to administer oaths within this State, fully setting forth the grounds upon which he or she claims such certificate, shall be deemed to have waived his or her rights to a certificate under the provisions of said section.

Every person to whom a certificate of examination or registration is granted shall display the same in a conspicuous part of his or her office wherein the practice of optometry is conducted.

Every person authorized to practice optometry in this State shall, on receipt of his or her certificate, and before beginning to practice, register at the county clerk's office of the county wherein he or she intends to practice, in a book to be kept for that purpose, his or her name, office and post office address.

The clerk of the county shall, upon the payment to him of $1, make registry of any person provided for in Secs. 3 and 6 of this act.

All fees not otherwise provided for in this act shall be paid to the Board of Examiners, who shall pay out of the same all proper expenses incurred under the provisions of this act.

It shall be unlawful for any person, on or after the 1st day of August, 1897, to practice optometry in this State unless he or she shall have been granted a certificate as provided in Secs. 3 or 6.

Nothing in the preceding sections of this act shall be construed to be applied to persons who sell spectacles or eyeglasses without making pretensions to scientific knowledge or skill in adapting them to the eye.

All physicians who are duly authorized by law to practice their profession in this State shall be exempt from all of the provisions of this act.

All violations of the provisions of this act shall be deemed misdemeanors, and shall be punished as such.

The practice of optometry is defined as follows: the employment of subjective and objective mechanical means to determine the accommodative and refractive states of the eye and the scope of its functions in general, or the act of adapting glasses to the eye by using such skilled means as will determine their choice.

This act shall take effect immediately.

Death of Ezekiel Wade.

ELIZABETH, N. J., March 18.—Ezekiel Wade, who for many years was a jeweler at 128 Broad St., died suddenly at his home last week while conversing with a member of his household. Death was caused primarily by heart disease, which, in turn, was due to the fact that Mr. Wade was struck by lightning about two years ago while on a fishing expedition. The shock so affected his heart that he never fully recovered from it.

Mr. Wade was born in Newark nearly 79 years ago, and had lived in this city for more than half a century. He was of an ingenious turn of mind, and had designed many rare things in jewelry and woodwork. He retired from business about two years ago.

Mr. Wade is survived by a widow and one daughter. The funeral services were conducted by the Rev. John E. Stuchell from his late home.

Archibald Gill was taken into custody recently on a charge of threatening the life of D. E. Danks, a jeweler of Rochester, N. Y.

Meeting of the Utica Optical Club.

UTICA, N. Y., March 18.—The Utica Optical Club held its regular bi-monthly meeting in the Y. M. C. A. building, last evening, Vice-President Payne presiding. Among those present were: R. Perlen, G. W. Payne, B. T. Clark, C. A. Enquest, N. A Burrill, A. M. Kenney and C. T. Evans.

The usual reports were read by the secretary and treasurer, after which B. T. Clark read an interesting paper on "Retinoscopy," and C. T. Evans followed with one on "The Advisability of Correcting Astigmatism in Presbyopic Cases." Both papers aroused considerable discussion.

A. M. Kenney and G. W. Payne were appointed to make arrangements for the May meeting, at which time the members expect to have an out-of-town speaker. The society is trying the plan of having two members read papers at each meeting, taking them in alphabetical order. In this way there are fewer declinations to write papers.

The society extends a hearty invitation to all opticians in the vicinity to attend the regular meetings, which will be held on the third Wednesday of each alternating month.

Diamonds Exported From South Africa During 1902 and 1901.

WASHINGTON, D. C., March 19.—The following returns, prepared by the Controller of Customs at Cape Town, which have just been received here, show the quantity and value of diamonds exported from Cape Colony during the year ended Dec. 31, 1902, as compared with the preceding year:

	Quantity.		*Value.*	
	1901.	1902.	1901.	1902.
United Kingdom	2,525,212 carats.	2,634,207 carats.	£4,877,042	£5,380,390

Diamonds Sent by Mail.

Shipments Held Up by Customs Authorities Owing to a Mistake by Shippers Who Failed to Forward by Parcels Post.

Diamond importers in New York are experiencing some difficulty from the steamship and postal authorities in obtaining diamonds from Europe. The trouble began late in the Fall, when the steamship companies raised the freight on diamonds, and has continued to the present time, with more or less misunderstandings with the postal authorities.

The climax in the difficulties experienced by importers was reached last week, when through an error on the part of Antwerp shippers large lots of goods were sent to New York by International mail, and on their arrival at their destination were seized by the United States Customs authorities. Nearly $1,000,000 worth of stones thus seized are now in safety deposit vaults, while Collector Stranahan of the port of New York is awaiting an order from Washington relative to their disposal. As the shipping of the goods by International mail instead of by parcels post was a technical error, and was done through ignorance, and as the Collector is assured of the good faith and honesty of the importers, these goods will undoubtedly be released this week.

Meanwhile it is estimated that there are nearly $500,000 worth of diamonds now on the water, that have been shipped by International mail. On the arrival of these stones they will be subjected to the same procedure as those already in the deposit vaults. The tying up, therefore, of $1,500,000 worth of diamonds, nearly a whole month's importation, may cause some inconvenience to the trade, but the effect will be temporary, as the stones are sure to be released some time within the week.

The complications in the situation at the present time date from the day that the so-called steamship combination notified the importers that under the new freight regulations, provided by the officials of the combination, all goods must pay freight according to the valuation of the goods marked on the consular invoice.

Before this time the same rate of freight was demanded by the various steamship companies, but the manner of assessment was entirely different from that already mentioned. Instead of assessing the goods at the valuation marked on the consular invoice, they were assessed at the valuation the importer placed on his goods.

The rate of freight charged by the steamship companies is one-quarter of 1 per cent. on lots valued at more than $5,000 and three-eighths of 1 per cent. on packages of less than $5,000 value. At this rate, a $100,000 shipment would be assessed for freight charges at $250, or nearly 10 times as large as the importers sometimes paid for the same lot of goods before the so-called steamship combination was organized.

As soon as this new condition of affairs became known to the importers they appealed to the steamship authorities to allow freight to be as it had always been, citing the fact that a $100,000 package of diamonds is barely larger than a box of cigars, and that freight charges of $250 on this small package, which could be easily depos-

Words.

Words are the slaves alike of the wise and the foolish, the weak and the strong, the true and the false. Fortunately, words are good when backed by deeds, and only so.

Deeds are not such servile subjects, and when the trade learns to know whose words are constantly allied with deeds, they know where and when to place confidence in words. It is not the "Just as Good" that you want, but honest, reliable and dependable goods. The Sternau make of CHAFING DISHES and METAL WARES in general are made by men who not only have the broadest experience of every good thing that has been done in the past, but they have the knowledge, the skill, and the initiative necessary to progress and improvement. Furthermore, the Sternau Chafing Dishes are made of solid copper and all bear this trade-mark

PHILADELPHIA WATCH CASE CO.
RIVERSIDE, N. J.

ited in the purser's safe, was exorbitant. The importers declared that such an increase would quite materially injure their business. To all their protests, explanations and requests, however, the steamship officials lent a deaf ear.

To meet the difficulty Stern Bros. & Co., Joseph Frankel's Sons, L. & M. Kahn & Co. and a number of other prominent diamond importers of New York held a meeting for the purpose of determining what should be done in such an emergency, and the question came up as to whether there was not some method of shipping diamonds through the mails. With this object in view the importers engaged the services of W. Wickham Smith, an attorney, to look up the postal laws between the United States and various European countries, and report as to the advisability or possibility of shipping diamonds from the other side through this channel. After a careful investigation and a conference with the Postmaster General at Washington, Mr. Smith reported that, according to the treaty between the United States and Germany, which went into effect Oct. 1, 1899, and subsequently became known as the "Parcels Post Treaty," the importers could legally receive goods from Germany by parcels post.

Acting on this advice, a number of New York importers immediately cabled their Amsterdam and Antwerp brokers to send all future shipments through by parcels post from Germany. These brokers misinterpreted the instructions, thinking that it meant any mail, and accordingly shipped through the International mail. It was this misunderstanding on the part of the Antwerp merchants that has caused the congestion of diamonds in the New York Custom House.

Collector Stranahan stated to a CIRCULAR-WEEKLY reporter Saturday that if diamonds, with the exception of those already on the water, continued to come by International mail they would be seized by the Government and be subjected to the regular procedure through the courts, the leniency of the Secretary of the Treasury in the present case being allowed only because a mistake, and not a wilful violation of the law, had been made by the foreign shippers. It was also stated at the Custom House that goods shipped by parcels post and sealed, such as would be necessary in the case of diamonds, would in a measure violate the provisions of the Parcels Post Treaty. That treaty declares that goods shipped by parcels post must be in such a condition that they can be readily examined by the postal authorities.

Regarding this latter point, Mr. Smith was interviewed Saturday. "I can state emphatically," said Mr. Smith, "that diamonds can come sealed by parcels post. I have assurance from the proper authorities to this effect. In fact, I have a letter from the Postmaster General which settles that very point in our favor."

Albert Bornefeld, Saratoga Springs, N. Y., who has been away from home for two months on a pleasure trip, was recently heard from at Palm Beach, Fla.

Death of W. S. Cole.

BEATRICE, Neb., March 18.—W. S. Cole, who was for many years prominent as a jeweler in this section, died at the home of his parents, Mr. and Mrs. G. L. Cole, in this city, Monday. His death came after an illness of several years, and Mr. Cole had just returned from a trip to the southwest, which he had taken in the hope of restoring his health.

The deceased was in the jewelry business at Cortland, Neb., and Beatrice for about 15 years and failed in 1890. He was 38 years old and was well known and liked in this community. In 1889 he was married to Miss Jessie Bailey, of Sterling, who survives him.

The funeral was held from the family home at 2.30 this afternoon and was under the auspices of the Elks, with a Masonic escort. Interment was in Evergreen Home Cemetery.

The Career of Frank L. Harwood.

WARREN, Mass., March 19.—The recent death of Frank L. Harwood from pneumonia removed one of the best known jewelers in this section.

Mr. Harwood was 55 years old, having been born in this town in November, 1847. He was the son of Lucian Harwood, who conducted a jewelry business in Laconia, N. H., Marlboro, Yarmouth and Warren for many years. Frank L. Harwood learned the jewelry business with his father, and in 1869 was admitted as a partner, the firm being changed to Lucian Harwood & Son. He remained in business with his father until the latter's death, Aug. 18, 1883, after which time he continued the business alone under the old style.

The deceased was prominent in politics, was a member of the Republican Town Committee and of the Board of Assessors of Warren. He was also a member of Arcturus Lodge, I. O. O. F., and of the Library Association.

Mr. Harwood is survived by a widow, three sons and a daughter.

Boone, Ia., Jewelry Store Robbed of Watches and Rings.

BOONE, Ia., March 19.—Some time last night a robber entered J. L. Simpson's "watch hospital" on 8th St. and stole watches and rings valued at $150. The man suspected of being the burglar was a stranger, who visited this place and yesterday afternoon purchased a chisel at a hardware store.

Among the articles which the robber took away with him were two solid gold watches, seven cheap watches, five watches in filled cases and about a dozen cheap rings and small articles. The chisel with which he opened the window was left on the sash.

E. D. Thomas, Charlotte, N. C., has moved into the store formerly occupied by W. L. Pope, 233 West Trade St.

Thief's Confession Results in Arrest Boston Jeweler.

BOSTON, Mass., March 21.—The arrest Edgar Bell, formerly a butler in the e ploy of Mrs. Clara G. Barclay, 32 W. 6 St., New York, by Inspectors Abbott a Chapman, of this city, on March 15, the d tails of which did not reach the public un last week, and his subsequent confession having stolen jewelry to the value of abo $2,500 from his former employer, plac Henry I. Bornstein, 26 Tremont Row, jeweler, in what would seem to be an u enviable position.

When Bell was arrested at the Po Office, where he had called to obtain a le ter sent out by the inspectors as a decoy, l broke down completely and told his ca tors that he had disposed of the stole goods to Bornstein for $400. He furth stated that he had told Bornstein that t jewelry was stolen, and the latter had pu chased a ticket for Bell's passage to Live pool, to be used March 15.

Mr. Bornstein was later taken into cu tody and denied all of Bell's statement claiming that Bell had told him that t goods were imported from Amsterdam. T detectives claimed that by a clever rus on their part he afterwards confessed hav ing known all about the source from whic the goods had been procured at the tim the deal with Bell was transacted.

The affair has created more or less tal among the members of the trade, as Bor stein was quite well known in certain quar ters. His rise in business has been quit rapid. He plied his trade in a nomadi manner for some time before he opened hi store on Tremont Row.

Failure of the Firm of R. W. Woodley & Co., Norfolk, Va.

NORFOLK, Va., March 19.—R. W. Wood ley & Co., of this city, made an assignmen to-day. Their liabilities are $16,000 and as sets $7,000.

Lieut.-Com. Clinton K. Curtis, of th United States Navy, who was a silent part ner in the concern, has purchased all th interest of Mr. Woodley. W. B. Barton i named as trustee.

Just before the assignment papers wer filed several out of town creditors, with claims of about $2,000, filed papers in th United States Court asking that the firm be adjudged bankrupt. Several Baltimore jew elers are said to be among the creditors.

It is stated that Mr. Woodley lost some $12,000, and was trying to reorganize the concern when the bankruptcy proceedings came on.

Death of Horace M. Loughead.

MARINETTE, Wis., March 18.—Horace M. Loughead, who was for many years prominent as a jeweler in this place, was buried Monday from his late home on Pierce Ave.

Mr. Loughead had been a resident of Marinette for over 30 years, and had been in the jewelry business here about 20 years.

The deceased was about 55 years old, and is survived by a widow and six children.

F. C. Maynard, Saratoga Springs, N. Y., has moved his stock from his temporary quarters into the old store, which has been thoroughly renovated and remodelled.

Dinner to the Directors of the Jewelers Association and Board of Trade and the Jewelers' Protective Union.

An informal dinner was given Thursday evening in the rooms of the Underwriters' Club, cor. William and Liberty Sts., New York, to the directors and officers of the Jewelers Association and Board of Trade of New York, and the Jewelers' Protective Union by Hiram A. Bliss and O. G. Fessenden, the presidents of those organizations.

There were 20 persons present and the dinner will pass into the memory of those who participated as one of the most delightfully pleasant affairs of the season. There was no speechmaking, no presiding, nor any formalities whatever. The dinner was given by Messrs. Bliss and Fessenden for the purpose of promoting and cementing good feeling of fellowship. The menu was served at 7 o'clock and cigars were lit about an hour later. Conversation and jokes continued until the dinner broke up, at a little after 10 o'clock.

Among those present were: Ira Goddard, D. L. Safford, Leopold Stern, Leo Wormser, C. G. Alford, A. K. Sloan, William T. Gough, Alfred Krower, F. H. Larter, Samuel H. Levy, August Oppenheim, George W. Street, Seth E. Thomas, Albert H. Gleason, George S. Hastings, W. I. Rosenfeld, J. C. Aikin, O. G. Fessenden, Hiram A. Bliss and Lemuel Skidmore.

Edward Lehman, Denver, Col., Brings Suit Against His Former Partner.

DENVER, Col., March 18.—Edward Lehman, formerly of Lehman & Hamilton, has brought suit in the District Court against William W. Hamilton, his former partner, to secure an accounting and settlement of the company's business.

Mr. Lehman avers in his complaint that the company was dissolved April 1, 1902; that he and Hamilton entered into an agreement by which the company's business was to be wound up, each to attend to collections of accounts; that about $4,000 was collected and deposited as a special fund in a bank.

In the meantime the plaintiff avers that Hamilton appropriated to his own use about $5,000 of the company's assets, fo which he refuses to make proper account ing. The court is asked to appoint a ref eree to take testimony in the case and, i necessary, to appoint a receiver to straighte out the difficulty between the two men. Mr Hamilton has not yet made answer to th suit.

Albert T. Sylvester Files Voluntary Petition in Bankruptcy.

BOSTON, Mass., March 18.—Austin T Sylvester, for many years a well-know jeweler of this city, filed a voluntary petition in bankruptcy yesterday and the sched ules filed in the United States Distric Court with this petition show liabilities o $2,627,17 and no assets.

Mr. Sylvester has long been in the jewelry business here and was at one time a member of the firm of H. T. Spear & Son He succeeded to the business of that concern and continued until 1897, when he made an assignment. Mr. Sylvester is at present employed by his daughter, Emma A. Sylvester, a manufacturer of bead chatelains and purses at 3 Winter St.

It is understood that Mr. Sylvester filed the bankruptcy petition in order to dispose of certain matters which were left unsettled at the time of his assignment.

Old Suit Over Garnet Mine Decided by Appellate Court.

SARATOGA SPRINGS, N. Y., March 18.—A decision has at last been handed down in the celebrated garnet mine case, which has been in the courts of this State for many years, by the Appellate Division of the Supreme Court, which, last week, affirmed the decision of the lower court.

This suit, which has been often spoken of in THE CIRCULAR-WEEKLY, was brought by William Moore against T. J. Eldridge and involved the rights to and boundaries of certain garnet mines in New York. When the case came up to trial the last time the action was decided in favor of Mr. Eldridge, whereupon the plaintiff took an appeal, and the decision has now been affirmed.

From cover to cover The Simmons Prospectus for 1903 is well worth reading.

IT tells of our co-operative advertising plans for the present twelve months—a campaign that is clear cut, and is solidly good.

It will show you that the things we have planned to do, we have planned to do for you individually.

It will satisfy you that we can do much to help you advertise your store and Simmons Chains in a way that will show results in your sales book.

But take the Simmons Prospectus home with you some evening and study it a bit. You will see the point then—understand why it would pay you handsomely to carry more Simmons Chains and push them.

If it happened that the copy of the Prospectus we sent you failed to arrive, let us know; we will forward another in the next mail.

R. F. Simmons Company,

Makers of Simmons Chains,

Attleboro, Mass.

Providence.

A new concern has started manufacturing stickpins and other novelties at 19 Calender St. under the firm style of the Hope Mfg. Co.

It has been announced that the business of the late William Kerr, 543 Westminster St., will be carried on and the same corps of workmen will be retained.

A quarterly dividend of 1½ per cent. has been declared upon the preferred and common stock of the Gorham Mfg. Co., payable April 1, to stockholders of record.

Charles Wrightlinger, employed in one of the local jewelry establishments, was painfully injured one day last week by having one of his fingers bruised while manipulating a foot press.

The Gorham Mfg. Co. intends to build very shortly an addition to its present factory, which will relieve conditions in some of the shops and be a needed improvement to the present extensive plant of the company. The new building will be three stories high, 256 feet long and 55 feet wide and will parallel the present south wing.

James F. Budlong has brought suit in the Common Pleas Division of the Supreme Court against the J. B. & S. M. Knowles Co. to recover $1,500 alleged to be due on book account. Mr. Budlong is suing for services for salary for one year, ending February, 1903. The answer to the allegations contained in his declaration has not yet been filed by the defendant company.

Another phase in the affairs of the McWilliams Mfg. Co. was reached Saturday, when the Builders' Iron Foundry, the Kendall Mfg. Co. and the Atlantic National Bank filed a petition in the United States Circuit Court asking that the concern be declared bankrupt. Frank L. Hinckley was recently appointed receiver of this concern by the Appellate Division of the Supreme Court.

James T. Hunt, who was formerly engaged in the jewelry business here, will get no new trial of the case in which he was convicted by a jury of assaulting Herbert W. Root. A rescript handed down in the Appellate Division of the Supreme Court denies the petition for a new trial, holding that the jury was fully justified in finding that Hunt was guilty of simple assault. The case was remitted to the Common Pleas Division for sentence.

Charles N. Leach, who was employed in the manufacturing firm of Geo. H. Cahoone & Co., as assistant foreman, was indicted by the last Grand Jury for larceny and pleaded *nolo* when arraigned. Mr. Cahoone said that the total amount of opals and gold scrap stolen would aggregate $4,000 in value. Out of sympathy with young Leach's family Judge Wilbur made the sentence rather lighter than usual, giving him 18 months in State Prison.

At a recent meeting of the Die and Hub Cutters' Mutual Association, U. S. A., there was a large representation of the different States present to see the presentation of the gavel used by the first president of the association, John J. Indelkop, who carried out the duties of his office so satisfactorily that it was decided to give him the gavel which he had wielded during his period of office. The gavel was handsomely decorated at the works of the Gorham Mfg. Co. and was presented to the retiring president by the present head of the organization. After the usual felicitous remarks a collation was served.

Last week the plant of Gladding & Coombs Bros. was sold at auction by the trustee, B. F. Chester, to Nicholas E. Arendt, of this city, the price paid being $1,300. The plant was located in the Lederer building, on Stewart St. A considerable quantity of finished and unfinished lockets was included in the stock, and the price at which the property went is considered as rather low. It is understood that the inventoried value was about $6,000.

By a recent decision of the Examiner in Chief, the appeal of George W. Dover in the somewhat celebrated patent case in which a pin tongue figures, is sustained, and Mr. Dover is adjudged to have a priority of claim to the invention. In December the Examiner of Interferences decided in favor of a Mr. Greenwood, but Mr. Dover appealed from this decision with the result above stated. Mr. Greenwood has the right to appeal to the Commissioner of Patents until April 10.

Following a recent action of the Gorham Mfg. Co., in giving its employes the same pay with less hours during the Summer months, comes the decision of the Roger Williams Silver Co. to start on May 2 with a new schedule to continue until further notice. This will give to all employes of the factory 60 hours' pay for 55 hours work, but employes must work at least 54 hours in every week in order to obtain the 60 hours' pay for the 55 hours' work. The company has given 57 hours' pay for 55 hours' work during the period between May 1 and Sept. 1 for the past five years, but this year has made its offer even better.

The Grand Jury presented its report last week, and among those indicted was John Nelson, a N. Main St. jeweler, charged with having received stolen goods, knowing the same to have been stolen. Nelson's arrest followed the disappearance of silver from the works of the Gorham Mfg. Co., in connection with which there was an arrest. It is charged that Nelson received the silver in question. Nelson will come in to plead to the indictment on Monday, March 30. Nelson's counsel Saturday appeared before the Common Pleas Division and asked for a change of venue in order that Nelson may be tried in another county than that of Providence. The hearing on this question was set down for April 4.

James Radigan was arrested in the North End Friday night while trying to dispose of jewelry at prices which did not conform with the quality of the goods. Davidson said, when questioned by the officers, that his employer, Louis Davidsburg, a manufacturing jeweler, had turned the jewelry over to him to sell. The police arrested him, however, and summoned Mr. Davidsburg, who said that the jewelry was taken without his knowledge. Radigan was arraigned in the District Court Saturday, charged with stealing from Mr. Davidsburg 17 pins, worth $7.11, brooches worth $2.25 and a box of pin tongues, all valued at $10.25. He pleaded guilty and was sentenced to the Reform School or to pay a fine of $15 and costs.

Attleboro.

The daughter of Frank H. Sadler, of F H. Sadler & Co., to-day becomes the bride of Arthur L. Bottomley.

Jesse Carpenter, New York representative of the Horton, Angell Co., paid a visit to the home office last week.

Alfred R. Crosby, of Smith & Crosby, resigned last week from the Republican Town Committee after serving as member and chairman for six years.

Edward A. Sweeney, of the W. H. Wilmarth Co., was the principal figure last Friday at the anniversary celebration of the local Red Men. He was their first Sachem.

Donald LeStage, Chicago, paid a flying visit to Attleboro jewelry friends last week. Since leaving the North Attleboro house by which he was employed he has started in the jewelry business on his own account in Chicago. He will remain east until the last of May.

Arrangements are being made to have the Tariff Committee of the Attleboros represented by at least one member when the National Manufacturers' Association meets in New Orleans, April 15. The influence of this association was very material in the fight the jewelers of this town made against the French Reciprocity Treaty, and the industry proposes from now on to keep itself before the eyes of the rest of the business men of the country by keeping in touch with the association.

Attleboro jewelry manufacturers and jewelry workers are deeply interested in the formation in Pawtucket, R. I., last week, of a branch of the Jewelry Workers' Union of America. At that gathering, where the union was formed, attention was called by more than one speaker to the fact that Pawtucket, part of Providence, and the Attleboros are the only remaining districts devoted to the manufacture of this sort of goods where the help are not banded into a union. It was stated that the Attleboros will hear from the national organizers shortly.

Ernest J. Qvarnstrom, of Carter, Qvarnstrom & Remington, was a passenger on the Fall River liner *Plymouth*, which was run down on Long Island Sound Friday morning. He was returning from a trip with the firm's sample case. The prow of the *City of Taunton*, which struck the *Plymouth*, crushed into the latter steamship at a point less than 20 feet from his own stateroom, so his escape was a narrow one. He sustained a very severe nervous shock from the sudden crash, the panic and the sights which greeted him when he left the stateroom.

A. T. Sturdy, Chartley, was two weeks ago elected a Selectman of Norton, the town of which Chartley is the westernmost village. He was swept in on a wave of agitation which turned out three Selectmen who had served 15 years. A complimentary banquet was tendered to him last week by the men of Chartley, and at this banquet things significant to the jewelry business were said. Mr. Sturdy represents a village in which are located three jewelry houses—Sturdy Bros., the W. A. Sturdy Mfg. Co., and Freeman, Daughaday & Co. There are nearly 400 employes in their shops, and the village is situated right on the edge of Attleboro. At the banquet to Mr. Sturdy re-

ated reference was made to the fact that cation, community of interest, similarity business and popular sympathy demand at the jewelry village of Chartley be set f from its old connections and annexed to ttleboro. A conference on the subject ill be held in a few days with the dis- ict's representative in the General Court.

North Attleboro.

Edward M. King, tool maker, has gone to anada on personal business.

Daniel M. Chisholm, of the Bugbee & iles Co., has gone to Jamaica for an out- ng of two weeks.

Louis D. Barrows and Harry Robinson ave been in New York in the interests H. F. Barrows & Co.

Harry W. Tufts, of the H. W. Tufts ool Co., has been reappointed Chief of he Fire Department.

The factory of Frank M. Whiting & Co. as been closed for the purpose of taking tock and making repairs to the plant.

The fire department was called to the residence of T. I. Smith last week for a himney fire. The damage was slight.

Fred Varneau, who recently terminated a service of 17 years with the T. I. Smith Co., was presented with a watch by his former shopmates.

The annual town meeting of Wrentham, of which Plainville is a part, was held on March 16. William F. Maintien, of Maintien Brothers & Elliott, was re-elected Selectman by a very complimentary vote. A very heated debate ended in the vote to appropriate the sum of $2,000 for the purchase of suitable fire apparatus.

A number of jewelers of North Attleboro, Attleboro and Providence have been investing in the stock of a coal company which owns mines at Coal Harbor, on Unga Island, off the south coast of Alaska. The island is in a direct line of travel between North America and Asia, and the investors are figuring on large returns when the mine is fully equipped.

The annual meeting of the town of North Attleboro was held on March 16. Steps were taken toward the changing of the town's name, and a committee was chosen to apply to the Legislature for the necessary permission to make the change. In the contests for town offices, Albert Totten, of Thomas Totten & Co., won out in a three-cornered fight, in which John H. Peckham, of J. H. Peckham & Co., and Frank A. Brown, an employe of Whiting & Davis, were his opponents. Mr. Totten's associates on the board are Fred S. Gilbert and Frank L. Shepardson, of F. L. Shepardson & Co. These gentlemen constituted the old board, and their re-election for a third term is regarded as a high honor. Walter B. Ballou, of R. Blackinton & Co., was returned to the School Committee, and George K. Webster, of the Webster Co., was re-elected to the positions of Water, Light and Sinking Fund Commissioner. Wallace G. Franklin, of E. I. Franklin & Co., won out in a contest for Auditor, and H. Alton Hall, of Scofield, Melcher & Scofield, was re-elected to a similar position. George G. Wheeler, local representative of THE CIRCULAR-WEEKLY, was elected Overseer of the Poor in a four-cornered fight.

Boston.

A. Paul & Co. expect to move into thei new quarters in the annex to the Jewelers building about the 20th of next month.

Elmer Chickering, one of the leading photographers of this city, is preparing a group picture of the Boston Jewelers' Club.

Walter B. Snow, New England representative of the Poole Silver Co., has moved into the new residence which he recently purchased in Dorchester.

Edward A. Bigelow, treasurer and manager of the E. Howard Clock Co., has been confined to his home for a few days with a severe attack of la grippe.

Notices have been received by Boston jobbers during the past week announcing the fact that Allan P. Trask, Bangor, Me., has sold out his business to Harry I. Bolton, of the same town.

W. F. Newhall, Lynn, rejoices over the advent of a son and heir on March 16, and congratulating friends are receiving invitations to ride in a new automobile, which arrived on the same date.

At the annual town meeting in Brookline last week Charles H. Pearson, of the Chelsea Clock Co., was elected Selectman. Mr. Pearson was defeated for the nomination in the caucus by C. E. Riley, but ran on nomination papers and went into office with a majority of 310 votes.

Henry F. Palmer, a jeweler at 120 Munroe St., Lynn, was held up and robbed one night last week. According to the story in circulation, Palmer fell unconscious while in a saloon and was taken out by three men, who carried him to an alley across the street, where he was found later by a police officer. Palmer's watch and chain were missing, but were recovered after his assailant was taken into custody.

Secretary of State Olin has issued the certificate of incorporation of the Newburyport Silver Co., with the folowing named as officers: President, John Currier; clerk and secretary, George E. Stickney. Workmen are already employed installing boilers, engine and other machinery necessary for the immediate commencement of business at the company's factory. The company will manufacture sterling wares only.

The directors of the American Waltham Watch Co. intend to make a change in the date of the annual meetings. It has been customary to hold the annual meeting each year March 26. This year the directors will meet on that date, but the meeting will be simply of a perfunctory nature, and a proposition will be made to amend the by-laws so that the annual meeting will be held May 14, and the fiscal year will end March 31.

The Jewelers' building addition was practically completed last week, the obstructions to sidewalk travel being removed and the new elevator service made about ready for use. This "annex" is quite similar in external appearance to the original Jewelers' building, alongside of which it has been constructed. The facades are of the same general design, and the new section, or annex, runs up to an equal height with the older one. The work of fitting it up for prospective occupants is steadily in progress.

U. C. Smith, of Brockton, and wife are arranging for a pleasure trip of three weeks' duration to commence about April 1. They

intend to visit Baltimore, Washington and other cities of the south.

Frederick W. Hoffman, Albany, N. Y., visited Boston last week.

Henry P. Doe, Lawrence, Mass., is spending a few weeks' vacation at Pinehurst, N. C.

Max Posner, a jewelry auctioneer of this city, has been conducting a large sale of high art and bric-à-brac in Atlantic City and will return to Boston, April 9, to sell the stock of E. E. Reynolds.

The firm of R. Hollings & Co., consisting of William Hollings, Richard Hollings and Harry James Hollings, doing business in lamps and fixtures at 93 and 95 Summer St., filed a petition in bankruptcy at the United States District Court, recently. The liabilities are scheduled at $134,171.98, of which $8,850 is secured. The assets are nominally placed at $103,791. Preferred claims for salaries to office clerks, salesmen, gasfitters and factory employes, amounting to $1,803, are included in the liabilities.

The following buyers visited this city during the past week: J. J. Woodward, Somersworth, N. H.; George H. Herrick, Attleboro, Mass.; C. W. Clough, Pawtucket, R. I.; N. C. Nelson, Concord, N. H.; A. Lawrence, Lowell, Mass.; G. A. Schmidt, Lawrence, Mass.; W. A. G. Smith, Rockland, Mass.; Wm. L. Kelley, New Bedford, Mass.; U. C. Smith, Brockton, Mass.; Mr. England, of England & Leavitt, Worcester, Mass.; Mr. Foster, of Frost & Co., Gloucester, Mass.; Mr. Eager, of Brigham & Eager, Marlborough, Mass.

The International Silver Co. has just placed on the market a patent tilting tea kettle, provided with the Meriden Britannia Co.'s patent trunnion, which makes it possible to lift the kettle and its stand at the same time. The trunnion is so constructed as to allow the kettle to swing freely or to be removed from the stand at will. An illustration of this useful device will be found in the company's announcement on another page.

Gilbert Rogers has been re-elected superintendent of the First M. E. Sunday school of Meriden.

President Samuel Dodd, of the International Silver Co., is reported to be confined to his home by illness.

William K. Chase, for 14 years in the employ of the Wm. L. Gilbert Clock Co., Winsted, died last week.

Walter H. Youngs, traveling salesman for factory "L," International Silver Co., left, March 18, on a southern business trip.

Burton W. Spencer has succeeded the late E. A. Mayne as foreman of the foundry department of the Bradley & Hubbard Mfg. Co., Bristol.

Wm. Shaw, superintendent of the sterling silver department of factory "L," International Silver Co., is confined to his home in Wallingford by illness.

Frank W. Morris, traveling representative of the R. Wallace & Sons' Mfg. Co., Wallingford, has just returned from a long business trip through the west.

Connecticut's first incorporated union, composed of metal workers, last Wednesday filed articles of incorporation with the Secretary of State in Hartford.

N. B. Rogers, Department Commander of the Grand Army, attended a campfire at Middletown last Friday, given to him and his staff by the post in that place.

Mrs. Henry J. Lewis, Stratford, whose husband was a son of the late I. C. Lewis, at one time president of the Meriden Britannia Co., has purchased the J. P. Stole residence in Meriden, which is now occupied by A. E. Hobson, superintendent of factory "A," International Silver Co.

The R. Wallace & Sons' Mfg. Co., Wallingford, is to erect a large addition to its silverware manufacturing plant, which, when completed, will employ about 125 workmen.

Christopher Strobel, Waterbury, accompanied by his sister, is enjoying a trip through the south. They will spend several weeks in Florida and then go to Asheville, N. C.

W. H. Hubby, formerly foreman of the plating department of the Williams Bros.' Mfg. Co., Glastonbury, has removed with his family to Waterbury, where he will accept a similar position.

The death is announced of Lewis Wilkinson, who had been in the employ of the Wilcox Silver Plate Co., Meriden, for about 25 years. Mr. Wilkinson was 65 years of age, and died at his home in New Bedford.

A postal card written in Japanese was recently received by the Ansonia Clock Co., Ansonia, and finally deciphered by Japanese students in New Haven. The card was a request for certain circulars issued by the company.

The bill amending the charter of the Bristol Brass and Clock Co., Bristol, changing the name to the Bristol Brass Co., has just passed both branches of the General Assembly and now awaits the signature of Governor Chamberlain.

The bronze memorial tablet presented by Augusta Munson Curtis, in memory of her husband, George R. Curtis, was recently placed in the vestibule of the Curtis Memorial Library in Meriden. The dedicatory services will be held about April 10.

The annual meeting of the officers of the International Silver Co. will be held in Jersey City, to-morrow. At this session a number of important matters will be discussed, but it is not expected that any change will be made in the management of the combine.

Wilbur F. Rogers, Burton C. Rogers, E. C. Wilcox, L. E. Wilcox and B. L. Lawton are the incorporators of the Connecticut Telephone and Electric Co., just formed in Meriden, with a capital of $36,000. E. C. Wilcox was elected president; Mr. Lawton, vice-president and treasurer, and B. C. Rogers, secretary. Wilbur F. Rogers and L. E. Wilcox are on the board of directors.

Jewelers' Gold Bars Withdrawn and Exchanged at New York.

Week Ended March 21, 1903.

The U. S. Assay Office reports:

Gold bars exchanged for gold coin	$270,914.50
Gold bars paid depositors	85,535.00
Total	$356,449.50

Of this the gold bars exchanged for gold coin are reported by the Sub-Treasury as follows:

March 17	$67,803.46
" 18	52,579.67
" 19	39,278.36
" 20	51,272.38
" 21	57,980.63
Total	$268,914.50

H. W. Sloane, Hames, Okla., is learning the jewelry business with his brother, E. L. Sloane, Wichita, Kan.

To Importers and Large Dealers in Diamonds.

We are now operating, and have been for the past ten years, the most extensive and best equipped Diamond Cutting Works in this country, equaling any in Europe.

We are continually buying large series of Rough direct from the Syndicate controlling the output of the associated Diamond mine owners, and can offer to Importers and Large Dealers, Original Lots at prices equal to those of the European Markets, thereby saving the 10 per cent. import duty.

We do NOT solicit memorandum orders.

Stern Bros. & Co.,

DIAMOND CUTTING WORKS,
142 to 146 West 14th Street.

68 Nassau Street, New York.

Chicago Office, 149 State Street.

London Office, 29 Ely Place.

Newark.

Richter & Heaton, manufacturing jewelers at Liberty and Lafayette Sts., have been succeeded by C. D. Schaufele, W. F. Fautz and J. W. Heaton, who have formed a partnership under the style of Schaufele, Fautz & Co.

Chas. Hodge Boyle, 33 years old, formerly a jeweler at Morristown, N. J., died at his home, 33 Railroad Pl., E. Orange, last week. His death was caused by appendicitis. He is survived by a wi low and two children. The funeral services were held Thursday afternoon and his body was taken to Morristown for interment.

Alfred Sodden, a driver for Reinhard's Express, was arrested last week by Detective Sergeant Ryan charged with stealing a box of fancy clocks valued at $106, which had been shipped by the Riley-Klotz Co. in this city to a Barclay St. firm in New York. Sodden denies that he stole the box. He said that it was lost.

Henry A. Hewson, for 26 years in the employ of the Richardson Mfg. Co., of 50 Columbia St., this city, died last week at his home in Irvington in his 72d year. Although confined to his home for 10 days, the deceased's condition was not considered serious and his death was unexpected. Mr. Hewson was born in Birmingham, England, and came to this country when 17 years old. He resided in this city for more than 50 years. After leaving the employ of the Richardson Mfg. Co., he went on the police force of the city. He leaves a widow and four daughters.

Georgia.

S. E. Theus, of Theus & Co., Savannah, has been appointed a member of the entertainment committee of the Savannah Chamber of Commerce.

H. M. Taylor, an employe of the Atlantic Coast Line R. R. Co., at Albany, Ga., was arrested, March 21, charged by Phil Harris, a jeweler, and the Southern Express with larceny. Taylor was formerly an employe of the express company and during the Christmas holidays acted as delivery clerk, at which time several packages of valuable jewelry, diamonds, etc., consigned to Phil Harris were stolen. One package of diamonds valued at $600 was mysteriously returned to the express company after a delay of several weeks. Taylor, when arrested, confessed his guilt and pleaded guilty to the charges before Judge Hobbs, who imposed a fine, which was immediately paid by his father, a prominent resident of Marshallville, Ga.

Columbus, O.

F. B. Ross, of the Bonnet-Ross Co., will return from a trip to Mexico next week.

George W. Gardner, of the Hofman Jewelry Co., returned Thursday from a two months' trip to the Pacific Coast.

Henry Bourquin, son of a member of the jewelry firm of Emile Bourquin & Son, Horton, Kan., is in the city receiving instruction in flute playing.

Columbus has been having an epidemic of jewelry auction sales during the past week. Among them were the sales of the Ford, Tussing and Caldwell stocks, the two former being bankrupt sales.

Harris & Co., opticians, will occupy the south half of the room previously occupied by a disappearing desk company at 41 S. High St. This change will give Frank M. Deinlein and the Harris Co. the entire room.

BIRTH FLOWER PINS,

A NEW IDEA IN BIB AND CUFF PINS.

10 K. solid back, rose or green gold finish. A novelty which every jeweler should carry in stock. An article equally appropriate for ladies and children; dainty in design and execution, modest in price, and a good seller for every month in the year.

SEND FOR AN ASSORTMENT.

Henry Freund & Bro., THE JEWELRY HOUSE, No. 9 Maiden Lane, New York.

ELK GOODS A SPECIALTY.

Philadelphia.

Max Golden is reported to have closed out his business at 227 S. 7th St.

C. W. Scott, a watchmaker, has accepted a position with Charles Wacher.

J. B. Robertson, with L. C. Reisner & Co., spent Sunday in Baltimore with friends.

De Forrest Bachman, of Wanamaker's, will return from the West Indies next week.

Fred Kruger, watchmaker, has accepted a position with F. L. Kirkpatrick, 11th and Sansom Sts.

John Sandman, 702 S. 2d St., was discharged from voluntary bankruptcy last week.

John Demmert transferred his store at 1602 Market St., Wednesday, to Wm. A. Schick.

George Ware, with Joseph B. Bechtel & Co., left Monday for a five weeks' trip through the State.

Evan R. Eastwood and Charles Park, of Eastwood & Park, Newark, N. J., were here last week on business.

W. Hopkins Iszard, 929 Chestnut St., returned last week from a business trip through the State.

Kuhn Bros. have opened a handsome new store at Hanover, Pa., where they are well and favorably known.

J. W. Heitel, 52 N. 11th St., has resumed business after having been confined to his home with rheumatism.

Fred. Hurlburt, of H. O. Hurlburt & Sons, is reported to have gone south on an extended pleasure trip.

A. F. J. Dorn, Camden, N. J., went to Baltimore last week to attend the funeral of an uncle who recently died.

Harry Murray, diamond salesman of Wanamaker's, who has been gravely ill, is reported to be convalescing.

Andrew Kaas, diamond broker, last week bought the property 925-927 Market St. for a nominal consideration.

Wm. Ritzmann, watchmaker, with J. E. Caldwell & Co., will sail for Europe to visit his old home March 27.

Charles Hilborn, formerly with John C. Dotter, has accepted a position with J. N. Litchfield, 1926 Columbia Ave.

Edward Wedder, watchmaker for George Grau, 322 Chestnut St., who has been seriously ill, is greatly improved.

It is reported that the Penn Smelting Co., on Filbert St., near 9th St., intends to move to larger and better equipped quarters.

Edward Trickett, watchmaker for Dilsheimer Bros., 510 Market St., was quite ill last week and confined to his home.

The Rexford Co., 1024 Market St., has posted a removal sign on account of the projected rebuilding of the store building.

C. W. Bailey, vice-president of the Bailey, Banks & Biddle Co., spent the early part of last week in Atlantic City on pleasure bent.

John F. Simons, of Simons, Bro. & Co., was last week nominated as one of the seven directors of the Manufacturers' Club.

Joseph Lingg, of the Fidelity Loan Co., 9th and Locust Sts., has resumed business after an illness of typhoid fever of six weeks.

Harry Holt, watchmaker for Bates & Co., Atlantic City, was in this city a few days last week combining business and pleasure.

James Bingham, manufacturing jeweler, 719 Sansom St., has remodeled his new quarters and is now fairly again started in business.

John Harmer, 1205 Girard Ave., is reported to be disposing of his stock of diamonds, intending to engage in the automobile business.

Henry A. Kammerer, 2205 Fairmount Ave., has been reappointed doorkeeper of Common Council for the new Councils to be organized next week.

The report emanates from Hot Springs, Va., that J. Warner Hutchins and L. P. White are becoming golf experts and enjoying themselves hugely.

Among the rural retailers here last week were: J. M. Lewis, Lambertville, N. J.; M. E. Smith, Greensborough, Md., and W. A. Butler, Greensborough, Md.

Fred. Ewald, until recently watchmaker for H. Garman, Main St., Coatesville, Pa., has opened an attractive place of his own on Main St., near First Ave.

The old jewelry store of the late James Bartlett at 217 S. 10th St., which of late has been managed by Wm. Wardle, is to be closed out at auction next week.

J. Lee Martin, a Bloomsburg jeweler, was successfully operated upon for a cyst at Dr. Ayres's private hospital in this city last week and has almost entirely recovered.

C. E. Lewis, 4600 Frankford Ave., one of the most prominent jewelers of that section, is receiving the condolences of the trade on the recent death of his father, Ellis S. Lewis.

Nathan Baylinson, individually and as a member of the firm of Baylinson & Litchfield, was discharged of his debts last week as a voluntary bankrupt in the United States District Court.

George Lewis, who swindled 40 merchants of this city, among them jewelers and opticians, by means of forged orders, has been sentenced to four years in the Eastern Penitentiary.

Samuel Robinson, formerly a well-known jeweler of this city, but who had been west for 25 years, has returned to his native city and opened an attractive little store on Columbia Ave., near 10th St.

The suit against the Montana Diamond Co. to recover on a contract for store fixtures brought by Robert Tarlo & Sons was settled Wednesday, when a verdict was rendered for $313.49, there being no defense.

David Reynolds, 1604 Federal St., detected a colored man in his store last week helping himself to watches in the show window. The intruder ran, was pursued, captured some squares away and is now in jail.

C. R. Dankworth, a prominent jeweler, was one of the residents of the northwestern section of the city who appeared before the License Court last week to remonstrate against any more saloons in that neighborhood.

J. Warner Hutchins and Wm. G. Blair are two Philadelphia jewelers appointed members of the honorary committee to arrange for a testimonial banquet to be given to Mayor Ashbridge at the Holtel Walton, April 3.

A jewelry department is included in the new store of F. Marks' Sons, opened last week at 1026 Chestnut St. The members of the firm until recently conducted a department store at 8th and Arch Sts., which has been abandoned.

The Bailey, Banks & Biddle Co. offer $100 reward and no questions asked for the return of a lady's gold hunting case watch worth $10, No. 277,771; about 16 S.; engraved "C. L. Y," and winding with a key. The watch was lost between Feb. 16 and 20 at the Hotel Walton.

A mass meeting of the gold and silver workers of this city of Local No. 5 and vicinity was held Saturday night at the n. e. cor. of 9th and Filbert Sts. The meeting was addressed by Herman J. Vollmer, of New York, president of the International Jewelry Workers' Union, and Ernest Koeppicus, business agent of Local No. 1 of New York.

The contract for the solid gold signet rings for the Girls' High School was awarded last week to James Bathgate, of Strawbridge's jewelry department. The competition for the contract was very keen and the award was made impartially on the merits of the design submitted, which represented a dolphin engraved with the letters "G. H. S." on the shank.

Gustavus Sickles, who represented the majority of the creditors of J. G. Ruth & Co., who conducted stores at Phoenixville, Royersford and Pottstown, has effected a settlement of 35 per cent. cash with the bankrupt jewelers. The original offer was 20 per cent. cash and two notes of 5 per cent. each, and the local creditors of the defunct firm are delighted with the increased cash settlement.

Edward C. Springman, until recently in the firm of Springman Bros., 722 Chestnut St., gold and silver platers, has bought out the establishment at 731 Sansom St., formerly the property of Charles H. Hartley, who died some time ago. Mr. Springman, who is well known in the trade, will continue there the gold and silver plating business, and in order to successfully conduct the business has remodeled the interior and put in machinery of the most approved type.

The stockholders of the Bailey, Banks & Biddle Co., at the annual meeting Tuesday, March 17, held at 11th and Walnut Sts., authorized all plans prepared by the officials of the company for the removal of the retail store and factory to the building erected for the firm at 1218-20-22 Chestnut St. The approximate cost of the new structure will be $375,000 and it will be, when completed, one of the handsomest jewelry stores in the country. The permit for its erection was issued last Thursday.

J. E. Caldwell & Co. placed on exhibition for sale last week, at the request of an anonymous collector, a collection of intaglios and cameos, the proceeds of the sale to go to the Philadelphia Society for Organizing Charity. The antique and medieval gems represent the work of Greek, Roman and Oriental masters, with some latter day work. A descriptive catalogue of the collection prefaced by Geo. W. Olcott, professor of Archæology at Columbia University, shows the gem of this exhibition to be an intaglio in Oriental carnelian, made in the 18th century.

Emil Haeni, formerly engaged in business in Freeport, Ill., has accepted a position in a watch factory in Rockford, Ill.

United States Court Refuses Discharge in Bankruptcy to John M. Frear.

UTICA, N. Y., March 21.—Although John M. Frear, a Binghamton jeweler, has compromised with his creditors, Judge Ray yesterday refused to confirm the settlement made by the Referee in Bankruptcy. Frear filed a petition in bankruptcy Oct. 4, 1901, and about a year later he presented a composition of 25 cents on a dollar, which his creditors accepted, and the amount was paid into the Referee's court and distributed among the creditors.

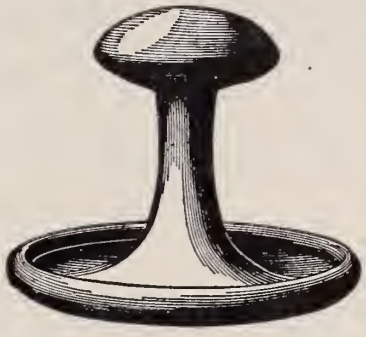
Frear's lawyer later made a motion before Judge Ray to confirm the composition, but this the court yesterday refused to do, because the bankruptcy law had not been complied with, in that the composition was not confirmed by the court before the assets were distributed. The court holds:

"It will be observed that there has been no compliance with the law. The parties and the referee have adopted a mode of composition and procedure utterly at variance with the law and now ask the court to approve and confirm it. The proceeding adopted and followed is not sanctioned by the law, and neither the Court nor the Judge has power to confirm it. This court has no power to ratify or confirm such a proceeding, and can not put its seal of approval thereon. The statute was made to be observed and complied with, and only when there has been a substantial compliance therewith will the Judge or the Court approve and confirm the proceedings. These matters of non-compliance are not technical, but they go to the very pith and marrow of the law and the objects to be attained. If this proceeding is confirmed the Court will necessarily be compelled in the future to approve any manner or mode of composition to which the creditors may not object. Silence or acquiescence on the part of creditors and their attorneys gives no excuse to the Judge or the Court to violate the statute. Jurisdiction to confirm this so-called composition could not be conferred by the express consent of all creditors. The provisions of the law as to compositions are to be strictly construed."

Frear's debts amounted to about $11,000, while his assets were less than half that amount.

Death of William D. Laverack.

PATERSON, N. J., March 23.—Wm. D. Laverack, a retail jeweler at 143 Main St., died in this city last week.



Mr. Laverack was the adopted son of Mrs. Mary Laverack, who had conducted a jewelry store here since 1882, when the business, which had been established many years before by her husband, David Laverack, was transferred to her. Mrs. Laverack died in 1897, turning the business over to her adopted son, and since that date it had been run by him.

Mr. Laverack was comparatively a young man. He left property and assets valued at more than $100,000, and by his death the Paterson Orphan Asylum, the Catholic Orphan Asylum, the Paterson General Hospital, and St. Joseph Hospital get $25,000 each.

Niels J. Provstgaard, a jeweler of Manti, Utah, intends making his home in Mexico in the near future.

The Giant of Collar Buttons

IN QUALITY,
IN SALES.

One Million Five Hundred Thousand Krementz One-Piece Collar Buttons made and sold within the last year. . . . . .

WHY? Because of their HIGHEST QUALITY, BEST CONSTRUCTION, GIVING THE MOST WEAR, AND GREATEST COMFORT and their IRON-CLAD GUARANTEE.

To verify this we invite the trade to read "**The Story of a Collar Button, with Illustrations;**" which may be had **FREE** for the asking, and to try the experiment suggested on page 5 of that booklet.

Extract from "Printers' Ink," Nov. 23, 1898.

The Little Schoolmaster now suggests, to every pupil in his class, to send a two-cent stamp to Krementz & Co., 49 Chestnut Street, Newark, N. J., and ask to be favored with a copy of their leaflet, "The Story of a Collar Button." Afterward, if any pupil will send to *Printers' Ink* another leaflet, new or old, that is half as good as this one, or that approaches it in excellence, the deserving student will be rewarded with one of *Printers' Ink's* souvenir spoons as an acknowledgment of his discovery and contribution. "The Story of a Collar Button" is the best piece of advertisement construction that has come to *Printers' Ink's* attention in the year of our Lord 1898.

Should you wish to utilize this booklet to increase your collar button business, we will, on receipt of your order, print your card upon and send you a quantity of them.

Krementz One-Piece Collar Buttons are stamped as follows, ON BACKS:

Patent sustained by United States Supreme Court.

Quality and Construction have made our reputation.

All Krementz Collar Buttons are Manufactured by

KREMENTZ & CO.,

in their Factory,

49 Chestnut Street,

To Develop Trade With India.

NOW that the American manufacturer is trying to gain a fair share of trade in the world's market, it is suggested, in a recent report of the Treasury Department devoted to "Commercial India in 1902," that he give more attention to England's great Eastern Empire. On that peninsula, which is about half the size of the United States, reside 300,000,000 people, or about one-fifth of all the inhabitants of the earth. As an exporter to India the United States rank near the end of the list of nations, while this country is the third largest purchaser of India's exports. It is some consolation to know, however, that if all the articles exported from the United States into India—many of which lose their identity in being transhipped in Europe—were traceable, our sales would make a much better showing. Great Britain is not increasing its trade with India, yet, when we consider the number of years that it has enjoyed a substantial monopoly in this respect, some idea of the important part India has taken in contributing to the wealth of the British Empire can be formed.

The continent of Asia and its islands have a population of perhaps 800,000,000 people and a trade worth probably $2,000,000,000 a year. Of this trade the United States do not receive a fair share—less, indeed, than some nations which, to reach it, have to cross two seas to our one. Indian commerce with America is increasing, however. A very friendly feeling toward the United States exists among the people of India, and all things American are popular.

With a view to increasing our trade with India it has been suggested that an American department store, composed of 10 or 12 non-competing lines, each controlled by a submanager sent out from the home house, and all under the supervision of a man of large local and general experience, be opened in Bombay. Such a concern should be a stock company, with the stock held equally by the several houses interested and paid for in the goods represented, less a small percentage in cash, the latter to be used to defray the expenses of establishing the business. The clerical force and salesmen could be natives of the country, but other details should be purely on the American plan. The sales, both wholesale and retail, should be made on a cash basis, or its equivalent, and sufficient goods should be carried in stock to permit immediate delivery. Among the various non-competing lines that would probably prove successful are jewelry, watches, clocks and novelties.

The many advantages of an American store in Bombay will be readily seen by our manufacturers and exporters. The unity of the various houses represented would give it strength and capital; the presence of thoroughly trained and reliable American representative agents, each a specialist in the line of which he is manager, studying the wants of the people and keeping their houses in touch with the market, are strong arguments in its favor.

A Remedy Needed.

THE question as to what a jeweler should do to protect himself from liability for watches and jewelry left with him to be repaired, when the articles have been practically abandoned by the owners, is one that continues to annoy the trade in all sections of the country. One solution pointed out in a recent article published in THE CIRCULAR-WEEKLY giving the text of a combination receipt and memorandum of agreement which the jeweler might use, has been adopted in some but not in many quarters, and it is now reported that there is a movement among some New York jewelers to obtain a passage of a bill in that State which would give dealers the right to sell articles that had been left in their care after a reasonable length of time.

That the question is one that may affect every jeweler at some time or another cannot be denied, and the idea entertained among some concerns to the effect that people who leave their articles for a year or more will never return for the same, and that there is little danger of the jeweler disposing of them for the value of the repairs, is one not founded on fact. A recent instance to come to the notice of the THE CIRCULAR-WEEKLY was that of a demand made upon a Brooklyn (N. Y.) jeweler for the return of a watch which had been left with him to be repaired 10 years ago. The jeweler had kept the watch for three years, and after writing repeatedly to the address of the man who had left it, and receiving no answer, sold the timepiece for the purpose of collecting the amount due upon it. A month or two ago the original owner of the watch demanded that it be returned to him, and to avoid a suit, which was threatened, the jeweler agreed to do so.

Unfortunately for the jeweler, the man to whom he had sold the watch had taken it to Germany, and after the purchaser had been located and the circumstances explained to him, he agreed to sell the watch back to the jeweler at nearly 50 per cent. more than he had paid for it. The watch was finally shipped to this country, and on arriving here was assessed $20 duty, which the jeweler also had to pay. The watch has now been received from the Custom House, and will be delivered to its original owner this week, but to restore it the jeweler has been put to the expense of more than $100 over and above the amount which he had received for the watch when sold.

That jewelers are exposed to such injustice under the laws of New York is shameful, and the quicker members of the trade will act together and devise some means of protecting themselves against such a condition of affairs the better it will be for all.

Examination of Arthur M. Felson Continued by Creditors.

OGDENSBURG, N. Y., March 18.—Arthur M. Felson, the Gouverneur (N. Y.) jeweler who went into bankruptcy several months ago, was examined here Saturday before Referee-in-Bankruptcy John Tolloch. A motion was made to compel the bankrupt to turn over to the trustee the sum of $20,000. An objection was made by Attorneys Rosenthal and Brown on the ground that the creditors' meeting was not closed, that the bankrupt had not been examined by his counsel regarding testimony introduced by the attorneys for the creditors, and that the law provides that no one can manufacture evidence in his own behalf. The referee held the motion to be premature, and requested that briefs be submitted to him Monday.

The New York Jewelers Association and Board of Trade, which is handling the Felson matter and which was represented here at the meeting by Attorney McKenzie, of New York, has decided not to file briefs in the matter, but will, however, give the bankrupt a close examination under another procedure.

Frank Rose Files Voluntary Petition in Bankruptcy.

CINCINNATI, O., March 18.—Frank Rose, a retail jeweler, has filed a voluntary petition in bankruptcy in the United States District Court in this city. According to the schedules filed with his petition the liabilities are $4,407.39, while the value of the assets is placed at $1,655.

Rose was originally in the employ of Clarke & Barr, of Chicago, and some time ago established a store at Columbus and another at Zanesville. He commenced business in Cincinnati March 15, 1902. He is said to have also done business under the style of the Rhodesia Diamond Co.

LETTERS TO THE EDITOR.

The Jewelry Industry of Hamburg.

NEW YORK, Feb. 25, 1903.

Editor of THE JEWELERS' CIRCULAR-WEEKLY:

Referring to your issue of Feb. 4, 1903 we beg to say that there is just as large a jewelry industry in Hamburg as in Pforzheim. In fact, it is larger, and employs only first-class artists. Notwithstanding the ridiculous duty of 60 per cent., which the United States impose, Hamburg jewelers are doing quite a business here by virtue of the superior quality of their wares.

Respectfully,
AUG. F. RICHTER, Ltd.

Chas. B. Pike, Whitehall, N. Y., has patented and is about to place on the market a new mailing device for small articles of merchandise.

Last Week's New York Arrivals.

THE CIRCULAR-WEEKLY each day posts in its office a bulletin of the latest buyers visiting New York, which every member of the trade is cordially invited to copy.

For the sum of $10, (payable in advance, a daily list will be mailed or delivered, during the Spring season (ending July 1, 1903, to the offices of those desiring this service.

New Stores and Enterprises.

(New Optical concerns will be found in the Optical Department and new enterprises in New York will be found under heading "New York Notes.")

R. C. Anderson has opened a jewelry store at Woodstock, Va.

W. Doyle is a new jeweler in Rainier, Ore.

M. G. Howe is opening a new store at Regina, Assiniboia, Can.

Stairs & Simpson are established in the jewelry business in Ralston, Okla.

A. S. Allen will conduct a jewelry repairing business in Canistota, S. D.

E. E. Morris, formerly with F. A. Hume, Lima, O., intends to start in business in Columbus, O., with his brother, Wm. Morris.

The Stockton-Whitmore Jewelry Co. was recently incorporated in Denver, Col., with a capital stock of $10,000. The incorporators were T. A. Stockton, W. H. Whitmore and Frank J. Hooper.

The Marquard & Scott Co. has opened a store at 411 Lumber Exchange, Minneapolis, Minn., to sell diamonds, watches and jewelry on instalments. W. H. Meyer is the western representative.

B. F. Simpson & Co. will engage in the wholesale jewelry business at 535-537 Lumber Exchange, Minneapolis, Minn., about April 1. Mr. Simpson has been at his home in London, Ont., suffering from an abscess of the ear, but hopes to be out again by that time. He has bought the stock and part of it has arrived in the city.

B. M. Henschel and M. A. Frank have formed a partnership under the style of Henschel & Frank and will conduct a retail jewelry business at 444 Main St., Buffalo, N. Y., dealing in jewelry, watches, optical goods and all the other lines kindred to the jewelry business. Mr. Henschel was for a great many years traveling salesman for Heintz Bros., Buffalo, N. Y., covering the eastern part of the United States from Buffalo to Boston, and Mr. Frank was for several years engaged in the button manufacturing business in Newark and Baltimore. Both members of the concern are comparatively well known in the jewelry trade. The partners were in New York last week buying stock for their new store, which will be opened about May 1.

DIAMONDS!

CROSS & BEGUELIN

Importers and Cutters of Diamonds and Precious Stones

Rue de Mesley, PARIS Telephone, 2188 Cortlandt 17 Maiden Lane, NEW YORK

New York Notes.

Theo. B. Starr has been spending a short vacation in New Orleans, La.

M. E. Eliassof, of Eliassof Bros. & Co., who manages the Albany branch of that concern, was in New York a few days last week, visiting the trade and calling on his friends.

J. Alexander Hardy, of the Hardy & Hayes Co., Pittsburgh, Pa., was in New York a few days last week, making his downtown headquarters with W. L. Sexton & Co., 7 Maiden Lane.

John W. Sherwood, of John W. Sherwood Co., Kansas City, Mo., arrived in New York Monday on a buying trip and left again last night for St. Louis, Mo.

Charles W. Crankshaw, Atlanta, Ga., was in New York, last week, purchasing goods for his new store, to be opened in the near future in the new 14-story building now in the course of construction in that city.

Richard Friedlander, of R., L. & M. Friedlander, wholesale jewelers at 30 Maiden Lane, has been making large purchases of diamonds in London and Amsterdam recently. In Amsterdam Mr. Friedlander obtained large lots of mêlée.

A Washington, D. C., newspaper published an interview Wednesday with Frederick Keim, a jewelry manufacturer of New York, who was then stopping in that city. The interview related to the supply of pearls, which, according to Mr. Keim, is apparently inadequate and by no means equal to the demand.

Wm. A. Webster, of Chicago, a traveling man for a New York lace house and a brother of Hawley T. and Fred H. Webster, of E. G. Webster & Son, silver plated ware manufacturers of Atlantic and Fifth Aves., Brooklyn, fatally shot himself last week in a Boston hotel. Mr. Webster's act is thought to have been caused by despondency due to ill health.

The L. T. Grant Co., formerly manufacturers of rings and diamond mountings at 17 Maiden Lane, is trying to effect a settlement with its creditors on a basis of 50 cents on the dollar. The concern sold its interest and retired from business about two months ago. Since then Mr. Grant has been in the employ of Julius Wodiska, 52 Maiden Lane.

The stock of Wolff & Hess, importers of leatherette jewelry boxes, has been purchased by Wolfsheim & Sachs, 48 Maiden Lane, who will add to their stock a line of import samples identical with that carried by the former firm, which is going out of business. In order to accommodate the extra business resulting from this addition Wolfsheim & Sachs will shortly move to larger quarters.

Adolph J. Grinberg, Saturday, admitted his sons, Maurice W. Grinberg and Ira Grinberg, to a partnership in the firm of Adolph J. Grinberg & Co., dealers in diamonds, pearls and opals, the style of which has been changed to Adolph J. Grinberg & Sons. Adolph J. Grinberg has been established on Maiden Lane since 1874. His sons have been connected with him in business since 1895.

Tiffany & Co. have sent word to the superintendents of their factories in this city and Newark, N. J., that when the Union Sq. establishment closes at noon for Saturday half-holidays from June 13 to Sept. 12, inclusive, the factories will close at the same time, and employes are to receive a full week's pay. Heretofore employes in the manufacturing departments were paid only for the hours they were actually at work.

Herbert M. Condit, secretary of the Stationers' Board of Trade, of New York, acting for that organization, has just closed the proceedings in a most unique failure, that of Geo E. Lane, a stationer of St. Albans, Vt. Mr. Lane filed a voluntary petition in bankruptcy early in January, showing assets of $4,123.18 and liabilities of $4,393.73. Mr. Condit, representing a number of the creditors of the bankrupt, took charge of the case and succeeded in having one claim of $700 thrown out by the Referee and another claim of $600 reduced to $250. This enabled the estate, after deducting the court and lawyer's fee to make a net payment of 100 cents on the dollar.

Leo Goldsmith, importer of diamonds, 9 Maiden Lane, returned home Thursday on the *Kronprinz Wilhelm* after an absence of nearly four months in Europe. Mr. Goldsmith went abroad early in December, partly on business and partly because of an injury which he had received to his foot. After visiting London and several of the prominent cities of Europe, he traveled extensively in the southwestern part of the Continent. He had planned to visit Egypt, Constantinople and a part of Asia and Asia Minor, but was prevented from doing so because of the quarantine, and the "plague" in those countries. On the steamer with Mr. Goldsmith were Henry Fera, of Fera & Kadison; Simon Adler, of Rosenbaum & Adler, and Sam Ross, of Joseph H. Fink & Co.

E. H. H. Smith, silverware manufacturer, whose factory is at Bridgeport, Conn., has given up his New York offices, which were at 9 Maiden Lane, and has moved his samples from that address to Bridgeport, where henceforth the main offices of the E. H. H. Smith Co. will be located. It has been Mr. Smith's custom to receive all orders at and ship all goods from the New York office, but owing to the growth of his business and inadequate facilities he has been unable longer to continue the office, and has moved to Bridgeport for more room and better facilities. His goods will be carried extensively, however, by C. H. Stites, 253 Broadway, who represents Mr. Smith in New York and in the territory within a radius of 20 miles of the city. Mr. Stites, who was formerly with the Bailey, Banks & Biddle Co., Philadelphia, and at one time a buyer for a prominent New York art concern, in addition to Mr. Smith's goods, will carry several other lines, all of which will be on display at his office.

A quantity of diamonds consigned to Hoey, Gascoigne & Scardefield, Custom House brokers, was obtained from the steamship *Finland* last week after that ship was well down the bay on her trip to Europe. The method of obtaining the diamonds was somewhat unique, the steamship having been stopped by Marconigram, while a tug, which had been dispatched after the diamonds, caught up with her in the Lower Bay. The diamonds had been locked up in the purser's safe on the *Finland* when that ship left the other side. When she arrived in New York the Custom House brokers attempted to obtain the diamonds, but each time a clerk called for them the purser happened to be away from the ship. Consequently when the ship left New York for her return trip to Europe the diamonds were still in the safe. The Red Star Line Steamship Co. was immediately notified by the brokers and a wireless message sent after the *Finland*; at the same time a tug was telephoned to follow after the steamer. In the Lower Bay the tug caught the *Finland* and obtained the diamonds.

A judgment of $746.15 in favor of the H. A. Kirby Co., Providence, R. I., whose New York office is at 13 Maiden Lane, against the Jewelers' Safety Fund Society, was entered Friday. The judgment grew out of a suit begun by the H. A. Kirby Co. against the Jewelers' Safety Fund Society about nine months ago, to recover the balance on a lot of goods valued at between $1,500 and $1,600, lost by a carrier employed by the former concern, which had been insured by the latter. A. Rutherford, the New York representative for the H. A. Kirby Co., intrusted sample cases, containing the goods in question, to a carrier to take from an uptown retail store to the Maiden Lane ad-

Fine Glassware for the Table.

Plain, Engraved, Etched, Cut, and Rock Crystal Decorations.

C. DORFLINGER & SONS, 36 Murray Street, New York.

dress of the company. This carrier, instead of going with the goods directly to Maiden Lane, gave part of them to an accomplice, who sold them to pawnbrokers. The H. A. Kirby Co. then sued the Jewelers' Safety Fund Society, which had insured the goods for $815.31. The case came up for trial in Part VIII. of the Supreme Court, before Judge Clark, Thursday, with the result that a judgment, as already described, was obtained in favor of the plaintiff.

Fred. W. Barrners and E. Jacobi have formed a partnership under the style of Barrners & Jacobi, and will deal in diamonds, watches and jewelry at 1136 Third Ave. They will also do repairing and diamond setting.

A meeting of the creditors of Jos. Friedlander, Memphis, Tenn., against whom an involuntary petition in bankruptcy was filed in Memphis, March 9, was held Saturday at the rooms of the Jewelers Association and Board of Trade, 170 Broadway. Quite a large number of creditors were present at the meeting, as was also Mr. Friedlander, who had come from Memphis, bringing with him his books and records of his sales. Mr. Friedlander made an offer of settlement on the basis of 25 per cent. net cash, which was accepted by a majority of the creditors. The offer is being circulated by the Jewelers Association and Board of Trade and will probably be accepted by the balance of the creditors.

Suit to Restrain Voting Trust of the International Silver Co. from Voting On the Company's Stock.

Vice-Chancellor Stevens in the Court of Chancery at Jersey City, N. J., Monday signed an order in the suit brought by Michael P. O'Connor, of New York, and Wm. H. Watrous, of Hartford, Conn., restraining the so-called voting trust, formed by the International Silver Co. from voting the pool stock. The Vice-Chancellor adjourned until April 6 the arguments on a motion for an injunction to the same effect. Meanwhile the officers of the company, who are to hold a meeting in Jersey City to-morrow for the purpose of electing directors, are restrained from voting on the stock.

The motions came up in a suit brought in Trenton, N. J., by the above mentioned complainants against H. Chamberlain, E. J. Doolittle, Samuel Dodd, George H. Wilcox and Charles L. Rockwell, who are charged with maintaining a "voting trust" in the company. They declare the alleged voting trust intends to re-elect the present directors. It is also charged that six of these directors are receiving an aggregate salary of $65,000 a year, and that there is a deficiency of $1,000 in the payment of dividends.

Vice-Chancellor Stevens granted a rule Saturday at Trenton for the defendants to show cause, returnable in Jersey City Monday, why they should not be restrained from voting the stock at the meeting to be held to-morrow. When the argument on this motion came up before Vice-Chancellor Stevens, Monday, on the agreement of Bedell, Edwards & Lawrence, attorneys for the complainants, and Collins & Corbin, attorneys for the defendants, the Vice-Chancellor signed the order, postponing the case until April 6, meanwhile restraining the officers of the company from voting at the meeting, as mentioned above.

Installment Jeweler Sued for $20,000 Damages for False Arrest.

Leon Weidenbaum, an East Side jeweler through his counsel, M. Harold Hachdorf of 140 Nassau St., began suit Saturday in the Supreme Court, New York, against Abraham Greenspan, an installment dealer and Thomas F. Gunn, a city marshal, to recover $20,000 damages for false arrest and imprisonment.

The suit is the outgrowth of a transaction between Weidenbaum and Greenspan in the early part of 1902, when the former purchased jewelry from Mr. Greenspan on the installment plan. He paid the debt with the exception of $105, about nine months ago. Greenspan then secured a judgment against Weidenbaum for this amount, eventually effecting a settlement with the latter on a basis of $55 cash and the balance in notes. Greenspan then assigned the judgment to his wife, and nothing more was heard by Mr. Weidenbaum until Jan. 31 of this year, when he was arrested on the old judgment and confined in jail until Feb. 26.

Weidenbaum's attorney then got a writ of habeas corpus from Justice Davis, of the Supreme Court, and had him released. In applying for the writ, the attorney says, he discovered that Greenspan, when securing the notes for the balance due, had deliberately changed them, so that they became due considerably in advance of the time for which they had been drawn, and had them protested long before the payee expected to take care of them under the terms of the agreement.

The papers in the suit for damages for false arrest were served on Mr. Greenspan Saturday. Mr. Weidenbaum declares that he was arrested without any reason by City Marshal Gunn, and that his confinement in Ludlow St. Jail was illegal and malicious and done with the intention of injuring his credit.

Where parties to a contract afterwards enter into a memorandum of agreement, covering the same subject matter and including additional terms and parties, the original contract is thereby superseded. (30 So. Rep. 865.)

Old Employe of Chas. E. Hancock Co. Presented with a Gold Watch.

PROVIDENCE, R. I., March 21.—The jewelry factory of the Chas. E. Hancock Co., at 7 Beverly St., was the scene of a pleasant surprise to-day, when Theophile Brisedou, an old and trusted employe of the concern, was presented by the employes of the company with a handsome gold watch.

Mr. Brisedou had severed his connection with the firm and intended to return to France. Shortly before closing time the employes assembled and C. E. Hancock made the presentation on behalf of the fellow workmen. As a personal gift, Mr. Hancock presented a handsome gold fob. Refreshments were served in the factory and the occasion was made one of much merriment. Mr. King, for the employes, expressed the feelings of pleasure that they all had for their employe and how pleased they were that there were such cordial relations existing between them. The exercises broke up with the singing of "Auld Lang Syne," all wishing Mr. Brisedou *bon voyage.*

W. C. Torrey has succeeded E. H. Corthell as foreman of the train room at the Elgin National Watch Co.'s factory, Elgin, Ill.

M. S. Moses, who recently commenced business in Cleveland, O., was erroneously reported as having been formerly with the Sands-Friedman Mfg. Co. The item should have read that he was formerly in the shirt and collar business known as the Buckeye Shirt and Collar Co.

Tariff Decisions & Regulations.

The Board of Classifications of the United States General Appraisers sustained the protest last week of Hamburger & Co. on a quantity of thermometers composed of blown or opal glass and other materials, the glass being the component material of chief value.

The goods had been assessed under Par. 100 of the Tariff Act of 1897, at the rate of 60 per cent. ad valorem as "opal and other blown glassware." The protestants claimed that the goods were dutiable at the rate of 45 per cent. ad valorem under Par. 112 of the Tariff Act as "manufactures of which glass is the component material of chief value not specially provided for."

The opinion in the case was written by Judge Sommerville, who cited numerous decisions in support of his ruling that the articles in question were "not blown or opal glassware, as provided for in Par. 100, but were provided for under Par. 112, as manufactures of glass not specially provided for."

Extremely odd and attractive is the line of grotesque art novelties offered the trade by the Van Vliet, Latz Co., 434 Broadway, New York. These novelties are of porcelain, in pairs and single pieces, and are chiefly characterized by their odd and fantastic shapes: beautiful maidens and courtly gentlemen in what might be said to be "gracefully awkward" positions are combined with vases, pitchers, ash receivers, etc. The pieces are all hand wrought and show exquisite workmanship and delicate coloring.

AN INDISPENSABLE BOOK FOR WATCHMAKERS.

Practical Course in Adjusting

BY

THEO. GRIBI.

Price, $2.50.

250 pages, including 18 diagram plates; Fine Paper; Large Type; Clear Illustrations; Systematically Arranged; Solid Binding.

COMPRISING a review of the laws governing the motion of the balance and balance spring in watches and chronometers, and application of the principles deduced therefrom in the correction of variations of rate arising from want of isochronism, change of position and variation of temperature.

ELUCIDATED AND DEMONSTRATED by original experimental researches in the actual problem, never before published, showing the causes that are operative in the variation of rate, and leading to correct remedies. To which have been added chapters on

How to make a Balance Arbor with Modern Appliances; How to Clean a Watch Properly; and, the Lever Escapement—Some Current Defects in it and How to Remedy Them.

Wilde, Meriden Cutlery Co.; Mr. Delano, Day, Clark & Co.; Mr. Goodwin, Durand & Co.; E. Cooper Stone, Jones & Woodland; H. Grabowski, Dattelbaum & Friedman; A. W. Levy, Byron L. Strasburger & Co.

The Albany, N. Y., trade was visited by the following traveling representatives, last week: H. A. Macfarland, Dominick & Haff; H. E. Warncke, Meriden Cut Glass Co.; Mr. Neumann, Bergstein & Son; H. H. Day, Day, Clark & Co.; Mr. Kerrick, Reed & Barton; William B. Treadwell, Jr., Hodenpyl & Sons; E. B. Downes, Hayden W. Wbeeler & Co.; Mr. Stratton, Alling & Co.; Frederick H. Carpenter, D. Gruen Sons & Co.; Morris Weil; Mr. Norton, Smith & North; Mr. Cobb, R. B. McDonald; Jesse Carpenter, Horton, Angell Co.; Mr. Stone, White Stone Jewelry Co.; Mr Vassilett, Fletcher, Burrows & Co.; A. B. House, Steinbart & Co.; Harry Lissauer, Jackson Bros.; Sol. Karger, Sol. Lindenborn; representatives of Crane & Theurer, Hagermann & Co., Heller & Co.: R. G. Gatter, Wm. L. Gilbert Clock Co.; Mr. Michaels, Frolicbstein & England; Mr. Schoff, A. Wallach & Co.; Mr. Sweet, Waite, Mathewson & Co.; J. L. Cobb, F. M. & J. L. Cobb; representative of Charles Adler's Sons; Mr. Sylvina, New Haven Clock Co.; William S. Gaurdineer, Bassett Jewelry Co.

Washington, D. C.

Joseph Drukker, who filed a voluntary petition in bankruptcy on Jan. 21, has been granted a final discharge of his debts by the Bankruptcy Court.

J. C. Buchanan has purchased the interest of J. M. Rieman in the firm of Rieman & Ladson. The new firm will be known as Buchanan & Ladson.

Wednesday night policemen of the Fourth Precinct caught two negroes in the act of trying to enter the jewelry store of E. J. Coles, on S. 7th St., and immediately put them under arrest. When locked up the men gave the names of Walker Brown and Sam Spring. The charge of vagrancy was preferred against both men, and an additional charge of carrying concealed weapons was registered against Spring.

The Waggoner Watchman Clock Co., Grand Rapids, Mich., is said to be negotiating with the St. Louis Fair Commissioner at St. Louis, Mo., to equip the Fair grounds and buildings with the Waggoner clocks. The clocks will be utilized by the watchmen and guards employed on the Fair grounds

Canada Notes.

N. W. Smith, Inwood, Ont., has sold out his business.

William Bramley, Montreal, has just recovered from a painful operation.

A. H. Beath, Sudbury, Ont., has sold out his branch store at Copper Cliff.

K. Chowen, Copper Cliff, Ont., has given a chattel mortgage for $1,475 to A. H. Heath.

A writ has been issued against G. G. Bigger, Vancouver, by H. E. Garfield, for $119 damages.

Bloomfield Bros., Montreal, have suffered a loss of $5,000 by fire, partly covered by insurance.

Walter J. Barr, manager of the Goldsmiths Stock Co., Toronto, has gone on a business trip to Quebec.

O. D. Bowlby, watchmaker, Melbourne, Ont., has assigned to D. Lamont and a meeting of creditors has been fixed for March 30.

George Margolius, who is wanted by jewelers and others in Montreal on charges of fraud, has been arrested in Chicago and is fighting extradition.

The clock in the City Hall tower at Toronto, Ont., is about to be illuminated with 450 lights, when it will be one of the best lighted clocks in the country.

The handsome M. A. A. trophy, which was presented to the Heather Curling Club at the annual dinner of the Montreal Snowshoe Club was made by Richard Hemsley, Montreal.

F. J. Porte, Winnipeg, Man., last week left on his annual purchasing trip to Chicago, Boston, Philadelphia and New York. Thence he crosses the Atlantic for England, France, Amsterdam and Italy.

The rush to Canada this year from Great Britain has already taxed the transportation facilities, and it is assured that the immigration this year from both Europe and the United States will be unprecedented. The newcomers are of the very best class and will appreciably increase Canadian purchases.

The Canadian Manufacturers' Association, in which the jewelers of the Dominion are largely represented, have been in Ottawa during the past few days with representations for the raising of the tariff. No cut and dried plan could be presented, however, because the manufacturers could not draw up one that was to the taste of all concerned.

William Birks, of Henry Birks & Sons, was elected a member of the advisory committee of the Montreal Business Men's League at the annual meeting, held in Montreal, last week. It was decided to institute a Canadian Home Week, to cover the period of the St. Jean Baptiste celebration, and arrangements have been made with the railways to run excursions to Montreal from the eastern States, Quebec, Ontario and the Maritime Provinces, from June 22 to July 5.

In speaking of the benefits he expects to see conferred on the pupils from the institution of a technical school in Montreal, J. H. Birks, of Henry Birks & Sons, referred to the training the young man got in their establishment, where, he said, the least skilful of their chasers and engravers was paid $15 and the best men $30 a week, while one of their men was the most skilful on the Continent. Mr. Birks himself is a graduate of the Boston Institute of Technology.

Albany.

Charles James, Hamilton, O., visited friends in Albany for a few days last week.

Jacob Miller, of Miller Bros., 60 S. Pearl St., has returned from a business trip through the northern part of the State.

Ben V. Smith, who conducts the large optical establishment on Maiden Lane, has opened a branch store at 75 N. Pearl St.

Webb C. Ball, chief watch inspector of the New York Central & Hudson River Railroad Co., was in Albany during the past week.

Otto H. Fasoldt has had a large clock placed in his store window for the benefit of the public. The improvement is meeting with popular favor.

The announcement of the engagement of Paul W. Hoffman, son of F. W. Hoffman, 81 N. Pearl St., to Miss Edith I. Johnston, of Auburn, N. Y., has been made. Mr. Hoffman is receiving congratulations from his many friends of Albany and vicinity.

A very pretty wedding took place in Beauman's Dancing Academy on Sunday night, the contracting parties being Miss Emma Sachs, daughter of A. Sachs, a Pearl St. jeweler, and Mr. Julius Kaminsky of Indianapolis, Ind. Rabbi Friedlander officiated. Miss Rae Sachs and Mr. Albert Sachs, sister and brother of the bride, were the attendants. Following the ceremony a reception was held and a wedding supper was served.

Chas. J. Dale, Plattsburgh, N. Y., left last week for a seven weeks' trip to Chicago, the Pacific Coast and other points of interest.

News Gleanings.

Charles E. Barto has sold his business in Delta, Col.

G. W. Warwick has sold out his business in Tillar, Ark.

W. T. Morse, Friend, Neb., has discontinued business.

Elie Ritchott is advertising for sale his business in Wallace, Idaho.

W. T. Lloyd, Washington, Kan., has given a warranty deed for $1,250.

H. W. Alexander and wife, Sioux City, Ia., have given a bill of sale for $1,100.

J. Fitch Smith, Van Horn, Ia., has bought a jewelry stock at Petersen, Ia.

Wm. W. Denney is making extensive improvements in his store at Aurora, Ill.

A. trustee has been appointed for the business of W. R. Thomas, Celeste, Tex.

J. E. Fields has purchased the business of the Randall Jewelry Co., Randall, Kan.

A. E. Colburn will discontinue his jewelry business in Trinidad, Col., after April 1.

Frank Blaisdell has purchased the business of Warren W. Wheaton, Leslie, Mich.

O. E. Flaten, Bagley, Minn., announces that he is selling out his stock of jewelry at cost.

E. M. Young is negotiating for the erection of a cut glass factory in Cuyahoga Falls, O.

E. C. Lewis will shortly erect a 14-foot addition to the rear of his jewelry store at Lawler, Ia.

The Music Club, of Lawrence, Kan., will hold its next meeting at the home of Sol Marks, of this place.

E. B. Robinson, Blackstone, Va., contemplates removing to Clarksville, Va., in the near future.

T. J. Dunn, a general merchant in Wood River, Neb., has added a stock of jewelry to his business.

Fred L. Hall, Carthage, N. Y., is having an electric system of illumination installed in his jewelry store.

Miss Adele Marks, daughter of Sol Marks, Lawrence, Kan., has been given a place on the programme at the High School graduating exercises.

Will H. Cleaver has opened a new stock of jewelry at the old stand of the Cleaver Jewelry Co., Boone, Ia.

The building occupied by H. Kistenmacher, Tampa, Fla., was sold recently in a large real estate deal.

Julius Schmitt, Oshkosh, Wis., has added new fixtures and otherwise improved the interior of his establishment.

The marriage is announced of D. C. Correll, a jeweler of Spartanburg, S. C., and Mrs. R. Smith, of Alabama.

On account of failing eyesight, Chas. A. Cantwell, Malone, N. Y., has concluded to close out his jewelry business.

Albert S. Smith, Birmingham, Ala., has just been placed in charge of the timepieces of the United States Government Building.

William Wortman, a jeweler of Canton, O., was arraigned in court a short time ago, accused by Jacob Florey of stealing a gold ring which Florey had given to him to repair. The jeweler waived examination and was bound over to the Probate Court.

A new metal ceiling is being erected in the jewelry store of D. Schramm, Jacksonville, Ill.

It is reported that a factory for the manufacture of chronographs will shortly be erected either in Beloit or Janesville, Wis.

William P. Hillick, Fulton, N. Y., is the choice of the Republicans of that place for nomination as County Clerk of Oswego County.

Carl G. Aldrich, Barton, Vt., has purchased the business of Charles P. Buskirk, Winsted, Mass., and will take possession about April 1.

Frank C. Maynard recently moved back to his old store at Saratoga Springs, N. Y. Since the fire an entirely new stock has been installed.

W. H. Scott, who was recently burned out in Watertown, N. Y., has moved into new quarters across the street, directly opposite his old location.

A. B. Linder, Corydon, Ky., is remodeling his newly purchased premises on E. Chestnut St., preparatory to installing a jewelry and millinery stock.

The store formerly owned by Paul Satz, Ware, Mass., whose stock was attached a short time ago, has been reopened under the name of M. Satz, his wife.

Charles Swedberg, Hopkins, Minn., has inaugurated a discount sale on his jewelry stock, as his lease expires April 1 and he has no other stand available at present.

The stock of W. H. H. Needy, Hagerstown, Md., last week was considerably damaged by smoke, which arose from a fire which did about $500 damage to the building.

The store of W. A. Kemp, Pepperell, Mass., was destroyed by fire last Thursday. The entire loss to the business section of that place is said to aggregate $300,000.

John Cameron, Scranton, Pa., has a long lease on the quarters in which it is reported the new Scranton Bank is to be located, and states that he proposes to remain where he is.

Stephens & Upp, Arcola, Ill., have dissolved. Mr. Stephens will continue the business and Mr. Upp will rest for a while after which he may locate in the State of Washington.

John B. Philp, who until recently was employed at the William A. Rogers, Ltd., silverware factory in Oneida, N. Y., has gone to Lyons, where he will have charge of the buffing department in the Manhattan Silverware Co.'s works.

W. E. Palmer, West Point, Ga., contemplates moving to Opelika, Ala., about July 1. He will continue to hold an interest in his West Point establishment, which will be managed by W. R. Houston.

Thieves gained an entrance to the establishment of Robert L. Wright, Fort Payne, Ala., last week, and escaped with $300 worth of jewelry. Bloodhounds were placed on the trail, but failed to trace the thieves.

Otto A. Zedler, formerly with Bunde & Upmeyer, Milwaukee, Wis., and now secretary of the C. Preusser Jewelry Co. of the same place, recently entertained his old business associates at a dinner given at the Blatz Hotel.

Among the goods secured by Mrs. Samuel Davis, arrested in Meadville, Pa., last week, for extensive shoplifting, covering quite a period, was an alarm clock which was identified by R. L. Longville & Bro., of that place. Both Mr. and Mrs. Davis were jailed for court in default of $300 bail each, but the husband was subsequently released in order that he might care for the two small children of the couple. Mr. Davis was not charged with the shoplifting.

An agent representing D. E. Danks, Rochester, N. Y., recently lost a gold watch, valued at $22, while displaying his goods on the street to a number of prospective buyers. A boy was suspected and arrested, but the watch has not been recovered.

The 25th annual dinner of the stockholders of the Dennison Mfg. Co. was held at the Parker House, Boston, last week. Representatives of the house from all sections of the country were present, and a very pleasant time is reported. Among those responding to the toasts of the evening was President Henry K. Dyer. The souvenir of the occasion was a menu handsomely printed and illuminated in bronze, blue and silver.

C. W. Morgan, who came to Scranton, Pa., about a week ago to present a local production of "The Scout of the Philippines," registering at the St. Charles Hotel, is missing, and so are two gold watches belonging to A. B. Cohen, a jeweler of that place. Morgan, who represented himself as an old soldier, entered into a contract for the production of his war drama at the Dixie Theatre, April 21 and 28, under the auspices of Ladies' Aid No. 19, auxiliary to the G. A. R. He secured the watches on the pretense that the Ladies' Aid wished to select one of them to chance off at the play.

The inquiry by the Federal Court Saturday into the affairs of William S. Tussing, the missing jeweler of Columbus, O., now in bankruptcy, brought out testimony to the effect that, before his mysterious disappearance, some weeks ago, he had pawned with various loan agents about $43,000 worth of diamonds. These facts were disclosed by the testimony of L. Barton Tussing, a cousin of the jeweler and a prominent attorney of this city. Tussing, according to his cousin's story, went to California from Columbus, and afterward wired asking whether he had better return. He was advised to do so, and had come as far as Chicago when he became ill. From that city he went to Louisville, Ky., and hearing that he was to be arrested went farther south, since which time all trace of him has been lost.

WORDS OF CONGRATULATION.

Hope, Ark., Feb. 10, 1903.

Editor The Jewelers' Circular-Weekly:

Dear Sir—I wish to congratulate you on the successful attainment of your 34th year and the handsome appearance of your anniversary number just issued. Just 20 years ago this Summer I built a nice little two-story brick house here specially for the jewelry business. In its foundation wall I incased with cement a copy of The Jewelers' Circular. It is there still, doubtless intact, but the house has long since been exchanged for a larger and more commodious building, my business having outgrown the old one. I have ever since then always found The Circular-Weekly a staunch and reliable friend to the legitimate jeweler, and a wholesome tonic for the jewelry trade. May its shadow never grow less.

Yours, etc.,

S. W. White.

Pittsburgh.

Frank McKinley, Washington, visited the wholesale houses here last Friday.

P. C. Gillespie, of Gillespie Bros., Park building, visited New York last week.

George Reed, father of J. R. Reed, 439 Market St., is seriously ill from erysipelas.

Paul Rudert, Tarentum, is among the jewelers who will retire from business this Spring.

O. C. Graf, of Graf & Niemann, 210 6th St., returned Wednesday from the New England States.

Otto Heeren, of Heeren Bros. & Co., will leave about April 1 on his annual Spring visit to Europe.

J. R. Brown, representing Marsh & Brown, in the Bijou building, is covering his eastern Ohio territory this week.

Charles Spandau, of Spandau Bros., 542 Smithfield St., spent several days last week among the eastern wholesale houses.

Mr. and Mrs. J. A. Hardy have returned from Jamaica, where they spent the Winter months. Mr. Hardy is now in New York.

M. Morganstern, of Emanuel Grafner & Co., 616 Penn Ave., has returned from his Spring trip through northwestern Pennsylvania.

George V. Brady, one of the pioneer jewelers of Washington, Pa., is disposing of his stock and will retire from business at that place.

Frederick Forth, formerly employed by the Hardy & Hayes Co., has given up his position and gone to Detroit, Mich., to engage in business.

J. Harvey Wattles is at the Markleton recuperating. His wife will join him there this week and together they will visit Washington, D. C.

J. E. Young, an Irwin jeweler, was in Pittsburgh during the past week. Mr. Young is now conducting an auction sale at his establishment in Irwin.

Harry Bauer, who for many years conducted a jewelry store on Penn Ave., near 12th St., has closed out his business here and opened a new establishment in Blairsville, Pa. Mr. Bauer was well known in this city.

Charles W. Wattles, of W. W. Wattles & Sons, has just returned from an extended stay in Pasadena and other Southern California points. Mr. Wattles is much improved in health and was warmly welcomed by his many friends.

L. Andrews, now employed by Heeren Bros. & Co., who will enter business for himself in the near future, spent last week in the east purchasing fixtures and goods for his new store in the Farmers' Deposit Bank building, Fifth Ave. and Wood St.

The handsome silver cup to be presented by the Dispatch Publishing Co. to the champion hockey team of this district, will be given away after the hockey contest in Duquesne Gardens next week. Besides the one large cup, six smaller pieces will be given to the players doing the best individual work. The *Dispatch* trophy was purchased from the Hardy & Hayes Co.

Among the retail jewelers from nearby towns who visited the local wholesale houses last week were: Mr. Roy, of Roy & Anderson, Braddock; Samuel Liljedahl, of Liljedahl & Lundborg, Braddock; George Scharbach, Toledo, O.; Frank Roser, New Kensington; Leroy Swan, New Castle; E H. Kennerdell, Tarentum; David Segelman, Homestead; J. S. Murphey, Greensburg, and Robert H. Wolf, Smithton.

R. Davis, a diamond merchant with offices in the Jackson building, attempted to board car No. 141 of the Highland Ave. branch at Fifth Ave. and Masters Way Wednesday and was thrown to the ground, sustaining an injury to his left knee. Mr. Davis carried at the time of the accident his sample case, which contained several thousand dollars worth of diamonds and precious stones. This was thrown in the street and lay there several minutes until the owner was able to pick himself up and take possession of it.

M. J. Smit, 212 Fifth Ave., by Attorney Rody P. Marshall, has sued Marie Robinson and Morris Glantz, in Common Pleas Court No. 1, for $500 damages. A capias has been issued for the arrest of the defendants. Mr. Smit says that some time ago he sold a $300 diamond scarfpin to Miss Robinson and that she covenanted not to allow the pin to get out of her possession until certain agreements were performed. It is charged that the defendants conspired to swindle Mr. Smit out of the pin.

S. & K. Hess, who about April 1 will open a retail jewelry store at 926 Liberty St., this city, have bought out the entire stock and fixtures of Henry Maier, Allegheny, which they will move to Pittsburgh on that date. S. Hess has been heretofore in the jewelry business in St. Louis, while K. Hess was for seven years with L. Schmidt, Braddock, Pa.

Montana.

William Chamberlain, of 315 Central Ave., Great Falls, is making a special show of rings with Montana sapphire settings.

T. W. Warren, chronometer, watch and clockmaker, has opened a store in Lewistown. Besides watch repairing, etc., he is making a specialty of jewelry made from native gold.

John Burke and Pat Sweeney, of Lewistown, who have some valuable sapphire claims in Yogo Gulch, are preparing to establish a cutting plant on their claims. They have ordered the necessary machinery and engaged two expert cutters. They expect to have the plant in operation some time in April.

John Burke, of the firm of Burke & Sweeney, who are the owners of the sapphire mines on Yogo Gulch, was in Great Falls last week, making arrangements for marketing the finished products of the mines and for putting up the cutting shops which it is the firm's intention to operate. Mr. Burke stated that at present he was unable to tell just how many men would be employed in the shop. For a long time prior to Jan. 12, he said, they were tied up by a bond held by the American Gem Co. and could not proceed with development. The bond having expired, they took over the properties and expect to work them to a great extent and market the cut stones as rapidly as they are wanted."

L. F. Summers, Milton, Ia., has sold out.

Chicago Notes.

C. E. Roy, with A. C. Becken, left last week for his western territory.

Louis Albert, of Albert Bros., Cincinnati, O., called on the local trade last week.

E. C. Wineburgh, with the L. Seligman Jewelry Co., left last week for a western trip.

J. W. Whitely, of J. W. Whitely & Sons, Bonaparte, Ia., called on the local trade last week.

Miss E. A. Kelly, Wastawnaw, Kan., was in Chicago looking over various lines last week.

E. J. Walther, western representative for the D. F. Briggs Co., returned last week from a western trip.

Charles E. Graves, of Charles E. Graves & Co., has returned from a two weeks' sojourn at Hot Springs, Ark.

Frank T. Parritt, of the Parritt Jewelry Co., Bloomington, Ill., was in this city last week visiting his many friends.

E. K. Boyd, western representative for Jules Racine & Co., accompanied by his wife, will return this week from a southern pleasure trip.

M. F. Barger, of M. F. Barger & Co., accompanied by his wife and son, returned last week from a six weeks' vacation spent in California.

Leon Gross, with the local office of the International Silver Co., left Saturday for a two weeks' trip to factory "D" of the company at Lyons, N. Y.

The Stein & Ellbogen Co. closed its store Wednesday from 12 M. to 3 P. M. during the funeral of M. Kohn, father of Harry Kohn, the treasurer of the company.

C. H. Knights, of C. H. Knights & Co., is expected home this week. Mr. Knights has been spending an extended vacation, in company with his wife, traveling through California.

"Phil" Noel, with Despres, Bridges & Noel, spent a few days of the past week duck shooting at Grass Lake, Ill. Max Noel, of this concern, will leave for his territory this week.

William A. Webster, brother of G. A. Webster, proprietor of the business of E. Webster's Sons, manufacturers of pocket-books and fancy leather goods, at 66 Wabash Ave., died suddenly in Boston March 17.

C. H. Allen, of C. H. Allen & Co., Attleboro, Mass., called on the trade in this city last week. His firm will open a local office in the Columbus building about April 1, with H. A. Allen as western representative.

The Philadelphia Watch Case Co. moved its local office last week from the eighth to the 10th floor of the Silversmith's building. The new quarters are about twice as large as those formerly occupied by the concern.

The wholesale jewelers in Chicago have signed an agreement to close their places of business at 5.30 P. M. daily and at 1 P. M. Saturday from May 1 to Sept. 6. A petition to this effect was circulated by the Chicago Jewelers' Association.

The family of Will F. Juergens, of the Juergens & Andersen Co., is spending a few weeks' vacation at Hot Springs, Ark. Mr. Juergens is visiting the trade in the west in company with Louis Bruns, the concern's regular representative in that territory.

The transfer of the property on the northwest corner of State and 17th Sts., 100x151 ft., from Charles D. Peacock, Jr., to the estate of the late Charles D. Peacock, in consideration of one dollar, was filed for record last week. The transfer was made Jan. 11, 1903.

Burglars last week entered the home of Robert E. Peacock and secured silverware and jewelry, mostly wedding gifts, valued in all at $1,500. Robert E. Peacock is a son of the late C. D. Peacock and one of the proprietors of the jewelry store at State and Adams Sts.

An intoxicated man fell through one of the large plate glass windows on the Madison St. side of the store of Charles E. Graves & Co., at about 4 o'clock Thursday morning. In the window was a display of optical goods, but fortunately no damage was done to the stock.

Lloyd Milnor, president of Spaulding & Co., returned Monday from the east, where he had been on a buying trip. E. B. Wright, in charge of the silverware department at Spaulding & Co.'s store, returned Monday from a two weeks' trip which he spent inspecting the eastern manufacturing plants.

Among the buyers in Chicago last week not elsewhere mentioned were: O. E. Lentz, Clintonville, Wis.; George F. Beach, Valparaiso, Ind.; George F. Lester, Arrowsmith, Ill.; John Hobart, Armington, Ill. G. E. Carlson, Ashland, Wis.; E. B. Sherman, Grayslake, Ill.; B. N. Boyer, Whiting, Ind.; J. Frank Heald, Sheridan, Wyo. E. C. Long, Shabbona, Ill.

Oscar Tewels, who has been in the employ of Swartchild & Co. for the past 2[illegible] years, leaves this city April 20 for New York, from which place he will sail in the *Auguste Victoria* April 23. Mr. Tewels will spend three monthe traveling through Europe, combining business with pleasure and will look over the European materia market in the interests of the firm he repre sents.

W. J. Miller, western manager for th Seth Thomas Clock Co., left for New Yor Friday, accompanied by his youngest son Mr. Miller went principally to bid *bo voyage* to Seth E. Thomas and his family who sail for Europe this week, but incidentally he will visit the factory of the company at Thomaston, Conn. C. F. Mille and G. W. Payson, both traveling from th local office of this company, left for the territories last week.

Swartchild & Co. moved last week fro the third floor of the Silversmith's buildin to their new and spacious quarters in th new jewelers' building, 134 and 136 Waba Ave. The new home of this firm has abou 9,500 square feet of floor space, with a 6 ft. frontage on Wabash Ave. This is abou three times the size of their former spac The office of the firm occupies 10 feet o the Wabash Ave. front, while the materi department has the other 20 feet. Th north side of this store contains window along its full length and faces on a 25-foo alley, giving the entire floor excellent ligh In the new quarters Swartchild & Co. hav ample room to display an extensive line o new American and European tools and als to distribute and systematize the sever departments so as to greatly facilitate th business.

Kansas City.

TRADE CONDITIONS.

Spring has apparently set in in dead earnest in Kansas City. The weather is mild, but so far has been extremely dry. Prospects are bright and indicative of a brisk trade. The Kansas wheat crop is in excellent condition. The plant is greening rapidly and shows a remarkably even growth. A heavy crop of corn and oats is also expected. The manufacturing jewelry trade has kept up remarkably well during the past few months and the manufacturers have just about caught up after the holiday overflow. The retailers are not selling extensively now, but a big Spring boom is anticipated, and they are going over their stocks to prepare for it. Several retailers, however, report a particularly large demand for wedding rings. Kansas City had been suffering from a strike of drivers of the transfer companies' wagons, but this has just been settled. Large quantities of freight were tied up at the various depots here, but it is now beginning to move freely again.

J. R. Mercer is installing a new line of Easter novelties.

L. S. Cady, of Cady & Olmstead, is confined to his home by illness.

U. S. Taylor, formerly with Gurney & Ware, is now with O. H. Stevens.

The Altman Jewelry Co. is making extensive improvements in the interior of its establishment.

Mrs. C. A. Nugent, cashier and bookkeeper for the Jaccard Jewelry Co., is sick with la grippe.

The building occupied by Gurney & Ware has been sold, but no changes are contemplated in it.

Mrs. Earl Underwood has completed a Russian translation which is now in press. It will be published about April 15.

Harry B. Carswell is building an addition of 60 feet to the rear of his store preparatory to enlarging his stock considerably.

J. Welch, formerly head of the manufacturing jewelry department of the Jaccard Jewelry Co., is now with Stuhl, Hassig & Kriche.

D. B. Ward, city salesman for Woodstock, Hoefer & Co., has left for California to settle his father's estate, from which he inherited $25,000. It is expected that he will return to Kansas City.

Stuhl, Hassig & Kriche have been awarded the contract for making 100 gold and enameled badges for the Improved Order of Red Men of Kansas. The badges will be presented to members for faithful service to the tribe.

Margolis & Metzer are getting out a new design in a solid silver "Missouri" spoon, which they have had copyrighted. The design shows a Kansas City man with a "gold brick" in his hand and a Missouri farmer holding a pot of money. The farmer says to the City man, who offers to sell him the brick cheap: "I am from Missouri, and you will have to show me."

The following out-of-town merchants visited Kansas City last week: Ira W. Plank, Lyons, Kan.; J. S. Pfeiffer, Parsons, Kan.; C. A. Stevens, Nickerson, Kan.; C. R. Tibby, Webb City, Mo.; Chas. Blattner, Junction City, Kan.; W. H. Meyer, Lawson, Mo.; Leslie White, Lee's Summit, Mo.; A. Rosenfield, Leavenworth, Kan.; M. C. Rosenfield, St. Joseph, Mo.; H. A. Tiballs, Oskaloosa, Kan.; Dr. J. H. Dudley, Arkansas City, Kan.; W. F. Laraway, Glenwood, Ia.; F. C. Fagercrans, Topeka, Kan.

PRECIOUS AND IMITATION STONES.

No More Guessing No Figuring to Do.

Use the

MOE Diamond Weight Gauge and Calculator

to determine the weight of stones while in the mounting. The gauge measures the diameter and depth, and by referring those two measurements to the book of tables that accompanies each gauge, the correct weight is shown. The book has 26 tables, showing weight of 1,700 diamonds from ¼ to 7⅝ carats inclusive. By its use you avoid chipping stones through removal from settings to weigh and save trouble and expense.

Gauge and book sent to any address; prepaid $5.00. Send for descriptive booklet and testimonials.

The R. J. Hillinger & Co. Silk Guards.

St. Louis.

TRADE CONDITIONS.

The wholesale jewelry trade is excellent and there is no complaint being made by the manufacturers or jobbers. Retail trade was better, last week, than it had been for some time, partly on account of the pleasant weather that prevailed.

Sept. 1 and Sept. 2 have been assigned as jewelers and silversmiths' days at the Louisiana Purchase Exposition in 1904.

The official buttons of the Louisiana Purchase Exposition Co., which are manufactured by the Eisenstadt Mfg. Co., were distributed to the trade last week.

It is thought that Morris Eisenstadt, who has been ill for some time, will be able to go to his office in about a week. He will have to be taken to and from his office, however, in a carriage.

It is reported that the Wabash Railroad will discontinue its present system of inspecting watches of the trainmen, which has been in effect during the last two years, and will go back to the old plan in use on most of the railroads in the country. This is not because the system used on the Wabash has been found defective but because the old plan is much less expensive.

Herman Mauch last week presided at the celebration given by the patrons of the Shepherd-Monroe School, commemorative of the purchase of a piece of property by the Board of Education for a new school in the district. Since Mr. Mauch has been president of the association the sum of $300,000 has been expended through his efforts for the purchase of new lots for school purposes.

Minneapolis and St. Paul.

A. H. Schultz, Minneapolis, has gone to Kankakee, Ill., for a 10 days' pleasure trip.

Gale Robinson, Owatonna, Minn., intends to go on the road for the Reed-Bennett Co., Minneapolis.

J. L. Eggleston, Wadena, Minn., who has been in Minneapolis for several days is suffering from rheumatism.

Mr. Berndtzen, formerly watchmaker for the Powers Mercantile Co., Minneapolis, is now with the Leber Jewelry Mfg. Co.

Herman Osterberg has left Charles Olson & Co., Minneapolis, and accepted a position with the Richard B. Wegner Co., St. Paul. The Richard B. Wagner Co. has reopened the store at 201 Ryan Annex, St. Paul.

Among the out of town dealers in the Twin Cities last week were: Fred Soderberg, Braham, Minn.; S. Reinholdtson, Lake Park, Minn.; E. P. Long, St. Cloud, Minn.; Mr. Girard, Grand Forks, N. D.; C. A. Brown, Appleton, Minn.

It is understood that some vandal has been tampering with the master clock of the court house at Minneapolis, and as a result that giant timepiece, which furnishes the time for all the offices in the court house, has been out of order. Last week all the clocks in the building were 70 minutes slow. Superintendent of Buildings E. P. Sweet is now hot on the trail of the person who appears to think it a practical joke to tamper with the clock.

Pacific Coast Notes.

L. Katz, Sutter Creek, Cal., visited San Francisco during the past week.

S. P. Anderson, Arcata, Cal., is spending several days at his homestead in Bald Mountain.

Sidney Greenleaf, Salinas, Cal., is suffering from a severe stroke of paralysis and is in a critical condition.

W. N. Cobb, recently with Charles Adams, Riverside, Cal., is now with a jewelry firm in San Francisco.

F. T. Sargent, formerly of Chicago, but lately engaged in the jewelry business in Cloverdale, Cal., has opened a new store at 308 4th St., Santa Rosa, Cal.

George D. Sanborn, Sebastopol, Cal., is now on the road for a wholesale jewelry firm of Cleveland, O. His territory will embrace Northern California, Oregon and Nevada.

The big two-ton safe in F. C. Trickey's store, Pomona, Cal., which contained a large part of his stock, last week fell from the jack-screws on which it had been elevated to enable the carpenters to lay a new floor beneath it and was badly damaged. An employe barely escaped being crushed beneath it.

John Burton, the young man who was arrested at Port Costa, Cal., a short time ago, having in his possession jewelry stolen from J. Sutcliffe, Long Beach, Cal., was held to answer on that charge in the Superior Court at Long Beach recently. Mr. Sutcliffe has identified all the jewelry as that taken from his stock. The prisoner took his examination very calmly and refused to make a statement or to have a lawyer. As he was unable to give the bond required he was taken back to jail in Los Angeles.

Bailey & Plumb, Ogdensburg, N. Y., are holding a dissolution sale and will dissolve partnership about May 1. It is said that Louis E. Van Horn, a commercial traveler, of New York City, has formed a co-partnership with Harry Plumb, of this firm, and will continue the business at the old stand. Chas. Bailey, the retiring partner has rented a small store further up town, where he will open an entirely new store.

A. J. Clow, Proprietor.

San Francisco.

TRADE CONDITIONS.

The wholesalers report that trade had been affected considerably by the retarded shipments from the east, but the stock is now coming in more rapidly. The retail trade, during the past two weeks, was not over-active, owing to the heavy rains.

F. W. Stanley, San Jose, Cal., last week paid a short visit to this city.

S. W. Thompson, Salem, Ore., was a visitor to this city last week.

Joseph Schulte, Jr., Monterey, Cal., spent a few days of last week in this city.

Henry Wolff recently started on a short trip to the northern part of the State.

J. H. Bethel, Lewiston, Idaho, was in town last week, visiting his friends in the trade.

Alphonse Judis, of the Alphonse Judis Co., has returned from a short trip through the south.

H. E. Hall, of A. I. Hall & Son, is now in Los Angeles, Cal., and is rapidly recovering from his illness.

Daniel Low, of Dan'l Low & Co., Salem, Mass., is on a pleasure trip to this coast. He is now in San Francisco.

Louis Hammersmith, of Hammersmith & Field, has gone on a short vacation to the southern part of the State.

Chas. Haas, of Chas. Haas & Son, Stockton, Cal., came up to this city for a few days last week to make purchases for his Spring stock.

H. F. Wichman, Honolulu, H. I., left San Francisco last week for his home after having spent several weeks on this coast and in the east.

Alex Feldenheimer, representative of the California Jewelry Co., has just returned from a successful trip through the southern part of the State.

Richard L. Radke, of Radke & Co., has purchased four new lots in the fashionable residential district on Presidio Heights and is building some fine flats on one of the lots.

Five men from the store of Radke & Co. and five from Shreve & Co.'s recently engaged in a bowling match in which the former won two out of three games. Shreve's men are anxious for a return game and the Radke team is confident of a second victory.

The Boston Regalia Co. supplied the Grand Council of the Royal Arcanum with jewels for its officers through J. B. Whitney, its San Francisco agent. F. E. Whitney, with J. B. Whitney, is now in Los Angeles, and reports that the few rains in that section have encouraged trade to a large extent.

Pacific Northwest.

TRADE CONDITIONS.

The general trade conditions for March show little change over February, although there was a slight advance during the past week. The watch trade has been especially active. In repairing and manufacturing lines, in Portland, Ore., there was a falling off in watch work, recently, but a large increase in other lines of jewelry work.

Jewelry to the amount of $200 was taken from the store of D. F. Spiegle, Cosmopolis, Wash., last week.

Fred Sanders, formerly in the employ of J. T. Bryan, Roseburg, Ore., has accepted a position with H. C. Madsen, Cottage Grove, Ore.

E. W. S. Pratt, Corvallis, Ore., has just installed in his store a new safe. It was made to order and is especially adapted for the storage of jewelry.

Simon Burnett, of Burnett Bros., Chehalis, Wash., has decided to open a jewelry store in Aberdeen, Wash., and has made contracts for the construction of expensive and elaborate fixtures.

Edward Sutter, with the Kohn Jewelry Co., Missoula, Mont., was married recently to Miss Elys Adams. The couple will make a short trip to the east and later return to Missoula, where they will reside.

R. E. Brigham has sold his jewelry business at Schuylerville, N. Y., to George Proper and will remove to Pennsylvania.

Fred Catron, Shenandoah, Ia., now traveling representative for a large jewelry establishment in Omaha, Neb., was a recent visitor to his old home in Shenandoah.

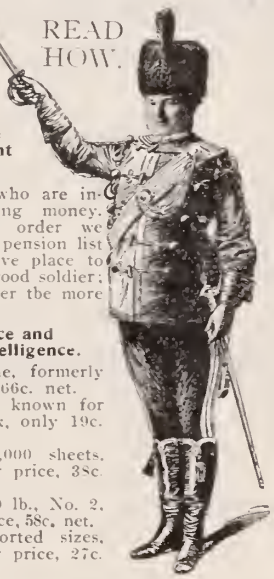
Denver.



Thomas McDougal, Breckenridge, was in Denver last week.

J. I. Schwartz wanted $20 changed recently in order to pay some of his help their wages for the week. He gave the bill to Charles Townsend, a colored porter. Townsend hurried from the store and did not return. Townsend was one of the men arrested as a suspect about two weeks ago, but as nothing could be proved against him he was released.

CALVIN CLAUER COMPANY,
103 State Street, CHICAGO.

Indianapolis.

TRADE CONDITIONS.

Trade was rather quiet, last week, but not unusually so for this season of the year. Out-of-town merchants complain that the heavy roads kept country customers away.

E. M. Wilson, Anderson, Ind., was in this city last week.

E. C. Miller has returned from a two months' trip to Mexico.

Fritz Nichols, of S. T. Nichols & Co., has recovered from a two months' siege of typhoid fever.

Three young colored girls attempted to escape with two gold rings from the store of J. C. Walk & Son one afternoon last week but were apprehended and the rings recovered.

Henry C. Klein & Sons, Muncie, Ind., have been appointed general watch inspectors for the Union Traction Co., of Indiana. This is a new move on the part of the traction company, which hereafter will require railroad grades in watches. An inspector will be appointed at every terminal point. H. E. Kinnear has been made inspector at Marion, Ind.

Norris E. Felt's store, Elkhart, Ind., was looted of a number of gold watches, rings, gold pens and other articles, between 3 and 6 o'clock on the morning of March 16, by burglars who entered by the front door, which the clerks found unlocked. The total value of the goods stolen was between $600 and $700. There is no clew to the thieves. From the appearance of the store the latter were in no hurry to leave, and made a careful selection of the goods.

One afternoon last week two well-dressed young men entered Louis Burgheim's store in the Park Theatre building in this city and asked to see some watches. Mr. Burgheim placed a tray of 10 watches before them. While they were examining these Mr. Burgheim turned to speak to another customer. In an instant the young men had darted through the door with six watches and disappeared in an alley. One of the watches was recovered the next day in a pawnbroker's office, but the thieves have not been caught.

Cincinnati.

TRADE CONDITIONS.

Business is slowing up a little with the jobbers, but the manufacturers seem to be as busy as ever. Many of the traveling men are home stocking up for a second trip.

All the travelers of Herman & Loeb are home stocking to go out next week again.

Strubbe & Co. have opened a new and handsome store on Race St., near 7th St.

The Gustave Fox Co. received a bag of 4,000 elk teeth last week from a collector at Wyoming.

Harry Bohmer, of Frohman & Co., returned from a very successful trip and Jonas Wise left last week to continue his trip.

Word has been received here that E. R. Van Suetter, Meridian, Miss., is selling out his stock at auction with a view of retiring from business.

J. C. Miller, of the Miller Jewelry Co., who is now back in this city, reports trade on the road to be excellent. The company's factory is short of men and has been working 15 hours a day.

Mr. Bene, of Bene, Lindenberg & Co., is home from a trip through the south and reports the flood conditions serious and disturbing to business. Mr. Lindenberg is back at the store after an illness of several weeks with la grippe.

Wm. W. Jackson, for 10 years with the Arcade Jewelry Store, went to Springfield, O., last week, where he was married to Miss Mollie Dodge, of that city. Mr. and Mrs. Jackson then visited the old home of the groom at Seymour, Ind., where Mr. Jackson will join his father in the jewelry business.

Mr. and Mrs. Gustave Fox have issued invitations to the wedding of their daughter, Miss Sadie Fox, to Arthur A. Spiegel. The ceremony will take place at the St. Nicholas, March 31, at 6 P. M. Mr. Spiegel is the western representative of the Gustave Fox Co., and is well known in the jewelry trade. The happy couple will go east on their honeymoon, and after a short trip will return to Cincinnati.

Richter & Phillips have consummated a settlement with the insurance companies for the sum of $6,200. The damage to their stock in the recent fire was principally from smoke and water. This house is opening

JOS. NOTERMAN & CO.,

Loose. DIAMONDS Mounted.

509-511-513 Race St.,

CINCINNATI - - - OHIO.

their new quarters at 5th and Vine Sts., where two large floors have been handsomely fitted up.

M. Kyle, of Kyle & Tate, Xenia, O., was in Cincinnati last week.

Walter Brown, the man who tried to rob the Prince Optical Co.'s store and succeeded in getting away with some goods from F. Speth's Sons, opticians, has been given a cumulative sentence of four years at the workhouse. He admitted stealing some instruments at other stores.

A daring robbery was perpetrated by two boys, aged 16 and 10, at the store of Chas. Esberger, 1116 Vine St., last week. While one of the boys had the jeweler show him a watch in the window, the other reached over the counter and took a roll of bills Mr. Esberger had been counting when the boys came in. The bills were handed to the first boy, who decided he would not take the watch and went away. The other boy looked at some chains but also went out without purchasing. After they were gone Mr. Esberger discovered his loss.

The battered and warped safe of Duhme Bros. & Co. was taken last week from the ruins of the late big fire and its contents examined and found to be perfectly safe. Not even water had penetrated to the interior and the watch movements in the drawers after being examined were found to be uninjured as were all the other articles it contained. The contents inventoried about $50,000. During the fire, after it became evident that it would reach their building, Herman Duhme asked the Chief of the Fire Department to aid in rescuing some of the stock outside the safes. This was done and several wagon loads of silverware and jewelry were taken out of the cases and brought to the City Hall. After the fire many valuable articles were also recovered from the ruins. The value of the goods thus saved will probably amount to $12,000. The insurance adjusters are engaged examining the stock and will probably render a settlement in a few days. Duhme Bros. & Co. have secured the two rooms at 138 and 140 E. 4th St., which will be thrown into one, and they will resume business at this location as soon as the improvements can be made, probably in a few weeks.

Cleveland.

W. J. Higgins, Shelby, O., called at the wholesale houses in this city last week.

A. J. Heiman, Barberton, O.; A. W. Elliott, Twinsburg, O.; Albert Zang, of J. A. Zang & Son, Alliance, O., and George A. Clark, Lorain, O., visited the trade in this city last week.

O. T. Loehr, of the Scribner & Loehr Co., left Friday to join his family for two weeks at Daytona, Fla. Chas. Keim, of the same house, has returned from Florida, after a month's sojourn, much improved in health.

The business men of Fremont have formed an organization for the purpose of settling labor troubles and preventing strikes in the factories of the busy little town. The movement has grown out of the trouble at the Clauss Shear Works as much as anything else. The organization will treat union and non-union labor alike, and will maintain a fund for the prosecution of any one who attempts to intimidate a workman who desires to go to work and will also prosecute those engaged in attempting to cause a lockout or boycott.

The daily papers, in speaking of George Willard, arrested at Chicago, have stated that he is wanted here on the charge of diamond robbery. This is an error, as it will be remembered that Willard was acquitted of the charge brought against him here.

H. W. Burdick, of the Bowler & Burdick Co., has returned from a trip among his old customers, whom he visited regularly for 18 years, but some of whom he has not seen for five or six years, since he has been off the road. He says the trip was a most enjoyable one.

Lancaster, Pa.

C. F. Johnson, Hughesville, Pa., spent several days in Lancaster last week.

P. G. Diener, Harrisburg, Pa., and Levi J. Miller, Ephrata, Pa., visited the trade in Lancaster last week.

It is reported here that Frederick L. Baker, the jewelry salesman, who is in the county jail awaiting trial, made the inquiries that led to his arrest. About two months ago the State Department at Washington received a letter inquiring whether there is an extradition treaty in force between the United States and Brazil. The writer of the letter, it has been learned, was Baker, and it was through his inquiry that he was overtaken in Brazil.

All Jobbers or Jewelers' Circular Publishing Co.

Harrisburg.

M. Albert, representing the American Electric Clock Co., of Chicago, visited this city last week.

The presence of thousands of foreign workmen in this vicinity has been rather beneficial to the jewelry business of this city.

The House has passed on second reading the Senate bill providing for an appropriation of $25,000 and a commission for the purchase of a silver service for the battleship *Pennsylvania*.

The Commonwealth Trust Co., assignee of E. L. Egolf, has advertised the real estate of Mr. Egolf for sale April 9. It is stated that this will be followed by a sale of the optical stock and machinery.

James A. Shearer has been held by the police as a suspect. He was arrested while trying to sell a box containing a large quantity of fake jewelry, which he claimed was given to him by a Mt. Holly dealer.

The directors of the newly-chartered J. W. Gitt Co., Hanover, Pa., dealers in notions and jewelry, are: George D. Gitt, Harry N. Gitt, Wm. H. Overbaugh, and Jacob D. Zouck. The capital stock is $50,000. The charter is for a term of 50 years. George D. Gitt is president and H. N. Gitt general manager.

Mayor McCormick has held Daniel Carmichael for court on a charge of larceny as bailee of a ring from Ferdinand T. Plack, 1328 6th St. Mr. Plack claims that Carmichael secured a watch and ring, saying that he would show them to his intended bride, and would either pay or return the goods the following Saturday. He failed to do either, and disposed of the ring. The watch was recovered.

A new trading stamp bill has been presented in the House by Representative Willett, of Allegheny. It takes the redemption of stamps out of the hands of individual agencies and provides that they shall be redeemed by merchants themselves, either in money or merchandise. These stamps must be redeemed in any quantity whatever. At present stamps below a certain amount are not redeemable. The Yellig bill requires that the denomination of the stamps shall be plainly printed upon the back of the stamp.

Baltimore.

Henry Castelberg was in New York last week for a few days.

The Orioles defeated Samuel Kirk & Son Co.'s team two out of three games at bowling last week.

The silver plate which covered the box placed in the cornerstone of the new Maryland Theatre and on which the inscription was engraved was prepared by the Hennegen-Bates Co., while the silver trowel used in laying the stone came from the James R. Armiger Co.

Max Rubenstein, East Bloomfield, N. Y., announces that owing to ill health he will transfer his jewelry and clothing business to his assistant, William G. Barks. The change will take effect April 1.

Optical Notes and Briefs.

Prof. M. Thomas, optician, has sold his optical business in Ogden, Utah, to C. T. Utter.

Joseph W. Browett, optician, Woodstock, Ont., has given a chattel mortgage for $151 to J. White & Co.

N. V. Smith, optician, Albany, N. Y., will shortly open a branch store at 75 N. Pearl St. in that city.

Mrs. G. Stanton, optician, has accepted a position with the Goodfellow Dry Goods Co., Minneapolis, Minn.

J. A. Smith, Saratoga Springs, N. Y., has had a neat eye fitting and testing room fitted up in his jewelry store.

Scott & Scott, Junction City, Kan., have rented the rooms adjoining their jewelry establishment and fitted them up as optical parlors.

Henry Kahn, of Henry Kahn & Co., opticians, San Francisco, Cal., has started east to visit his interests in New York. He will be gone until June.

The first woman to take an examination for the practice of optometry in the State of Minnesota presented herself for examination in St. Paul last Thursday.

Briggs S. Palmer, manager of the John W. Sanborn Co., opticians, Boston, Mass., recently underwent an operation for appendicitis. He is at the Lynn Union Hospital and is reported as doing well.

The Jas. H. Morse Optical Co., Syracuse, N. Y., has certified to the Secretary of State that one-half of its capital has been paid in. The certificate is signed by Levi S. Chapman and Jas. H. Morse.

Dr. H. A. Thompson, optician, South Bend, Ind., has moved into more spacious quarters in the McDonald block. He contemplates using the entire third floor of the new building for manufacturing purposes.

A committee consisting of an optician from each of the six leading optical houses in San Francisco, Cal., went to Sacramento about one week ago to discuss with the Governor the pending bill, the purpose of which is to require a State certificate to practice as an optician.

The engagement is announced of Ben T. Popenoe, of the Columbian Optical Co., Kansas City, Mo., to Miss Mabel A. Fisher, of Lawrence, Kan. Owing to the recent death of Mr Popenoe's mother, there will be a very quiet wedding, April 4, at the bride's home. Mr. Popenoe's home was formerly in Lawrence, but after being married the couple will reside in Kansas City.

Upon the filing of a bond for $500 Judge Dobler last Saturday in the Baltimore, Md., Circuit Court No. 2, granted the injunction asked for by Leon Levi, trading as the Maryland Optical Co., restraining William B. Brown, trading as the William B. Brown Optical Co., from publishing by circular or otherwise that the defendant has the records of all eyes examined or prescriptions filled by the Maryland Optical Co.

The following are recent graduates from the Southwestern Optical College, Kansas City, Mo.: Charles E. Jacobs, E. A. Jacobs, Ashland, O.; W. M. Hocl, Lockwood, Mo.; D. W. Miller, Indianola, Neb.; J. H. Cantlon, Macon, Mo.; W. C. Rairdon, Havensville, Kan.; Mrs. L. B. Walters, Mrs. M. E. Walker, D. W. Walker, C. L. Treadway, Kansas City, Mo.; G. E. Moore, Denton, Tex.; I. H. Pargeter, C. E. Flordin Hutchinson, Kan.; A. J. Blackwood, Sterling, Kan.

The attorney for the A. S. Aloe Optical Co., St. Louis, Mo., obtained judgment in a justice court last week against J. S. Branham for $143.29. The judgment was obtained on a counter claim filed in a suit for $26, which was brought by Branham against the above company. Branham is a delivery man who did work for the company. The relations between him and the company ceased and he claimed $26 as his due and brought suit for that amount. Attorney on behalf of the company filed a counter claim for $210. At the conclusion of the presentation of the plaintiff's evidence, the attorney filed a demurrer to the evidence. The demurrer was sustained and judgment was given for the optical company on the plaintiff's cause of action.

The Southbridge Optical Co., Southbridge, Mass., through Treasurer George M. Wells, Monday made public its annual financial statement. It contains the following figures:

Real estate and buildings	$258,45

Capital stock	$60,00
Debts	98,50
Profit and loss	790,34
Reserved for depreciation	250,00
Total	$1,198,84

Coming Annual Convention of the American Association of Opticians.

SANDUSKY, O., March 23.—The annual convention of the American Association of Opticians will be held July 7, 8 and 9, 1903 at Atlantic City, N. J., at the Royal Palace Hotel. Special railroad rates have been made for those who wish to attend. The association would like to get local or State societies to hold their meetings then, as it would be an incentive to get a larger attendance. They could hold their meetings from July 6-8 or after the national convention.

The place of meeting—the Royal Palace Hotel—is considered one of the best in the city and is finely located. The surf bathing is immediately in front of the hotel at the ocean end of Pacific Ave., on the very brink of the Atlantic, the main wing of the hotel extending to within 50 feet of the most famous esplanade in America. The location of the house will be an ideal and unique place for holding the convention, and it is anticipated that the 1903 meeting will be the largest every held.

Chas. Moe, president of the Chas. Moe Co., Chicago, recently placed on the market a handy device, whereby the weight of a diamond may be determined accurately without removing the stone from the mounting. All the measurements necessary to determine the weight of the diamond are made by means of a specially designed spring gauge. By reference to a small book which gives the weight of 1,700 different sized stones, the weight of any stone from ¼c. to 7⅝c., inclusive, can be determined from the measurements taken. A detailed description and illustration of the device will be found elsewhere in this issue.

Chili: 3 packages glass ware, $31; 2 packages plated ware, $512; 7 packages clocks, $318; 2 cases watches, $476; 1 package jewelry, $195.

Christiania: 1 case clocks, $48.

Colombia: 32 packages glass ware, $276; 2 packages plated ware, $32; 2 packages cutlery, $167.

Cuba: 146 packages glass ware, $1,332; 2 packages optical goods, $63; 2 packages watches, $178; 2 packages jewelry, $378; 8 packages cutlery, $259; 1 package silverware, $104; 28 packages clocks, $693.

Danish West Indies: 1 case clocks, $11.

Dunoon: 1 package glass ware, $75.

Dutch Guiana: 1 package watches, $41; 1 package jewelry, $20.

Ecuador: 4 packages cutlery, $188; 2 packages jewelry, $303; 3 packages clocks, $19; 2 packages glass ware, $19; 1 package plated ware, $22; 1 package watches, $76.

French West Indies: 3 packages glass ware, $38.

French Guiana: 2 packages glass ware, $18; 1 package cutlery, $18; 1 package plated ware, $32.

Freiberg: 5 barrels jewelers' sweepings, $1,875.

Gibraltar. 7 packages clocks, $125.

Glasgow: 7 packages cutlery, $144; 198 packages clocks, $4,271.

Hamburg: 1 package plated ware, $12; 3 packages glass ware, $75; 3 packages jewelry, $128; 3 packages cutlery, $1,250; 2 packages watches, $40; 5 cases ivory scrap, $2,500; 5 barrels jewelers' sweepings, $5,500.

Havre: 3 packages optical goods, $163; 2 packages jewelry, $51,379; 1 package cutlery, $10; 2 packages plated ware, $227.

Hayti: 1 package cutlery, $37.

Liverpool: 1 package silverware, $50; 6 packages optical goods, $819; 118 packages clocks, $1,705; 6 packages jewelry, $1,058; 1 package plated ware, $67; 9 packages glass ware, $220; 4 packages cutlery, $127; 2 packages plating outfits, $30.

London: 11 packages glass ware, $490; 1 package plated ware, $10; 1 package silverware, $80; 203 packages clocks, $4,097; 4 packages watches, $200.

Lisbon: 63 packages clocks, $657; 1 package glass ware, $12.

Madrid: 2 packages plated ware, $220.

Mexico: 189 packages glass ware, $1,245; 4 packages plated ware, $458; 3 packages cutlery, $85; 13 packages clocks, $186.

Oporto: 48 packages clocks, $563.

Portuguese Possessions in Africa: 8 packages glass ware, $69.

Peru: 3 packages clocks, $42; 4 packages jewelry, $177; 6 packages watches, $1,335.

Rotterdam: 4 packages glass ware, $25; 1 case silverware, $120.

San Domingo: 15 packages glass ware, $56; 5 packages clocks, $44.

Stockholm: 1 case time recorders, $75.

Uruguay: 33 packages clocks, $385; 33 packages glass ware, $244.

Venezuela: 4 packages glass ware, $45; 1 box clocks, $19.

Detroit.

E. M. Proul's lease of the stationery department of Roehm & Son will expire May 1 and the firm will conduct its own stationery department after that date.

The failure on the part of workmen who searched the ruins of the Masonic Temple, recently burned at Corunna, Mich., to find any of the jewelry stock in the store where the fire originated has caused the authorities to order an investigation.

Roehm & Son are completing alterations to their Woodward Ave. store, elevating the office, making room for two alcoves on the first floor, in which will be the cut glass and Rookwood pottery displays. The firm will act as local agents for the Libbey Cut Glass Co.'s product.

Representatives of tontine and debenture companies of Kentucky, Illinois, and other States, are opposing the passage of the bill at Lansing, prepared by Secretary of State Fred M. Warner, requiring them to make a deposit of $100,000 with the State Treasurer before they can do business in Michigan. The companies ask that the bill be amended so that when such a deposit is made in the State where the concerns are organized it shall not be required in Michigan. A compromise along this line will probably be made.

W. W. HARRISON,

MANUFACTURER OF

Umbrellas and Walking Sticks

OF THE BETTER SORT,

405 BROADWAY, NEW YORK.

SOME POINTS OF EXCELLENCE in Harrison Umbrellas, gained by 25 years of careful study of the details so essential in making an umbrella adapted to the wants of the Jewelry trade:

Exclusive Designs in Handles. Quality of Silks.
Perfection of Finish in Handles. Finest Tempered English Frames.
Compactness in Roll. Strength of Construction.

Harrison's Gold Head Walking Sticks have stood the test for more than a quarter of a century. They comprise all the Standard Shapes and are made of twenty-year 14k. Filled Gold and of twenty-year 14k. Filled Gold with 14k. Solid Gold tops, ends and name plates. Also a line of Solid Gold Heads.

The only Umbrella and Walking Stick Manufacturer in the United States not selling to the Dry Goods and Department Stores.

REES SMITH, Room 2, 45 Maiden Lane, N. Y.

Sale of a Celebrated English Jug.

CONSIDERABLE interest was shown in a recent sale in London at the well known auction rooms of Christie, Manson & Woods. The sale of historic church silver wares is in itself an event of rare occurrence, and in this instance excited interest, as the Vicar and Church Wardens of West Malling offered for sale what has been long known to collectors as the West Malling Jug.

The piece, which is illustrated herewith, was originally found in a hiding place in

THE WEST MALLING JUG.

the foundations of the church, and was no doubt intended by its maker for purposes far removed from simple ecclesiastical uses. It is described as of Fulham-Defft or stone ware, the splashings of purple, orange, green and other colors, in themselves a triumph of art. The silver gilt mountings have the London Hall mark of 1581 and the maker's mark, a *fleur de lis*, stamped in intaglio, repeated on cover neckband and foot.

The jug stands 9½ inches high and is 5⅜ inches at its greatest diameter. The body of the jug is enclosed by four vertical straps, each beautifully chased in relief, with a caryatid female figure. The neckband, 1⅝ inches deep, is engraved with festooned drapery, between whose folds are five birds. The handle is wrapped with a silver plate, engraved with formal scroll work; the lower part of the hinge, of hollow, box-like form, has on either side of the massive billet a chased cherubim; in the interlaced shapwork of the cover grotesque masks are introduced. The actual weight of the silver mounts is only about 9 ounces.

The bidding for this remarkable work began at 300 guineas and went up quickly to four figures. Finally it was knocked down to Messrs. Crichton, of Bond St. for 1,450 guineas. This may fairly be regarded as an addition to the series of "records" which have been so common of late years. Mr. J. A. Holms, a well known Scotch collector, later in the day became the owner of the jug. Mr. Holms already possesses the celebrated Tudor Cup, sold at the Dunn Gardner sale for £4,100, and the Bampton Standing Salt Cellar and Cover, which brought £325 per ounce (£3,000 in all) in December last.

Sale of Chinese Porcelains.

ANTIQUE Chinese porcelains belonging to the private collection of Richard H. Halsted brought large figures recently at an auction held in the rooms of the American Art Association, New York. The total for the 118 objects offered was $32,000, professional and private dealers doing most of the bidding. The highest bid was $1,900 paid by Knoedler & Co. for a turquoise blue vase of the period of K'ang-hsi (1662-1722). The vase was a tall oviform, 16½ inches, bottle-shaped, the whole invested with a brilliant, translucent turquoise blue glaze and coated with streaks of a darker tint.

Next in the estimation of the bidders was an emerald green gallipot of the period of K'ang-hsi, which was bought by Mrs. J. A. Hoagland for $1,500. The texture was thick and invested with a monochrome glaze of brilliant green in iridescent quality. The height was 15 inches.

Other good prices were $530 for a Camelia leaf green vase of the K'ang-hsi period bought by Knoedler & Co.; C. J. Hudson's purchase of a deep red vase of the Ch'ien Lung period at $500; an imperial yellow jar of the Ch'ien-Lung period by Duveen for $410; a white jar of the same period by "Lawrence," and a mirror-black vase of the K'ang-hsi period by Mrs. Hoagland for $825.

New Jersey Bill Forbidding Purchase of Jewelry From Minors.

TRENTON, N. J., March 18.—The bill introduced in the Senate recently by Mr. Lee which provides against the purchase of jewelry and other goods from minors has been referred to the Committee on Judiciary. That part of the bill of interest to the trade reads as follows:

A Supplement to an act entitled "An Act for the Punishment of Crimes," approved June 14, 1898:

Be it enacted by the Senate and General Assembly of the State of New Jersey:

Any person who shall buy or purchase any jewelry, hardware, waste metals, plumbers' or builders' supplies or fixtures, metal pipes or conduits, and junk of a metallic nature, second-hand clothing, bric-à-brac, or house furnishing goods from any minor under the age of 16 years, shall be guilty of a misdemeanor.

* * * * *

Any person found guilty of any crime by which this act is declared to be a misdemeanor, shall be punished as provided by the act to which this is a supplement, in cases of misdemeanor.

That this act shall take effect immediately

Frank Franklin was arraigned before Justice Carney, in the Court og Dubuque, Ia., a short time ago, charged with selling bogus jewelry. Franklin had just completed a sentence of 18 months for larceny committed in Dubuque. The court at first sentenced him to 30 days in jail, but suspended sentence on condition that he would leave town in one hour.

The Diamond Fields of British Guiana.

BY ALFRED DE ANDRADE.

(Continued from issue of March 18.)

THE present process of diamond working is still very laborious, though much improved to what it was, and some thanks are due in this respect to the advent of F. Oats (one of the pioneer directors of the great De Beers mines in South Africa). There are usually 10 or 13 men employed under ordinary primitive circumstances. One man shovels the gravel and clay to be worked into a wheel barrow; four men are employed in wheeling the barrows to where the stuff is worked; two other men melt it in a "tam," two are at the "cradle," two "jagging" the sieves, and about two or three are at the table where the gravel is searched. The wire webbing used for sieves is about 1-16 to 1 inch, and by repeated shakings in the water the gravel is washed, the clay and sand being liberated, and by "jagging" the sieves the carbons and diamonds settle at the bottom of the sieves, then after dumping the gravel on the table the diamonds can be easily seen and picked out.

It may be interesting to append herewith a statement illustrating the progress in the initiative of diamond mining made by the firm under whose auspices diamonds were first successfully found in the Mazaruni, the British Guiana Diamond Syndicate. The following is a return of the precious stones exported by this English syndicate since operations were commenced:

	No. of stones.		*No. of stones.*
1900, March	282	1901, May	1,036
" July	406	" June	760
" Sept.	279	" July	827
" Oct.	881	" Sept.	4,432
" Dec.	1,088	" Oct.	2,911
1901, March	970	" Dec.	7,769

Indeed, in reviewing the little past history of diamond mining in British Guiana, the perfectly novel features of the industry with its local and extraordinary conditions must never be forgotten. It is easy to look back and criticise, but for the pioneers of the industry there was absolutely no previous experience to be guided by. It was a perpetual groping in the dark and a necessary waiting for events, and the wonder is that with all the drawbacks of the situation so much should have been accomplished.

In conclusion it may be said that invested capital in this colony is perfectly secure; that investment in diamond mining will prove exceedingly profitable if the exploitation is directed by skill and experience. Indeed, in my opinion, great fortunes should be taken out the diamond district in the next few years. There is also money to be made in placer gold washing. In various localities the quartz is so rich as to show free gold, and from this many of the laborers made good wages by pounding or crushing it in a primitive manner and washing it out in bottles. Even with diamond placer mining it is impossible to say where it could be exhausted, for vast quantities of diamonds held in the surface sand and gravel in the extensive diamondiferous territory comprised in this area may require many years to exhaust.

Another good feature which is pleasing to consider is that the laborer is docile; that there are few quarrels among the negroes and that obedience is exacted without force or threats. I repeat, however, and with all the emphasis possible, that British Guiana is no place for the poor man of the United States, as labor is cheap. Negroes can be hired to work for 50 to 64 cents a day and their keep. The diamond mines are inaccessible except to capital, and all other branches of labor are filled with native negroes, Indian and coolies, who work for small pay.

The Moorami diamond fields have only been recently brought to the notice of the public. With the railway, the advent of capital and other means of communication, it will, in the course of a very few years, become one of the most prosperous, wealthy and populous districts of British Guiana and probably in the whole of South Africa.

It seems to have been hardly yet realized, even in British Guiana, that in the interior of that country there are to be found special physical features which, in comparison with what are considered natural wonders of the world, must be regarded as remarkable. Two of these, the frontier mountain range, commonly known as Roraina, and the great Kaitive Falls, are, each in its own way, altogether unique and are deserving of more than passing notice. Roraina is nearly 9,000 feet above sea level, and its waters add no inconsiderable streams to the head waters of the Amazon, Orinoco and Esseguibo streams that leap forth from the summit as magnificent waterfalls, sheer down to the forest slopes, 2,000 feet below. The temperature of this elevated plateau is 65 degrees Fahr. at midday and 47 degrees at night. The Kaitive Falls are about four times that of Niagara. Unfortunately, this great natural wonder, as in the case of Roraina, is shut off from the general residents and visitors by the cost and difficulty of the journey.

THE END.

What Is More Convincing than the Proof?

GIVE FAVORENE A TRIAL and you will never go back to the old way of soldering with Borax, Anti-Oxidizer, Pickle, etc. With Favorene you can flow 14-K. solder on 6 or 8 K. goods without the use of Borax and without danger of melting the goods.

Favorene was patented October 28, 1902, and is superior to all other hard-soldering solutions now on the market.

Favorene is guaranteed to please absolutely or money refunded, on hard-soldering of Gold, Silver, Filled, Alumnico, Brass and Nickel.

Parts to be soldered need not be cleaned or filed.

Obtained through any jobber.

Price, 2 oz. Bottle, 35 Cents.

WRITE FOR SAMPLE.

KLENZENE WILL REACH the hope of your expectation with amazing results.

You simply apply the solution and the tarnish disappears almost instantly and without the slightest injury either to the article or the hands; requires no rubbing, no brushing.

Klenzene leaves your work bright and clean; no dust, no powder left in the engraved parts or chasing, no rubbing or brushing necessary, consequently no scratches left on the polished articles, as you have by the use of paste or powder.

Klenzene is fully protected by a patent allowed April 9, 1902.

A trial with Klenzene and you will never do without it; saves time and trouble and does the work as you want it.

Any jobber can supply you.

Price, 3 oz. Bottle, 25 Cents.

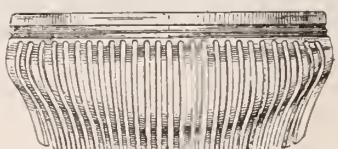
The Latest Patents.

ISSUE OF MARCH 17, 1903.



722,684. SELF-WINDING ELECTRIC CLOCK. Oscar A. En Holm, New York, N. Y. Filed Dec. 11, 1901. Serial No. 85,460. (No model.)

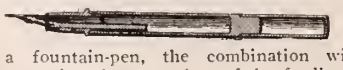
In a clock, the combination of a driving-shaft, a gear mounted on said shaft and engaging with one of the rotatable members of the hand-operating mechanism, a drum journaled on said shaft, a lever

pivoted intermediate of said gear and said drum and having a loose connection at one end with said gear and at the other end a loose connection with said drum, a movable clutch mechanism for engaging with said drum to rotate the latter in one direction, a fixed clutch mechanism for holding said drum when rotated in a direction opposite to that in which it is rotated by said movable clutch mechanism, and a spring for moving said lever and said drum relatively to each other and normally pressing said drum in the direction opposite to that in which it is moved by said movable clutch mechanism.

722,714. HAIR-COMB. Julius Kahn, Weehawken Heights, N. J., assignor to Pacific Novelty Co., New York, N. Y. Filed Dec. 17, 1902. Serial No. 135,478. (No model.)

A device of the character described having a back, teeth secured thereto and formed with substantially straight ends connected to said back by means of outwardly-arched intermediate portions.

722,824. GEM-SETTING. George W. Dover, Cranston, R. I. Filed Sept. 17, 1902. Serial No. 123,672. (No model.)



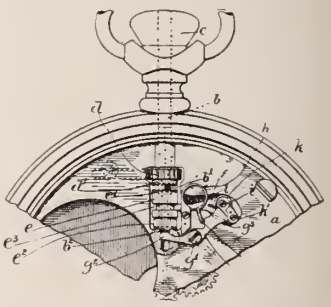
In a gem-setting the combination with the setting-prongs of a gem mounted in the prongs, a brace comprising radial arms joining the setting-prongs and means upon the ends of the radial arms for engaging the prongs.

722,910. GUN-SIGHT TELESCOPE. Geo. N. Saegmuller, Washington, D. C. Filed Dec. 8, 1902. Serial No. 134,339. (No model.)

In a telescope, a casing provided with field and erecting lenses, a fixed eye-lens mounted within said casing, and a yieldingly-mounted protector movable relative to said eye-lens.

723,112. FOUNTAIN-PEN. Paul E. Wirt, Bloomsburg, Pa. Filed Jan. 16, 1902. Serial No. 90,061. (No model.)

In a fountain-pen, the combination with the holder carrying the pen-point, of the feeding means including an element having an outer face exposed outside of the holder and provided with a polished non-adherent surface.



723,113. FOUNTAIN-PEN. Paul E. Wirt, Bloomsburg, Pa. Filed April 15, 1902. Serial No. 103,042. (No model.)

In a fountain-pen, the combination with the feeder for the pen-point extending outside of the holder, of a non-corrodible flat sheath arranged to constitute a lining for the exposed face of the feeder and having an outer non-adherent surface.

723,123. STEM-WINDING WATCH. Ander Aune, Waltham, Mass. Filed June 2, 1902. Serial No. 109,834. (No model.)

A stem winding and setting mechanism for watches, comprising a longitudinally-movable stem arbor, a sleeve-clutch thereon adapted to alter

nately engage the winding and setting trains, the lever *g* having one end in the path of movement of the stem-arbor, and having a shoulder g^4 between its end and the pivot, the lever *i* engaging the sleeve-clutch to reciprocate it and provided with an abutment and an adjoining cam-surface to be engaged by the adjacent end of the lever *g*, said lever *i* being provided with a spring extending from the abutment to the opposite side of the pivot and adapted to be engaged by the end of the lever *g* alternately with the engagement with said abutment.

Design **36,245.** BACK FOR BRUSHES OR SIMILAR ARTICLES. S. O. Bigney, Attleboro, Mass., assignor to Bristol Mfg. Co. Filed Feb. 7, 1903. Term of patent 3½ years.

SUBJECT:

"How to Develop a Watch and Watch-Repairing Department."

THE first question, "How to develop a watch department," must be divided between the two classes of jewelers, the beginner and the established jeweler, for the first step to be taken in this department is to know what kind of movements and cases to carry in stock to satisfy the tastes and fancies of the persons to whom he intends to sell. In some sections one movement may be a better seller than others, and the same may be said about the cases. In one section there may be more solid gold cases sold than filled, and in another section it may be just the opposite.

The established jeweler should know this, and the beginner should make it a point to post himself on this first step, at least to the best of his ability, before stocking this department. If the established jeweler does know this, as he should if he is active, alert and progressive, he will be able to select designs of cases that he knows will please the eye of the customers, and consequently be good sellers.

The beginner certainly will not be posted as well as the established jeweler, but if he is a good business man his tastes will suffice in selecting new and up-to-date designs which he will be sure not to carry in stock too long to become old and shopworn, and consequently spoil the appearance of the others.

The watches should occupy the first case, or more if necessary, in the jewelry store, for watches always have been and still are the leading line in the jewelry business, because to the majority of the people they are a necessity. The people could go without almost everything else in the jewelry business, if necessary (except the optical goods, of which the majority of jewelers now carry a full line).

The watches should be placed in trays made especially for that purpose so as not to have them come in contact with one another and become scratched. They should always appear fresh and new, for the appearance of an article goes a great way in making a sale; for instance, one jeweler may have a case with a good American movement, and may be marked $16.00, but the appearance of the case is not what it should be, owing to carelessness. Another jeweler may have the same case and movement marked one or two dollars higher, but the appearance of the case and movement is fresh and new, although he may have carried it in stock for quite some time, and it will be easier for him to make the sale at a higher price than it would be for the jeweler who had the same article marked lower, but who had been careless and negligent.

The movements should not be cased until a sale is made. Some of them, however, should be displayed among the cases in the glass dust-proof boxes in which the manufacturers send the movements. The movements can be shown to the customer in the boxes, as well, if not better, than in the cases, for the customer can look at them without the movements being exposed to the dust and dirt, and, besides some patrons, while looking at a movement in a case, will touch the plates of the movement in asking a question, which will always be sure to take the finish off the plate. This will very seldom happen if the movements are kept in the glass holders.

In not casing the movements the jeweler also saves the lids of the cases from becoming scratched and marked by continually opening them for a customer whereas if there are no movements in the cases, the lids need not be closed tight when placed in the trays, will always be easy to open, and the appearance of the cases will be preserved.

Each and every movement should be properly regulated before leaving the store. A great many jewelers err in that they buy a number of movements and do not examine or regulate them, and when a sale is made they may case a movement which is not in condition to leave the store, even though it may have come direct from the factory. The customer may carry the watch a day or two and find it does not keep correct time. In many cases the watch may stop from some slight cause, and this leaves upon the customer a bad impression which could easily be avoided if the movements were properly attended to beforehand.

On the cases should be marked the prices in plain figures on a neat price tag giving price complete with a seven jewel Elgin, Waltham, or other movement. A price list should always be kept handy so as to know how much to add to the price of the case if the customer desires a higher jeweled movement. Never leave the tags exposed, for they soil the appearance of the trays. A strict record should be kept of all watches sold, including number and style of case and movement, date bought and sold, and buyer's name. The number of record should be scratched on the inside lid in small figures so as not to be noticeable.

If possible, a jeweler should try to be appointed watch inspector of one or more of the railroads in the section in which he is located, for it will be of great help and

Prize Essay Competition—No. 11.

Three prizes, $20, $10 and $5, will he given to writers of essays on the subject:

"How a Jeweler Can Profitably Conduct a Camera Department."

The prizes will he awarded to the writers of the best and most reasonable essays. The ideas expressed, rather than the language used, will he considered in making the awards. The essays will he lettered when received and the judges will not know the identity of the writers until after the decisions have been made.

Essays must he in the office of THE CIRCULAR-WEEKLY by April 15. Write plainly and legibly and on one side of the paper only.

The right is reserved to publish any or all of the essays received. Only those connected with the trade are allowed to enter this competition.

Grand HINTS to JEWELERS

benefit to his business. Advertise watches freely in the local papers, and at times it may be very well to offer as a special inducement, for a short time only, a watch with an American movement at a low price, giving the same guarantee and being as particular as though receiving the regular price.

(To be continued.)

Idea for a Guessing Contest.

MANY jewelers find guessing contests useful to promote their business at certain times but it often becomes apparently impossible to hit upon a feasible scheme that has not been worked to death. Guessing the number of beans in a jar, the time a clock will stop, the length of a chain, the number of links in a chain, and other schemes of that nature, are quite familiar. Although they have not entirely outlived their usefulness, still most jewelers like to have something new. For their benefit this idea has been suggested:

Secure a fern ball such as are imported from China and Japan. Hang it in a conspicuous manner in a show window. Close to it have a cardboard sign reading something in this way:

THIS IS A FERN BALL.

It was imported from Japan.

It has the interesting habit of developing foliage in its present state.

It is now growing.

We will give to the customer who guesses nearest to the day and hour that this fern ball develops full foliage any $10 article in the store.

Such conditions as might be desirable might be stated. The usefulness of the fern ball might be extended by using it for a second contest when it was in full foliage. A prize might then be offered to the customer who guessed nearest to the time the foliage would die. It would be good to secure the services of a well informed florist or other person whose knowledge would be accepted by the public to determine when the fern ball was in full foliage as well as when its foliage was dead.

The fern ball and its peculiarities are really interesting and if well advertised such a contest ought to attract much attention to any window in which it was displayed for the purpose indicated. When in foliage it would be an attractive decoration to the window. The dormant fern balls can be bought in almost any city for 25 cents.

As these paragraphs are being written, the writer is informed of a storekeeper in a city of 20,000 people (not a jeweler) who aroused a great deal of interest by placing two of these balls in his window. One was marked "No. 1" and the other "No. 2." He offered a good prize to the customer who guessed correctly which ball would first show foliage. His window was a center of attraction for half the people in the business section for several days and the interest was so great that several outside bets were made on the result.

Naturally this phase of the matter brought the store very prominently to the attention of men who might not have been interested in an ordinary guessing contest. At the same time the female portion of the city's inhabitants were certainly quite as much interested as they would have been if the men had not developed their betting interest.

Of course not every jeweler could cause such a state of affairs, and a great many who might be able to would not wish to have their stores the center for a scheme of that nature. But there is an idea in the foregoing that some CIRCULAR-WEEKLY reader ought to be able to utilize profitably after he has modified it to suit the conditions that surround him.

THE COMMENTATOR.

The Purchase of Discontinued Patterns by Department Stores.

"ONE of the ways in which department stores make competition for the small jewelry dealer hard to bear," recently remarked a retail jeweler, "is by the purchase of 'discontinued patterns.' These 'discontinued patterns' are designs that have become *passé*, that have gone out of general vogue. Almost all of the dealers will probably have some of them still in stock, bought at the regular price.

"The department store, having an avenue for the sale of goods in large quantities, is continually in search of some article, which, by clearing out, they can obtain at a greatly reduced price, if not, indeed, at their own figure. Looking round for such an article, they may find that the manufacturer or jobber has a large stock of these on hand. They make the latter an offer, and he, recognizing that the article is depreciating day by day, may be glad to get rid of them in bulk even at a loss, fearing a greater.

"The department store then throws these goods on their 'bargain counter,' advertising to sell them at a price with which the retail jeweler cannot possibly compete. The only thing that the latter can do, if he has been caught in this way, is 'to grin and bear it.' Either he must sell these out at a great loss, or send them back to the manufacturer and have them melted, and stand the loss that way."

The retail jeweler relapsed into silence, gazing into vacancy, and perhaps unconsciously hummed, "The dealer's lot is not a happy one."

THE ONLOOKER.

A Model Jewelry Store.

THE new establishment of the Gale Jewelry Co., Norfolk, Va., is a good example of a model jewelry store. The prominent sign is a special feature of the front and was erected with a special view of attracting attention to the new quarters.

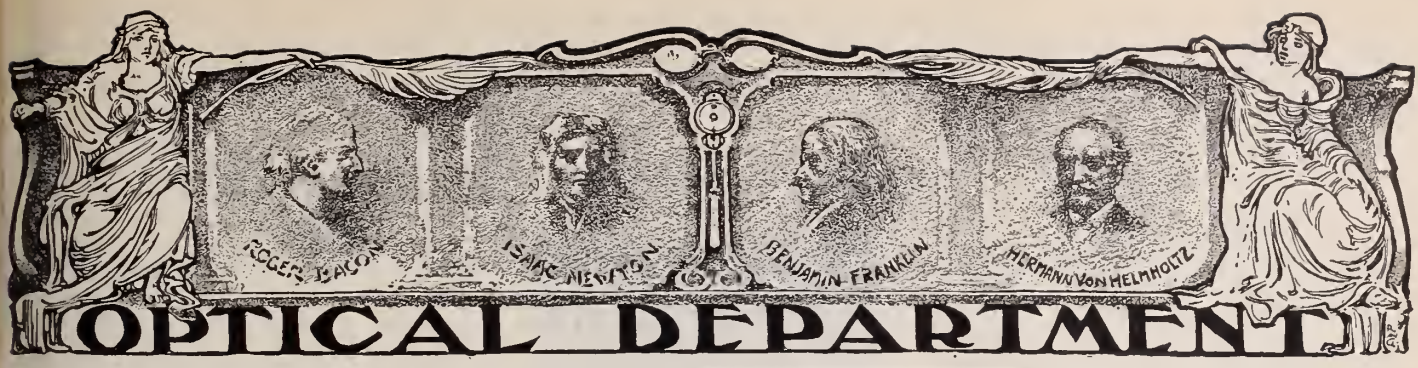
Around the sign are 32 electric lights, and upon its face appears "Gale's Jewelry Store," in round, gilt Tiffany letters. The windows present a show case appearance, with handsome brass signboard around the front and side of each window. Upon these signs read, in Tiffany, Roman, black letters, "Fine Diamonds, Gold Watches, Sterling Silver, Bridal Presents." In the top of the windows there is a large number of electric lights, which by means of mirrors throw a soft, brilliant light upon the goods displayed. At night the effect of this front is one of wonderful brilliancy, making the store one of the most attractive in the city.

AN ATTRACTIVE JEWELRY STORE SIGN.

Upon entering the store one is at once impressed with the bright and cheerful appearance, light being soft and mellow, the very best under which to select diamonds. The ceilings and walls are beautifully tinted and hand decorated. From the ceiling are suspended four elegant combination electric lights and upon the side walls are handsome quartered oak brackets for the display of clocks, statuary, etc. The office is an alcove, neatly arched and near the center of the store. All the furniture is of quartered oak and the side cases are fitted with the most improved electric lights.

In the rear is the optical department, handsomely fitted with rugs, settees and chairs for the accommodation of patients, and is presided over by Dr. A. Weck. The office is equipped with the most modern appliances for the careful examination of the eye.

Blank's Patent Opera and Field Glasses,



made by the celebrated L-E-M-A-I-R-E, of Paris,

are the only glasses on the market permitting the free use of both hands in handling the programme or other article, besides combining the quickest focussing attachment ever produced, and the certainty of not dropping the glasses. No other opera or field glasses possess these features. The ring is easily taken off and a handle attached or vice versa.

FOR SALE BY ALL REPUTABLE JOBBERS.

SOLE AGENTS.

Resume of a Lecture Delivered by Prof. Wm. Fox Before the Optical Society of the City of New York.

BY E. LE ROY RYER.

AFTER a few preliminary remarks, wherein it was shown how a pencil, placed behind a slab of glass, was, when viewed in such a manner as to have the line of vision form an acute angle with the surface of the slab, apparently displaced—this displacement increasing in proportion to the obliquity of the gaze—the professor proceed-

ed at once to allow the members to demonstrate that the refractive index of glass is, as compared with that of air, as 1.5 + is to 1.

The slab of glass was placed in position, standing upon its edge on a sheet of paper, as shown in diagram. Two pins were inserted at P and P'. With the eye at D, the pins P P' were sighted through the glass and the third pin, K', was so placed as to appear in line with P and P'. At K the fourth pin was placed, being likewise in line with other pins, P, P' and K'.

The slab of glass was then removed, and, contrary to expectations, it was found by drawing lines A B and D C, passing through P and P' and K and K', respectively, that the four points, P, P', K and K', were not within the same straight line, but as shown in diagram.

Line H G was drawn through A perpendicular to the surface of the slab. Points A and C were connected and the line formed, A C, prolonged to E. On line A B was laid i, being 10 centimeters distant from A and from this point, i, was drawn the line i M perpendicular to H G and forming the line of the angle of incidence. A similar operation was performed between the upper surface of the slab, *i. e.*, point J was found on the line A E, 10 centimeters distant from A. Line J N was drawn perpendicular to H G, forming the sine of the angle of refraction.

The lines M i and J N were measured and found to equal, respectively, 75 and 48 millimeters. (These figures will vary according to the positions first selected for pins P and P'; the ratio between the two measurements, however, remains fixed.)

The formula having been given, the following results were obtained:

$$\frac{m\ i}{a\ i} = \frac{75\ M\ M}{100\ M\ M} = \sin M\ A\ I = \text{sin of the angle of incidence.}$$

$$\frac{J\ N}{J\ A} = \frac{48\ M\ M}{100\ M\ M} = \sin N\ A\ J = \text{sin of the angle refraction.}$$

$$\text{Index of refraction} = \frac{\sin M\ A\ I}{\sin N\ A\ J} = \frac{75}{48} = 1.5 +.$$

The professor then reversed the order of things—made the drawings, using the results just found, and, by placing the glass slab upon the drawing, proved in a practical way that the calculations were correct.

Full Text of Bill Recently Introduced to Regulate Practice of Optometry in State of Pennsylvania.

HARRISBURG, Pa., March 18.—The full text of the bill recently introduced in the State Senate "to define and regulate the practice of optometry in the State of Pennsylvania" is appended below; it has been referred to the Judiciary General Committee and is still in committee:

Be it enacted by the Senate and House of Representatives of the Commonwealth of Pennsylvania, in General Assembly met, and it is hereby enacted by authority of the same, that,

Section 1. The practice of optomery is hereby defined as the employment of subjective and objective mechanical means to determine the accommodative and refractive states of the eye, and the scope of its functions in general, or the art of adapting glasses to the eye by using such skilled means as will determine their choice.

Sec. 2. Within 30 days after the passage of this act, the Governor of the State of Pennsylvania be and is hereby authorized and directed to appoint a Board of Examiners in Optometry, consisting of five resident opticians, engaged in the actual practice of optometry, three of whom shall have successfully passed their examination in the Optical Society of the State of Pennsylvania. The term of each member of the Board shall be three years, and until his successor is appointed, except that in the original appointment of the members, two shall be appointed for one year, two for the term of two years, and one for the term of three years, from July 1, 1903, and vacancies shall be filled for the unexpired term only.

Sec. 3. Every person desiring to commence or to continue the practice of optometry, except as hereinafter provided, shall pass an examination before said Board of Examiners to determine his fitness therefor, which examination shall be conducted at such times and places, and in accordance with such rules as said Board of Examiners shall appoint and adopt. Every candidate successfully passing such examination shall receive from the Board of Examiners a certificate of examination. Every person who shall have been continuously engaged in the practice of optometry for more than one year prior to the passage of this act, shall be entitled upon submitting an affidavit of such fact to the Board of Examiners, to receive from the Board a certificate of exemption.

Proper record in books for the purpose shall be kept by the Board of all examinations held and certificates issued by it.

The holder of either of such certificates shall also present the same for record in the prothonotary's office in each county in which he shall practice optometry.

Sec. 4. The fee for such examination shall be $15, and for a certificate of examination $10, or for a certificate of exemption $5, payable in advance to the Board of Examiners by the person passing such examination or receiving such certificate, which fee shall be in lieu of all other compensation to said Board, and the fee to be paid by the certificate holder to the prothonotary for recording such certificate shall be 50 cents. Provided, however, that in case of failure of an applicant to pass a satisfactory examination, he will be entitled to a second examination without charge at the next succeeding meeting of the Board.

Sec. 5. Any person not a holder of a certificate of examination or exemption, duly issued or recorded as above provided, who shall after Jan. 1, 1904, practice optometry within this State, shall be guilty of a misdemeanor, and upon conviction shall be punished by a fine of not less than $20, nor more than $100, or by imprisonment in the county jail for not more than three months, or both at the discretion of the Court. And all fines thus received shall be paid into the common school fund of the county in which such conviction takes place.

Sec. 6. The provisions of this act shall not be construed to apply to physicians duly licensed to practice medicine under the laws of the State of Pennsylvania, nor to persons who sell spectacles or eyeglasses as merchandise without attempting to traffic upon assumed skill in adapting them to the eye.

Sec. 7. This Act shall take effect and be in force from and after its passage.

It is thought that this bill has had its inception in the desire of the thoroughly qualified opticians of the State to put a stop to the present method of giving a jeweler a few weeks' instruction in the profession of optometry, and then presenting him with a diploma setting forth that he is eminently fitted to pass upon eye troubles and furnish the proper glasses for such troubles. It is argued that the present tendency is to turn a man loose upon a community as a qualified optician in entirely too short a space of time after he has entered upon the study of optometry. The bill has the endorsement of opticians of the old school.

The Missouri State Association of Opticians will hold its third annual convention in Sedalia, Mo., May 13. The meetings will be held in the Criminal Court Room of the Court House.

For Optical Notes and Briefs See Page 60.

Glass for Optical Purposes.

(From an illustrated lecture by Dr. GLAZEBROOK, F. R. S., reported in the *Optician and Photographic Trades Review.*)
(*Continued from issue of March 18.*)

THE surfaces of the lens as I have drawn them are portions of spheres. It is pretty clear how we might correct this lens so as to bring all the rays to a focus more nearly at the same point. It is clear that the upper portion of this lens refracts the rays too much, they cut the axis in front of the rays from the center. Therefore if we could flatten our surfaces at the

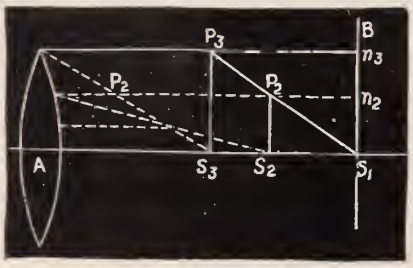

FIG. 11.

edge so as to have less curvature there, we should probably be more successful in bringing the rays to one focus somewhere between S and S_3. Of course, however, we must remember that for practical purposes it is necessary to work with surfaces that are portions of spheres, because if we do not do that we are stopped by the very great difficulty of working the shapes of the lenses accurately and exactly; and it can be shown, if we examine the question more completely and more fully, that we cannot in any case completely correct spherical aberration for such a single lens, though we can by properly choosing the shape of the lens make it very much less than in the figure.

Now I should like to explain how we may make a diagram which will show us the amount of spherical aberration in the case of any lens. Let the line A S_1, Fig. 11,

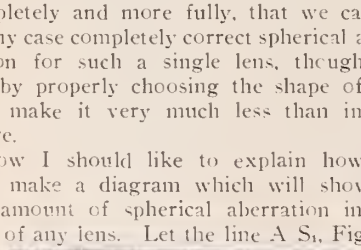

FIG. 12.

represent the axis of the lens. Let us take a line S_1 B at right angles to the axis, and suppose that the central rays come to a focus at the point S_1; let us divide the lens for simplicity into three parts and assume that the rays from the central part meet the axis in S_1, those from the middle zone in S_2 and those from the outer zone in S_3; of course, in this figure the displacement of the focus is very greatly exaggerated. Now suppose we take points n_2, n_3 on the vertical line S_1 B to represent the zones as it were, and through n_2 and S_2 draw horizontal and vertical lines P_2 n_2 and P_2 S_2 to meet in P_2. Then P_2 may be taken to represent the aberration of the zone represented by n_2; similarly P_3 obtained in the same way represents the aberration at n_3.

Now if instead of three zones we took a large series we should obtain a series of points like P_2 or P_3; these points would lie on a curve and by means of this curve we can represent the aberration due to each zone of the lens. Hence it is clear if we

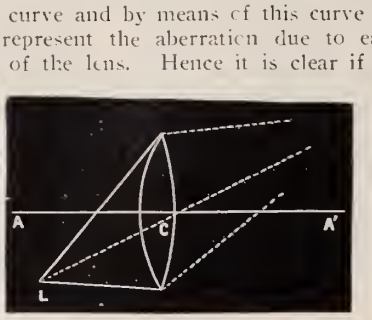

FIG. 13.

want to get rid of the spherical aberration of the lens we must make the curve as nearly as possible coincide with the vertical line B S_1, and one of the objects that we have to aim at in making lenses will be to succeed in bringing the curve as close as possible to the vertical line. We shall have to examine later how that can be done. This then is the first serious error of a lens which we wish to correct, the error due to spherical aberration.

Now, in the figure I have just drawn, and the statement I have just made, I have assumed that the source of light was on the axis of the lens, and we can suppose

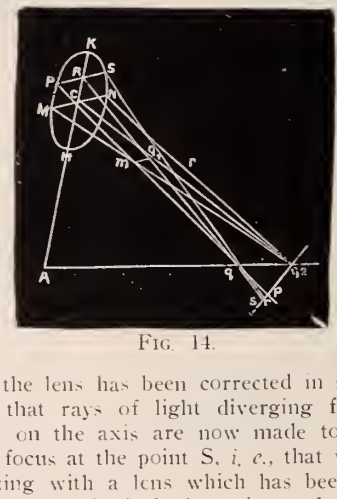

FIG. 14.

that the lens has been corrected in such a way that rays of light diverging from a point on the axis are now made to come to a focus at the point S, *i. e.*, that we are working with a lens which has been corrected for spherical aberration—what then is the next thing we have to deal with? In almost all cases we are not concerned solely with a source of light which lies strictly on the axis of the lens. We are concerned with getting the image of an object, which is in many cases somewhat near the axis of the lens, but not exactly on it. We have got then a small object, as L *l* of Fig. 12, and we are going to consider the formation of an image of this small object produced by a lens at S. The lens has been corrected for spherical aberration so that the image of L, the center of the object, is supposed to be at L'.

Now we can again divide up our lens into a series of zones. We take the central zone first: The elementary theory of lenses enables us to calculate on certain assumptions the position of the image of *l* which is not on the axis formed by the center portion of the lens. Let us suppose that, as shown in this diagram, an image of *l* as formed by the center portion of the lens, is found at the point *l'*. Does it follow that if we consider the pencil of rays which fall on the lens at some considerable distance away from the axis, it will also form an image of *l* at *l'*? It does not so follow the image of *l* formed by such rays would in general be at *l'*, and the condition that the image of *l* as formed by rays which travel near the edge of the lens shall be at *l'*, *i. e.*, that *l'* should coincide with *l'*, is an important condition.

That the condition is known generally to opticians as the sine condition, because if you call U the angle at which any ray makes with the axis of the lens, and if you call U' the angle which the corresponding refracted ray makes with the axis of the lens, the condition that these two image

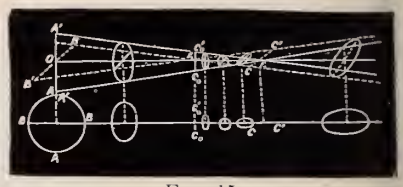

FIG. 15.

l' and *l''* should coincide requires that the fraction obtained by dividing sine U by sine U' should be the same for any two corresponding rays. I do not think I need trouble now as to how this comes about but in order that you may get a good image of a small object placed at L, formed at L', you must have this sine condition satisfied for all possible rays. Now it is not difficult to show that this sine condition generally speaking, will only be satisfied for two points for which the lens has its spherical aberration corrected. These two points are known as the aplanatic points and a lens which has satisfied these conditions is said to be an aplanatic lens.

So far I have only dealt with rays of light which fall on the lens in a direction more or less nearly coincident with the axis of the lens. The axis of the pencil of rays has not been supposed to fall obliquely on the lens. I now come to the defects produced by oblique incidence. In Fig. 13 A C A' is the axis of the lens. Light from a point L falls obliquely on the lens and is refracted; we wish to consider what happens to it. This is shown in Fig. 14 in which I have not drawn the incident rays of the pencil. The figure H M K N represents the portion of the lens on which the rays fall and these rays coming from a point behind the lens are refracted. The refracted rays are drawn, and you will notice that they pass very approximately through a straight line *m* q_1, and also through a second straight line *r* q_2.

There is no point anywhere through which all pass. These rays are supposed of course, to be formed by refraction at a spherical surface according to the ordinary laws of refraction. There is no point through which all the rays will pass, they will pass approximately, however, through two straight lines called focal lines; the one straight line *m* q_1 is at right angles to the paper and is called the primary focal line, the other is in the plane of the paper and is called the secondary focal line. What we want to remember is that when the rays are incident obliquely on a refracting surface such as this we do not get—unless we correct the action of the lens—we

Optical Department.

not get the rays converging to one point, but to two straight lines, a primary focal and a secondary focal line which may be behind or in front of it according to the properties of the lens.

I have one or two other slides to show this, and to illustrate shortly how we can correct or get rid of this defect. In Fig. 15, ABA'B represents a portion of a surface on which rays of light are incident; some of these rays are drawn in the figure, and the curves below are intended to show what is the shape of a section of that pencil of rays as you take a screen back from the lens itself through the pencil.

The section is circular—at first, when you get a little distance away it becomes more or less elliptical with its longer axis vertical. As you get further and further away it becomes a straight line C_0 C_0', one of the focal lines. As you go further away again the section becomes slightly elliptical, and finally some little way further you get a point at which it is more or less approximately a circle; this is known as the circle of least confusion. As you pass on further you get an elliptical section again but the axis of the ellipse is at right angles to what it was previously. Then you come to another straight line CC' which is at right angles to the first straight line. This gives you the form of a pencil of rays which are supposed to diverge from a point, and which fall on a lens obliquely after they have traversed the lens. So that if you were to receive these rays on a screen, you would nowhere get on the screen a sharp, clear image of the point from which the rays diverge. You would get a circular blur becoming more or less of a straight line near the focal lines.

The problem then that we have before us if we wish to form an image when working with light which is falling very obliquely on a lens is how to alter the surface—the shape of the lens, or to combine the lens with one of a different class, so as to bring together the two focal lines and make them coincide with the circle of least confusion, making that circle very small indeed, practically a point. When this is done the lens is said to be stigmatic; we want to correct the astigmatism of our lens inasmuch as it does not bring the rays of light to a point. We shall see shortly how we can do that.

(To be continued.)

How We See Single.

By N. P. Hackett, M.D., in the *American Inventor.*)

(Continued from issue of March 18.)

IT may be observed that the nasal and temporal sides do not correspond anatomically, but they do really correspond in function, or practically, for it corresponds with the decussation, or the blending, of the optic nerve fibers in the chiasm.

The chiasm is the place in the brain where the fibers of the two optic nerves cross each other, and join in a somewhat complicated manner. It is sufficient for the present purpose, to understand that some of the nerve fibers from the nasal side of one retina blend with those from the temporal side of the other; and following the optic tracts, run back to the same visual center in the brain. In this manner the two images are blended, and are perceived as one. In a telephone system, if two wires were to become united, and if these should conduct two sounds, precisely alike and simultaneous, to the same instrument, the two would be heard as one. Of course, the two images in the two eyes are exactly alike, and are conducted at the same instant.

We have reasons to conclude that the faculty of single vision is acquired, but very early in life. Observing the manner in which infants roll their eyes, rarely turning both in the same direction, it is hardly possible for the image to fall on corresponding parts of the retina. Young infants do not have an intelligent expression, until they acquire the power of single vision; so the acquisition of this power is one of the first steps in ocular and mental development. This seems entirely reasonable when we consider that infants have to learn to use the other muscles of the body, those of the hand, of the feet, mouth, etc.

The act of vision is involuntary, but the manner of seeing, or looking at objects, is directed by muscles either entirely voluntary or partially so. We exercise our will to turn the eyes up, down, outward, or to fix them on some near object. These muscles which turn the eyes in different directions require the nicest sort of adjustment. They must be perfectly balanced, both in strength of the muscle itself, and in the nerve impulse. Anything that interferes with this equilibrium may prevent the images from falling on corresponding parts of the two retinas, and so produce diplopia, or double vision.

The specific causes of double vision may exist in the eye itself from lack of development, or it may be from some brain disturbance. Thus when a person is cross-eyed, he will have double vision, until he learns to disregard, that is, not to see, the image in the squinting eye. This almost always occurs, whether the eye is congenitally crossed, or becomes so from disease. When any of the muscles of one eye become paralyzed, the person will see double, for the paralyzed eye cannot follow its fellow in its movements

One may illustrate double vision by holding two pins in the same line, one 16 inches and the other eight inches, and look at the more distant pin, when the nearer one will appear double. Since the gaze is fixed on the further one, the image of the nearer one will not fall on a corresponding point in both eyes. If one looks at the moon, and presses on the side of the eye with the finger, it will be seen double; because the pressure displaces one eye from the line of vision of the other, beyond the power of the muscles to adjust it. Even an unbalanced condition of the muscles, so slight as not to be observable, may produce diplopia.

Prisms that are too strong to be overcome by the eye muscles, produce diplopia, since they change the direction of the rays of light, and make the image on a different part of the retina. Malingerers who pretend to be blind in one eye, may be detected by placing a strong prism before one eye, and have them to look at an object with both eyes; if they see two objects, they must be able to use both eyes. Sometimes double vision is a temporary symptom of no importance, but at other times it may point to a very serious lesion of the eye muscles, the nerves, or the brain.

The New Eyeglass.

TRULY Johann F. Volle has given us an eyeglass in the patent described in a recent issue of The Circular-Weekly. Though he is the first to secure the idea by letters patent, many will recognize it as one which they frequently thought of, but which they did not consider worthy of exclusive ownership, inasmuch as it seems impractical. It is evident that the wearing of a thin lens of this nature would be wrought with danger, yet should the lens be made sufficiently thick

A UNIQUE EYEGLASS.

to be reasonably safe when worn it would produce a "bulgy" effect.

Of course, it will be urged that in wearing the ordinary lenses before the eyes as we now wear them some danger arises inasmuch as they, too, may be broken, but with the latter the lids may intervene, protecting the eyeball, whereas with Volle's lens a break means certain and direct injury to the eyeball. Again, it would too frequently irritate and cause inflammation. The flow of the lachrymal fluid would be interfered with, and as this fluid could pass on one side only of the inserted lens, *i. e.*, between it and the cornea, or between it and the conjunction lining the lids, either the cornea or the conjunction would suffer from lack of a proper supply of this most necessary fluid.

To the writer it appears that that which at first glance seems to be the greatest objectionable feature, namely, the danger of breakage, is really not as serious by far as this latter objection wherein one or the other surface is kept dry. The former objection may in time be overcome by obtaining a material which, while transparent, and capable of being so formed as to produce the required optical effect, will, at the same time, be of a pliable and non-breakable nature—this lies wholly within the possible, even the probable, but to guide the lachrymal fluid in such a manner as to eliminate danger on this score is an entirely different problem and one standing small chance of being solved. Could the above objections be overcome these lenses would prove a godsend. A worthy field for investigation is hereby offered.

George A. Barron, secretary of the New England Association of Opticians, is remodeling his place of business on Winter St., Boston Mass.

THE BEST IS ALWAYS THE CHEAPEST; THIS applies to Watch Glasses as well as to anything.

The best Watch Glasses are those that are carefully made, from the proper stock, properly labeled and correctly gauged.

The CHEAPEST Watch Glasses are those which require the least time to fit, and in which there is the least percentage of breakage.

The **V. T. F.** Glasses combine all of these cardinal qualities and BEAR THIS LABEL: Insist upon getting the **V. T. F.** and take no other.

REVERSE.

agnificent Memorial Clock Tower for Brown University.

BROWN UNIVERSITY is soon to have a clock tower which will not only be of ractical value, but a striking addition to ie campus. It will be artistic in design and its general outlines will harmonize with e other university buildings. The plans for already have been decided upon and the ntract for the work of erection awarded. Workmen will commence laying the foun- ations as soon as the frost is out of the

THE BAJNOTTI MEMORIAL CLOCK TOWER.

ound and the construction will be pushed rapidly as is consistent.

The tower is the gift of Paul Bajnotti, of urin, Italy, Italian Consul General at Liv- pool, and is a memorial to his late wife, aroline Matilda, daughter of Nicholas rown, now deceased. The plans for it ere decided upon last August. Mr. Baj- otti viewed some of the more famous cam- niles in Europe in an endeavor to find me design that appealed to his tastes. In e meantime various architects had been work on plans, and finally the one sub- mitted by Guy Lowell, of Boston, Mass., was adopted.

The tower will stand on the northwest corner of the front campus, cor. of Pros- pect and Waterman Sts. The lofty tower will have a great dignity of outline and will be built in Colonial style to harmonize with the older buildings now on the campus. The base will be of Indiana limestone, and on this will be carved the commemorative in- scription. This base will rest upon a foun- dation of granite. The main shaft, which will run up to a sufficient height to make the tower conspicuous from various parts of the city, will be of New Hampshire brick, while the decorative parts around the dial and the belvedere surmounting the shaft will be of Indiana limestone.

As for the clock, the four dials will be of bronze, with an antique, Pompeian finish. Inside the tower will be the mechanism for moving the large hands and striking the hours. The E. Howard Clock Co., Boston, Mass., will furnish the mechanical portion of the clock tower.

The contract for building the tower has been awarded to the J. W. Bishop Co., a sufficient guarantee that the structure will be all that its giver intended in workman- ship. The estimated cost of the tower has not been made public, but it will reach a goodly amount. The commission in charge of its erection was appointed by the corpo- ration of Brown University and consists of Robert Ives Gammell, John Carter Brown and Rowland G. Hazard.

It was but a comparatively short time ago that Mr. Bajnotti presented to the city of Providence as a memorial to his wife a fountain of unique and artistic design, which occupies a prominent place in front of the Union Station.

Amplification of the Articles of the Late H. H. Heinrich.

THE articles recently published in THE CIRCULAR-WEEKLY under the head of "Heinrich's Horologica," and written by the late H. H. Heinrich, awakened so much in- terest that there was a constant demand for them. It is undoubtedly a great misfortune for the trade at large that this horologist has been removed from the world, and many readers will surely miss the interest- ing narrative of his experience gained dur- ing 65 years of untiring labor and research.

It seems that Mr. Heinrich had a pre- sentiment of his approaching end and that sufficient time would not be allotted to him for the completion of his intended work. Consequently, in order to impart as much as possible in his limited period of time, he was compelled to make his work very suc- cinct. The little which he has written, how- ever, which was indeed exceedingly techni- cal and particularly adapted to advanced students of horology, will undoubtedly af- ford great benefit to the less advanced when more fully and extensively explained as THE CIRCULAR-WEEKLY intends to do.

Mr. Heinrich's utterances on isochronism would certainly have provoked a storm of protest had they been made by some other watchmaker not well known as a skilful ad- juster. These utterances, forsooth, have opened the eyes of many a horologist and afforded much food for thought to many who believed that they had mastered the art of adjusting.

The 16 causes, enumerated in a few lines, why a watch goes slower in a vertical posi- tion is a mine of knowledge for the watch- maker of investigative mind, disclosing, as it does, secrets which he never would have been able to learn in a workshop. The position error in the adjustment of watches is the stumbling block of at least 95 per cent. of all watchmakers—even of the most advanced, and the writer knows of many clever watchmakers, who, when they met with difficulties in the adjustment of a fine watch in the different positions, were glad to ask Mr. Heinrich's advice in regard to the means of correcting the error.

When, as frequently happened, the ven- erable old man explained to a younger brother-workman the principles of adjust- ing, he little thought that his lesson had often fallen on barren ground, and that in- stead of a thankful pupil, he had made an ungrateful grumbler who, unable to study and comprehend the principles of his art, expected that he ought to have received a sort of intuitive knowledge receipt. The more intelligent ones, however, accepted Mr. Heinrich's sayings as so many axioms, and, if they were unable to understand the whys and wherefores, they at least had re- ceived the necessary material with which to make further investigations.

The assertion made by many skilled work- men that the ends of balance staff pivots should be made flat in order to equalize friction in different positions, was clearly demonstrated by Mr. Heinrich to be erroneous. When a watchmaker dares to contradict such great men as Pierre Leroy and Ferdinand Berthout in regard to the isochronism of the hairspring, with the statement, that "a long hairspring makes the great vibrations of a balance go slower than the short vibrations," he must be a man of skill and experience, for no one with a little fame attached to his name would de- sire to obscure that fame by any ridiculous assertion. But Mr. Heinrich knew of what he spoke, and, in a masterly manner, ex-

plained the reasons for his statements.

The features of the different shapes of roller jewels have also been discussed by Mr. Heinrich. He explained which jewels he preferred and those that give the best results in adjusting. The explanations are extremely concise, and, although new to many, they furnish a nucleus for broader investigation and elucidation. When these explanations are illustrated with the devices in which the different ruby pins are employed, valuable information will be imparted. At the request of many readers, and realizing as we do that a true interpretation will be welcomed by all, it is our intention to undertake the task of unfolding these secrets already contained in this most valuable deposit of horology.

Calculation for a Compensated Pendulum of Nickel-Steel.

(Translated for THE JEWELERS' CIRCULAR-WEEKLY from the French of DR. CH. ED. GUILLAUME in the *Journal Suisse d'Horlogerie.*)

(*Continued from issue of March* 18.)

THE definite length of the cylinder, therefore, will be 14 + 0.73 cm. = 14.73 cm. A new calculation made by setting out with the value 14.70 gives for the length L, of the pendulum, the value previously found, and for *l*, 14.73 by a new calculation of the pendulum rod.

The suspension springs may be made of the alloy invar, which obviates the necessity of calculating a special corrective term for their dilatation. As to the variation of their elasticity with the temperature, it is easy to see that if they are not too short, it will have no appreciable influence on a heavy pendulum. I recall the fact pointed out by M. Thury, that the rigidity of the alloy invar increases at the same time as the temperature.

The calculation which I have given may appear laborious at first sight. It is in reality very simple. The formulas being once established, all there is to do is to introduce the numerical values of the factors. The calculation is in reality reduced to the following operations: Approximate determination of the length of the compensating cylinder by the elemental condition of compensation (formula 1); calculation of the total length, setting out from the near value of the dimensions of the compensating cylinder (formula 3^1); strict calculation of the height of the cylinder on the exact condition of compensation $\frac{\Delta l}{\Delta S} = \frac{I}{S}$; in practice this calculation becomes elemental, as we have seen, if limited to the determination of the corrective term ε, to add to the height of the cylinder approximatively known.

All these calculations are still more simplified by setting out with the known elements of a pendulum when it is proposed to determine those of one slightly different. The calculation of the first approximation is then of no account, and we can introduce immediately in the formulas relative to the second approximation the values found for a first pendulum.

The calculation made here for a compensating cylinder undergoes no modification if the cylinder is replaced by a bob symmetrical with reference to the horizontal plane containing its center of gravity. The dimensions of the bob once calculated, we can, for the tests, add a few millimeters to its height, and make in the lower part a cylindrical cavity of which the bottom shall be at a distance from the center of gravity a little less than the value calculated for its radius. The cavity may then receive a ring of any metal, of which the dimensions shall be determined in such a way as to increase the action of the bob to the extent desired.

The necessity of a perfect adjustment of the pendulum should not be exaggerated. As M. Thury has remarked, the largest errors in a pendulum of the alloy invar without any compensation would be about one-third of a second per day. Now the compensation to the hundredths nearly, which the calculation allows of reaching at once, without trials and without the least difficulty, would reduce this error to 1/300 of a second per day, for 10 degrees of deviation in the average temperature, a quantity absolutely negligible.

The Decimal System in Horology.

IN a recent article in which we commented on the inventions of watches giving decimal time, we expressed the opinion that it would be better before starting new and more decimalizations, especially that of time, to first apply the system to measurements of all articles of horology, the measurements of mainsprings, dials, watch glasses, dimensions of movements, etc. We are glad to state that the Swiss Chamber of Commerce, whose ideas, it seems, run in the same direction, decided at its last meeting to conceive means of popularizing the use of the metric system in the horological industry.

To begin with, it intends to publish in horological trade papers: (1) A list of all Swiss manufactories, agencies and workshops which have entirely eliminated the ancient measurements by twelfths in order to use the decimal tools and instruments. (2) A list of all Swiss manufacturers and jobbers of decimal tools or measuring instruments which are of an easy and useful employment in the divers branches of horology.

The board thinks that this gratuitous advertisement will be favorable to the business of the interested parties and that the horological syndicates of France will soon follow the example. In America, as already stated on a previous occasion, the metric system of measures has been introduced in several watch factories.

The *American Machinist,* which also is much interested in the general introduction of the metric system, has made inquiries at most of the great industrial concerns of the country for the sake of knowing the opinion of their proprietors and their technical leaders in regard to the difficulties or advantages which would follow a general adoption of the decimal system.

The following letter, recently published in the above journal, shows what one of our greatest watch manufactories has to say about it:

"We are in receipt of your inquiry of the 6th inst., relating to our use of the metric system. Will say that we have employed the metric system of linear measurements since about 1868, and for our factory purposes we have found it very convenient, especially in two particulars; first, the unit is readily subdivided into quantities adapted to the requirements of our line of manufacture. It will be readily apparent to you that in making the delicate mechanism composing watch movements, the dimensions are not only quite small, but they require to be quite accurate.

"The ordinary subdivisions of the standard inch are not sufficiently minute for our requirements. Previous to our adoption of the metric system we had constructed and used fine gages, indicating dimensions as fine as 1/2500 inch, but such a quantity was not simply expressed, nor readily multiplied. In adopting the metric system we arbitrarily took as our standard unit, not the full "meter," but the centimeter, which we divide into tenths, hundredths and thousandths, which are readily distinguished by their relation to the decimal point.

"Having adopted this system in the measurements of watch parts, it was not at all difficult to apply it in our machine shop also. On this system we have been running an entire factory for nearly 35 years, with the exception of its application to shafting and pulleys, which to quite an extent we purchase in the market. We have had very little experience, however, with the system as applied to liquid measure, nor in weights, save as we import certain articles which come by the kilogram.

"Doubtless it will be a slow and difficult matter to bring about the complete adoption of the system in all commercial and mechanical lines, but there are good reasons for believing that it would prove convenient and simple to an extent which would justify the change."

AMERICAN WALTHAM WATCH CO.
E. A. MARSH, Gen'l Supt.

An Old Clockmaker of Boston.

AMOS D. CARLETON, clockmaker, 73 Hanover St., Boston, Mass., one of the few survivors of the trade many years ago. For half a century has been identified with the trade. Before the days of electro plating he was a skilled workman in what was known as close plating, a handicraft which suffered a severe setback, when the art of electro plating was introduced.

Mr. Carleton was born in Wills River, Vt., and at an early age was apprenticed to a maker in silver near Worcester, Mass. He came to Boston in 1850, and began his business career, first in Marshall St., from which place he removed to what was then 6 Washington St., near Adams Sq., and later in Brattle St., over Marston's restaurant. Of late years he has devoted himself to the repairing of antique clocks and is looked upon as an expert in this line, having a clientage among the best families in Boston. Mr. Carleton has also an envied reputation as a maker of violins. He lives where he works, and is a unique character in the trade, where he is well known and highly respected by all with whom he comes in contact.

Marion Hayes, Barry, Ill., has moved his stock into more commodious quarters in the Roland building.

The Manipulation of Steel in Watch-Work.

(By JOHN J. BOWMAN, of the Ezra F. Bowman Technical School, Lancaster, Pa.)

(*Continued from issue of March 18.*)

FOR grinding use oilstone powder and oil on one of the iron laps. Where a square shoulder is to be ground, after turning it perfectly square and very nearly to size, take a fine pointed graver and turn a very slight undercut right in the corner, to prevent rounding off of the corner of the lap. When this is done carefully the grinding will just remove the last trace of the undercut and leave a perfectly sharp corner.

Vibrate the spindle both lengthwise by the knob, and back and forth slightly by the carriage, so as to keep the grinding ma-

a *b* *c* *d* *e*

FIG. 16.

terial distributed and insure flatness. It is well also once in a while to reverse the motion of the work. Great care must be taken in grinding pivots not to work too fast lest the pivot be cut "out of round." Stop frequently and clean the pivot with pith dipped in benzine, to gauge the work, preferably with the jewel in which the pivot is to run. As soon as the pivot will just enter a little way into the jewel and stick there, clean it with great care and proceed to polish it. Use the compound as on the hand polisher, rather wet at first, and after a black hard coating appears on the bell metal wipe off the surplus paste and clean the pivot again with pith, when the polishing may be finished at high speed with light pressure.

The great difference in size between the small spindle pulley and the large countershaft pulley causes the lap to revolve at a very high speed, while the work, driven in the regular way, of course, moves much more slowly. In putting the lap on the spindle always make sure there is no dirt on the taper of either; the lap must run perfectly true. Unavoidable differences in the laps used in grinding and polishing often make it necessary in polishing tapers to correct the angle at which the lap-face stands by the eye. After setting the base of the attachment to the desired angle, charge the lap with the paste and bring it gradually up to the revolving work. If it does not touch all the surface to be polished at once correct the angular adjustment until the paste shows contact with the entire surface of the work.

For grinding and polishing a delicate taper, such as the back taper of a staff pivot, use laps shaped like the frustum of a cone (*c*, Fig. 16). The greatest care must be taken in setting these against the work, as the acute angled edges are easily broken or worked out of shape. The round cornered laps for conical pivots should not be too much rounded off—rather the opposite. It is impossible to always turn the curve of the pivot to fit the curve of the lap; with the rounding of the lap greater, it cannot touch the curve of the pivot, but when the curve of the lap is smaller, it can be easily moved everywhere over the pivot surface, making a fine, unbroken curve.

When polishing a surface, such as the bevel of an exposed winding wheel, use the end face of the lap. After the hard, black surface appears on the lap, remove the cement chuck from the lathe and thoroughly wash the whole in soap and water, to remove all loose, soft paste from between the teeth. Wipe off the surplus from the lap and finish at high speed. The great necessity in every polishing operation is to keep everything scrupulously clean. Keep the polishing paste covered. Before using either the bell metal slip or the laps, wash them with perfectly clean benzine and dry with a clean chamois or rag. The work itself must be carefully cleaned, not only before, but once or more during the work, especially if it has any recesses which catch the polishing material, as this will cause streaks in the work. Clean the polisher spindle and bearings with benzine before putting it away, and oil freshly each time before using.

A finish much used for exposed winding wheels is that generally known as

FIG. 17.

"snailing." To produce it, cement the wheel to a brass and adjust the pivot polisher with its spindle at a slight angle as read on the graduated base. Now we will need another adjustment which is not generally provided for on these attachments. The lap must be held in such a position that its face does not lie parallel with that of the work, so as to give clearance and prevent the appearance of two sets of strokes in different directions on the wheel being treated. The object is to set the spindle at an angle with the lathe bed, vertically considered.

This may be accomplished by slipping a thin brass wire under the right or left side of the base of the polisher before clamping it down. Use a lap shaped like the regular pivot laps, with the front corner slightly rounded off. This had better be of brass, as it holds the emery better than iron. Mix fine emery powder with oil and use it in facing off the wheel. The result will be a nicely grained surface consisting of fine curved lines radiating from the center. To produce curves of less radius, use smaller laps.

GRINDING AND POLISHING FLAT WORK.

For grinding and polishing flat work such as the faces of steel wheels, screw heads, springs, etc., the same materials may be used as for turned work, except when it is required to produce a cheap, quick gloss; this latter is fulfilled by using a flat boxwood surface over which the article is rubbed with Vienna lime and alcohol as the polishing agent. For grinding steel flat before polishing, nothing is more easily obtained nor better in its working qualities than a piece of ground

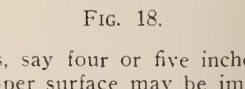

FIG. 18.

plate glass, say four or five inches square.

The proper surface may be imparted by taking two pieces of plate glass and rubbing them together with water and emery grade FFF, until the entire surface is finely "frosted," with no minute patches of clear glass. Wash out all traces of emery with soap and water, dry the plates and then repeat the process with oilstone powder and oil. Use one of the plates as a grinding lap for some time, then wash with great care and start it as a polishing plate. Using it first as a grinder smoothes it and mellows the surface preparatory to using it for polishing. Small steel wheels and similar pieces may be ground by moving them over the plate, covered with oilstone powder pretty freely mixed with oil, holding the work on the tip of the finger or with a peg-wood stick.

Large flat work would tend to be ground concave on account of the pressure being applied to its center, so it should be held on a piece of cork or cemented to a polishing tripod (Fig. 18). This is a plate with two adjustable screw feet at the back and a clamping bar (a) screwed on in front. Several upright notches in the front of the plate serve to hold screws or similar work which is to be flattened or polished. The clamping bar holds the work perpendicularly in the notches. A convenient attachment for this is a brass cement plate (b) with a projection at the end to be clamped in the tool. Pieces like self-acting click springs may be fastened to this plate with lathe cement for the purpose of finishing them. In doing this, first adjust the screw feet to the height the face of the work will stand from the plate of the tripod. Then heat the cement and the work, and seat the work in the wax, but before the wax hardens, bring the whole down on the glass plate, with a little pressure so the face to be ground comes down flat on the plate, and allow the cement to cool. Spread oilstone powder in oil evenly over the plate.

Workshop Notes and Queries.

[*Answers are solicited from our readers to the questions published weekly on this page.*]

QUESTION No. 413.—**Iridescent Glass.**—*Can you tell me how the iridescent effect on glass is produced?* F. B.

ANSWER:—The glasses used for that purpose are of easy fusion, chiefly colored with metallic oxides, ground and laid on the glass with spirits of turpentine. In the production and modification of glass colors much depends on the different preparations of the metals, on the small proportion of the metallic oxides employed in proportion to the vitreous mass, on the degree of fire and time of its continuance, and on the purity of each ingredient intended for vitreous mixture. Hence difficulties arise which even a skilful operator cannot always remove and which often frustrate his efforts. The proper degree of heat to which the glass must be exposed in the muffle is ascertained by taking out, at different intervals, small pieces of glass arranged for the purpose, on which are laid colors similar to those being fired. After the glass is burned it requires great precaution in cooling, for if suddenly cooled it is apt to fly; consequently all sudden changes of temperature should be avoided. To assimilate opaque natural stones, white enamel is used in a proportion as follows: Six parts calcined borax, 2 parts oxide of tin, 4 parts flint, 2 cornish stone. These ingredients must be well mixed and fused in an air furnace in a crucible, the fire at first applied very gradually, and the whole repeatedly stirred with an iron rod. The mixture by this calcination, and by being kept for some time in fusion in an intense heat, acquires its fusibility and opacity. Yellow and orange stains are made from 1 part oxide of silver, 12 parts green vitriol calcined. The vitriol must be calcined to a reddish color and repeatedly washed with boiling water until it is completely freed from its acid, which will be known by the water becoming insipid to the taste. Then triturate the silver and vitriol in a mortar, after which grind them up with spirits of tar. Various temperatures in burning produce various colored stains, the highest a red, a little less an orange, and so on to a yellow. But to procure a very deep red the color must be laid upon both sides of the glass. Blue is obtained by one of the following mixtures: Four and a half parts flint glass, 1 flint, 4 parts of borax, ½ potash, ½ prepared purple, 1 blue calx. In preparing these blues let the material be calcined in an air furnace and the whole mass kept in a state of fusion for some time, when a fine blue glass enamel will be produced. The cobalt blue calx should be of the finest quality that can possibly be procured and free from impurities. The other mixture is: Three parts of red lead, 8 flint glass, 1 potash, 1 blue calx, ½ common salt.

QUESTION No. 414.—**Roseleur's Gold Solution.**—*Can you or any of your readers give me Roseleur's receipt, No. 1, for gold electro plating solution? This treatise by Roseleur is out of print, but you or some of your readers may have the book and can give me the receipt in your columns. Also give me receipt for gold plating electro process in French ormolu plate.* B. K.

ANSWER:—Roseleur's receipt, No. 1, has been given in answer to question No. 320, issue of THE CIRCULAR-WEEKLY of Dec. 17, 1902, from which also can be learned the method of preparing it. To complete both answers, we will add receipt No. 2 of Roseleur, which is as follows: Phosphate of soda, 50 parts; bisulphite of soda, 12½ parts; cyanide of potassium (pure), ½ part; gold, 1 part; distilled water, 1,000 parts. This is the bath modified so as to be suitable for gilding steel, and also cast and wrought iron, directly; that is, without being previously coated with copper. In working the first bath, Roseleur says: "Small articles, such as brooches, bracelets and jewelry ware in general, are kept in the right hand with the conducting wire, immersed, and constantly agitated in the bath. The left hand holds the anode of platinum wire, which is immersed more or less frequently in the liquor according to the surface of the articles to be gilded. Large pieces are suspended by one or more brass rods, and, as with the platinum anode, are moved about. The shade of the gold deposit is modified by dipping the platinum anode in the liquor, the paler tints being obtained when a small surface is exposed, and the darker shades when a larger surface is exposed. Generally, gilders of small articles almost exhaust their baths as soon as they cease to give satisfactory results; they make a new one, still keeping the old bath for colored golds or for beginning the gilding of articles, which are then scratch brushed and finished in a fresh bath. Those who gild large pieces maintain the strength of their baths by successive additions of chloride of gold, or, what is better, of equal parts of ammoniuret of gold and cyanide of potassium." Certain mixtures employed in gilding by fire or by the wet process:

RED ORMULU.

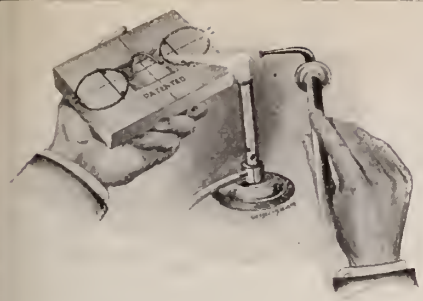
COMPOSED OF:

Potassa alum	30 parts
Saltpetre	30 "
Sulphate of zinc	8 "
Common salt	3 "
Red ochre	28 "
Sulphate of iron	1 part
	100 parts

We may add to it a small proportion of annotto, madder, cochineal or other coloring matter, ground in water or in weak vinegar.

YELLOW ORMOLU.

Red ochre	17 parts
Potassa alum	50 "
Sulphate of zinc	10 "
Common salt	3 "
Saltpetre	20 "
	100 parts



DEAD LUSTER FOR JEWELRY.

Sulphate of iron, Sulphate of zinc, Potassa alum, Saltpetre } Take equal parts of each.

The salts are fused together in their water of crystallization, and, if the gilding be strong and durable, a small proportion of common salt may be added.

QUESTION No. 415.—**Hard Soldering.**—*Kindly inform me how to hard solder a hinge on a match case. I tried all kinds of ways but the solder would flow on the hinge but not on the case. I used a large alcohol lamp and blow pipe. Also how to center a duplex balance wheel.* A. G.

ANSWER:—To solder joints of gold cases a solder is used which is alloyed with an extra quantity of silver, whereby it is reduced to a little below the standard (the melting point) of the gold to be soldered. The fusing point is thus lowered, so that when heated the solder melts, or "runs," much sooner than the gold. Therefore it is absolutely necessary to have a special solder for each quality of gold. The preparation for soldering is made as follows: On a piece of moistened slate, rub a lump of borax until a white liquid paste is obtained. Having prepared the borax, the surfaces to be united are cleansed either by scraping or with dilute nitric acid. The acid may be previously heated to boiling, as it will then act more rapidly. The surfaces are subsequently scraped. The parts to be soldered are held in position with clamps, tweezers, pins or binding wire. They are covered with the prepared borax by means of a small hair pencil and little pieces of solder are also placed at the junctions of the parts. In order to prevent the solder from flowing away, only a moderate heat should at first be applied, so as to melt the borax without displacing it. The violent frothing up, which is the cause of the displacement of the parts, or the fragments of solder, can thus be greatly avoided. To solder gold to silver, or silver, brass or steel to each other or to themselves, proceed in the manner already explained for gold, except that the borax paste must be considerably thicker. We do not well understand what you mean by centering a duplex balance wheel. A balance wheel is the escape wheel and that which carries the hairspring is the balance; by some erroneously called the balance wheel. This latter, especially if it is a compensating balance, happens often to be out of true, which is not the same as being out of center. To examine a balance for its truth we make use of a pair of calipers. If it is out of center and the staff is not true, it may be caused by bent pivots. If that, however, be not the case, the staff has probably been repivoted and the new pivot not being fitted perfectly in the center. The only remedy is to make a new staff. The balance staffs of the duplex escapement must be carefully and correctly made, perfectly true and have very little play in the jewel holes. If the balance is out of shape, bent or out of true, it must first be made flat, and then the rim can be curved perfectly round. If the curving needs much correcting, it is necessary, in order to do good work, to remove all the screws from the rim. They must be laid aside in such a manner that after the balance has been trued you will be able to replace each screw in the hole that it occupied at first. It is advisable to place upon the brass or steel rule which is used with the calipers a piece of thin, white paper, cut into a sharp angle. The smallest defect in the truth of the balance will cause the paper to move, thus preventing any danger to the pivots, which danger may sometimes arise when a stiff rule is used.

WE SHOW OUR FAITH IN

The Keystone Spectacle Soldering Block

by GUARANTEEING it to be the **Best and Most Practical** tool on the market, *and the cheapest.* With it you can solder any broken spectacle bridge in half a minute or put on a new one in less than a minute. USED TWICE PAYS FOR ITSELF. **Price 50 cents, post paid.**

MIGHTY MEN O' THE HAMMER.

The services of the two best-known auctioneers at the cost of one.

A Tremendous Triumph!

Without the shadow of a doubt, the sale we are now conducting for Chas. W. Crankshaw, of Atlanta, Ga., is one of the most successful ever made in this country from every point of view. We especially solicit large dealers who are in any way interested to personally write to the above well-known jeweler.

Recently we sold out the stock of Jos. Brown & Co., 176 E. Madison St., Chicago, which was damaged by fire. Just prior to that we conducted a four weeks' sale for the Gem Jewelry Co., of Norfolk, Va., the largest and most successful sale ever made in that city. Preceding that we made a record-breaking sale for Geo. Winder of Troy, N. Y., after another firm of auctioneers had made a failure. One success has followed another. We have to our credit a greater number of sales, higher average of goods sold and a better percentage of profit than any other auctioneer in the trade.

Jewelers desiring our services must write months in advance, as our time is booked for several months.

THE RAMBLER'S NOTES.

WHAT THE RAMBLER SAW AND HEARD AMONG THE DEALERS IN ART POTTERY, CUT GLASS, BRONZES, ETC.

NEW STYLES IN DOMESTIC LAMPS.

A NEW lamp which shows a distinctly Grecian effect has been placed on the market by the Bradley & Hubbard Mfg. Co., whose New York office and show rooms are at 26 Park Pl. The lamps in question have what is known as the Corinthian copper finish and are ornamented with gilt mountings. The distinguishing feature of this lamp, outside of the peculiar color of the finish, is the shape, the body being built on the lines of a low and broad Greek urn, containing graceful curves. The handles also follow the lines of the handles of Greek urns. The main body of the lamp contains no ornamentation and its finish being very bright and of a peculiar color, its shape stands out clearly and distinctly. Other new goods recently placed on display by the firm consists of new candelabra and smokers' sets and articles made with an Etruscan gold finish. The candelabra show originality in their designs, which combine antique and modern features. An entirely new effect, both in shape and finish, has been produced, and consists of a base made of a combination of oak and maple leaves from which arise long wire stems twisted into graceful curves and containing caps for the candles. This style of candelabrum comes in a black brass finish. A number of novelties are promised by the concern in the next few weeks.

*

ORIGINAL EFFECTS IN LIMOGES CHINA.

LIMOGES china, showing decidedly new decorative features, has been placed on display in the ware rooms of Chas. Ahrenfeldt & Sons, 52 Murray St., New York. This china which is manufactured by the concern differs from the lines of previous years in that a number of the designs show an irregularity of treatment. The effect is produced by broken floral border in plain or encrusted gold, the flower being usually golden rod, lilac blossoms or a bunch of forget-me-nots. These flower designs are splashed over the surface of the rim of plates, seemingly without regard to order or position, but the effect is artistic and original. In some instances this irregularity of design extends entirely over the surface of the piece which it ornaments, or is arranged in panels enclosed by gold or green band border. Another new design consists of a border decoration of encrusted or plain gold in conventional styles, in combination with several plain panels, on which are painted bright colored roses, violets and other colored flowers. Other designs show delicate wreaths of roses painted around the border of the body of the plate, while the rim of the piece is decorated with a plain band of gold. Roses, delicately drawn and shaded, in combination with gold and green, are characteristic of a large part of this concern's samples from Limoges. The designs described come principally in plates.

*

WEDGWOOD FISH AND GAME SETS.

JOHN A. SERVICE, the United States and Canadian representative of Josiah Wedgwood & Sons, Ltd., the Worcester Royal Porcelain Co., Ltd., and Thomas Webb & Sons, Ltd., who is displaying sample lines of the products of all these factories at the Astor House, New York, is now showing some beautiful Wedgwood china game and fish sets decorated with American fish and game. These decorations are the distinguishing characteristics of the china, inasmuch as each bird or fish is pictured on the dishes which it decorates with all the minuteness of detail and color and trueness to lite possible in a subject of this kind. So careful and painstaking has been the work of the artist that even different kinds of the same species of American animal life are readily distinguishable. These animal subjects are employed as decorations either on the vignette or panel of the plate or over its entire surface. Invariably the border of the ware has an applied gold decoration in a floral design. The plates and plaques with encrusted gold and rose and other floral decorations displayed by Mr. Service are among the finest seen in this market this season. By means of acid, gold has been applied in various designs, both plain and raised, and has been interwoven and paneled by solid and broken colors of green, maroon, pink and blue. Delicately shaded rose wreaths are occasionally woven in the gold around the border of the vignette or panel of the plate. In addition to his china, Mr. Service has also a fine assortment of English cut glass, which ranges in design and general style from cuttings in vogue at the time of Queen Anne down to the present period. Most of the goods shown are especially adapted to the jewelry trade, and jewelry buyers should not miss this last opportunity of seeing these lines before Mr. Service completes his season here and returns to England. THE RAMBLER.

John A. Service,

The Jeweled Bolero Jacket of "Jolie Fagette."

THE eccentric whim of the Paris fashionable world has begotten another remarkable creation and again a fortune has been sacrificed to *"piquanterie."* A jeweler on the Avenue de l'Opera some time ago finished an ornament which has the form of a complete piece of dress, viz., a bolero jacket, representing a value of no less than 1,500,000 francs. This truly princely article of clothing, however, is not designed to adorn the bust of a princess or other high born lady, but has been presented to a queen of the variety stage. The lucky diva forms the chief attraction of the *Concert des Ambassadeurs* at Paris, and her name is Jolie Fagette.

The bolero is fashioned of gold-doubled silver, constituting a net, embellished with ornaments in the style of Louis XV. and studded with the costliest gems, weighing altogether 1½ kilos. This piece of jewelry can be closed in the front and back, as well as on the shoulder, the back closure being a joint. The front closure is formed by an emerald with two diamonds at its side, with a pendant of two rows of pearls, having in the middle a silver strip edged with diamonds. This terminates, on the one hand, into two black pearls; on the other, into a black brilliant. The two chief pieces on the breast can be detached and constitute in themselves a brooch, or both together a separate piece of jewelry. On the left shoulder is a loop in the same style, edged with brilliants and sapphires, in the center of which is a wreath of brilliants with a turquoise in the middle. This loop is on a spring and can be unscrewed and used as a brooch or hair ornament. Every point of the front part also terminates into a black pearl. The center stones of the breast ornaments are rubies.

The piece still contains various other colored stones, as well as vari-colored pearls. Altogether 4,000 stones—diamonds, rubies, emeralds, sapphires, turquoises, pearls, etc., have been employed. Three months were taken up by the making of the jewel, 25,000 francs being paid out for wages. As a protection against burglars, who doubtless have an eye on this costly possession of Mlle. Fagette, four detectives are continually in attendance at her residence without their presence being noticeable. The case is of black leather, 50 centimeters in length and 30 centimeters in height, with several artistic locks.

"Jolie Fagette" appeared four years ago as a modest chorus girl in a variety review. Nobody would have prophesied a future to the little dancer with the pouting lips, despite her black diamond eyes. But a small journalist poured out torrents of ink for her advertisement, a rich jeweler, her second lord and master, created the 1,500,000 franc wonder and an anonymous Crœsus took upon himself the remaining equipment. There is no fear of "Jolie Fagette" ever becoming a star in choreography, despite her grace and faultless form, as well as her *soi-disant* lily complexion *partout*. The jeweler is said to have gone to this expense only because his diamond dream appeared to him on Fagette's white shoulder as the eighth wonder of the world.

Ancient Sussex Pottery.

IN the January number of *The Reliquary and Illustrated Archæologist* was an interesting article on "Sussex Pottery," by W. Heneage Legge. Referring to some ancient kilns near Lewes, which showed that a pottery once existed there, the writer says: "This pottery is of considerable antiquity, its potters being mentioned in various ancient documents, such as court rolls and wills; and it appears to have been worked, with various periods of suspension, until the end of the sixteenth century. A possible reference occurs to it in a will dated 1588, of a certain Thomas Hooke, of Ringmer, who postscripts that 'William Bynge, the brickmaker,' owes him 3s.; while Thomas Shepperd, of the same place, in his will, dated 1594, makes a similar statement about 'Saunder, the bryck-maker.' Possibly we have a still later record in the words 'Mary Cruse made me begorr 1791,' inscribed on the under surface of a ridge tile removed from the end of Ringmer Church some years ago. The earliest record of the ancient potteries of Ringmer, which I have found, occurs in a court rool of the time of Edward III, wherein there is entered the receipt of 4s. 6d., 'de consuetudine sex figulorum apud Ryngmere;' while another roll of 1378 records the amounts paid, namely, 2s. 3d., by three potters, 'for license from the lord to dig clay in the common.' Besides the money rent, the rolls record that each paid 100 eggs at Easter and a hen at Christmas.

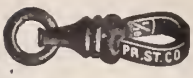
"In 1517 this little colony of potters appears to have been involved in one of those periodic epidemics, which wrought so much havoc with human life in mediæval times, for a court roll of the date records that nothing had been received from the five potters of Ringmer, because they are dead, and no one fills their place (eo quod mortui sunt . . . et nullus est qui occupat locum eorum)."

Found in the Mails.

ONE of the watch companies which issue advertising brochures recently received the following request for a booklet.

NEW YORK, Feb. 23, 1903.

Dear Sir—Would you please sent one of you books to Mr. X——— Y———.



My dear sir My dear sir I am very sorry that I cannot call you my dear sir but I hope I can call you without my knowing you.

My dear sir I hope I will receive one of you delicate books. Yours truly, X. Y.

The Strength of a Chain

Foster's Strong Links.

Link the Fourth---Our Business Growth.

No house can build up a paying and lasting business by making goods that do not pay and do not last.

The single fact that Theodore W. Foster & Brother Company are in existence to-day after thirty years is proof positive that those thirty years have seen some pretty successful manufacturing.

There must be something about the chains and lockets that we make which appeals to the jeweler everywhere. If this is true, the same set of facts will appeal to the dealer who has not yet tried them.

If you have never sold or seen our Seamless Wire Chains and Gold-filled Lockets, you have something in the way of business yet coming to you. If you do know, you only need to be reminded that they have always proved good sellers.

Your nearest jobber carries them in stock. To make certain, always look for this trade-mark, which is the stamp of merit.

F&B TRADE MARK REGISTERED

is its Weakest Link

ELSIE BEE'S FASHIONS.

A LADY'S RAMBLES AMONG THE JEWELERS.

A ROSE and shaded gold handle for an umbrella is dotted with diamond and spinel sparks, and is an exquisite piece of its kind.

*

Scarabs are standard cuff links.

*

Prize cups are much in evidence.

*

Banquet rings grow larger and more ornate.

*

Variations on the fob for both men and women never cease.

*

Antique finish provides something unique in silver sleeve links.

*

Handsome diamond slides are provided for diamond throat bands.

*

A large hoop of rubies and diamonds is among handsome ring styles.

*

Renaissance designs in banquet rings employ a multitude of small diamonds.

*

Nowhere does *l'art nouveau* display itself more attractively than in silver vases.

*

Very light colored and satiny is the finish on some of the newest silverware.

*

Square handles mark some of the most select of the holiday displays of umbrellas.

*

Wide collars of many rows of coral beads are enriched with a central plaque and slides of brilliants.

*

A coffee set of antique finish, and with ebony handles, is low and square in shape, with concaved corners.

*

A man's tie clip, very much up to date, has a green heart-shaped stone, surrounded with brilliants, sunk in its face.

•

Engraving and a floral pattern of colored stones in gypsy setting mark some of the frames of very fine gold bags.

*

A very taking decoration on graceful coffee sets of Empire form is found in the "snowball" used as a small set figure.

*

One of the newest and handsome exploitations of the fashionable ribbon bow motif is in an imposing diamond tiara.

*

A long flat oval seems a favorite shape in men's sleeve links, and an engraved monogram gives the latest touch of style to them.

*

A bracelet that illustrates the fad for green and also the incoming fancy for *a jour* work consists of green balls alternating with *rondelles* of gold open work.

ELSIE BEE.

"Something Different."

In all the arts and crafts it is the man who stamps his own individuality upon his work, and who imparts to his productions his own genius that is a true artist. The workman who is able to only imitate is a mechanic, not an artist.

The making of jewelry is an art-craft, and most susceptible of artistic expression. There are many mechanics but few artists. The productions of the artists are what we seek. We select those pieces that possess a character and originality of their own, which are the qualities that make them salable. Take watch cases for instance, some have all the ear-marks of regularity, while others have an appearance of "something different" that will attract the eye of a prospective purchaser at once. This is especially true of the productions of the Dubois Watch Case Company. Our mounted diamond pieces are of high artistic merit. We believe in advertising the truth only, and therefore solicit selection orders that we may demonstrate that our stock is always as good as we say it is.

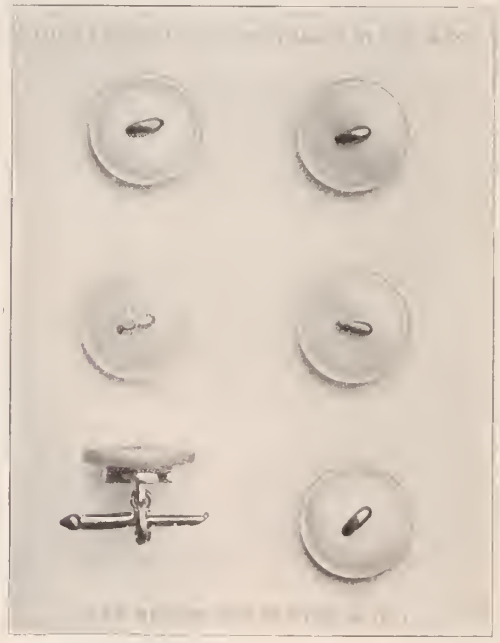
Headquarters for all that is best in



AMERICAN WATCHES,
DIAMONDS, Mounted and Unmounted.

During this

SPRING AND SUMMER

light vests will form one of the prominent features of men's apparel for both day and evening wear.

The ease of inserting and removing the Larter Vest Buttons, in any style of vest, overcomes one of the chief objections to wearing washable vests.

Therefore there will be an increased demand for Larter Vest Buttons. To meet this want we are now placing on the market some new patterns with mother-of-pearl fronts, so well constructed and so moderately priced that every Progressive Jeweler should carry them in stock. Made in 14K. gold only.

LARTER, ELCOX & CO,

NEW YORK CITY.

Reigning Paris Fashions.

Paris, March 10.—At the present time when the care for luxury and elegance is greater than ever before, it is a delight to witness the superb productions in modern art now gracing the windows of our leading jewelers.

The most charming fancy prevails in sash buckle designing. Figs. 1, 2 and 3 show some new and tasty designs in this line which is still increasing in popularity. Fig.

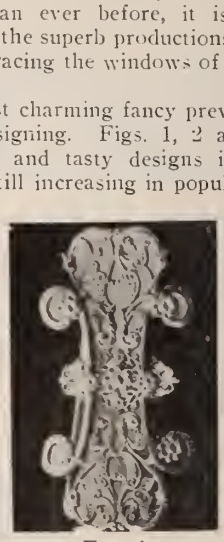

Fig. 1.

1 is a beautiful plaque designed to adorn the sash. It is of matt gold and represents flowers and foliage elaborately chased. Fig. 2 is a buckle of oxidized silver, enriched with diamonds. It is oblong in shape and is adorned with knots in the Louis XV. style, set with brilliants. Fig. 3 is also a buckle of oxidized silver. It is in the Louis XV. style and is adorned with diamonds.

In necklaces occur many exquisite novelties. As an example, I will first cite a magnificent pattern consisting of a chain of matt gold from which are suspended emeralds or turquoises, almond-shaped and framed with a thin band of matt gold. Others, very effective, too, consist of a single and large diamond mounted on an invisible chainlet of matt gold or platinum.

Bracelets in the new art style are extensively shown. The most attractive designs are composed of motifs of matt gold, finely chased, alternating with emeralds and opals. Fashion has brought brooches to the fore. Among the most favored specimens

Fig. 2.

are those consisting of a large baroque pearl surrounded with thistle foliage of chased matt gold.

Back combs are as much in demand as ever. The newest ones are of light tortoise-shell headed with an artistic motif of chased matt gold, enriched with turquoise or emeralds. In the way of head-dress ornament I should also mention a large butterfly of chased silver, with outspread wings. Rubies serve as eyes.

Long rings in the marquise shape are

much in vogue. They are adorned with pear-shaped stones of different hues.

Breloques enjoy still the greatest popularity. Among the latest are wee animals (elephants, mice, frogs, etc.,) of matt gold incrusted with precious stones. Four-leaved clover always supplies a popular breloque. This leaf is inserted between two discs of glass taking the form of a circle or a heart, framed with a band of bright gold. All these charms are now worn suspended from chainlets of matt

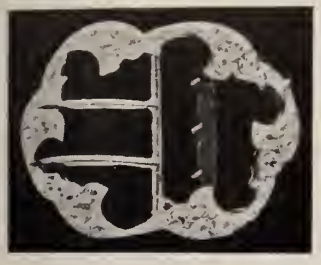

Fig. 3.

gold, fixed to a motif of matt gold treated in the new art style.

Newest and daintiest of umbrella handles for ladies are those of chased silver representing a squirrel holding in its mouth an apple of coral.

An endless variety of fancy buttons is shown. Those represented in Fig. 4 and Fig. 5 are among the most popular. The former is of chased matt gold and represents a dainty flower delicately enameled, while the latter represents a star of matt gold upon a background of chased silver.

Fans in the Louis XV., Louis XVI. or Empire style are much sought for. Among the modern creations, including feathers or lace fans, let me also mention a superb design consisting of white gauze fringed with sable. This gauze is spangled with gold and the mounting is of light tortoise-shell.

Flasks of cut crystal adorned with gold mountings are profusely laid out on the dressing-table, among new and charming powder boxes of matt gold representing apples delicately wrought.

As for the dinner-table, it is more and more decorated with artistic vases, dishes,

Fig. 4.

Fig. 5.

statues, etc. In this order, let me conclude by mentioning superb fruit cups of chased silver representing a large shell held up by three chubby cherubs of Minton china, gathered together in the attitude of the three Graces.

As regards desk accessories, many charming novelties are to be seen. First in this order should be cited sealing lamps, taking the form of a large flower of crystal; then, the telegram or letter box of chased silver or repoussé leather. Not the least interesting among these dainty articles are pencilholders of jade, inlaid with gold, and paper weights of gilt bronze representing a lion playing with a mouse.

The Diamond Crown of Queen Alexandra.

(*See illustration on page* 1.)

IN February, 1902, THE CIRCULAR-WEEKLY was able to present illustrations of the coronets worn by the Peers and Peeresses at the coronation of King Edward VII. in Westminster Abbey. Owing to the stringent commands of the authorities as to premature publication of any representation of the Queen's new crown, it was impossible to obtain a photograph of this unique piece of the jeweler's art. The London *Gentlewoman*, however, recently published an illustration, which, by arrangement with the proprietors, THE CIRCULAR-WEEKLY is enabled to reproduce on Page 1.

This is the crown which was placed on Her Majesty's head by the Archbishop of York, at the famous ceremony in the Abbey last August, and is the one that she wore as she rode back with the King to the Palace. What a blaze of light it presented is hard to realize by those who were not privileged to see it. It was designed and made by Carrington & Co., jewelers and diamond merchants to their Majesties, and very carefully was it guarded at the makers' premises in Regent St. in the days preceding the coronation. The crown contains 3,971 diamonds, and is of such brilliance that when the room in which it rested was plunged in darkness the reflection of a light in a passage outside whose rays passed through the open door on to the crown was sufficient to light up the room to a considerable degree!

The circlet which formed the base was 1½ inches in height, and was entirely encrusted with brilliants, placed so closely together that no metal was visible, and the entire circlet became one blaze of light. This strikingly rich band supported four large crosses-patées and four large *fleurs-des-lys*. At the center of the largest cross-patée, shown in the illustration, is the priceless Koh-i-noor, the grand and unique feature of the crown. This famous stone of Light is said to have been found in the bed of the river Godavery 5,000 years ago, but other accounts name the mines of Golconda in the Deccan as the source of its origin. It passed through many hands before it was inherited by Dhuleep Singh, and on the annexation of the Punjab it was presented to Queen Victoria, and sent home by that most forceful Viceroy, Lord Dalhousie. The Prince Consort had it re-cut as a brilliant.

Immediately the crown was placed upon the Queen's head the peeresses assumed their coronets according to ancient custom. These, as was explained in our article on "Coronets," being of gold with silver balls (excepting in the case of the Duchesses) and having no jewels, acted as an excellent foil to the more brilliant appearance of Her Majesty's crown. peeresses, however, wore tiaras, mostly composd of diamonds.

It was generally understood that the designing of the crown was subjeet to very severe tests before final satisfaction was given to their Majesties. Some time beiore the event it transpired that the Koh-i-noor was to be used in the composition of the crown, but the statement was immediately semi-officially denied. It was stated in a "society" journal that between 30 and 40 designs were submitted before the choice was made. Carrington & Co. are to be congratulated upon their success in seeuring the manufaeture of this "blue ribbon" of the jewelry trade.

The last Queen Consort to be crowned in England was Queen Adelaide, consort of King William IV. Her erown is described as "a rich imperial erown set with diamonds of great value intermixed with preeious stones of other kinds and some pearls. Composed of crosses and *fleurs-des-lys* with bars and arehes and a mound and eross on the top of the arches. The eap was of purple velvet lined with rich white taffeta and turned up with ermine or minever pure riehly powdered." Queen Victoria being a Queen Regnant was of eourse erowned with the official eoronation erown of England—"St. Edward's."

The History of the Crowns of England would fill a volume. In Saxon times a plain fillet of gold was worn. King Egbert fixed on the eirclet with rays or points resembling the eastern monarch's crowns. Edward Ironside topped the points with pearls. Alfred's erown is described as of "gould wyer worke with slight stones and 2 little bells." It weighed 79½ ounces, and was valued "at £3 per ounce, £428.10s.," a ealculation whieh does little credit to the historian's knowledge of arithmetic! William the Conqueror appears to have introduced leaves (or *fleurs-des-lys*) and the erosses patée. The arches appear in the reign of Henry VII., and the prineipal variations sinee have been only as to height, etc., of the leaves, erosses and arches. The maiden Queen wore the arches remarkably high.

Valuations of the erowns of the Kings and Queens of England vary exeeedingly, and are, it is to be feared, unreliable. An interesting detail to the jewelry trade is found in the statement that Rundell & Bridge, the erown jewelers in the reign of George IV., were paid £20,000 for the provision of the magnificent erown worn by that monarch. The jewels were, however, only borrowed or taken from other erowns and royal jewelry, and the priee paid was merely for the "fashion" and cost of hire of stones. The erown was broken up and the stones returned to their various sources, a fate which has probably already overtaken the new diamond crown.

No estimate of value can be plaeed upon the new diamond erown worn by Queen Alexandra. The value of the Koh-i-noor alone is a bone of eontention among experts. It was, however, quite a unique speeimen of the jeweler's art, and even in the faee of the severe competition of eastern potentates, aneient and modern, will rank as worthy of a plaee in the history of regal headgear.

Consul Darnall Reports on the Silver Trade of Mexico.

WASHINGTON, D. C., Mareh 25.—According to Consul Darnall, at Nogales, Mexieo, there are no manufactories of silver or plated ware in the State of Sonora. The consumption of such ware is limited. The larger part of the importations are from the United States and are of the cheaper grades. The method of introduction is as follows: The prineipal mercantile houses keep eatalogues and most sales are made in that way. Individuals visiting the United States frequently introduce such articles as personal effeets.

Consul Darnall is persuaded that it would be wise for Amerieau manufacturers of silver and silver plated ware to look well to this particular industry in the State of Sonora. His four years' sojourn in Nogales enables him to note the rapid advancement that is being made in that country. While it is true that American capital gives the inspiration to its activities, it is also true that the so-ealled better class of Mexiean or Spanish people are more and more assimilating toward the modes and methods of the United States. Prosperity has about the same influenee on the people of Mexico as it has on our own people. The Consul does not know any race of people that enjoys articles of luxury more than the Spanish. Recent events have fully convinced him that a wonderful future is in store for northwestern Mexico.

J. A. Filion, Lowell, Mass., is closing out his stoek at auetion preparatory to making extensive improvements in his establishment and installing an entirely new stock.

Arehibald Gill, who was said to have plotted to kill D. E. Danks, a jeweler of Rochester, N. Y., was diseharged in Police Court, recently, as the prosecution had not prepared a ease against him.

Michigan Stamping Law.

Bill Regulating Sale of Jewelry and Optical Goods Passes the House and the Senate.

LANSING, Mich., March 27.—The bill introduced the first part of this month into the House of Representatives of the Michigan Legislature, which provides that all articles of jewelry, watch cases, optical goods, etc., shall be stamped or tagged in a way that will show plainly what are the component materials of the articles, passed the House of Representatives Tuesday without amendment and was passed by the Senate yesterday.

This bill, which was published in full in THE CIRCULAR-WEEKLY, March 11, is one of the most elaborate of this kind that has yet been introduced in a State Legislature, providing as it does, not only for silver and gold, but for rolled plate, electro plate, filled gold, gold front and imitations of gold or silver, and also providing that these goods be labeled with the name of the manufacturer and a statement of the exact quality of the metal contained.

The bill, it is reported, was introduced at the request of the jewelers of Michigan, and so far has met with little opposition. It has now been sent to the Governor for his approval.

Boy Arrested for Stealing Articles From Jeweler's Post Office Box.

ASHLAND, Pa., March 25.—For some time past, Postmaster Clayton has been puzzled by the mysterious disappearance of mail matter from the post office box of Peter H. Loeper, a jeweler of this city, but it is believed that the mystery has now been solved by the arrest of Walter Payne, a 17-year-old messenger boy of the United States Express Co.

Payne was arrested last week on a charge of stealing articles from Mr. Loeper's box after being caught in the act.

The boy was taken to Mr. Loeper's store and a box which was found in his pocket was identified by the jeweler. He was then taken before Justice Russell, where at first he denied his guilt, but finally made a confession and produced a number of articles which he had stolen at various times, among which were a watch movement, a brooch, a bracelet, half dozen rings and other pieces of jewelry, all of which were identified by the jeweler as his property.

Payne was taken to Pottsville Monday and arraigned before United States Commissioner Woltjen, by whom he was remanded to the Eastern Penitentiary to await the action of the United States Grand Jury.

Pittsburgh Police Arrest Man Whom They Claim Stole Jewelry Worth $4,000.

PITTSBURGH, Pa., March 26.—By the arrest of Morris Lustig Tuesday the police believe that they have made an important capture. Lustig, who was employed in a downtown department store, is accused of stealing a large amount of jewelry and other articles. Already the loss of goods amounting to almost $4,000 is charged to his acts.

Lustig, it is claimed, made daily shipments of booty to New York, where it was disposed of to pawnbrokers of that city. He is said to have a wife in the metropolis, who aided in his work and saw that the booty was judiciously distributed among the pawnbrokers. Lustig boarded on 9th St., this city, and the disappearance of $800 worth of diamonds belonging to his landlady led to his arrest. The police claim that from local pawnshops they have learned that Lustig disposed of a large amount of goods, and over 100 pawn tickets and about $1,000 worth of goods were found in his room when it was searched. The police have notified New York authorities and sent descriptions of the pawned articles there. It is expected that the New York police will make an attempt to locate Mrs. Lustig.

Receivers Complete Inventory of Assets of R. W. Woodley & Co.

NORFOLK, Va., March 25.—Riddleberger & Baird, receivers of the bankrupt firm of R. W. Woodley & Co., an account of whose failure was published in the last issue of THE CIRCULAR-WEEKLY, have completed the inventory, which amounts to $16,989.99. Other assets, in the form of accounts, aggregate $5,048.45. The receivers have not as yet been able to ascertain the amount of the liabilities.

Ehrlich & Sinnock, Newark, N. J., creditors of the defunct firm to the extent of $280, last Monday, through their attorney, P. A. Agelasto, filed a petition in the United States Court asking that Commander C. K. Curtis, of the United States Navy, a member of R. W. Woodley & Co., be made a party to the bankruptcy proceedings. Ehrlich & Sinnock also requested that W. B. Barton, trustee under the deed of trust executed by Commander Curtis, be also made a party to the suit.

Walter Ware, Waverly, N. Y., is erecting a handsome residence on Pennsylvania Ave., and expects that it will be ready for occupancy by Sept. 1.

WHY DON'T YOU

Send your old gold, silver, sweeps and plated scraps to the refiner who makes a specialty of purchasing same?

There is a well-known maxim that "Experience makes perfect."

To accurately test and value a lot of old gold, etc., the requisite experience is absolutely necessary.

Being the largest buyers of old gold and silver in the country, and having the exclusive patronage of the majority of the jewelers in the United States and Canada, we can guarantee to the trade accuracy in valuation and **prompt and honest returns.**

OUR PLAN. Immediately upon receipt of consignment we will remit by cash or draft (as preferred). If our offer should prove unsatisfactory, we will return consignment intact and pay all charges. Make us a trial shipment, and you will ship again.

READ!! THIS WILL INTEREST YOU.

TESTIMONIALS FROM PLEASED CUSTOMERS:

Check received. Thank you for your promptness. The amount exceeded my expectations.
H. S. Gier, Pittsburg, Pa.

Your favor, enclosing draft, to hand. Many thanks. It was better than I expected.
E. A. Schober, Pt. Townsend, Ind.

Check received. Am perfectly satisfied. You gave me all it was worth at the mint.
A. Simon, Ft. Worth, Tex.

Received check for old gold. Am pleased to say it was more than I expected.
C. A. Notbohm, Oconomowoc, Wis.

I received your check and am well pleased, as it was more than I expected.
L. C. Hodskey, Big Rapids, Mich.

Check at hand. Am well pleased as always. This time about $1.00 more than I expected.
H. Wykhuysen, Holland, Mich.

Draft received. Will ship you old gold and silver hereafter. I did not expect so much for the shipment. A. B. Corman, Chetopa, Kans.

Check received. More than I expected. Sent you a little shipment some time since which I had sent to another firm. Your check was a dollar more than their offer.
G. D. Thomas, Kirksville, Mo.

Received your check for scraps, etc., sent you some days ago. Entirely satisfactory, more than I expected. O. M. Nelson, Madison, Wis.

Your check for gold sent you is O. K. The returns were very quick and the price the best we have had.
R. G. Pierce Jewelry Co., Barron, Wis.

Your remittance of recent date is satisfactory. Thanking you for prompt service, I am respectfully yours, J. C. Davis, Oelwein, Ia.

Your letter and draft were received. The draft is very satisfactory indeed. Many thanks.
Glover Johns, St. Louis, Mo.

Received your check for $74.80 in payment for old gold and silver. The same is perfectly satisfactory, as it has been in the past. Many thanks for same. Very truly,
Chas. G. Williams, Reading, Pa.

Your immediate reply and estimate on old gold and silver is entirely satisfactory. We expect your enclosed check for same. Respectfully,
Forte & Furniss, Nashville, Mich.

Check at hand and very satisfactory, as your checks always are. My returns always fall short when sending to other people. Nearly exact when sent to you. Yours truly,

The South Bend Watch Co.'s Factory Starts in Operation.

SOUTH BEND, Ind., March 25.—One of the most important occurrences that has taken place in this city for a long time, was a formal opening promptly at 7.30 A. M. Monday morning of the new factory of the South Bend Watch Co. Clement Studebaker, Jr., the president of the concern, pressed a button which put in operation the machinery of the plant and started the employes at work.

Nearly all Monday morning the factory was thrown open to visitors who were shown throughout the plant and were heartily welcomed. The machinery was started by about 125 employes, but it is expected that the plant will employ about 1,500 hands and that its capacity may reach 1,200 watches a day.

The South Bend Watch Co. was formed May 8, 1902, and later absorbed the Columbus Watch Co. The officers are: President, Clement Studebaker, Jr.,; first vice-president, M. V. Beiger; second vice-president and treasurer, Irving A. Sibley; general manager and secretary, E. A. Bazzett. The directors include Clement Studebaker, Jr., M. V. Beiger, E. A. Bazzett, Irving A. Sibley, H. H. Gross, F. F. Fish, Chas. W. Haldy, Albert O. Gleck and Chas. Clie.

Death of Philip W. Hager.

LOUISVILLE, Ky., March 25.—The death last week of Philip W. Hager has caused profound regret among his many friends in the jewelry trade in this city. Mr. Hager was a member of the firm of Hager & Hetch, manufacturing jewelers at 350 W. Jefferson St.

The deceased, who was 60 years old, began business under the present firm style in 1895. He was a veteran of the Civil War, having been a sailor in the Mississippi Ram Fleet. He lived at 2445 W. Chestnut St.

Death of Morris Kronberg.

LITTLE ROCK, Ark., March 25.—Morris Kronberg, a jeweler of this town and brother of Ike Kronberg, of 416 Main St., died here March 20 as the result of an operation for appendicitis, from which he had been suffering for two weeks.

The deceased passed his 33d birthday March 17, and for a year and a half had been associated with the business of his brother on Main St. He was well and favorably known, and his death is generally regretted.

Bought Presents From Three Butler, Pa., Jewelers with Worthless Checks.

BUTLER, Pa., March 27.—Three jewelers of this place, R. L. Kirkpatrick, David L. Cleeland and Wm. E. Ralstan, were victims of Daniel H. Wuller, a druggist, the question as to whose sanity is being determined by the court here. The jewelers testified that Wuller bought about $1,800 worth of diamonds, watches and trinkets from them and had given in payment checks that were worthless, his bank account having been overdrawn.

Wuller, who is a well-known business man, made a habit of giving his friends expensive presents, and it is said that he had given a large portion of the jewelry purchased to various persons. Since the trial to determine his sanity began a quantity of jewelry has been returned to the jewelers by persons to whom it was given.

Otto L. Beck Reported to Be Missing From Toledo, O.

TOLEDO, O., March 25.—Otto L. Beck, a jeweler of this city, is missing, as is a large amount of jewelry from his establishment.

Monday noon Beck told his employes that they need not return to work until Tuesday morning, as he had decided to give them a half holiday. When the clerks went to the place of business yesterday morning it was locked and remained so all day. Yesterday evening one of the employes broke open the transom and entered the store. It was found to have been ransacked and that jewelry was missing.

Efforts to locate the whereabouts of Beck have proved futile, and the exact value of the jewelry missing is not known.

The business of Frederick W. Brooks, Ithaca, N. Y., will be continued by Charles H. Brooks.

Ebony Goods, **Shell Goods.**

Deitsch Bros. 14 E. 17th St., New York.

The JEWELERS' CIRCULAR-WEEKLY of March 18 in speaking of booklet advertising says in part:

The retail Jeweler who has not made use of the booklet is unaware of its possibilities.

And that's right.

Good booklets sell goods.

As we have explained before, we will supply you free with very handsome Simmons Chains booklets, imprinted on the cover with your name and address so that you can mail them to your customers and benefit thereby. Just let us know how many you want.

There isn't the slightest doubt in the world but what they will sell a good many Simmons Chains for you.

R. F. Simmons Co.,
Attleboro, Massachusetts.

Death of Thomas Fogarty.

Thos. Fogarty, who for more than a decade was manager of the New York office of the Manhattan Silver Plate Co. on John St., and who, when that company was absorbed by the International Silver Co. about two years ago, went with Wm. A. Rogers, Ltd., 12 Warren St., New York, died suddenly last week at the home of his sister-in-law, 430 E. 83d St., New York.

Mr. Fogarty was about 38 years old, and was well known in the jewelry and silverware trade not only in New York but in New England and other parts of the United States. He entered the employ of the Manhattan Silver Plate Co. when about 20 years old, and gradually worked his way from the bottom of the ladder up to the position of manager. He had a genial, hearty disposition, was well liked and made many friends among his customers and associates. After going with Wm. A. Rogers, Ltd., Mr. Fogarty traveled extensively, his territory at the time of his death being New England.

One day recently Mr. Fogarty was suddenly stricken with a severe cold and a complication of stomach troubles and hurried back to New York, where he arrived Saturday afternoon, March 21. He went to his sister-in-law's house on E. 83d St., and died there the following evening, the physician in attendance giving the cause of his death as heart disease, superinduced by a severe cold in the lungs, which produced congestion and affected the heart.

Funeral services were held Wednesday afternoon from the residence of the deceased's sister-in-law and interment was made in the Holy Cross cemetery, Brooklyn. Many members of the jewelry and silverware trade attended the service. Mr. Fogarty is survived by a widow.

Death of Eugene E. Newell.

TURNERS FALLS, Mass., March 25.—Eugene E. Newell, a jeweler of this town, was drowned yesterday afternoon while canoeing on the Connecticut River. Mr. Newell, accompanied by J. M. Starbuck, was shooting muskrats and while on the river their canoe was caught in a powerful eddy and capsized.

Mr. Newell's death will be deeply regretted by friends in this city. The deceased was 25 years old and learned the jewelry business with J. H. Hollister, Greenfield, Mass., and was later with Foster Bros., of the same place. He started in business in Turners Falls just a year ago and had built up a good trade.

Canadian Manufacturers' Unsuccessful Appeal for Higher Tariff.

OTTAWA, Can., March 25.—A deputation representing the Canadian Manufacturers' Association waited last week upon Sir Wilfrid Laurier, Dominion Premier, and other members of the administration to urge an immediate revision of the tariff along the lines of increased protection in order to meet American competition. The jewelry and silverware trades were represented by W. K. McNaught, of the American Watch Case Co., Toronto, and Thomas Roden, Toronto.

A lengthy memorial was presented by President Cyrus A. Birge, of Hamilton, Ont., which set forth that the association, with a membership of 1,218, represented an invested capital of over $400,000,000. Six years had elapsed since a general revision of the tariff, and the rapid development of a young country demanded a periodical revision to meet the changes in industrial conditions. The Canadian tariff was so low and the methods of American competition and undervaluation so successful that the United States was able to supply a large portion of the goods which should be manufactured in Canadian factories. It was pointed out that imports from the United States had risen from $28,000,000 in 1886 to $53,000,000 in 1896, and last year reached the sum of $120,000,000. The British preferential tariff of 33 1-3 per cent. was taken advantage of by German and other Continental manufacturers, who had their goods transhipped from Britain, thus obtaining an advantage to which they were not entitled. Should a period of depression set in Canadian manufacturers would be forced to compete more keenly than ever against the gigantic aggregations of capital which control the specialized industries of the United States.

President Birge said he believed hard times were coming in the United States within a short time, and when they came Canada would be made the slaughtering ground for surplus American products.

W. K. McNaught saw in the trusts of the United States a menace to Canada. The coming in of German goods under the British preference was an outrage. In his business the employes were demanding higher wages. They measured their demands by what United States artisans got, but the Canadian manufacturer was not protected by as high a tariff as prevailed there. He believed that a national tariff copying that of the United States in its main details was the tariff for Canada.

Hon. W. S. Fielding replied on behalf of the Government and intimated that he disagreed with many of the views advanced: He was disappointed in their representations as they had not been sufficiently definite in their demands. The details of what they asked should be made public and not kept secret. The buyers had yet to be heard from. He had received letters from manufacturers warning him against the designs of the association. Many manufacturers feared that the aims they had in view would affect their special interests adversely. The administration and members of Parliament had received numerous letters urging that no action in the direction of tariff revision be taken.

The deputation retired convinced that nothing in the way of further protection could be expected from the Government.

Solomon Berlin Files a Voluntary Petition in Bankruptcy.

An involuntary petition in bankruptcy was filed Thursday in the United States District Court at New York by Solomon Berlin, formerly a retail jeweler at 36 Forsyth St., New York. The schedules filed with this petition show liabilities of $3,652 and no assets.

Among the creditors for amounts of $100 and more are: Hammel, Riglander & Co., $690; I. Ollendorff, $450; Jonas Koch, $350; Sussfeld, Lorsch & Co., $250; S. & B. Lederer Co., $300; Providence Stock Co., $200; Isidore Lipshitz, $667; R. A. Breidenbach, $150, and Hipp. Didisheim & Bro., $400.

The bankrupt was formerly in business with Isaac Lipshitz, under the style of Berlin & Lipshitz, which concern was dissolved in 1897.

Can Any Reader Answer This?

Lock Box, 341, Rushville, Neb.

Editor THE JEWELERS' CIRCULAR-WEEKLY:

Can you or can any of your readers inform me of the whereabouts of Edward Zink. I heard from him just before the big Chicago fire, at which time he was in the jewelry business in Chicago.

Respectfully,

T. L. OPPENHEIMER.

William Hellfach, La Crosse, Wis., will shortly move into more commodious quarters at 322 Main St.

Abraham Anzelewitz Brings Suit To Protect His Patents Relating To Watch Movements.

Abraham Anzelewitz, of Abraham Anzelewitz & Co., wholesale dealers in watches and jewelry, 110 Canal St., New York, has brought suit in the United States Circuit Court in New York against Albert Wittnauer, an importer of watches at 13 Maiden Lane, over an alleged infringement of patent on improvements in stem winding and stem setting watches.

According to the complaint filed in the United States Circuit Court last week, there are two patents involved, both of which are controlled by the complainant. The complainant claims Mr. Wellnauer has sold watches containing features which infringe the patents and asks for the usual accounting and damages sustained by reason of the defendant's alleged infringement; seeks a temporary and perpetual injunction restraining the defendants in the further use or sale of articles containing the patent, and further asks the Court to increase the actual damages to a sum equal to three times the amount actually received, because of the alleged wilful and unjust infringement.

The patents at issue in the suit are No. 408573, issued Aug. 6, 1889, to Edward K. Boyd, of Chicago, and assigned Feb. 3 of this year to the complainant in suit, and No. 682968, issued to the complainant Sept. 17, 1901, and still owned by him. The claim of the Boyd patent reads:

In a watch movement, the combination, with a handle and a yoke for transmitting motion from the handle to the winding and setting mechanism, the yoke being provided with a tooth of a lever connected to the handle and adapted to engage the tooth to move the yoke to the setting position, and a spring extending from the lever to the yoke, this spring when under tension tending to move the yoke to the winding position.

The general claim of the patent taken out by Mr. Anzelewitz, reads:

In a winding and setting mechanism, a stem, a shell carried on the stem, a sliding clutch-sleeve on the stem, and two engaging spring-actuated levers; one of them engaging the shell and the other one serving to shift the clutch-sleeve, and the lever that shifts the clutch-sleeve being positively held in one of its positions by the other lever.

California Optometry Bill Now a Law.

San Francisco, Cal., March 25.—The bill recently introduced in the Legislature by Senator Wolfe, creating a State Board of Examiners in Optometry, which was given in full in The Circular-Weekly a short time ago, has now become a law in California.

Optometry is defined in the bill as "the employment of subjective and objective mechanical means to determine the accommodative and refractive states of the eye and the scope of its functions in general."

Shrewd Thieves Loot A. B. Hubermann's Store of $5,000 Worth of Diamonds.

Omaha, Neb., March 25.—Two unknown men entered the store of A. B. Hubermann to-day and escaped with $5,000 worth of gems.

The men are supposed to have had a third confederate, for while they were in the store the jewelry clerk was called to the telephone, and while engaged in conversation, the thieves made off with the plunder. There is no clue to their whereabouts.

INTERNATIONAL SILVER CO.,

SUCCESSOR TO

ROGERS & BROTHER,

WATERBURY, CONNECTICUT.

New York Warerooms, - 9-11-13 MAIDEN LANE.

Meeting of the International Silver Co.'s Stockholders Adjourned Until May 7.

A meeting of the stockholders of the International Silver Co. was held Thursday in Jersey City, but owing to the injunction proceedings begun in the New Jersey Court of Chancery by Wm. H. Watrous, of Hartford, Conn., and Wm. P. O'Connor, of New York, to restrain action by the so-called "voting trust," the annual meeting of the company has been adjourned until May 7, when officers for the ensuing year will be elected.

A discussion of the suit was quite general at the meeting, and it seemed to be the feeling of all those present that the policy pursued by the company's officers was for the best interest of every one concerned. Some of the leading stockholders expressed themselves as much pleased with the manner in which the business of the concern is being conducted, and said that they had no fault whatever to find with the present management. It is also asserted that the stock owned by the two members, under whose names the proceedings were brought, amount to only five shares of preferred and a few shares of common.

The sales of the company for the first three months of this year have considerably exceeded those for the corresponding period of 1902, and the prospects for the coming year are exceptionally good. Statements obtained from prominent interests in the company, however, seem to indicate that no increase in the present rate of the preferred stock dividend may be expected for some time, the opinion being expressed that profits above the amount necessary for fixed charges and preferred stock dividends might better be applied toward accumulating a surplus. Those present at the meeting represented 44,000 shares of the preferred stock and 93,000 shares of the common stock.

Assets and Liabilities of Wm. L. Pollack.

The schedules of W. L. Pollack, a diamond dealer at 41 Maiden Lane, New York, against whom an involuntary petition in bankruptcy was filed in the United States District Court in New York, Jan. 5, were filed Friday. They show his liabilities to be $42,300 and nominal assets $10,275.

Among the creditors for amounts of $100 and more are Fred W. Lewis & Co., $4,242; Leo M. Sachs, $1,659; I. J. Roe, $2,066; Oppenheimer Bros. & Veith, $4,520; Henry Sessler, $510; Ingomar Goldsmith & Co., $100; Mount & Woodhull, $11,952; Jac. Kryn & Wouters Bros. (assignees of claim of Arthur J. Kahn & Co.), $7,535; H. Z. & H. Oppenheimer, $1,356; Felix B. Rothenburg, $910; the State Bank, $1,203, and Herman Levy, $5,424. The assets, which consist of bills receivable, $169; stock and fixtures, $3,200; outstanding accounts, $6,830, and cash in banks, $75.81, are now in the hands of Robert C. Morris, who was appointed receiver Jan. 5 of this year.

Pollack, it will be remembered, was arrested early in January in a civil suit brought against him by Fred W. Lewis & Co., for the alleged conversion of $3,350.94 and was admitted to bail in $3,000. He began business for himself in 1879, and in 1896 failed, under the style of Wm. L. Pollack & Co. He went through bankruptcy in 1900, and his liabilities were at that time $40,046. His present difficulties, according to him, were caused by unfortunate betting at horse races. W. L. Pollack should not be confused with W. G. Pollack & Co., 68 Nassau St., which firm is solvent and is not connected with W. L. Pollack in any way.

Continuation of the Examination Into the Affairs of W. S. Tussing.

COLUMBUS, O., March 27.—The examination into the affairs of W. S. Tussing, the missing jeweler of this city, has been going on for the past week and many facts have been disclosed at the last session of the examination, held in the Bankruptcy Court, Wednesday. Mrs. Tussing, the wife of the jeweler, was the principal witness.

Mrs. Tussing stated that she did not have a dollar's worth of the stock in the jewelry store nor did she know where it was held except as she was told by Tussing just before he left. She said her husband told her of jewels to the value of $83,000 that were deposited with different pawnbrokers in this city. This was told shortly before Christmas and a few days prior to this Tussing, looking very badly at the time, threatened to commit suicide.

Mrs. Tussing testified that she had sold her house for $4,500, giving a part of this money to her husband just before his departure. The witness claimed she did not know where her husband is or whether he would return.

The case was then continued and Referee in Bankruptcy Rogers states that it may be two weeks before the next hearing. It was expected that the first distribution would be made to creditors before this, but some unexpected complications have delayed the dividend.

John R. Losey, Plymouth, Ind., recently visited South Bend with a view to locating there.

Another Five Per Cent. Advance in the Price of Rough Diamonds.

New York diamond importers received cablegrams Tuesday and Wednesday of last week from London, Amsterdam and Antwerp brokers, announcing that the London diamond syndicate had advanced the price on all grades of rough diamonds 5 per cent.

This last advance, although anticipated to some extent, as was the one before it, has confirmed the opinion of a large number of importers to the effect that there is an actual scarcity in the supply of rough. This feeling has been somewhat strengthened by reports of returning diamond buyers, who declare that desirable goods have not been so scarce in London and Continental markets for a long time.

THIS WEEK—16,000 JEWELERS

WHO ARE NOT SUPPLIED WITH "1847 ROGERS BROS." GOODS DIRECT FROM FACTORY WILL RECEIVE ONE OF THESE CARDS, PRINTED IN TWO COLORS:—

Facsimile of each box containing the genuine "1847 ROGERS BROS." goods.

With the many Fictitious Brands being introduced every year the Trade have only the reputation of the manufacturer as a guarantee, therefore we caution those who desire the original and guaranteed Rogers Spoons, Forks, etc., to see they are stamped with the Trade-Mark,

"1847 ROGERS BROS."

In the Year 1903—Fifty-six Years after the First Spoon or Fork was made in the original Rogers Brand—the line is one that any jeweler can safely look upon as staple. Past reputation makes it a reliable and salable quality, and will continue to make it a brand sought after by the consumer.

It has been largely advertised, greatly stimulating the sale, and in the future will be kept before the public by attractive announcements in all leading periodicals, insuring an increasing demand as in the past. Jewelers will be materially benefited by having a good assortment of these goods to show possible customers. Any jobber will supply you. Made only by the successors to Rogers Bros.

PHILADELPHIA WATCH CASE CO.
RIVERSIDE, N. J.

Death of Joseph F. Blood.

PROVIDENCE, R. I., March 30.—Joseph F. Blood, of the firm of Flint, Blood & Co., manufacturing jewelers, died at his home, 600 Broad St., this city, Saturday afternoon. Mr. Blood had been ill for some little time and his death was not wholly unexpected. News of it caused a shock, however, among his friends and business associates. He had a paralytic stroke Aug. 2, 1901, from which he never fully recovered.

Mr. Blood was born in Ipswich, Mass.,

THE LATE JOSEPH F. BLOOD.

Sept. 5, 1834. He was the son of Samuel and Elizabeth Blood, and one of a family of several children, all of whom are now dead. He came to this city in 1851 and became an apprentice in a jewelry establishment, serving his time and mastering details of the business that later stood him in good stead

In his early days Mr. Blood was in the employ of Dutee Wilcox, but later decided to start in business for himself. This was in 1869, the firm being known as Flint, Blood & Co. Associated with Mr. Blood were William W. Flint, James A. Young and Benjamin A. Holbrook. The plant was first located in the old French & McKenzie building, Eddy and Friendship Sts., but later the business was transferred to the Fitzgerald building, and from there to the Simmons building, 94 Point St., where it is at present located. On the withdrawal of Mr. Holbrook, the firm name was changed to Flint, Blood & Young. Mr. Young died in 1888, and the former name of Flint, Blood & Co. was adopted again.

While rings were the firm's specialty, the J. F. Blood patent stud, invented by Mr. Blood, gained a wide reputation. The firm has won for itself a name among the business interests of the city and in this upbuilding Mr. Blood played a by no means inconspicuous part.

Mr. Blood took no active part in politics, but was keenly interested in municipal, as well as national events of importance. Neither was he affiliated with any social organization.

Mr. Blood is survived by a widow and one daughter, Mrs. Frederick S. Potter, of this city. The funeral will be held Wednesday afternoon at 1 o'clock from his late residence.

Death of L. Combremont.

Word was received in New York last week from Paris, France, that L. Combremont, formerly a dealer in watch materials and jewelers' supplies, at 45 Maiden Lane, New York, had died in that city recently.

Mr. Combremont was about 42 years old, and was well known among the New York jewelers as a dealer in materials and supplies. He came to this country about 15 years ago, and for many years acted as agent for a Switzerland watch material house, but early in the '90s he went into business for himself, selling mostly imported goods.

After a few years at this business, Mr. Combremont's affairs became entangled and in 1899 he was forced to make an assignment. When his business troubles were finally straightened out, he returned to Europe and has since lived in Paris, making occasional visits to Switzerland, Germany and certain parts of France. Whenever New York watch material men went abroad, they were quite likely to meet Mr. Combremont and exchange stories and news notes.

DUBOIS WATCH CASE CO.

Death of John A. Platt.

PROVIDENCE, March 30.—News of the sudden death of John A. Platt, a traveling salesman in the employ of the Theodore W. Foster & Bro. Co., manufacturing jewelers, was received by his relatives in this city Saturday. Mr. Platt died in Chicago, being in the west on a business trip for the

THE LATE JOHN A. PLATT.

firm which he represented. He was taken ill about a week ago, but it was not thought that the sickness was of a serious nature. Blood poisoning, however, combined with a liver trouble, proved fatal. His eldest son, Charles E. Platt, who was also in Chicago on business, was with him when he died and brought the remains to this city.

Mr. Platt was born in Poughkeepsie, N. Y., and was in his 65th year. He had been a resident of this city for the past 35 years. He was considered an expert salesman and traveled for a number of dry goods houses before coming to this city. He was at one time engaged in the drug business here, but left that to become a manufacturing jeweler, the firm being Dodge, Platt & Co. He ultimately withdrew from the firm and became a salesman for the Theodore W. Foster & Bro. Co., with whom he had been associated for the past 20 years or more.

Mr. Platt was a particularly active man and had often expressed the determination to "die in harness." He was not a member of any secret societies, but was connected with the Central Congregational Church and took an active interest in church matters. Mr. Platt was married in Poughkeepsie, N. Y., and his wife died three years ago.

He leaves five sons and one daughter, the two older sons being employes of the firm with which the deceased had been so long connected.

W. B. Brown Files His Answer To the Suit by the Maryland Optical Co.

BALTIMORE, Md., March 29.—William B Brown, trading as the Brown Optical Co., filed his answer Friday to the bill for an injunction entered by Leon Levi, trading as the Maryland Optical Co., to restrain the defendant from advertising himself as the owner of all the records and prescriptions of the Maryland Optical Co.

Mr. Brown states in his answer that the assets of the optical business conducted by William H. Kettler, at 109 W. Lexington St., under the title of the Maryland Optical Co., were disposed of at public auction, May 13, 1903, and denies that Leon Levi, as he claims, purchased a large portion of the stock, but avers that the oculists' prescriptions and records of glasses prescribed by the old Maryland Optical Co., along with stock, machinery and the furniture, were bought by himself. He claims Mr. Levi was one of the smallest purchasers at the sale. Mr. Brown states he has no knowledge that Mr. Levi subsequently obtained lease of the premises at 109 W. Lexington St., but that prior to the sale a small portion of the premises were rented by the complainant for the purpose of conducting a jewelry business. As to the good will of the Maryland Optical Co., Mr. Brown stated he had tried to purchase it, but was told by the assignee that the good will was not for sale, and states he has no knowledge of Mr. Levi's purchasing it.

In concluding his answer Mr. Brown refers to the advertisements in the daily papers that caused the suit. They stated that on May 13, 1902, William B. Brown did buy the oculists' prescriptions and records of glasses prescribed by the Maryland Optical Co., under the proprietorship of Mr. Kettler, etc. He asks that the proceedings be dismissed, as the suit was not based on good faith, but was brought to embarrass him in his legitimate business.

J. A. Lewis, Pittston, Pa., is confined to his home on William St. by an attack of la grippe.

W. H. Henderson, watchmaker and optician, has accepted a position with D W. Dusenberry, Middletown, N. Y.

Mrs. D. R. Jenkins, El Paso, Ill., will move into newly furnished quarters in the Fleming building, at that place, April 1.

Amendment to Polishing Law.

Bill Which Would Injure Manufacturing Jewelers Again Introduced in New York Legislature.

An act to amend the labor law, relating to polishing and buffing, has been introduced by Assemblyman Wemple in the New York Legislature. This amendment is exactly the same as that proposed by the bill introduced by Assemblyman John F. Ahearn in the Legislature one year ago, and which, by the prompt action of the Manufacturing Jewelers' Association of New York, after the bill had been discovered by THE CIRCULAR-WEEKLY, was killed in the Judiciary Committee of the Senate.

The amendment was for the purpose of inserting simply the words "tripoli" and "rouge" among the abrasives mentioned in the act known as the Polishing Law and would thereby forbid jewelers in New York from employing females at all, or males under 18 years of age, in their polishing and buffing shops.

The amendment now in the Legislature reads as follows, the new matter being printed in italics:

"EMPLOYMENT OF WOMEN OR CHILDREN AT POLISHING OR BUFFING.

No male child under the age of 18 years, nor any female, shall be employed in any factory in this State in operating or using any emery, *tripoli, rouge,* corundum, stone, *carborundum or any abrasive,* or emery polishing or buffing wheel. The owner, agent or lessee of a factory who employs any such person in the performance of such work is guilty of a misdemeanor and upon conviction thereof shall be fined the sum of $50 for each such violation. The *Commissioner of Labor,* his assistants and deputies, shall enforce the provisions of this section."

This bill has been referred to the Assembly Committee on Labor and Industries, and Assemblyman Costello, chairman of that committee, knowing that jewelers were interested, notified the Manufacturing Jewelers' Association of New York that the bill would be up for argument before the committee yesterday, and accordingly the president of the association, Chas. R. Jung, of Jung, Staiger & Klitz, and L. H. Stern, of Stern Bros. & Co., went to Albany yesterday to attend the hearing and use every effort in their power to defeat the measure.

These are the same gentlemen who composed the committee that fought the bill last year and who, by their prompt action and persistent efforts, finally caused its defeat.

Treasury Department Invites Sealed Bids For Clocks For Government Buildings.

WASHINGTON, D. C., March 28.—The Treasury Department is inviting sealed proposals until April 21, 1903, for furnishing United States buildings under the control of the Department east of the Rocky Mountains, as the requirements of the service may demand, during the fiscal year ending June 30, 1904, with certain clocks. These clocks must be either eight-day, pendulum or electric wall clocks, with 12-inch dials, of standard makes; frames to be of oak, cherry or walnut.

No stated form of proposal is necessary, but the bids should be explicit in description and accompanied by samples of clocks. The prices stated must include all expenses incident to delivery to such buildings as the Department may designate. Proposals should be addressed to the Secretary of the Treasury, Washington, D. C.

Endless Chain Watch Scheme Worked at the Brooklyn Navy Yard.

New York and Brooklyn newspapers during the past week have given extensive publicity to a mysterious "endless chain" scheme, which has for its purpose the selling of gold watches. No names are mentioned in these reports, but those most deeply interested were the employes in the Brooklyn Navy Yard. The firm supporting this scheme is supposed to be located in Syracuse, N. Y., and offers to supply every man with a gold watch at the insignificant price of 25 cents, postage prepaid.

When this information was circulated about the Navy Yard by a quiet looking man, who made his appearance last week and subsequently disappeared, men tumbled over one another in their haste to accept the proposition. The man who started it passed around small tickets, on which were words to the effect that the little piece of pasteboard inclosed in an envelope with $1 in currency and mailed to the firm would bring back four more tickets, similar to the one sent in, by return mail. These tickets were to be sold to friends at 25 cents each, thus bringing back the dollar, and as soon as these four friends sent their tickets, each inclosing a dollar, the watch would be mailed. The scheme was the well known variety of "endless chain" from beginning to end, and it is said that a large business in the Navy Yard was rapidly built up.

Postmaster Roberts, of Brooklyn, when questioned as to the possibility of interference by the postal authorities, stated that they were powerless to stop the concern from doing business through the mails. "The postmaster could refuse to rent such a concern a box in his post office," he said; "but we have no authority to interfere with their business, unless some one should put in a claim that the company had not lived up to its agreement. That would constitute fraud, and an inspector would at once be detailed to look into the matter."

R. Randall Davidson, Whose Stock Was Attached, Brings Counter Suit.

ANSONIA, Conn., March 26.—The stock of R. R. Davidson was sold at Sheriff's sale last week to satisfy the judgment for which the goods had been attached. The balance of the goods which were not sold were returned to Mr. Davidson, but he refused to accept them and they are now said to be in the possession of the Sheriff.

Mr. Davidson has brought a counter suit against S. W. Smith, an attachment of $1,500 having been levied, and also a suit against Deputy Sheriff Peck, in whose case an attachment of $1,400 has been levied. Both of these suits are returnable to the Superior Court, and it is believed they will be heard some time during this month.

The suits are brought on the ground that the judgment was illegal and that Mr. Davidson was wrongfully ejected from his store.

The E. Howard Watch Co.

Providence.

George W. Dover started on a trip to Florida last week.

S. K. Barber has returned to this city after a business trip to New York for A. Holt & Co.

R. A. Breidenbach's office, which was formerly at 94 Friendship St., is now located in the Fletcher building, 212 Union St.

Owing to the retirement from business of C. J. Beekman, the plant has been advertised for sale in lots to suit the purchaser.

At a recent meeting of the Jewelry Workers' Union it was voted to admit women employes in the jewelry shops to membership in the union.

C. C. Darling & Co., located in the Fuller building, 68 W. Exchange St., have announced that from April 4 to Aug. 29 their employes will have a half holiday Saturday afternoons, with full pay. About 65 hands are employed in the factory.

Articles of incorporation of Clark & Coombs were taken out at the office of the Secretary of State last week. The firm, according to the articles, will manufacture, buy, sell and otherwise deal in jewelry and other articles. The incorporators are: William Clark, Jr., Willsmond Clark and Austin I. Clark. The amount of capital stock is $150,000, divided into 1,500 shares at $100 each. Members of the concern stated that the object in becoming incorporated was to facilitate their business.

A daring scheme to loot the store of the Belcher & Loomis Co., dealers in jewelers' tools and supplies, was nipped in the bud one night last week, when Charles H. Bassett, a young man, was apprehended as he was about to carry away some of the goods. Bassett was arraigned in the Sixth District Court, but inasmuch as there was an old indictment hanging over him he was taken before the Common Pleas Division of the Supreme Court and sentenced to 18 months' imprisonment on the old indictment.

John Nelson, the N. Main St. jeweler, indicted by the Grand Jury on a charge of receiving 15 ounces of silver stolen from the Gorham Mfg. Co., was arraigned before Judge Wilbur in the Common Pleas Division of the Supreme Court last week. He pleaded not guilty and a bond in the sum of $1,000 was furnished by Shamay Kotler for Nelson's appearance for trial. Nelson wants to be tried in some county other than Providence, and has moved, through his counsel, for a change of venue.

By a decree entered in the Appellate Division of the Supreme Court in the matter of the Builders' Iron Foundry against the McWilliams Mfg. Co., the receiver is authorized to take possession of the property under attachment. The rescript further directs the Sheriff to give up this property, except $1,100 worth, and the receiver is authorized to continue the business until further notice. Following closely upon this action comes the suit of Thomas McWilliams in the Common Pleas Division of the Supreme Court against the McWilliams Mfg. Co., on a note for $100 and book account of $675. The plaintiff places the damages in his writ at $1,000.

William C. Riccius, who has been employed during the Winter at the shops of O. C. Devereux, has been engaged to play ball with the Fall River nine this season. To

show their esteem his fellow shopmates presented him Saturday with a handsome pin set with a diamond surrounded by pearls.

The games of last week did not change the standing of the clubs in the Manufacturers' League bowling tournament, the Dovers still heading the list, with the Ostby & Barton quintet in fifth place.

W. C. Codman, designer for the Gorham Mfg. Co., has been selected as judge of all terriers, except Boston and fox, at the bench show of the Rhode Island Kennel Club, to be held in Music Hall, Pawtucket, Saturday, May 2.

In accordance with the general move in that direction, it is claimed that the die and hub cutters will soon ask for a nine-hour day. There has recently been a canvass of the situation among the members of the Die and Hub Cutters' Association and the sentiment of the majority is said to have been in favor of making the request. It is understood that the association has a membership of about 234. They will act upon the matter at their next meeting, and will probably ask for the new scale to go into effect May 4. Those of the members who have been interviewed state that if their demand is not acceded to there will be a strike on the date mentioned. They say that in other cities the members of the same craft have made a similar demand and it has been granted in some places.

Among the important real estate deals of the past week were two that had a direct bearing on the jewelry industry—one cites the acquiring by the Gorham Co. of a site for an addition to its present big factory, mention of which was made in the last issue of THE CIRCULAR-WEEKLY, and the other was the purchase by the Ostby & Barton Co. of land adjoining the north side of its present factory, located on Richmond St. This land is 130 by 60 feet, and negotiations for its purchase have been pending for some time. On this land the company will erect a new building, which will practically double the capacity of the firm. The rapid growth of the company has made this addition imperative, and it proposes to erect a building that will be a model of its kind and in keeping with the up-to-date ideas now employed in the construction of buildings of this character.

Attleboro.

The Attleboro jewelry manufacturers who were swindled over and over again by New York's "bogus directory gang" have a fellow feeling for the residents of the metropolis itself, who now prove to have been heavy losers by the operations of the same men. Attleboro has the distinction of being the first city or town in which adequate prosecution of the swindlers was attempted.

United States Army officers are in search of Edward Blain, a jeweler employed by the W. & S. Blackinton Co., on the ground that he failed to serve out a term of enlistment in the regular army. The man was taken from his bench at the shop, but in some manner escaped from under the eye of the officers and is now missing.

The first meeting of the creditors of Ransom M. Derick, the bankrupt jobbing jeweler, was held in Taunton Friday. A physician's certificate was presented to the effect that the bankrupt was unable to leave his

home. The following claims were allowed: Moses Rosendale, $51; Mason Box Co., $44; the D. F. Briggs Co., $35; the D. E. Makepeace Co., $4; McRae & Keeler, $95. The meeting was continued until April 22.

William H. Hoddie, of Attleboro, filed a suit last week against the Attleboro Mfg. Co. in behalf of his minor son, William H. Hoddie, Jr. He demands $50,000 for the loss of the boy's eyesight, due to an accident at the factory. The lad was sent with a pitcher from the shop to an outbuilding. He was to bring some acid—a mixture of nitric and sulphuric. In some manner he slipped and the acid was spilled on his face as he fell.

Work was started last week on a new storage vault, water and fireproof, for finished silverware at the shop of Reed & Barton, Taunton. The whole factory is being overhauled, the departments of work differently arranged and classified and additional power and new machinery introduced.

North Attleboro.

The pearl shop at the T. I. Smith Co. plant is running until 11 P. M.

Orrin W. Clifford, of the Webster Co., has moved into his new house on Church St.

Frederick D. Heffron, of Riley, French & Heffron, is back in town after an extended trip.

Isidor Himmelreich has entered the employ of the B. S. Freeman Co. as traveling man.

Harold H. Totten, western salesman for Frank M. Whiting & Co., has returned from a trip.

Fred Cook, New York representative for Whiting & Davis, spent a few days in town last week.

G. Herbert French, of Riley, French & Heffron, is expected from Florida, with his family about April 10.

The factory of H. F. Barrows & Co. closed for the first week in April in order to make the annual overhauling.

The Providence Brush Co. has practically completed the work of removing to the Cargill factory, and will soon be turning out goods.

Howard C. Saunders, the refiner, has the sympathy of many friends in the sad accident that befell his young son, Richard, last week. The lad was run over by a team and has been in a critical condition ever since.

The Regovitz Seamless Ball Co., of Providence, is looking for factory space in the town and hopes to find room for the employment of 50 hands. The concern is negotiating for the use of the Scott building, and if it can be made strong enough to hold the heavy machinery used, a lease will probably be taken.

A fire that was confidently expected would end in the entire demolition of the Union Power building, occurred on Saturday afternoon. The prompt work of the fire department saved the building, and the loss thereto will not exceed $500. The building is the tallest factory in North Attleboro and is regarded as a bad one for a fire to get started in. It is four stories high and built of wood. The first floor is occupied by Fred S. Gilbert; the second by Sturtevant, Whiting & Bigelow; Sandland, Capron & Co. occupy the third floor and the fourth floor is vacant at present. The fire

started in the polishing room of Sturtevant, Whiting & Bigelow, on the second floor, and is believed to have been originated by a heated bearing in a blower. The new chemical engine, recently purchased by the town, enabled the department to extinguish the blaze without drenching the building. Had the fire gained but a very little more headway before its discovery the building would have been doomed. The three concerns in the factory suffered some water damage, but there will be no interruption of business.

Connecticut.

Ernst Schall, Hartford, last week celebrated the 40th anniversary of his business career as a jeweler.

Frank P. Becton & Co., Waterbury, have dissolved. The business will hereafter be known as the Gaffney Jewelry Co.

The death is announced of A. L. Collins, formerly president of the Meriden Cutlery Co. Mr. Collins was 83 years of age.

Gen. George H. Ford and wife, New Haven, who have been in Rome, Italy, for several weeks, sailed for home March 25.

Wm. A. Pennoier, formerly with Isaac Brush, Bridgeport, has tendered his resignation to accept a position in Atlanta, Ga.

J. W. Bailey, Durham, died last Saturday, aged 59 years. The deceased was the father of Arthur B. Bailey, now with the Gorham Mfg. Co. in Montreal.

Meriden dispatches state that the office department of the C. Rogers & Bros.' plant in Meriden will be transferred to factory "E" of the International Silver Co.

Morris Mille, a chaser in the employ of factory "E," International Silver Co., New Haven, Conn., was the winner of a $1,000 prize at the recent fair held at Birger Jare and Diana Lodges, Order of Vasa, New Haven.

N. L. Bradley, of the Bradley & Hubbard Mfg. Co., Hartford, last Wednesday afternoon appeared before the Committee on Public Health and Safety in opposition to a bill which declared that the emission of dense smoke longer than five minutes at one

time from any chimney in the city shall be a nuisance.

The report that Samuel Dodd, president of the International Silver Co., is critically ill was denied by Dr. Bradstreet, the attending physician, who recently stated that his patient was doing well and will probably be able to resume his business duties within a very short time.

The will of Mrs. William H. Lyon, who was the daughter of the late Charles Parker, was admitted to probate last Friday afternoon in Meriden. William H. Lyon was appointed administrator. The entire property, which amounts to several thousand dollars, reverts to the daughter of the deceased, Miss Elsie Lyon.

Philip T. Hall, Yalesville, has secured an option on the factory of G. I. Mix & Co., of that place. It is said that Mr. Hall intends to organize a joint stock company and operate the plant as soon as his plans can be put into effect. The seven houses formerly owned by Mr. Kendrick, of G. I. Mix & Co., have been purchased for $10,500 by E. W. Beecher, of Wallingford.

Canada Notes.

TRADE CONDITIONS.

General business conditions in eastern Canada continue favorable. Money is plentiful and a good season's trade is anticipated. Reports from British Columbia are unsatisfactory. The protracted labor troubles in the mining districts and the recent strike on the Canadian Pacific Railway have had a most depressing effect on trade. There is a heavy demand for goods from the northwest in anticipation of a continued influx of population, and some conservative houses fear that there may be a speculative expansion of trade in excess of the requirements of the country. It is noted that not so many buyers have gone to Europe this season as usual, there being a growing disposition to purchase home-manufactured goods more extensively from the large firms who make up many lines after European designs. The prevailing style of wearing sash pins has resulted in some neat designs in enameled jewelry being placed on the market.

C. S. Ellis, of P. W. Ellis & Co., Toronto, returned last week from a tour to New York and the southern States.

Frederick Addison, well known in connection with the jewelry trade, but at present an operator on the stock market, sailed for Europe last Wednesday.

Out of town buyers visiting Toronto, Ont., last week included J. Abramson, Kingston; C. L. Weiss, Bancroft; W. Sheppy, Highgate; Thomas Porte, Winnipeg.

The stock of Jacob Dover, Nelson, B. C., has been taken possession of by the Bank of Montreal under a chattel mortgage for a large amount. There are large liabilities to eastern creditors, and it is expected that with due care in the winding up process a fair dividend will be realized.

J. E. Seagram, Waterloo, Ont., the noted turfman, recently ordered a $1,000 racing trophy as a prize at the coming Woodbine Park race meeting. After a keen competition, in which a large number of the leading silversmith firms, both in Canada and the United States, took part in submitting original designs, the contract was awarded to Ryrie Bros., Toronto.

Lewis Kennedy has resigned his position with Mrs. J. N. Smith, Canastota, N. Y., and has begun a course of study in the Waltham Horological School, Waltham, Mass.

Boston.

Henry Cowan returned Monday from a trip through New York and Vermont.

The relief society of the American Waltham Watch Co.'s factory paid out $278 in sick benefits last week.

James Murphy, of the Boston office of the American Waltham Watch Co., is erecting a cottage at Braintree.

Carl D. Smith, of Smith, Patterson & Co., has returned from a two weeks' pleasure trip to Pinehurst, N. C.

E. W. Rollins, of the Nelson H. Brown Co., 90 Franklin St., was confined to his home for three days last week.

George B. Owen, New York manager of the William L. Gilbert Clock Co., was in home by illness for three days last week.

John E. Pilling, silverware buyer for the Jordan Marsh Co., is receiving congratulations on the birth of a daughter.

Abraham S. Hirschberg, manufacturing jeweler, has moved from 406 Washington St. into the new Jewelers' building annex.

Walter W. Cook, optician, 169 Tremont St., has moved his stock and fixtures to 3 Winter St., where he has become associated with George A. Barron.

E. Edwin Bentley, of the Bentley Jewelry Co., 36 Jewelers' building, is visiting New York, Philadelphia, Pittsburgh and Washington on a business trip.

Briggs S. Palmer, manager of the John W. Sanborn Co., opticians, whose confinement at the Lynn Union Hospital with appendicitis was announced in these columns last week, has been obliged to undergo another operation, owing to complications which arose. He is reported as convalescent.

The stock and fixtures of A. D. Cairns & Co. were removed from the corner of Washington and Franklin Sts., to the office of Nathan & Hurst, Jewelers' building, last week. Mrs. Cairns, who has carried on the business since the death of her husband, intends to retire, and the firm will simply have desk room in the new quarters until affairs are closed up.

Buyers in town last week were: W. N. Arnzen, Fall River, Mass.; Harry P. Lowell, Augusta, Me.; F. R. Hayden, Worcester, Mass.; L. R. Hapgood, Orange, Mass.; H. G. Chase, Nashua, N. H.; H. A. Stone, Ayer, Mass.; John McEvoy, Lowell, Mass.; J. R. Connell, Portsmouth, N. H.; A. B. Duncan, Portsmouth, N. H.; S. K. Gurney, of the Gurney Bros. Co., Brockton, Mass.; A. G. Wilbor, New Bedford, Mass.; E. S. Padelford, Gloucester, Mass., and John Schneider, Lawrence, Mass.

At last week's meeting of the Board of Aldermen Mayor Collins sent in a veto of the order permitting John C. Sawyer to erect a clock sign in front of his store at 10 Summer St., on the ground that such signs were contrary to the city ordinances. While it is true that the Mayor was right in saying that the erection of such a sign would be a violation of the laws of the city, it is also a fact that clocks have been put up by other merchants and business men in violation of the ordinance and with full knowledge of the "city fathers."

G. M. Gazeley's jewelry store at Arlington, S. D., was recently burned out with a loss of about $2,500.

To Importers and Large Dealers in Diamonds.

We are now operating, and have been for the past ten years, the most extensive and best equipped Diamond Cutting Works in this country, equaling any in Europe.

We are continually buying large series of Rough direct from the Syndicate controlling the output of the associated Diamond mine owners, and can offer to Importers and Large Dealers, Original Lots at prices equal to those of the European Markets, thereby saving the 10 per cent. import duty.

We do NOT solicit memorandum orders.

Traveling representatives may consider these columns open for the publication of any news or items of interest regarding themselves or their confreres.

Traveling men in Indianapolis, Ind., last week, included: Frank Lawton, Flint, Blood & Co.; N. F. Drexmit, Keystone Watch Case Co.; Mortimer C. Adler, Charles Adler's Sons; W. H. Lee, W. E. Webster & Co.

New eastern traveling men now in San Francisco, Cal., are: S. E. Eppenstein, Illinois Watch Case Co.; and John Nathan, L. Adler & Son.

Among the traveling men who arrived in Portland, Ore., recently, are: F. H. Wilkinson, A. Wittnauer; David Beer, Bernheim & Beer.

Traveling men visiting Toronto, Ont., have been few and far between, lately. I. Lederer, representing the S. & B. Lederer Co., Providence, R. I., was there, last week.

The following eastern traveling men were in St. Louis, Mo., last week: Lucien Rockwell, Poole Silver Co.; J. H. Friedlander, H. Z. & H. Oppenheimer; C. L. Krugler, Mandeville, Carrow & Crane; Adolph Rosenthal; Max Arnstein, Arnstein Bros. & Co.

Travelers in Lancaster, Pa., last week, included: H. E. Slater, Champenois & Co.; A. M. Hering, Carter, Howe & Co.; Sidney H. Joseph, Frederick Kaufman; George W. Berglund, L. W. Rubenstein; representative of Mabie, Todd & Bard; Mr. Grabowski, Dattelbaum & Friedman; Christ Lerch, Baer Bros.; Joseph Rifkin, L. Heller & Son; S. F. Dickes, Kaufman & Stengle.

Eastern representatives in Chicago, last week, were: M. McAllister, Irons & Russell; M. Delano, Day, Clark & Co.; Jules Franklin, L. Tannenbaum & Co.; L. L. Squire, F. H. Cutler & Co.; S. Arnstein, Arnstein Bros. & Co.; John J. Heiser, A. Ludeke & Co.; George Southwick, Union Braiding Co.; Mr. Strandberg, Sykes & Strandberg; Frank L. Wood, Ludwig Nissen & Co.; E. A. White, George L. Vose Co.; S. Englander, S. Komjn & Co.; "Willie" Barry, Larter, Elcox & Co.

Among the representatives who visited Pittsburgh, Pa., last week, were: E. A. Reed, Reed & Barton; H. C. Rowbotham, Untermeyer-Robbins Co.; S. C. Howard, Dominick & Haff; H. A. Bliss, Gorham Mfg. Co.; E. Cooper Stone, Jones & Woodland; Mr. Brown, Brown & Mills; George W. Wagoner, Wilcox & Wagoner; Lewis P. Cook, S. Sternau & Co.; Charles E. Bennett, Jacob Bennett & Son; Mr. Strandberg, Sykes & Strandberg; E. Untermeyer, Charles Keller & Co.

The following representatives of wholesale jewelry houses visited Kansas City, Mo., last week: Mr. Singleton, Adams & Singleton; A. W. Young, Edward Todd & Co.; J. A. Patterson, Hayden W. Wheeler & Co.; George F. Mackey, Charles Ahrenfeldt & Son; K. H. Clarke, Towle Mfg. Co.; George L. Brenning, Dennison Mfg. Co.; Helmer F. Thompson, F. H. Noble & Co.; T. S. Buttle, William Schimper & Co.; V. G. Cuthbert, Otto Young & Co.; W. S. Adams, P. W. Lambert & Co.

The Albany, N. Y., trade was visited by the following traveling men, last week: Garret G. Frear, E. A. Bliss Co.; Alva Lasher, Wilcox & Evertsen; George A. Jochum, David Kaiser & Co.; H. E. Warncke, Meriden Cut Glass Co.; H. H. Day, Day, Clark & Co.; Frank Ottley, Riker Bros.; Theodore Parker, Martin, Copeland & Co.; James Fisher, F. J. Boese; John Laffy, Gorham Mfg. Co.; W. J. Wartz, C. Sydney Smith; A. M. Dorchester, Champin, Holister & Co.; D. D. Burns, A. Paul & Co.; Mr. Wettigger, Hirsh & Hyman; W. R. Cattelle, Henry E. Oppenheimer & Co.; representative of Ciner & Seeleman.

The following salesmen visited Boston, Mass., last week: William Matschke, A. Joralemon & Son; M. Lind, Harvey B. Kinney; M. Goodfriend, Goodfriend Bros.; Samuel L. Howland, Joseph Frankel's Sons; Harry Lissauer, Jacobson Bros.; C. E. Mott, J. B. Bowden & Co.; Fred Clarkson, Albert Lorsch & Co.; Herman Freese, Fred W. Lewis & Co.; Irving L. Russell, L. Tannenbaum & Co.; Charles S. Isabel, Arnstein Bros. & Co.; Leverett S. Lewis, Chester Billings & Son; Mr. Hoyt, Hoyt, Obrig & Geiger Co.; Charles L. Power, Charles L. Power & Co.; Mr. Stratton, Alling & Co.; Harry Larter, Larter, Elcox & Co.

Traveling salesmen calling on the Columbus, O., trade, during the past week, were: George A. Schaefer, Regnell, Bigney & Co.; M. E. Heise, Langfeld Bros. & Co.; R. P. Coughlin, William L. Gilbert Clock Co.; Edwin M. Levy, R. Hoehn Co.; E. M. Sachs, Wolfsheim & Sachs; Mr. Tewksbury, Frank W. Smith; H. Carter, Mockridge Jewelry Co.; Emil Pick, Hammel, Riglander & Co.; Charles Melcher, Aikin, Lambert & Co.; A. J. Butch, Bawo & Dotter; J. T. Griffith, Carter, Howe & Co.; I. Price, Louis Strasburger's Son & Co.; Mr. Singleton, Adams & Singleton; W. H. Gregory, Strobel & Crane; Fred Thoma, Thoma Bros.

The Davenport, Ia., trade was visited, last week, by: A. M. Brinckle, Maple City Glass Co.; Emanuel Jacobson, Jacobson Bros.; J. R. Payne, Meriden Cutlery Co.; Ed Sinnock, Ehrlich & Sinnock; J. Block, Swartchild & Co.; J. A. Reuter, J. H. Purdy & Co.; I. H. Adler, Freudenheim Bros. & Levy; Henry Klaas, S. Glickauf & Co.; J. H. Crawford, J. W. Forsinger; Frank C. Shinn, Charles L. Trout & Co.; K. D. Yeaton, S. Sternau & Co.; H. H. Meyer, William B. Kerr & Co.; Theo. Lyons, Lyons Gem Co.; W. F. Pilcher, Parker Pen Co.; W. T. Heft, T. B. Clark & Co.; Albert Paulsen, Henry Paulsen & Co.; Jacob A. Goldberg; representative of Vander Voort Bros.

The trade in Minneapolis and St. Paul, Minn., was visited, last week, by the following: Mr. Rosenberger, Cohen & Rosenberger; Mr. Jacoby, Manchester Mfg. Co.; Mr. Jacobi, Providence Stock Co.; Henry J. Hauk, B. Grieshaber Co.; William B. Forbes, Cohannett Silver Co.; Mr. Koopman, Bernard Rice's Sons; Joseph Frank, Sussfeld, Lorsch & Co.; Mr. Barker, Mandeville, Carrow & Crane; W. F. Barker, R. Wallace & Sons Mfg. Co.; Mr. Franklin, L. Tannenbaum & Co.; Helmer Thompson, F. H. Noble & Co.; Mr. Cook, Fontneau & Cook; Charles E. Lochner, Hayes Bros. Co.; L. W. Arnold, Western Clock Mfg. Co.; W. C. Wood, Meriden Britannia Co.; H. E. Cobb, Daggett & Clap Co.; L. A. Lawton, H. M. Quackenbusch; J. O. Otis, Harvey & Otis.

Calling on Syracuse, N. Y., jewelers, during the past two weeks, were: Irving Michaels, Frolichstein & England; George L. Paine, E. T. Franklin & Co.; M. Klipper, Hipp. Didisheim & Bro.; Mr. Kenrick, Reed & Barton; Paul Gesswein, F. W. Gesswein Co.; Joseph Rifkin, L. Heller & Son; Milton S. Rodenberg, Rodenberg & Dunn; E. A. Gunther, Schwarzkopf & Dorer, Ltd.; Mr. Schloss, Bristol Mfg. Co.; F. J. Ryder, Walter E. Hayward, W. R. Boss, Hutchison & Huestis; F. D. Heffron, Riley, French & Heffron; Mr. Ripley, Watson & Newell Co.; Mr. Kramer, John T. Mauran Mfg. Co.; H. A. Macfarland, Dominick & Haff; M. Stratton, Jr., Alling & Co.; Frank S. Ottley, Riker Bros.; E. B. Downs, Hayden W. Wheeler & Co.; C. W. Smith, J. A. Whaley & Co.; A. A. Wheeler, Kraus & Jantzen; R. H. Schley, Sloan & Co.; A. L. Halstead, Barbour Silver Co.; A. E. Alexander, Simpson, Hall, Miller & Co.; William W. Middlebrook, B. A. Ballou & Co.; Morris Weil; Meyer Lehmann, Ludwig Lehmann; A. E. La Vigne, Mathey Bros., Mathez & Co.; E. C. North, Smith & North; H. L. Mitchell, Robert S. Gatter; A. N. Dorchester, Chapin & Hollister Co.; S. E. Coggins, Towle Mfg. Co.; J. Goldberg; Mr. Neumann, Bergstein & Son, Frank W. Harmon, M. B. Bryant & Co.; Theo. L. Parker, Martin, Copeland & Co.; James W. Wortz, C. Sydney Smith; James G. Magee, C. F. Rumpp & Sons; James J. Fisher, F. J. Boesse; Horace W. Sherrill, Sinnock & Sherrill; Mr. Kneeland, G. T. Sutterley & Co.; H. E. Warncke, Meriden Cut Glass Co.; C. H. E. Griffith, A. Van Der Laan & Co.; W. H. Carlough, Glaenzer, Freres & Rheinboldt; Mr. Hurlbut, American Optical Co.; Mr. Miller, Seth Thomas Clock Co.

J. H. Gorman, of Gastonia, N. C., who sold his store to Torrence Bros., has formed a partnership with Asher Green, under the firm name of Gorman & Green. The new firm recently purchased the stock of the late Joseph Horah, of Salisbury, N. C., and have greatly improved the store.

New Gold Stamping Law.

Act to Regulate Marking of Gold Articles Introduced in New York Legislature.

ALBANY, N. Y., March 27.—Assemblyman Bostwick, of New York, has introduced in the Legislature a bill amending the Penal Code in relation to the stamping or making of articles manufactured of gold or alloy of gold. The bill seeks to prevent any fraud or deceit being practiced on the public, and its provisions make it unlawful for any person to sell an article of jewelry made of gold that is improperly stamped as to quality. The bill reads as follows:

The people of the State of New York represented in Senate and Assembly, do enact as follows:

Section 1. The Penal Code is amended by incorporating therein an additional section, between Sections 3641 and 365, to be known as 364K, and to read as follows:

Section 364K. Any person, firm, corporation or association who makes or sells or offers to sell or dispose of, has in his, her or its possession, with intent to sell or dispose of, any article of merchandise constructed in whole or in part of gold or any alloy of gold, and having thereon any stamp, brand, engraving, printed label, trade-mark, imprint or other mark indicating or designed or intended to indicate that the gold or the alloy of gold in such article is of a greater degree or karat of fineness than the actual fineness of quality of such gold or alloy, is guilty of a misdemeanor.

Sec. 2. This Act shall take effect on and after the 1st day of May, 1903.

As will be seen from an examination of the bill, it does not make compulsory the stamping of articles made of gold, but provides simply that when such articles are stamped the stamp shall indicate truthfully the quality of the gold. The bill has strong backing among the wholesale jewelry trade.

A petition in favor of the bill addressed to the Legislature, which was circulated yesterday in New York, received in a very short space of time the following signatures: American Waltham Watch Co., Robbins & Appleton, Sloan & Co., N. H. White & Co., Enos Richardson & Co., Hayden W Wheeler & Co.; Carter, Howe & Co.; American Watch Case Co., Lissauer & Co., C. G Alford & Co., Jonas Koch, Day, Clark & Co.; Henry Ginnel & Co., William I. Rosenfeld, Crescent Watch Case Co., Roy Watch Case Co., Henry A. Kirby, William Smith & Co. Many others will no doubt be added before the petition is presented.

Retail jewelers throughout the State can materially assist in securing the passage of the bill by writing a letter to their Assemblyman and State Senator, urging them to support the measure. The following form may serve as a suggestion for the letter.

Honorable ——— ———,

Capitol, Albany, N. Y.:

Dear Sir—We believe that Assembly Bill No. 1643 to regulate the stamping of articles of gold would prevent the perpetration of many frauds upon the public and would protect the honest manufacturer and the honest retailer against unscrupulous competition; we therefore ask you to give the measure your hearty support.

Yours respectfully,

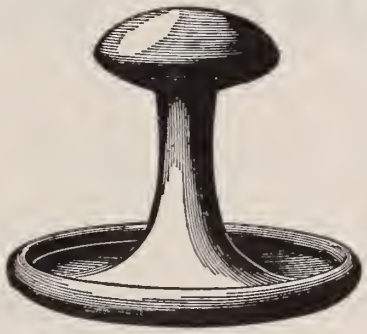
In order to make a letter effective it is not necessary that the writer should be personally acquainted with his representative. The mere fact that the jeweler lives within the district is sufficient to entitle him to the consideration of his Assemblyman and his Senator.

Hits Installment Jewelers.

Law To Stop Arrests in Actions For Conversion of Goods Purchased on Installments, May Be Enacted.

A bill affecting installment jewelers, introduced by Senator Elsberg during the present session of the New York Legislature, is very likely now to become a law in the near future. The bill purposes to abolish body executions in actions for conversion where the amount sued for is less than $100, and hits chiefly at the installment jewelry dealers of the East Side of New York, who, according to the newspapers, have been prosecuting poor people and locking them up in the Ludlow St. Jail to enforce payment of installments.

The bill introduced by Senator Elsberg was practically the same bill as the one introduced for the same purpose last year, which was killed by the strenuous opposition of M. Fred Werner and Irving C. Fox, attorneys employed by the Jewelers' Mutual Protective Association to fight its passage. This year when the bill was again presented the majority of the members of this association decided not to fight it, and so, without opposition, it passed both the Assembly and the Senate, and was argued before Mayor Low in New York Wednesday. The wrongs perpetrated by the installment dealers of the East Side and the harm they were doing because of lack of laws to stop them was presented to the Mayor at the hearing by Henry M. Taft, representing the University Settlement, which organization had been collecting evidence in regard to these alleged corrupt practices, and by Miss Rosalie Leow, representing the Legal Aid Society.



As there was no opposition to the bill the Mayor approved it; but it has not yet been signed by the Governor, though it probably will be signed by him within a few days. Meanwhile Irving C. Fox is holding the matter open for further consideration on the part of the members of the Jewelers' Mutual Protective Association, having telephoned to the Governor Monday asking him to withhold his signature until the organization should have time to present reasons for vetoing it, in case the members decide to do so.

To a CIRCULAR-WEEKLY reporter Mr. Fox said, Monday: "If we finally decide not to oppose the law we shall try to offset somewhat the effect of its enactment by enforcing clause 972 of the Penal Code, which makes it a misdemeanor for any person to conceal, sell or pawn goods purchased on the installment plan which are not wholly paid for. Heretofore judges would not allow us warrants for the arrest of persons violating this clause. We must, however, have some means of protecting our members from those persons who are always willing to buy a piece of jewelry for $150, pawn it for $100 and then laugh at us because we are unable to force them to pay. The passage of this bill will give us no redress in cases of this kind unless we are able to enforce clause 972."

A. S. Haskins has purchased the business of Henry A. Belknap, St. Johnsbury, Vt., and will continue the business. Mr. Haskins had been in the employ of Mr. Belknap for nearly two years.

The Giant of Collar Buttons

IN QUALITY,
IN SALES.

One Million Five Hundred Thousand Krementz One-Piece Collar Buttons made and sold within the last year. . . . . .

WHY? Because of their HIGHEST QUALITY, BEST CONSTRUCTION, GIVING THE MOST WEAR, AND GREATEST COMFORT and their IRON-CLAD GUARANTEE.

To verify this we invite the trade to read "**The Story of a Collar Button, with Illustrations;**" which may be had **FREE** for the asking, and to try the experiment suggested on page 5 of that booklet.

Extract from "Printers' Ink," Nov. 23, 1898.

The Little Schoolmaster now suggests, to every pupil in his class, to send a two-cent stamp to Krementz & Co., 49 Chestnut Street, Newark, N. J., and ask to be favored with a copy of their leaflet, "The Story of a Collar Button." Afterward, if any pupil will send to *Printers' Ink* another leaflet, new or old, that is half as good as this one, or that approaches it in excellence, the deserving student will be rewarded with one of *Printers' Ink's* souvenir spoons as an acknowledgment of his discovery and contribution. "The Story of a Collar Button" is the best piece of advertisement construction that has come to *Printers' Ink's* attention in the yeat of our Lord 1898.

Should you wish to utilize this booklet to increase your collar button business, we will, on receipt of your order, print your card upon and send you a quantity of them.

Krementz One-Piece Collar Buttons are stamped as follows, ON BACKS:

Patent sustained by United States Supreme Court.

Quality and Construction have made our reputation.

All Krementz Collar Buttons are Manufactured by

KREMENTZ & CO.,

in their Factory,

49 Chestnut Street,

NEWARK, N. J.

PARKS BROS. & ROGERS,
20 Maiden Lane, New York.
Selling Agents to Jobbing Trade.

Waltham Watches.

The issue of the following **10 Size** movements is announced:

No. 1015, Nickel;

15 Jewels; Settings; Exposed Pallets; Cut Expansion Balance; Patent Breguet Hairspring, Hardened and Tempered in Form; Tempered Steel Safety Barrel; Exposed Winding Wheels; Red Gilded Center Wheel and Jewel Settings.

The product of 10 size movements will be Open Face only, for the present.

MANUFACTURED AND GUARANTEED BY

American Waltham Watch Company,
Waltham, Mass.

Notices of changes in standing advertisements must be received one week in advance; new matter can be received up to Monday.

No attention paid to communications unless accompanied by full name and address of the writer.

Important Legislation Pending.

THERE are at present in the Legislatures of the various States of the Union more bills affecting the jewelry and kindred trades than have been pending at any one time for many years. While some of these measures may not have the indorsement of the trade in general, most of them are drawn in the interest of jewelers and opticians, and will have the hearty support of merchants in those lines.

Among the important measures yet to be acted upon are the Rosenstein bill in New York, relating to the marking of gold-plated goods; the Massachusetts bill to the same effect; the amendment to the Gold and Silver Stamping Law of Connecticut requiring manufacturers to file bonds; the Michigan Stamping Law; the Meyer's Pearl bill in Arkansas, and last, but not least in importance, the bill introduced last week by Assemblyman Bostwick in the Legislature at Albany, N. Y., which forbids the manufacture or sale of gold articles which contain less gold than the mark stamped upon them would indicate. Among the important optical bills are those regulating the practice of optometry, recently introduced in the New Jersey and Pennsylvania Legislatures and published in full in THE CIRCULAR-WEEKLY of March 25.

The Michigan Stamping Law, which was published in full in THE CIRCULAR-WEEKLY March 11, providing for the marking or tagging of all jewelry or optical goods made of gold or silver with an exact statement as to the quality of the metal of which they are composed, seems likely to be a law within a short time, as it has passed both branches of the Michigan Legislature. The bill in the New York Legislature, introduced by Mr. Rosenstein, does not seem to have made much headway, and little interest as to its fate has been evinced in the jewelry trade, as far as THE CIRCULAR-WEEKLY has been able to discover.

The Bostwick bill, just introduced, in New York, which requires gold articles to be properly stamped, is a law that has long been needed in the Empire State, and one that we feel nearly every legitimate jeweler and honest merchant can heartily indorse. Those who favor this act should not be passive in their support, but should actively work for its passage, as the time in which any effective action can be taken is very short. While it is true that this is the season of the year when the jeweler's business begins to be brisk and he has little or no time to devote to anything else, nevertheless, every member of the trade in New York who desires the Bostwick bill to pass can aid in this work by simply writing a brief letter to his Assemblyman or Senator, asking him to support the measure.

LETTERS TO THE EDITOR.

The Watchmaker's Unenviable Position.

BOSTON, Mass., March 16, 1903.

Editor THE JEWELERS' CIRCULAR-WEEKLY:

Will you kindly allow me through your columns to express a few ideas concerning the position of the watchmaker of to-day as that position looks to me after nearly 20 years' experience.

First, why is it that a good watchmaker, or, properly speaking, a watch repairer, should find it difficult to get a position at decent living wages? Why must he be an optician, engraver, clock repairer and jeweler? Judging by the advertisements in all jewelry trade papers, a man must be able to practice one or all of these besides watch repairing. I don't hear anything of carpenters being compelled to do plumbing, nor yet gasfitting. Some might say the trades are connected; well, in building houses all the trades are connected, but you do not find the carpenter doing the plumbing.

Now about wages: According to the advertisements, I should say the average wages paid seems to be $15 per week for a good watch repairer, clock repairer, optician, jeweler and salesman. You must be all this, and usually work from 7 A. M. to 7 P. M. for the great salary of $15 per week with probably one evening off. I would like to hear from brother watchmakers what they think should be the proper wages for a good watch repairer, and what are the causes that make his trade command no higher wages.

In a canvass made in this city (one of half a million people) I find more watch repairers working at $12 to $15 than at $15 to $20 per week; those getting $20 I could count on my fingers. This city pays its street sweepers and men of that class (men knowing no trade, not expected to wear decent clothes nor provide any tools—really the lowest class of workers) $2 per day of 8 hours, and gives them work the year round. The lowest rate the motormen of the electric car service get is $2.35 per diem, and they can work seven days a week if they wish to; coal teamsters get from $13 to $15 per week, so I suppose from these facts a watchmaker must class himself with these.

There is one thing I have discovered—that letter carriers, policemen and firemen are infinitely better off than watchmakers, the last two in this city commencing at about $21 per week, with all their chances of promotion. I claim that a watch repairer should be able to get a salary of $1,000 a year, and if he is not worth that he should get out of the trade; in order to pay this salary the general price of repairing should be advanced all over the country.

Why cannot watch repairers organize into State societies, the same as the opticians do, issue a certificate to each competent watchmaker and then publish in the daily papers, once in a while, the names of jewelry houses employing those who are incompetent. A watchmaker must be an intelligent man (certainly above teamsters and motormen); he must have good eyesight, steady nerves; must put on a good appearance, and he has to live decently; and to do all this he will receive (if he is in luck) not much over $15 per week.

My expenses on $16 per week this Winter have been about as follows: Rent, $15; coal, $12; household (food, lighting), $30; car fare, $4; lunches in town, $4 a month. That consumed my wages, so that clothes for myself and family, insurance and other incidentals I have had to pay out of my savings of other days. I suppose a watch repairer should not be married.

Oftentimes a man running a jewelry store will keep only one man. It is his place to clean windows, dust the store, tend furnace, sweep the floor, go outside and bring in dirty clocks that have been hanging up for years, and yet the boss will expect this man to dress in good clothes, so as to take his place behind the counter in the absence of his employer.

Under these conditions what are the prospects of the watch repairer, and what can he look forward to in the future? Take a retail salesman: Beginning as a boy in a good house, he is continually advancing, comes in personal contact with the customers and in time is the head of a department, or another house engages him at an advance of salary, and he brings his trade with him. The watchmaker, however, remains always the same, without advancement.

I would like to write a good deal more on this subject, but I will first wait and hear from my fellow craftsmen, whom I hope will take this matter in hand.

Very truly yours,
A. L. C.

JACKSON, Miss., March 6, 1902.

Editor THE JEWELERS' CIRCULAR-WEEKLY:

In reading "The Complaint of a Watchmaker," recently published in THE CIRCULAR-WEEKLY, we must remark, "'Tis pity, but 'tis true." I believe the only way to prevent (to some extent) the harm done by catalogue houses would be to enact a law compelling all houses issuing catalogues to pay a county tax, a city tax and all such taxes as we retail merchants would have to pay when doing business in these towns.

G. C. H.

Where a retail merchant makes false and fraudulent statements to representatives of commercial agencies for the purpose of establishing a basis of credit for himself and such statements are incorporated into the books of such agencies and circulated among the wholesale trade and by reason whereof credit is extended to such merchant, such statements may be introduced in evidence in an action brought to recover the possession of the goods which it is alleged were sold and delivered to him on the strength of such statements. (66 Pac. Rep. 718.)

Last Week's New York Arrivals.

THE CIRCULAR-WEEKLY each day posts in its office a bulletin of the latest buyers visiting New York, which every member of the trade is cordially invited to copy.

For the sum of $10, (payable in advance, a daily list will be mailed or delivered, during the Spring season (ending July 1, 1903, to the offices of those desiring this service.

SMETHPORT, PA., H. W. Rubin, Broadway Central.

SYRACUSE, N. Y., M. A. Hudson (Hudson Crockery Co.), Continental.

TACOMA, WASH., L. Mahncke (Mahncke & Co.), Astor.

TROY, N. Y., Jos. M. Quite (Tappin Diamond Palace), Merchants' Association.

WATERBURY, CONN., J. R. Hughes (Reid & Hughes Dry Goods Co.), Navarre.

WILLIMANTIC, CONN., D. C. Barrows, Astor.

WORCESTER, MASS., A. J. Moir (John C. MacInnes Co.), 55 White St.

YOUNGSTOWN, O., J. Brenner, Belvedere.
H. H. Coens (J. N. Euwers Sons), Albert.

L. Stevens, Jr., secretary of the Jewelers' League of New York, has resigned his position. The vacancy has been filled by F. A. Marsellus, who has had nine years practical experience in insurance companies, having been seven years with the New York Life and two years with the Equitable. Previous to this time he was engaged in the banking business.

New Stores and Enterprises.

(New Optical concerns will be found in the Optical Department and new enterprises in New York will be found under heading "New York Notes.")

W. G. Benson is in business at Mooresville, Mo.

A. Lederholm has opened a repair shop in San Francisco, Cal.

J. E. Bowen has just commenced business in Statesboro, Ga.

Max Goldstein is engaged in the jewelry business in Topeka, Kan.

William Krape recently commenced business in Center Hall, Pa.

F. C. Torrey will shortly start a jewelry business in Titusville, Pa.

Henry Unterberger will shortly commence business in Little Rock, Ark.

John D. Murdock contemplated opening a store in Rochester, N. Y., to-day.

C. R. Shelburne has established himself in the jewelry business in Arapahoe, Okla.

J. C. Berry & Co. is the firm style of a new jewelry establishment in Dalton, Ga.

R. J. Snyder will shortly conduct a watch repairing establishment in Waterbury, Conn.

William Fuller, formerly of El Reno, Okla., has gone into the jewelry business in Centerville, Ia.

R. S. Rabbe, formerly with A. I. Hall & Son, San Francisco, Cal., is now in business for himself in the Call building.

J. W. Zimmerman, formerly with the Geo. W. Meyer Jewelry Co., Chattanooga, Tenn., has opened a new store of his own at 11 W. 8th St. at that place.

J. S. McNeight & Co. is the firm style of a new company organized to do business in Jamestown, N. Y. J. S. McNeight, formerly in the employ of F. G. Nordstrom, will be the manager of the new establishment.

The Lackawanna Cut Glass Co. was incorporated last week in Scranton, Pa., with a capital stock of $20,000. The following are the directors: W. M. Gardner, S. E. Finnerty, S. H. Baker, M. D. Freer and R. H. Patterson.

The American Steam Gauge and Valve Mfg. Co. was recently incorporated in East Orange, N. J., with a capital of $250,000 to manufacture valves, indicators, clocks, gauges, etc. Incorporators, John McCandlish, Ralph B. Phillips, John L. Weeks.

Trans-Atlantic Voyagers.

TO EUROPE.

Asher Green, New York, sails to-day on the *Philadelphia*.

E. P. Wells, of the Globe Optical Co., Boston, sailed Saturday.

John A. Service, with the Worcester Royal Porcelain Co., England, will sail April 11.

Abe Sickles, of M. Sickles & Sons, Philadelphia, accompanied by his family, will sail April 7 on the *Kaiser Wilhelm der Grosse*.

William Ritzmann, with J. C. Caldwell & Co., Philadelphia, sailed Friday.

FROM EUROPE.

Paul Fleischer, New York, returned Wednesday on the *Etruria*.

M. Berman, Altoona, Pa., is issuing to patrons aluminum fire alarm cards. The novelty is decidedly neat and useful.

DIAMONDS!

CROSS & BEGUELIN

Importers and Cutters of Diamonds and Precious Stones

8 Rue de Mesley, PARIS *Telephone, 2188 Cortlandt* *17 Maiden Lane, NEW YORK*

New York Notes.

Fred Kohn has moved from 37 Maiden Lane to 7 Maiden Lane.

A judgment for $434.08 against Adolph Teitelbaum in favor of A. Cappola was filed last week.

Otto Goldsmith, retail jeweler at 114 W. 125th St., is holding an auction sale for the purpose of reducing his stock.

A judgment for $71.38 in favor of the City of New York was entered Thursday against the defunct Camm-Roy Watch Case Co.

The judgment for $746.15 against the Jewelers' Safety Fund Society in favor of the H. A. Kirby Co., Providence, R. I., was satisfied last week.

The judgment of $88.37 in favor of Goodfriend Bros. against Henry Lehr, a jeweler, who failed in 1895, was canceled Friday. Mr. Lehr obtained a discharge from his debts in bankruptcy in March, 1902.

The firm of Sam. Sultan & Co., manufacturing jewelers, 48 Maiden Lane, has been dissolved. Sam. Sultan will continue the business under his own name, liquidating the debts of the old concern.

The International Engraving Co., of New York, was organized Wednesday at Albany, with a capital of $50,000. The incorporators are: C. F. Rideal and Max Hart, New York, and J. L. Scale, Brooklyn.

Henry M. Abrams is representing on the Pacific Coast Rothschild Bros., 51 Maiden Lane; the Keller Jewelry Mfg. Co., 64 Nassau St., and C. P. Goldsmith & Co., 33 Gold St. Mr. Abrams is well known in the Pacific Coast trade.

Adolphe Schwob will soon move from 40 Maiden Lane to the Broadway-Maiden Lane building, 4 Maiden Lane, a location occupied by Mr. Schwob before his removal to his present location. His office will be on the third floor.

The Untermeyer-Robbins Co. has enlarged its factory at 90 William St., taking the entire top floor of the building with a floor space of 2,000 square feet. Hereafter the entrance to the building will be at 90 William St., instead of 32 Platt St.

L. W. Levy & Co., 194 Broadway, will occupy the entire first floor at that address after May 1. The added floor space will give room for the display of the concern's large line of new samples and afford accommodation for its increased business.

Charles N. Gray, head of the collection department of the Jewelers Association and Board of Trade, was married Wednesday to Miss Julia Mabel Belknap, of Plainfield, N. J. Mr. and Mrs. Gray will be at home after April 7 at 237 E. 9th St., Plainfield.

W. Reichert, of W. Reichert & Co., manufacturing jewelers at Pforzheim, Germany, has opened a New York office at 13 Maiden Lane. Mr. Reichert will carry a line of German jewelry, and will occupy the office formerly rented by the E. H. H. Smith Co. on the fourth floor of the building.

Henry Silberfeld, formerly of Silberfeld Bros., 129 Second Ave., who dissolved partnership a short time ago, has purchased the good will and stock of Harry Sartoris at 1395 Broadway, at which location he will start in business this week. Arthur Silberfeld continues the old business at 129 Second Ave. Mr. Sartoris will open a store at 127 W. 38th St.

A complimentary dinner was given by the New York Credit Men's Association at the Arkwright Club Thursday evening to those who had assisted the Association in securing amendments to the National Bankruptcy Act. In addition to many prominent guests, there were present about 250 credit men, members of the local Association and of other organizations.

A defective burglar alarm in the jewelry store of Geo. Frost, Irvington, N. J., caused considerable excitement early one morning last week, attracting the attention of two policemen, and causing Mr. Frost to be routed out of bed at 2 o'clock in the morning. The alarm continued to ring for nearly half an hour after it had been discovered, but a careful search of the premises revealed no burglars.

Word was received in New York Monday of the death, March 9, at Mayence, Germany, of Bernard Albert Mayer, one of the founders and partners of the silver manufacturing firm of Martin Mayer. Mr. Mayer was 62 years old. He was not only a member of one of the best-known manufacturing concerns in Europe, but was noted as a philanthropist, being connected with nearly every philanthropic association of his city. The affection of his employes for him was a matter of comment by his business acquaintances. He was also active as a member of the Executive Committee of his political party.

Van Gelder, Kahn & Co., importers and cutters of diamonds at 12 John St., will remove the latter part of this month to the Broadway-Maiden Lane building, 170 Broadway. The move is necessitated because of lack of light and other facilities in the present office. In the new location they will occupy a corner office on the seventh floor which is extremely well lighted, having six windows and well adapted to the diamond trade. As soon as the firm moves out Maurice Brower, dealer in domestic pearls now on the seventh floor of 12 John St., will move to one of the suite of offices left vacant by Van Gelder, Kahn & Co.

Geo. F. Kunz, of Tiffany & Co., has just received one of the first gold dollars made in commemoration of the Louisiana Purchase Exposition. This is the first gold dollar that was ever made for souvenir purposes. It weighs 21.3 grains, is 2/5 of an inch in diameter and 8mm. in thickness. Around the rim of one side of the piece are the words "Louisiana Purchase Exposition," and in the center of the same side of the coin are the words "One dollar." Immediately beneath are the dates "1803 1903." On the reverse is the head of Thos. Jefferson, under whose administration the Louisiana Purchase was effected. Around the rim of this side of the coin are the words, "United States of America."

Hyman Davis, a retail dealer in jewelry and watches at 90 Ludlow St., has disappeared, taking with him all of his stock of goods. It is said that he owes about $700 in the trade. Saturday when some of his creditors called at his place of business, they found it closed, and the only articles inside the store were a safe and a show case. Mr. Davis's disappearance caused some surprise, as he has always borne a good reputation. He began business for himself about 1892 at 223 Madison St., having previously worked for Silbermann & Sulzberger. He moved to Ludlow St. in the Fall of 1895. He is about 32 years old and is said to have held equities in several pieces of real estate. It is thought that he has either gone to Liberty, N. Y., or to Colorado.

Jos. Hoffman, diamond setter at 76 Nassau St., is the inventor of a new diamond setter's chuck, which has been assigned by Mr. Hoffman to Hammel, Riglander & Co., 35 Maiden Lane. This invention has been patented and a full description of it appears under the patent department of this issue of THE CIRCULAR-WEEKLY. Mr. Hoffman still retains an interest in the patent right. By virtue of this invention Mr. Hoffman claims that it is no longer necessary to mount brooches and lockets in shellac or wax, in order to hold them while work is being done upon them, as his chuck has clamps which are so adjustable that they can be made to seize and hold any style of locket or other kind of jewelry. The clamps are padded with chamois and leather, so that they will not injure the gold setting.

Geo. Allers, a retail jeweler at 308 Cen-

Fine Glassware for the Table.

Plain, Engraved, Etched, Cut, and Rock Crystal Decorations.

C. DORFLINGER & SONS, 36 Murray Street, New York.

tral Ave., Jersey City Heights, intends to erect a four-story brick building on the lot south of his store. The building is to cost $15,000 and will be 88x25 feet. Mr. Allers will occupy the ground floor with his jewelry store.

R. P. Outerbridge, Reedsburg, Wis., accompanied by his wife, has arrived in New York from Bermuda, where they have been spending the past few months. They leave to-day for their home.

Asher Green, with M. J. Averbeck, to-day sails for London, Eng., where he expects to meet one of his brothers now on his way from South Africa, whom he has not seen for 17 years. They will together visit their father at Cardiff, South Wales, and from there Mr. Green will go to Amsterdam, where he will meet Mr. Averbeck, who will sail about the middle of this month with W. H. Balch.

Abraham I. Goldberg, a salesman and dealer in jewelry, living at 1468 First Ave., filed a voluntary petition in bankruptcy in the United States District Court at New York Saturday, showing liabilities of $5,548 and assets of $329 consisting of debts due on open accounts. Among the creditors of the bankrupt for sums above $100 are: Jos. Geischild, $275; Aron Goldberg, $125, and Ettie Phillips, $4,646.

Maurice Maas, secretary and treasurer of the Maiden Lane Safe Deposit Co., 170 Broadway, was struck Saturday by a southbound Madison Ave. surface car at 86th St., and received a severe shaking up. Mr. Maas had just alighted from an uptown car and was crossing the tracks to the other side of the street when the downtown car struck him on the head and hurled him several feet. He was picked up unconscious and an ambulance was summoned from the Presbyterian Hospital. Later he was taken to his home and confined to his bed until yesterday morning, when he was able to move about the house.

Erroneous Report of the Death of Wm. D. Laverack.

The report of the death of Wm. D. Laverack, a retail jeweler of Paterson, N. J., which was published extensively in the daily newspapers of the country last week, was entirely erroneous.

Mr. Laverack is critically ill and has been so for some time. Being under the impression that he might die at any moment, one of the Paterson newspapers published an account of the provisions of his foster-mother's will, by which, at Mr. Laverack's death, a large part of her fortune is to go to a number of charitable institutions in the city, and it was probably this report which started the false rumor concerning Mr. Laverack's death.

Mr. Laverack is still in a very precarious condition and it is not thought that he will recover.

Bids To Supply Clocks, Watches and Optical Goods For Naval Observatory.

WASHINGTON, D. C., March 28.—Bids have been received by the Bureau of Supplies and Accounts of the Navy Department for furnishing the Naval Observatory with certain clocks, watches, spyglasses, etc. The bidders were as follows:

For 45 comparing watches and 35 stop watches—Edwin Harris, Washington, D. C., $1,782.50; Robert Leding, Washington, D. C., $1,886.25; Andrew O. Hutterly, Washington, D. C., $2,046.25.

For 135 deck clocks, No. 1—Manhattan Supply Co., New York City, $1,463.40; Chelsea Clock Co., Boston, $1,687.50.

For 70 deck clocks, No. 2—Chelsea Clock Co., Boston, $735.

For 220 binocular glasses, day, and 290 binocular glasses, night—Sussfeld, Lorsch & Co., New York City, $3,406.80; Robert Leding, Washington, D. C., $3,468; Spencer Optical Mfg. Co., New York City, $3,901.50; Queen & Co., Philadelphia, Pa., $5,100.

For 45 quartermaster's spyglasses, high power; 80 quartermaster's spyglasses, low power; 15 quartermaster's spyglasses, medium power—Queen & Co., $1,891.50; Sussfeld, Lorsch & Co., $1,963.25; Robert Leding, $2,029.25.

For 225 spyglasses for officer of the deck—Robert Leding, $1,800; Sussfeld, Lorsch & Co., $1,822.50; Queen & Co., $1,856.25.

For 35 protractors—R. C. Ballantyne, Washington, D. C., $1,994.65; Kueffel & Esser Co., New York City, $1,995; G. F. Muth & Co., Washington, D. C., $2,025; Queen & Co., $2,030; F. A. Schmidt, Washington, D. C., $2,310.

For 52 aneroid barometers—R. W. Geldart, New York City, $408.80; J. B. Roach, Brooklyn, N. Y., $414.54; R. Hoehn Co., New York City, $456.75; Queen & Co., $469.35; Sussfeld, Lorsch & Co., $469.35; H. J. Green, Brooklyn, $693.

For 55 clinometers, new style, Hicks—Sussfeld, Lorsch & Co., $929.50; R. Hoehn Co., $932.25; W. L. Bilisoly & Bro., Norfolk, Va., $981.75; Old Dominion Paper Co., Norfolk, $990; Queen & Co., $1,559.25.

C. W. Morgan, an account of whose scheme to defraud jewelers of Scranton, Pa., appeared in the last issue of THE CIRCULAR-WEEKLY, is supposed in police circles to be the man named Wesley who operated a similar scheme in Ottumwa, Ia., some time ago.

The Best Location in the Country

FOR A FIRST-CLASS DIAMOND OR JEWELRY HOUSE.

LUDWIG NISSEN,

18 JOHN STREET, NEW YORK,

will rent 3 upper floors of Building 182-184 Broadway, now occupied by the Seventh National Bank, for occupancy after May 1st. The Building will be thoroughly renovated and put in first-class condition and the lower part will in future be occupied by

THE ORIENTAL BANK.

The

Mercantile National Bank

OF THE CITY OF NEW YORK,

BROADWAY AND DEY STREET,

Solicits Accounts from the Jewelry Trade.

THE CHATHAM NATIONAL BANK, NEW YORK.

GEO. M. HARD, President.

H. P. DOREMUS, Cashier. *W. H. STRAWN, Ass't Cashier.*

Albany.

James Mix is reported to be ill.

F. W. Hoffman, Jr., son of F. W. Hoffman, 81 N. Pearl St., has returned from New York.

B. L. Wood, of Rochester, has been appointed to take charge of Ben V. Smith's new optical establishment at 75 N. Pearl St.

J. M. Rosengarden, son of Meyer Rosengarden, wholesale jeweler, 58 S. Pearl St., has returned from a trip to the northern part of the State.

William Scott, a watchmaker at F. L. Hunke's jewelry store, 70 N. Pearl St., is confined to his home by illness. His place is being filled by J. D. Quick, of Binghamton, N. Y.

The quarterly inspection of watches of the employes of the N. Y. C. and H. R. Railroad begins to-day and will continue for several days. The inspection in this vicinity is under the direction of Otto H. Fasoldt.

Letters of administration on the estate of Frank Honig, formerly an optician at 75 N. Pearl St., who shot himself on Feb. 16, were granted on last Wednesday to his brother, William M. Honig. The administrator and three sisters share $150 in real and $500 in personal property.

S. J. Stewart, who was recently released from Dannemora, arrived in Albany on Friday morning, and some hours later was arrested by a policeman, who found him coming out of William Kennedy's jewelry store, 534 Broadway, wearing a false mustache. Stewart was brought to police headquarters, where he was detained until several of the prominent jewelers and other merchants could be interviewed to see if the man in custody had attempted to steal from them. Stewart was given a ticket and sent to Utica, for which place he departed on the Empire Saturday morning.

Miss Ella Hurley, 155 Livingston Ave., formerly employed by Miller Bros., 60 S. Pearl St., was found at the bottom of an embankment at Kenwood, a short distance south of Albany, Friday night, suffering from severe injuries. Miss Hurley in attempting to take a train from Elsmere to Albany grabbed the handle of the rear platform of the last car and managed to get one foot on the lower step as the train was moving. In this position she clung, unable to raise herself to the platform until she arrived at Kenwood, a distance of several miles, when she became exhausted and fell to the ground. She rolled over and fell down the embankment, where she was later found by a railroad man. Her clothing was torn, her face and body badly bruised, and her right arm fractured. She was brought to the Homoeopathic Hospital in Albany where she at first absolutely refused to state how the accident happened

---

Where the authority delegated to an agent requires skill and discretion in its exercise, it matters not whether the agent is general or special, he cannot, without express authority from his principal, delegate it to another. (56 L. R. A. 548).

In case of a debt lost through the neglect of the collecting agent, the measure of damages is the amount of the debt, in case there is a reasonable probability that, but for the default of the agent, the debt would have been collected. (82 N. W. Rep. 34.)

Honesty.

Honesty in manufacture is one of the essential features of a successful business. The Sternau policy is one of frank, earnest service. Its methods are consistent. The Sternau make of CHAFING DISHES and METAL WARES in general are made by men who not only have the broadest experience of every good thing that has been done in the past, but they have the knowledge, the skill, and the initiative necessary to progress and improvement. From far and wide the imitator who has made no preparation of any unusual character, prints the same words, perhaps the same claims, with only inferiorly made goods to back it, and wonders why he does not succeed. Some manufacturers use poor material, because it is going to be covered up by plating. Others use poor plating because they don't care. Others use inferior metal and their goods drop apart. Sternau uses honest materials throughout, honest work, and the result is that you get honest, reliable and dependable goods. We carry a large stock of all goods, and can always make prompt shipments.

Write for our supplement No. 18.

TRADE S&C MARK

S. Sternau & Co.,

Manufacturers of Everything in Metal Wares,

Factory: Brooklyn, N. Y.

204 CHURCH STREET, Cor. Thomas, New York.

The German Jewelry Trade.*

By W. AUGUSTUS STEWARD.

Chief Instructor in Gold and Silverworking at the Central School of Arts and Crafts, London.

(*Continued from issue of Morch* 11.)

THE establishment of Andreas Daub is situated in the Luisenstrasse, and as the illustration of the frontage, published in the issue of Feb. 5, shows, is a large and important looking building; but the frontage only suggests the extent of the premises, so the illustrations of the principal workshop, the setters' and polishing departments, etc., must emphasize the magnitude of the building. The premises are situated within a stone's throw of the railway station, and from the windows one looks across the railway to the hills which rise beyond. Practically within the last quarter of a century this establishment was on the outskirts of the city, surrounded by grassy plots, and one is reminded of its once rural surroundings by the fact that in what remains of the once large gardens are to be seen luscious fruits growing upon the trees.

In this establishment, as in those specially catering for articles in solid gold, there is to be seen the same thoughtfulness as to organization, and the same considerations as to detail. The main workshop is a very large and well arranged apartment, lit by electric light, thoroughly well ventilated, and, although a considerable amount of work is produced by hand, the most modern machines are in use, for the proprietors are fully awake to the part which machinery will and indeed must play in the production of the cheaper classes of jewelry. For not only are the larger, most up-to-date machine tools in use, but the hand tools used by the workmen and the blowpipes also are of the most up-to-date character.

*Copyright, 1902, by THE JEWELERS' CIRCULAR-PUB. CO. All rights in Great Britain reserved by the author.

Here, as in the other establishments which I was privileged to visit, I was very forcibly struck by the eagerness with which the German jewelry manufacturer hastens to secure the most improved tools and machinery; it is true that good tools are of little avail in the hands of bad workmen, but, given good workmen and antiquated tools, you cannot get so much out of them as if they were using the best instruments, and this is a point which the German manufacturer never loses sight of. Like the American, he is always on the alert to improve his methods, and if possible to improve upon such machines as he may have in use. Moreover, the go-ahead German manufacturers believe in producing everything they possibly can upon their own premises. The argument so frequently used by the free trader that goods will always tend to be made in those places or localities where they can be produced the best and cheapest, has been frequently urged against the principle of producing all necessities in one establishment, but the argument will not hold good in many cases. It is true that the small jeweler can produce much more cheaply by buying his findings of the bigger manufacturers, but most certainly the large German manufacturers, by their complete system and the production of every possible part upon their premises, are enabled to make important economies and so produce their commodities at a minimum cost, and herein is another reason why German jewelers are producing cheaply and well.

In this particular establishment, where one can see the goods going through the different processes from practically the raw material to the sweating of the gold, and their being enameled, set, finished and boxed, one can realize very fully what can be done in the way of economies and organization, and appreciate why such an establishment as Andreas Daub's is able to produce such well made and artistic commodities at prices which 20 years ago were undreamt of.

If we walk across the town to the establishment of Freiderich Speidel, a handsome looking building overlooking the Stadt Gardens, and literally at the mouth of the Black Forest, we find another large establishment devoted exclusively to the production of rolled gold goods. In 1868, the elder Mr. Speidel commenced business in a very small way, and indeed until the '80s the business grew comparatively slowly. This was mainly due to the fact that the goods produced appealed only to German taste, but when Herrn Fr. and Eugene Speidel took over the management of the establishment they fully understood the possibilities of extending their trade by catering for the foreign markets, soon found their goods gaining considerable favor, and in 1896 were enabled to build the magnificent establishment above mentioned. But it soon became necessary to obtain further accommodation for workpeople, and although the large building accommodated 700 workpeople another factory at Nagold was erected in 1898 to accommodate 250 more workpeople. The advance in the demand for German-made rolled gold goods is further emphasized by the manner in which this firm has progressed, and it is not to be wondered at, for the methods in vogue are as modern as can be, while the buildings in which the people are housed are as healthy and comfortable as workshops could possibly be. Herein, as in Messrs. Daub's and Kollmar & Jordan's factories, every part of the building is clean and thoroughly well equipped and electricity is the lighting and also the motive power.

(To be continued.)

GENUINE COINS
Made into JEWELRY

of all descriptions, secured by letters patent in the United States and Europe.

HEAD OF COLUMBIA broken through a Coin in 3-4 relief. One of the most artistic articles ever made in Jewelry. *No Agents.* Orders must be sent direct to office. We will send, on application, price list of all goods.

COIN NOVELTY CO.,

W. A. MALLIET, Gen. Agt. **170 Broadway, New York.**

Syracuse.

The Butler Silver Plate Mfg. Co. is now out of business.

George E. Wilkins spent last week in New York, Washington and Philadelphia.

Fred F. Mead, for several years with Calvin S. Ball, will open a jewelry store under the firm name of Mead & Co., May 1, in the Larned building, S. Warren and E. Washington Sts. The store will be entirely remodelled, a new front put in, and will be fitted throughout with mahogany fixtures.

Mr. and Mrs. W. H. Bundy have moved to Syracuse and Mr. and Mrs. W. L. Bundy will also move there. Messrs. Bundy will be at the head of a factory in this city for manufacturing the calculating machine patented by W. H. Bundy. Both men were formerly connected with the International Time Recording Co., Binghamton.

Jewelers' Gold Bars Withdrawn and Exchanged at New York.

Week Ended Morch 28, 1903.

The U. S. Assay Office reports:

Gold bars exchanged for gold coin	$206,685.05
Gold bars paid depositors	188,406.74
Total	$395,091.79

Of this the gold bars exchanged for gold coin are reported by the Sub-Treasury as follows:

March 23	$38,562.61
" 24	30,594.58
" 25	46,727.39
" 26	67,370.39
" 27	5,143.13
" 28	20,286.95
Total	$208,685.05

The Diamond Markets.

ANTWERP, March 15.—Notwithstanding the presence of a lot of buyers in this city, the market has been extremely quiet during the past fortnight. Offers were made for mêlée from 10 to 20 francs per carat under the limits. The purchase of this quality is very poor. The chief demand continues for first grade, large goods, but the stock is very scarce.

The following buyers were here: Mr. Monnossohn, of St. Petersburg, Russia; Mr. Poli, of Rome; Mr. Mechelsohn, of Moscow; Alex. Habib, of Paris; Mr. Roulina, of Paris, and Woelfling, of Paris.

The dissolution has been anounced of the diamond firm of Louis Colinet & Co., which was only formed here in the beginning of the year.

The following New York diamond firms were represented here during the last few days: Zimmern, Rees & Co., by B. F. Rees; Rosenbaum & Adler, by S. Adler; Joseph H. Fink & Co., by S. B. Ross, and Mr. Stern.

Mr. Bollincks has been elected as a member of the *Consul des Prud hommes* for the diamond industry.

C. De Ridder, a well-known diamond polisher, died recently. He was only 30 years old.

A strike of the diamond employes began in the factories on Rue Somers and Rue de la Perche. The cause was a difference on the question of apprentices. About 150 diamond polishers and cutters have been obliged to stop work. There have been no developments since the strike, but it is hoped the differences between the employers and employes will be settled quickly.

The exports of uncut diamonds from Belgium to the United States are valued at 52,000 francs and the cut diamonds at 6,240,000 francs.

AMSTERDAM, March 12.—The diamond trade is very quiet here, but merchants are generally hoping for a good Spring business. Prices for rough diamonds remain very firm, with an upward tendency, owing to the scarcity of fine rough goods in London. Merchants are daily expecting a further advance, in spite of the last raise of 5 per cent.

Every one here is awaiting the result of the negotiations between the Government and the workmen who are threatening to strike. It is hoped that a general strike will be averted.

Louis Friedlander, of R., L. & M. Friedlander, New York, has been making heavy purchases of mêlée.

LONDON, March 18.—The very fine weather has helped business in precious stones. The sale of rough diamonds continues brisk as before, while cut goods are more difficult to sell owing to the gradual advances in price; as stocks are not large and inquiries are lively, dealers will soon see the necessity of paying the current prices.

An indication of the good conditions prevailing in the diamond trade for some time past is to be found in the few failures recorded in the trade. The first two months in the year are always months in which failures are numerous, but January and February were exceptions to this rule.

Richard Friedlander, New York, was among the American purchasers here recently.

PARIS, March 12.—The Paris diamond market reflects the depression reported in the other diamond centers.

Messrs. Hahn and A. Levie, two well-known diamond merchants of this city, have been in Antwerp, but they said it was impossible to fill their orders owing to the scarcity of fine brilliants and the extraordinarily high prices in that market.

Prices for pearls and colored stones go up daily.

Statistics recently published by the French Government show that France is the largest exporter of jewelry and precious stones to the Philippine Islands.

The figures giving the exports from France to the United States for the year 1901-1902 show that the uncut diamonds were valued at 306,000 francs, and the cut diamonds 12,453 francs.

Where a seller, without any qualification or restriction, leaves goods with a common carrier (railroad or express company) to be delivered to the buyer, the seller parts with the goods and the buyer is bound to pay for them, and if the goods are injured while in the hands of the carrier, the buyer must look to the carrier for damages for the injuries sustained. (19 Pa. Supr. 403.)

TRADE-MARKS.

To Manufacturers and Jobbers:

We have now in preparation the second edition of "*Trade-Marks of the Jewelry and Kindred Trades*" and in order that this work may be as complete and accurate as it is possible to make it, we request all manufacturers and jobbers to send us a list of such marks as they may now use, or have ever used, together with such information (the kind and quality of goods upon which the marks are used, etc.) as may be germane to the subject. Send cuts of marks if possible. If not, send clear, printed impressions or drawings.

The earliest attention is solicited as it is of the utmost importance to every manufacturer and jobber to have his mark recorded in this volume.

THE JEWELERS' CIRCULAR PUBLISHING CO.,

11 JOHN STREET, NEW YORK.

News Gleanings.

E. K. Hall, Walden, N. Y., will shortly remove to Gouverneur, N. Y.

Lawritz H. Tufts, Hawley, Minn., has formed a partnership with C. Nelson.

Nels Megorden, formerly of Le Roy, Minn., has moved to Lime Springs, Ia.

Adam Egolf, Norristown, Pa., has removed his stock into more elaborate quarters.

H. J. Westinghouse, Springfield, Minn., will shortly engage in business at Wabasha, Minn.

William Fullerot, El Reno, Okla., has opened a novelty jewelry store at Centerville, Ia.

Harry I. Bolton has purchased the business formerly conducted by Allan P. Trask, Bangor, Me.

Edward D. Lewis and wife, Oneonta, N. Y., returned last week from a three months' stay in California.

Mr. Polk, formerly of Linden, Tex., has established himself in the jewelry business in Queen City, Tex

Benson & Rucker's jewelry and optical establishment, Sturgeon, Mo., was destroyed by fire last Saturday.

J. W. Fetzer, who has been in business in Coopersburg, Pa., for almost eight years, will sell out this week.

Albert J. Krueger, North Branch, Minn., will add a gold and silver plating department to his jewelry store.

C. M. Hateher, Malcom, Ia., has shipped his jewelry stock to Elkhart, Ia., where he will continue in business.

Harry A. Dillon, Gloversville, N. Y., recently presented a handsome clock to the Fire Department of that place.

O. W. Maynard, Richmond, Ind., has returned from an enjoyable vacation spent along the eastern coast of Florida.

The Anton Kleiser stock of jewelry at Sioux Falls, S. D., was sold recently to John Agrant, who is closing it out.

C. J. Wells and wife gave a card party at their home in Utica, N. Y., Tuesday evening and entertained about 30 guests.

William Wooster, at one time in the jewelry business in Columbus, O., died recently at his home in Johnstown, N. Y., aged 63 years.

F. Stevens has purchased the stock of Wm. Barendreght, Arcola, Ill. Mr. Barendreght will act as manager of the establishment.

Robert Hellmer, who contemplated engaging in the jewelry business in Silver Lake, Minn., has decided to locate in Stewart, Minn.

The father of Paul Blocher, a former jeweler of Chambersburg, Pa., now residing in Carlisle, died at his home in Gettysburg last week.

Joseph H. Lamb, Greenfield, Mass., is disposing of his entire stock of jewelry and hereafter will devote all of his time to the music business.

The stock of Walter R. Ray, Adairville, Ky., was recently damaged by fire to the extent of about $500. The loss is fully covered by insurance.

Sweet & Payne, Liberty, N. Y., have dissolved partnership. L. O. Sweet has removed to his former location and will continue in the jewelry business.

R. E. Brigham, who recently sold his business at Schuylerville, N. Y., has rented a store at Oneonta, N. Y., and will soon open up there in the same business.

The building formerly occupied by Chas. E. Maxson, DeRuyter, N. Y., has been sold to W. H. Hardy. Mr. Maxson has temporarily removed his stock to his home on Cortlandt St.

Burglars last Wednesday night made an attempt to enter the store of B. Sands, Cleveland, O., but were frightened away before completing their plans. The bars in the rear window of the store had been cut.

A. Jay Thompson, junior member of the old established firm of Lyman W. Thompson & Son, Cherry Valley, N. Y., was recently elected town clerk for the 12th consecutive term. Mr. Thompson is also a village Father.

Thieves recently entered the establishment of Herman Fascher, Salt Lake City, Utah, and escaped with miscellaneous jewelry valued at $60. Rings and watches were among the articles stolen. The police have no clew to the burglars.

Chas. D. Brooks, a jeweler of Coshocton, O., has invented an improved hypodermic needle, the advantage of which lies in a gold conductor, which transfers the fluid from the needle to the puncture. It can be thoroughly disinfected in a moment's time.

Greensburg, Pa., Councils have turned down an ordinance submitted by merchants of the town relating to the sale of goods from house to house upon receiving an opinion from the borough solicitor that the ordinance conflicted with important rulings of the Supreme Court and laws of the Federal Government relating to inter-State commerce.

For the second time within two weeks robbers entered the store and post office of M. T. Hunsicker at Iron Bridge, Pa., and secured a lot of valuable plunder. They also secured about $300 in postage stamps and money from the safe. Entrance was effected by forcing a side shutter. A number of stock certificates were also taken.

An entirely new swindle has made its appearance in central New York, of which relatives of dead persons are generally the victims. A day or so after a funeral in the family there is received a ring sent C. O. D., with charges running from $5 to $10. The box contains a gold ring and the relatives think that possibly the jewelry had been ordered by the deceased, so it is accepted and the charges paid. An inspection of the ring shows it to be of the class which retails at about 50 cents a dozen. The swindlers evidently watch the newspapers close and select families where the scheme seems the most likely to work. Strong efforts are being made to get track of the despicable swindlers.

National Monthly Import and Export Statistics.

WASHINGTON, D. C., March 26.—The records of the Treasury Department contain the following comparative statistics of interest to the jewelry trade, for February, 1902 and 1903, and for the eight months ended February, 1903:

IMPORTS.

			8 Months Ending	
	Feb., 1902.	*Feb.*, 1903.	*Feb.*, 1902.	*Feb.*, 1903.
Clocks and parts of	$30,247	$25,024	$346,391	$369,201
Watches, materials and movements	141,041	98,885	1,391,013	1,401,344

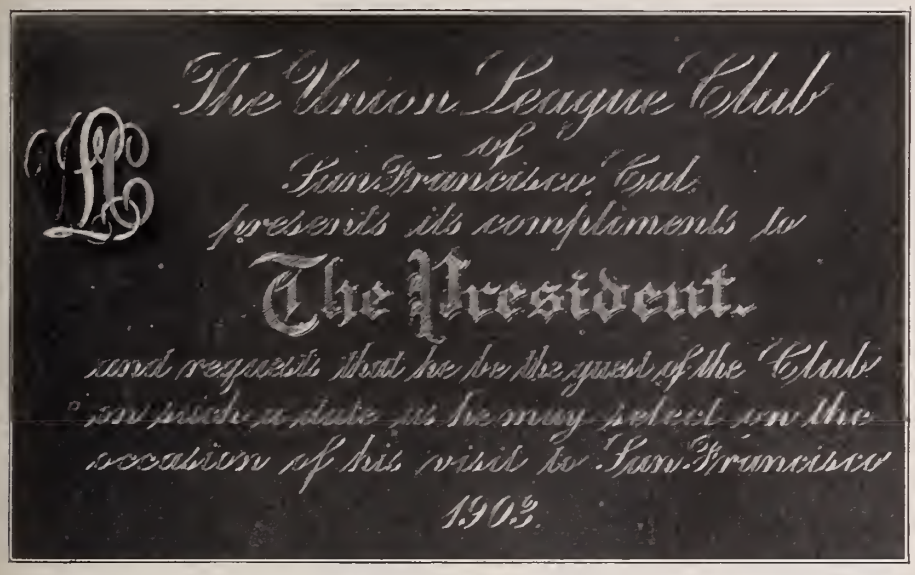
Plated ware	37,931	55,595	347,737	453,195

COMMERCIAL LAW POINTS.

The individual members of a firm are liable for the wrongful acts of one of its members, though they had no knowledge of the same, where it was committed in the course of the partnership business and for its benefit. (31 So. Rep. 736.)



Where a creditor receives from his debtor a check, accompanied by a letter stating it is in full of the balance of account and an itemized statement showing such balance, and he cashes the check, there is a payment in full, in the absence of any fraud or conduct relieving the creditor from the effect of his acceptance of the check. (41 S. E. Rep. 6.)

A contract for the future delivery of goods or merchandise is void for want of a consideration and mutuality if the quantity to be delivered is condition by the will of one of the parties; but an accepted offer to furnish such articles as may be required by the established business of the acceptor during a limited time is mutual and binding. (114 Fed. Rep. 77.)

Where the amount furnished by each partner is fixed and certain and the share of each in the partnership profits is a fixed proportion, advances by one of the partners in excess of his prescribed proportion, though credited to the special account of such partner and called "capital" of the firm, are in fact, as between the partners, loans and advancements, and draw interest. (75 N. Y. S. 301.)

Gold Invitation Presented to President Roosevelt.

AS already noted in the columns of THE CIRCULAR-WEEKLY, President Roosevelt recently received a solid gold plate, on which was inscribed the invitation of the Union League Club of San Francisco, Cal., requesting that the President be the guest of the club some time this year. Through the courtesy of Hammersmith & Field, gold and silversmiths, 36 Kearny St., San Francisco, who made the plate in question, THE CIRCULAR-WEEKLY is now able to present an illustration of the same.

GOLD INVITATION PRESENTED BY UNION LEAGUE CLUB OF SAN FRANCISCO TO PRESIDENT ROOSEVELT.

The plate is of virgin gold, 3¼ inches wide by 6 inches long, and in the upper left-hand corner displays the club's monogram, "U. L. C.," in red, white and blue enamel. The invitation is engraved on the plate in the same manner as it would have appeared on a card. The plate weighs 8½ ounces and is cased in a purple velvet box lined inside with white, the monogram, "T. R.," appearing on the top of the cover in virgin gold.

The reverse of the plate contains the following inscription:

The gold in this plate was contributed by the following deep gold quartz mines on the Mother Lode of California:

Gwin Mine	1,750	feet deep
Zeila Mine	1,400	" "
Argonaut Mine	2,000	" "
Kennedy Mine	2,600	" "
Oneida Mine	2,000	" "
Central Eureka Mine	2,000	" "
Wildman-Mahoney Mine	1,400	" "
Lincoln Mine	2,000	" "
Bunker Hill Mine	1,400	" "
Fremont Con. Mine	1,400	" "

J. H. Neff. Ore from Church Mine.

Hammersmith & Field have been highly congratulated upon turning out this piece and have received a card of thanks from the Union League Club for their perfect execution of the work.

A. M. Felson, the bankrupt jeweler of Gouverneur, N. Y., is again in the jewelry business working for S. Felson, Agent. His wife is agent for a brother-in-law in New York.

First Annual Convention of the Ohio Optical Association.

COLUMBUS, O., March 30.—The first annual convention of the Ohio Optical Association will be held in Columbus, O., April 13. Dr. Earl Brown, Chicago, will deliver a lecture upon "The Anatomy and Physiology of the Eye and the Diseases of the Retina." Dr. Andrew Timberman, Columbus, will speak upon "What Should Be the Relations Between the Oculist and Optician?"

The officers of the association are: President, I. C. Eberhardt, Dayton; vice-president, E. Klein, Cincinnati; secretary, E. L. Jones, Sandusky; treasurer, L. Beckman, Toledo.

Proposed English Law for Hall-Marking Foreign Plate.

WORD comes from London that a Parliamentary bill to amend the law with regard to the assaying of gold and silver plate and jewelry has been drafted. Its main provisions are:

1. Every person who, after a date to be fixed by Order in Council, sends or brings any gold and silver plate or jewelry, whether imported or not, to any assay office in the United Kingdom for the purpose of being assayed, stamped, or marked, shall make a declaration declaring in what country or place such gold and silver plate or jewelry was made, and if it appear by such declaration that such gold and silver plate or jewelry was made in some country or place out of the United Kingdom, the assay office shall place on such gold and silver plate or jewelry such a mark (differing from the mark placed by the office on gold and silver plate and jewelry made in the United Kingdom) and in such a mode as may be from time to time directed by an Order in Council.

2. A declaration under this Act may be made before an omcer of an assay office appointed in that behalf by the office (which officer is hereby authorized to administer such declaration) or before a justice of the peace or a commissioner having power to administer oath in the Supreme Court of Judicature in England or Ireland, or in the Court of Session in Scotland, and shall be in such form as may from time to time be directed by Order in Council.

3. Every person who makes a false declaration for the purpose of this Act shall be liable on conviction on indictment to the penalties of perjury, and on summary jurisdiction to a fine not exceeding £20 for each offence.

It is sought to have the bill come into operation on Jan. 1, 1904. It is backed by Samuel Roberts, M. P., and has the support of the Birmingham, London and Sheffield Wholesalers' Associations, and also the retailers as represented by the National Association of Goldsmiths.

A deputation which waited upon His Majesty's Government has been successful in obtaining a promise from Gerald Balfour, the president of the Board of Trade, that the Government would support such a measure.

Optical Notes and Briefs.

(Additional Optical News on page 75.)

Dr. H. Parker, optician, Denver, Col., is a visitor to Pendleton, Ore.

M. Zineman & Bro., opticians, Philadelphia, Pa., have moved their stock into handsomely equipped quarters at 21 N. 11th St.

H. N. Edwards is selling at auction the stock of his jewelry store at Syracuse, N. Y., and will refit the store for optical parlors.

The Schuchard Optical Co., Seattle, Wash., has moved into the store formerly occupied by G. Benninghausen of that place.

Dr. F. S. Hart, optician, formerly with Osborn B. Kaull, Earlville, Ill., has opened an optical establishment of his own in Ottawa, Ill.

Fred Campbell, Portland, Me., formerly with H. E. Murdock, of that city, has removed to Worcester, Mass., where he will carry on an optical business.

Dr. Z. V. Vaughn, eye specialist, Los Angeles, Cal., is retiring from the jewelry business, and hereafter will devote his entire time to his optical business.

George H. Kahn, optician, San Francisco, Cal., recently sailed for Europe, from New York on the steamer *Vaderland*. He will remain away for about six months.

The California State Association of Opticians held a directory meeting last week, at which 12 applications for membership were received. The next regular meeting will be held April 10.

A. J. Spicer and David J. Ward, who recently opened a branch office of the "Empire State Optical Co." in Dover Del., were arrested last week just as they were about to leave the city accused by a woman of intending to defraud her out of $22 which she declared was due for board.

After to-day the Houghton-Hardy Optical Co., Boston, Mass., will be known as the Boston Optical Co. Mr. Houghton has decided to devote most of his time in the future to his own business in eye shades and optical supplies, and will start on a business trip some time this week.

The semi-annual meeting of the Canadian Association of Opticians will be held in Toronto, Ont., April 10. A large attendance is expected, as all opticians, whether members of the association or not, have been invited. The main feature of the gathering will be a banquet to be held at McConkey's restaurant, after which addresses will be delivered and questions of importance to the trade considered.

The Seattle Optical Society has been organized at Seattle, Wash. Twenty-one opticians have signed the roll as charter members. The objects of the society are friendly intercourse and mutual improvement. On the occasion of his visit to Puget Sound it is the intention of the society to present President Roosevelt with a pair of glasses made of Alaska gold and Washington rock crystal.

Herbert C. Watts, who for a number of years has occupied optical parlors in connection with Calvin S. Ball's jewelry store, S. Salina St., Syracuse, N. Y., will remove, April 1, to his store at 210 S. Warren St. A year ago Mr. Watts bought out the old Syracuse Optical Co., and has since been running both places. A. G. Golder, who now occupies optical parlors at Leiter Bros.' jewelry store, 304 S. Salina St., will succeed Mr. Watts in the Salina St. location, which will be entirely refitted for his occupancy.

Harry W. Gile, optician, 79 Poplar St., Roslindale, Mass., has filed a voluntary petition in bankruptcy. The schedule of assets and liabilities shows secured debts amounting to $75, and unsecured debts to the amount of $2,373. Of the latter a bill of $90 to Mary Beckford, Portland, Me., is disputed. The principal creditor is George W. Anderson, lawyer, who has a claim against Gile for $2,025 for services as administrator of the estate of a relative of Gile's. The only assets given in the schedule are $75 on his stock, mortgaged for that amount by Benjamin F. Cobleigh, and $60 on household furniture, wearing apparel, etc.

New Members of the American Association of Opticians.

SANDUSKY, O., March 26.—Secretary Edwin L. Jones, of the American Association of Opticians, reports that the membership is increasing daily. The following is a list of members recently admitted:

O. J. Halbe, Chicago, Ill.; Franklin J. Ives, Oneonta, N. Y.; Carl W. Voellger, Wilkinsburg, Pa.; B. Brantman, New York, N. Y.; W. R. Ford, Toledo, O.; Otto Bebber, Phoenix, Ariz.; H. J. Cordle, Littleton, N. C.; Emma Grace Davis, Cincinnati, O.; H. G. Card, Canton, O.; J. R. Duncox, Providence, R. I.; Rutherford H. Anthony, Minneapolis, Minn.; Frederick Newman, East Hartford, Conn.; W. H. Leggett, Memphis, Tenn.; Eugene E. Heurch, Pittsburgh, Pa.; W. J. Huggins, Tunaru, New Zealand.

The names appended below are those of members of the Indiana State Optical Society which recently affiliated with the American Association of Opticians:

J. H. Arnold, Columbus; Leo Auth, Decatur; C. F. Allen, Plymouth; J. H. Boyer, Indianapolis; F. L. Bryant, Indianapolis; David Bixler, Berne; J. E. Booth, Tipton; Arthur Baker, Logansport; William E. Boggis, Anglia; E. L. Beer, Rushville; D. H. Burgshir, Indianapolis; H. E. Barth, North Vernon; Eugene Collins, Franklin; Nellie Conner, New Albany; N. V. Cole, Michigan City; B. F. Crisenburg, Elwood; F. D. Cloud, Washington; J. W. Callahan, Terre Haute; W. S. Orwin, Rushville; H. G. Patton, Ft. Wayne; J. W. Pendergrass, Indianapolis; A. Purcel, Noblesville; I. M. Rem, Indianapolis; A. Rothermel, Connersville; Stella V. Rodgers, Indianapolis; Otto R. Ream, Hartford City; J. E. Russell, Connersville; Leo Statz, Terre Haute; George L. Spahr, Lebanon; F. C. Sheldon, Shelbyville; E. R. Smith, Huntington; C. W. Stone, Washington; J. Henry Smith, Greenfield; E. C. P. Show, La Grange; James Benbuer, Attica; J. D. Taylor, Logansport; H. P. Turner, Bloomington; J. H. Tender, Seymour; L. M. Roberts, Richmond; E. H. De Selms, Attica; H. M. Bastain, La Grange; C. M. Hunnicutt, Rockville; Caspar Ritzi, Brookville, E. R. Wood, Warsaw; Fannie M. Huston, Greenfield; William Lucas, Winchester; Theo. Edwins, Franklin; Joseph Hummel, Muncie; W. A. Huff, Rensselaer; J. Lott Losey, Plymouth; E. E. Ludt, Wabash; E. B. Ruhwein, Alexandria; J. M. Siefert, Mulberry; S. M. Swain, Martinsville; John H. Ellis, South Bend; W. E. Huston, Greenfield, O. W. Ridgeway, Sheriden; Paul Hulsman, Indianapolis; William Hazleton, Kokomo; H. G. Patton, Ft. Wayne; E. Shipley, Greencastle; John Wimmer, Indianapolis; H. C. Delaney, Hammond, Charles F. Chullenger, Ft. Wayne; E. N. Canada, Winchester; J. R. Clayton, Shelbyville; O. B. Clark, Anderson; G. S. Drake, Pendleton; W. C. Davis, Elkhardt; H. J. Dale, Lenton; R. H. Denney, Portland; G. W. Dolph, Wenamac; Claud Stoops, Nappanee; J. R. Swain, Dana; C. C. Farns, Marion; F. H. Edmunds, Richmond; W. M. Edwards, Knightown; D. W. English, Hartford City; Margaret J. Crisman, Lafayette; J. H. Hammond, Vincennes; D. M. Hensley, Decatur; Charles Ham, Frankfort; A. Hawkins, Noblesville; Bruce Herny, Waynetown; E. W. Hackett, Marion; Dallis F. Green Ft. Wayne; George Greyer, Anderson; G. S Grubb, Marion; Charles T. Gasho, Fowlerton; J. W. Hudson, Fortville; C. M. Jenkins, Richmond; Ed. Israel, Harrison, O.; M. C. Klein, Crawfordsville; Andrew M. Keck, Odon; W Walker Kern, Churuhusco; J. G. Laupus, Seymour; E. W. Kelly, Sullivan; Q. X. Z. Laur, Huntington; M. S. Walker, Greenfield; J. H. Leslie, South Bend; C. H. Thomson, Greenburg; G. F. Long, New Richmond; Ollie Taylor, Princeton; C. L. Lawall, Richmond; H. B. Thompson, Rochester; W. E. Woodward, Indianapolis; D. S. Whittaker, Lebanon; Eugene Willson, Martinsville; J. W. Washburn, Anderson; C. C. Wolf, Rochester; E. E. Wilber, Attica; William H. Goss, Union Mills; E. O. Ridgway, Sheridan; H. F. Smith, Terre Haute; J. E. Murdock, Peru; C. K. McCain, Kokomo; Minnie A. Mitchell, Wabash; L. R. McCain, Delphi; H. S. Murphy, New Castle; J. C. Meyers, La Fayette; George H. Mead, Madison; A. T. Nutter, Martinsville.

The Moultrie Jewelry Co., Moultrie, Ga., recently filed a certificate of incorporation in the Superior Court of Georgia, Colquit County.

The Homan Silver Plate Co., Cincinnati, O., is turning out more elaborate designs in hollow ware than it ever before attempted. The new patterns include applied floral designs of the most artistic character.

Watch cases, solid gold and gold filled too,
Designs in both entirely new,
To fit American movements, including the new size Ten,
The thinnest and neatest watch made for men.
In Open Face only and of them hardly enough
So send for a sample to ELIASSOF.

VOL. XLVI. CHICAGO, WEDNESDAY, APRIL 1, 1903. No. 9.

Chicago Notes.

A. J. Reinhardt, Lincoln, Ill., called on his old friends in this city last week.

C. J. Cornwall, representing Otto Young & Co., returned from his territory last week.

J. R. Fayne, representing the Meriden Cutlery Co., called on the local trade last week.

A. W. Nisbet and wife, Dimondale, Mich., called on the trade in this city last week.

J. A. Schoenthaler and wife are expected to return from a California pleasure trip this week.

M. Lippet & Co. will move from the eighth to the 13th floor of the Columbus building about May 1.

A. C. Becken, with his wife and family, is expected to return from the Southern pleasure trip this week.

F. M. Drummond, with the Towle Mfg. Co., has returned from a two weeks' sojourn at West Baden, Ind.

John Mattern, of Conner, Mattern & Co., Wabash, Ind., called on his old friends in the Chicago trade last week.

Rudolph Weinburg was in this city last week placing some good orders for C. F. Hadley & Co., of Augusta, Ill.

H. S. Hyman, of Hyman, Berg & Co., with his wife, are expected to return this week from their Florida pleasure trip.

W. S. Sparrow, western manager for Stern Bros. & Co., left Thursday for a visit to the New York office of the company.

M. De Dilegtis, of M. De Deligtis & Co., Torre del Greco, Italy, called on the trade in this city last week, with a line of coral.

A. E. Rush, Macomb, Ill., accompanied by his wife, recently spent a couple of weeks in this city, combining business with pleasure.

M. Goldsmith, of Goldsmith Bros., refiners and assayers, returned last week from a week's duck shooting on the Kankakee marshes.

R. W. Russell, Delmont, S. D., was in this city the past week. Mr. Russell spent a few days at Coldwater, Mich., before his return home.

A. S. Clifford, formerly assistant credit man for Benj. Allen & Co., will in future conduct the credit department for the Calvin Clauer Co.

Fred Smith, general manager, and W. W. Coup, secretary and treasurer of the Geneva Optical Co., returned last week from a visit to the St. Louis branch of the company.

L. Ratzesberger, Milford, Ill., who recently returned from a two months' pleasure tour abroad, was in this city last week on a purchasing trip.

The Ostby & Barton Co. and the Theo. W. Foster & Bro. Co. have arranged to stay in Room 607, Columbus building, for the ensuing year.

A petition was filed last week by B. F. Norris, Allister & Co. and others, to have the Chicago Cabinet Co. declared bankrupt. The claims aggregate $596.

Mr. Root, of Root & Morrison, Pontiac, Ill., accompanied by his wife, was in this city last week, looking over the various lines and combining business with pleasure.

Among the buyers in Chicago last week not elsewhere mentioned were: T. E. Davidson, Three Oaks, Mich.; W. R. Smith, Geneva, Ill.; Frank Smith, Pontiac, Ill.; J. A. Seekatz, Hoopeston, Ill.

Word has been received here that Eugene Edelstein, foreign representative of the Illinois Watch Case Co., is seriously ill at El Paso, Tex. On receipt of the news the company immediately dispatched a man to El Paso to look after Mr. Edelstein.

Ed Hahn, of H. F. Hahn & Co., returns this week from the west. Mr. Hahn has been covering E. B. Hoffman's territory during the latter's illness. Mr. Hoffman's many friends in the trade will be glad to learn that he is now convalescent.

W. A. Burrows, watch jobber, 149 State St., has secured quarters on the seventh floor of the Stewart building. The new space is three times the size of his present space, and will greatly add to his facilities. Mr. Burrows returned Monday from a brief trip to St. Louis.

Stern Bros. & Co. have secured a portion of the space formerly occupied by B. F. Norris, Alister & Co., on the second floor of the Columbus building, and will take possession of the same about May 1. The space is much larger than the firm's present office at 149 State St., and will be handsomely fitted up with new fixtures.

The first annual meeting of the Jewelers' Club, of Chicago, will be held on the evening of Tuesday, April 7, at 7 o'clock, in Room 412, Masonic Temple. This meeting is for the election of permanent officers for the ensuing year. The committee on nominations, appointed at the last meeting by H. S. Hyman, president *pro tem.*, will present the ticket selected by them. As this is the most important meeting of the year, every member is requested to attend and vote for the officers.

H. G. Nye, formerly western representative for C. Rogers & Bros., is now representing the lines of the William Rogers Mfg. Co., the Holmes & Edwards Silver Co. and the Manhattan Silver Plate Co., of the International Silver Co. C. P. Dungan, representing factory "E" of this company, is at present on a visit to that factory at Meriden, Conn.

Norris, Alister & Co. moved last week from the second floor of the Columbus building to the second floor of the new Jewelers' building, 134 Wabash Ave. The concern occupies the entire floor, which has about 9,000 square feet. The 60-foot Wabash Ave. front is used for office space. In the rear of the office is the watch department, 30 feet long, followed by a space 40 feet long given over to general jewelry lines; an open square of show cases, 16 by 36 feet, stands directly in the center of the first half of the store, and in these the concern makes a display of diamonds. New safes, wall cases and other fixtures have been installed and additional help has been engaged.

The five Brothers Thoma, who are all of one height, one weight and one business, held a reunion in this city last week. Each Mr. Thoma owns a jewelry store and each one hails from a different town. Although the brothers have been coming into Chicago on the average of once or twice a year on a buying trip, they have never before been here all at one time. The brothers are: A. W. Thoma, Mineral Point, Wis.; C. C. Thoma, Battle Creek, Mich.; W. E. Thoma, Kalamazoo, Mich.; George H. Thoma, Three Rivers, Mich., and I. E. Thoma, Grand Rapids, Mich., all retail jewelers. After spending several days in town, looking over the various lines, and combining business and pleasure, the Messrs. Thoma left for their respective homes.

The first meeting of the creditors of Wm. B. Drackett, Louis D. Clock and Harry Jehlinger, formerly trading under the name of Drackett, Clock & Jehlinger, will be held April 8 at 10 A. M. in the office of Sydney E. Eastman, Referee-in-Bankruptcy, Room 714, Monadnock block, 98 Jackson Boulevard. The debtors were adjudicated bankrupts March 5 in the United States Circuit Court, and at the meeting next week a trustee will

be elected and the members of the firm will be examined by the creditors.

A. Hirsch, of A. Hirsch & Co., who has been making a pleasure trip through Florida, accompanied by his wife and family, is expected to return this week.

Oscar Lehme, formerly with C. H. Knights & Co. and at present with Edward Lehman, Denver, Col., was called to this city last week on account of the death of his mother.

Walter N. Treleaven, an optician at 49 State St., has filed a voluntary petition in bankruptcy in the United States District Court. The schedules show liabilities of $5,481 and assets of $245.

Paul Serwich, with William A. Rogers, Ltd., recently returned from a northern business trip. David N. Johnson, for the past two years with C. Rogers & Bros., has accepted a position in the local office of William A. Rogers, Ltd.

M. N. Burchard, who represented Simpson, Hall, Miller & Co. and their successors in this city for 20 years, returned from the east last week, where he made arrangements to represent the William H. Rogers Corporation and the Biggins-Rodgers Co.'s. Mr. Burchard also represents the Ohio Cut Glass Co., and has established his office in the Silversmiths' building.

Indianapolis.

The partnership between Marion G. Cole and Alice E. Campbell, Bedford, Ind., has been dissolved, Alice E. Campbell retiring. M. G. Cole will continue the business at the old stand.

Out of town dealers in the city last week included: E. O. Collins, Franklin, Ind.; A. Pursel, Noblesville, Ind.; Frank Haseltine, of Haseltine Bros., Kokomo, Ind.; George F. Long, New Richmond, Ind.; Herman L. Rost, Columbus, Ind.; C. H. Cloud, Montpelier, Ind.; J. W. Thompson, Danville, Ind.; George O. Sumare, Daleville, Ind.; S. T. Kerscy, of Campbell & Kersey, Darlington, Ind.; E. M. Wilson, Anderson, Ind.; B. Maier, Edinburg, Ind.; Walter Bishop, of G. W. Bishop's Sons, Walton, Ind., and C. N. Hitzner, Peru, Ind.

James F. Crist, Newburg, N. Y., is selling out his entire stock at auction preparatory to retiring from business.

Thieves last week entered the store of T. H. Kenncaster, South McAlester, Ind. T., and stole $500 worth of jewelry from the safe. Thus far no trace of the thieves has been found.

The R. E. Brobst Co., Knoxville, Ia., has moved its stock into more commodious quarters. The interior of the new store has ben handsomely decorated and thoroughly remodeled.

Kansas City.

James Whiteside, Liberty, Neb., was visiting his old friends here last week.

Archie Baranger has resigned his position with the C. B. Norton Jewelry Co.

Margolis & Metzer are preparing their new catalogue, which will be out very soon.

Ed. Rheinboldt, of W. W. Trigg & Co., is laid up with a sprained ankle sustained by a fall.

Mr. Raphael, of the Streicher Watch & Jewelry Co., is going east on a purchasing trip soon.

J. M. Scott and wife celebrated their silver wedding last Saturday at their home, 2615 E. 30th St.

E. S. Villamore, traveler for the C. B. Norton Jewelry Co., has just returned from his Texas trip.

Louis Meyer and M. Fricke, of the Meyer Jewelry Co., have returned from a business trip to St. Louis.

V. G. Cuthbert, of Otto Young & Co., Chicago, is here on business and is staying at the residence of his brother-in-law, Harry B. Carswell.

C. Olmstead, son of Mr. Olmstead, of Cady & Olmstead, has resumed his business duties in this city after a few months' sojourn in Arizona.

E. Massa and wife, formerly in business in this city, were in town last week. Mr. Massa is now engaged in the coffee, tea and spice business in St. Louis.

C. E. Russell, who recently sold out his retail store, has embarked in the manufacturing business at 17 W. 10th St., under the style of the C. E. Russell Jewelry Co. Mr. Russell intends to make a specialty of the mail order business.

The following out-of-town merchants visited Kansas City during the past week: F. S. Hester, Lawrence, Kan.; D. M. Bowers, Lawton, Okla.; Thomas S. Terry, Downs, Kan.; Sol Marks, Lawrence, Kan.; Major B. Gorden, Braymer, Mo.; S. J. Huey, Excelsior Springs, Mo.; G. P. Roberts, McCune, Kan.; F. H. Kretchmar, Nebraska City, Neb.; Geo. H. Church, Oak Grove, Mo.; and J. E. Hathaway, Parksville, Mo.

St. Louis.

TRADE CONDITIONS.

The wholesale dealers report very good business, largely in excess of the same time last year. Retail business is gradually getting better, owing to the pleasant weather of the past few days. The retailers look for a steady increase right along.

J. H. Friedlander, representing H. Z. & H. Oppenheimer, was taken home to New York last week, suffering from a severe attack of appendicitis.

Morris Eisenstadt, who has been laid up

ILLINOIS College of Engraving CHICAGO, ILL.

A. J. CLOW, Proprietor.

with a broken ankle for some time, expects to get down to his office this week.

The establishment of H. C. Grawe was recently threatened by a fire which broke out in the five-story building at 411 Washington Ave. The flames were quenched, however, before doing serious damage.

Butte, Mont.

TRADE CONDITIONS.

Business in this section showed a decided improvement during the last few weeks, and jewelers are looking forward to a brisk summer trade. The weather in Butte has been open and comparatively mild, thus creating an early demand for Spring goods, but in the northern part of the State it has been severe with a correspondingly bad effect on trade. In Butte the chief trade interest has been the two sales which are being conducted and which will result in the distribution of a large quantity of silverware and jewelry.

The jewelers of Billings have joined with the other merchants in an agreement to close their stores at 6 o'clock every evening except Saturdays.

Sam Martin and Mr. Murphy are still conducting the auction sale at J. H. Leyson's store. Judging from the crowds who attended the two daily sales, the auction is a great success. It will probably last several weeks more, as the stock was a very large one.

Ed Mayer's store on W. Park St., in which he is at present conducting an auction sale after the fire that damaged his premises, will when finished be one of the most handsome establishments in the State. Mr. Mayer has taken in the adjoining store and will thus have double the space he formerly occupied. The ceiling is of wood of various colors, while the cornice is decorated with 50 electric lamps, with reflectors, which make an admirable illumination. The furnishings and cases are of handsome design.

Denver.

Fred Sommers, recently connected with C. A. Kiger, Kansas City, Mo., is in this city and will probably locate here.

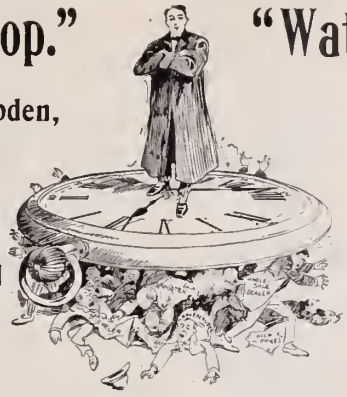
A new electro-plating plant has been opened up at 2306 Welton St., under the name of Mrs. Ray's Plating Works.

The Boyd Park Jewelry Co. has filed articles of incorporation, with a capital of $200,000. The incorporators are Boyd Park, Samuel C. Park and Platt Rogers.

Among the out of town visitors to this city last week were: G. V. Anderson, E. F. Bennett, M. F. Warren, all of Colorado Springs; G. L. Muffley, Golden; Harl S. Kittle, Boulder; James Inman, Goldfield, and Sam Hirst, Pueblo.

Portland, Ore.

G. Heitkemper, of the G. Heitkemper Co., is spending a few days at the seashore for rest and recuperation.



J. A. Young, of Julius A. Young & Co., San Francisco, Cal., was in Portland last week on a business and pleasure trip.

O. H. Rieger has a window full of samples of the painting on china and porcelain done by the Pfeil & Lewis Art School, which is to open a branch here.

James A. Lewis, Pittston, Pa., is suffering from an attack of pneumonia.

CALVIN CLAUER COMPANY,
103 State Street, CHICAGO.

No More Guessing No Figuring to Do.

Use the

MOE Diamond Weight Gauge and Calculator

to determine the weight of stones while in the mounting. The gauge measures the diameter and depth, and by referring those two measurements to the book of tables that accompanies each gauge, the correct weight is shown. The book has 26 tables, showing weight of 1,700 diamonds from ¼ to 7⅝ carats inclusive. By its use you avoid chipping stones through removal from settings to weigh and save trouble and expense.

Gauge and book sent to any address; prepaid $5.00. Send for descriptive booklet and testimonials.

CHARLES MOE, 80 Adams St., CHICAGO, ILL.

Pacific Coast Notes.

George Smith, formerly of Madera, Cal., but later in business in Pennsylvania, is now in Madera on a visit.

H. R. Condy, Wadsworth, Nev., formerly in business at Stockton, Cal., recently spent a few days at the latter place.

R. Greenleaf, Salinas, Cal., who recently suffered from what was apparently a stroke of paralysis, has recovered and is able to be at his place of business again.

S. R. Zwetow, Denver, Col., is on the Coast, combining business and pleasure. He is at present at Redlands and may conclude to locate there in the near future.

The J. P Trafton Co., Los Angeles, Cal., has incorporated, with a capital stock of $100,000. The following directors have been chosen: J. P. Trafton, D. P. Trafton, W. E. Cummings, Donald Barker and W. H. Shaw.

Rudolph Hoas has obtained a concession from the Government of Nueva Leon, Mexico, to install electric clocks in the city of Monterey. The wires will start from Hoas's office and run to the public offices, private buildings, etc. These clocks will not be sold, but rented to subscribers, as in the case of telephones.

A. H. Grennell has sold out nearly all of his jewelry stock at Bakersfield, Cal., and will shortly close his store. In company with his wife he expects to leave early this month for a year's visit to relatives and friends in New York and Baltimore. Mr. Grennell has made no plans beyond that, but does not expect to return to Bakersfield.

A. E. Springborg, a jeweler of Redlands, Cal., is preparing to pay a visit to his home at Copenhagen, Denmark. He expects to leave Redlands about May 10, sailing from New York May 26 on the *Kaiser Wilhelm II.* On the return trip his brother will accompany him a part of the way, and both will make a tour through the Continent, visiting Antwerp, Paris and other large cities. Mr. Springborg expects to return home Sept. 1.

Pacific Northwest.

B. T. Vandecar, Coquille, Ore., has returned from a trip to San Francisco, Cal.

E. M. Elwood, Grant's Pass, Ore., has moved into more spacious quarters in a newly erected building at that place.

M. R. Janney, Eugene, Ore., has purchased a restaurant and confectionery store, which he will conduct in connection with his jewelry business.

Harry Wood, manager of the company which has taken up claims of the rare stone, jade, recently discovered in Althouse and Indian Creeks, Southern Josephine County, Ore., states that they have found jade in great quantities in their claims on Indian Creek. The stone varies in color from a dark blue and green to a transparent white. This is the first discovery of this rare stone on the North American continent.

San Francisco.

TRADE CONDITIONS.

Trade during the past week, with both the wholesalers and retailers, was rather quiet. The weather, however, is growing very favorable and the retailers are hopeful of an increase in business with the advent of Spring.

Mrs. L. Klodt, Seattle, Wash., is enjoying a short vacation in this city.

M. Meyer, with M. Schussler & Co., has just returned from a trip to the country.

L. H. Fall has resumed his duties with Radke & Co., after an illness of six weeks.

W. C. Tappen, Attleboro, Mass., accompanied by his wife, is a visitor to this city.

George Haas, of Chas. Haas & Son, Stockton, Cal., is in this city making purchases.

Lance H. Smith, representative of A. I. Hall & Son, has returned from a successful trip to the south.

Mr. Bristol, of the Bohm Bristol Diamond Co., Denver, Col., is in town in the interests of his firm.

Louis Hammersmith, bookkeeper for Hammersmith & Field, has just returned from a short vacation.

George H. Smith, formerly of this city, but now a jeweler of Danville, Pa., is visiting old friends here.

Mrs. Emil Pfund, Aberdeen, Wash., is spending a few weeks in this city, combining business with pleasure.

David Hyman, of Hyman Bros., Oakland, Cal., has filed a petition for discharge from all debts. His assets are figured at $31,000 and liabilities at $98,832.

J. C. Feige, representing Adolph Eisenberg & Co., left recently on a trip to the north. A. Eisenberg and wife expect to start on an eastern trip very soon.

Mr. Sather, head watchmaker for A. O. Solberg, Everett, Wash., arrived in this city recently and will visit Southern California before returning to his home.

Shreve & Co. furnished the handsome watch and fob and diamond-set match safe recently presented to Mascagni on the occasion of his farewell appearance in this city.

George S. Savage, manager of Manning.

MONEY IS NO GOOD UNLESS IT EARNS MONEY.

Goods bought right are half sold. Our competitors are trying to drive us out of business by telling the manufacturers and importers not to sell us any goods as we are price cutters. **Yes, we do cut prices.** Here are some instances:

Our Peerless Brand all size watch screw drivers N. P., **5c.** each.
Elgin, Waltham, Hampden or any other make 7J. Grade Balance Staffs, **75c.** doz.
Same, fine polished for 15—17 and 2 J., **$1.00** per doz
Peerless Brand Cock and Foot Jewels for all makes, **$1.00** per doz.
Peerless Roller Jewels for all make watches, **20c.** per doz.
Peerless Pivot Drills, **20c.** per doz
Fine Alum. Straight or Riding Temple any size Eye Frames, **$1.75** per doz.
Same in Cable, **$3.00** per doz.

Above staffs and jewels are guaranteed to fit. Not any cheap imitation goods. Above prices are net cash with order. Money refunded if not satisfactory. Write for our confidential discount on general line. Watch for our low prices every month in this paper. Mail all orders to

J. MEDNIKOW JEWELRY SUPPLY CO., Rooms 33, 34 & 35, **105 Grand Ave., Milwaukee, Wis.**

Bowman & Co., is at present in San Francisco on a pleasure trip. He has been in Los Angeles and all the larger coast cities and reports encouraging business conditions.

J. C. Davidson claims to have discovered a process by which he can reproduce an emerald equal to the real gem. Confident of final success, Mr. Davidson is going to New York to experiment with his recent discovery and will bring back with him the products of his discoveries in sapphires, diamonds and emeralds.

Cincinnati.

TRADE CONDITIONS.

Business improved during the past week. Travelers are sending in good orders and the factories continue to be busy.

The new quarters of Loring Andrews & Co. are being greatly improved.

H. M. Bohmer, a well-known watchmaker, is moving from the East End to Walnut Hills.

Theodore Neuhaus returned from the east last week after a 10 days' trip on business and pleasure.

Victor A. Gebhardt, of Gebhardt Bros., is on the road. The Gebhard Bros. are making the medal for the Woodward High School athletic games, which will be held next month.

The jewelry stock and fixtures of Frank Rose, now in bankruptcy, are to be sold by order of Referee in Bankruptcy C. T. Greeve. Sealed bids for the same were received by Mr. Greeve until Monday, the date of the first meeting of the creditors.

The Miama Silver Co. is the name of a new company recently incorporated with a capital stock of $50,000. Joseph Meyer, formerly with the Homan Silver Plate Co. and also with the Queen City Silver Co., has charge of the sales department of the company. The staff of the company is composed of skilled artisans, some of whom have been in practical business for 20 years. New machinery is expected to be installed within a few weeks in the large building the concern will occupy on E. 8th St.

The city officials have turned over the trunks, silverware and jewelry taken from the big fire of a few weeks ago and belonging to Duhme Bros. & Co. and Richter & Phillips. The trunks have been kept in a cell at the police station and carefully guarded. The contents of the trunks of Richter & Phillips inventoried about $18,000. The stock belonging to Duhme Bros. & Co. is now in the hands of the insurance inspectors, who have not yet completed their adjustment of the loss. It is possible the settlement will be reached early this week. Afterward Duhme Bros. & Co. will proceed to arrange for the stock of their new store.

Columbus, O.

Among the out of town buyers who visited Columbus last week were J. W. Clark, Mt. Vernon, and W. R. McCommon, Westerville.

During the past week Columbus has been visited by many "key-workers." These thieves are evidently experts, as but little was taken that was not solid silver or solid gold.

An item referring to auction sales held in this city last week was so worded that the inference might be drawn that the sale of the stock of Perry M. Ford was a bankrupt sale. This is not correct, as Mr. Ford states that he is selling out only because the quarters in which he had been located for three years were leased over his head to another party. Mr. Ford says he will begin business again as soon as he can get a store in a good location.

Beautiful effects in sterling silver belt buckles are offered the trade by R. Blackinton & Co., No. 3 Maiden Lane, New York. The line comprises a large variety of new designs, which surpass anything of their kind hitherto shown; the designs include a range of *art nouveau motifs* and floral patterns executed with remarkable beauty and fineness of detail, to which it is almost impossible for any description to do justice. These goods are also made up in back pieces and waist sets to match and are finished in either rose or gray finish. Netsuki bags, in a variety of designs, silver bracelets, girdles, chatelaines and card cases also hold a prominent place in this concern's sample lines, while to their flat ware designs a new pattern, "The Narcissus," has just been added.

NEW LINE GRADUATING.

FANS and JEWELRY.

ESTABLISHED 1854. **EXCLUSIVE DESIGNS IN ARTISTIC JEWELRY.** INCORPORATED 1893.

Fancy Diamond Mounted Goods, Diamonds, Pearls, Emeralds, Rubies, etc.

JUERGENS & ANDERSEN CO.,

92-98 State St., Chicago.

23-25 LOOIJERSGRACHT, AMSTERDAM, HOLLAND.

Minneapolis and St. Paul.

Geo. R. Holmes, St. Paul, will move to his new store at 417 Robert St. about April 15.

M. M. Cohen, with J. S. Cohen & Co., St. Paul, has returned from a trip to the Copper Country.

John Flindt, watchmaker for H. Fegelson, St. Paul, has resigned and is now in the life insurance business.

Louis Morgan was arrested a short time ago while in the act of stealing three silver watches from a jewelry store at 215 Nicollet Ave., Minneapolis. He is said to have been intoxicated when he committed the theft.

M. L. Finkelstein, St. Paul, will move his store on 7th St., near Robert, into the rooms adjoining, which will be remodeled and made into a handsome store. It will be finely fitted up with all the modern appurtenances of an up-to-date store.

Among the visitors to the Twin Cities during the past week were: Mr. Hurd, of Johnson & Hurd, Forest Lake, Minn.; Ed Carow, Dayton, Minn.; S. Reinholtson, Lake Park, Minn.; John Saxine, Prescott, Wis.; J. Morton, Northfield, Minn.; F. J. Hipp, New Brighton, Minn.

Colonel Zinn, proprietor of the St. Paul Jewelry Mfg. Co., St. Paul, has returned from a trip to Milwaukee, Wis. Beginning to-day, the company will considerably enlarge its quarters in the Kendrick block to meet the demands of its increasing business.

The store of S. Jacobs & Co., 520 Nicollet Ave., Minneapolis, was looted of about $135 worth of diamonds recently. Two colored men asked to be shown diamonds. During the progress of the examination by one of the men the other man stepped aside to look at some watches, which he asked the clerk to show him. The clerk proceeded to d so, and his pretended customer managed to stand in a position so that the clerk could not see his confederate at the diamonds. During this time the first negro succeeded in transferring the diamonds to his pocke's and made his escape. Shortly after the second negro discovered that he had business elsewhere, and left, promising to return later. One of the thieves has been caught.

An Economical Luxury.

CHEAPEST IN EXPENSE, MOST SATISFACTORY, SEARCH-LIGHT VAPOR LAMPS FOR ANY USE. ARE RIVALLED ONLY BY SUN LIGHT.

Search-Light Mfg.Co. 182 Division St., Chicago

Detroit.

Ralph Dewey, who has charge of Wright, Kay & Co.'s Paris office, recently sailed for Europe from New York.

Ernest Eimer, Muskegon, has moved into handsome new quarters in the Occidental Block, a few doors from his old location.

Noack & Gorenflo last week received a shipment of 8,000 clocks imported direct from the Black Forest, Germany.

A. Moody's stock at Battle Creek was recently disposed of at auction. The stock and fixtures were purchased by local jewelers. Mr. Moody's store had been occupied by a jewelry establishment for the last 40 years, and will shortly be turned into a bank.

The Pacific & Dominion Express Co. has increased the reward offered for the $23,500 gold bar stolen from the company's office at the Union Station in this city last week. The reward is now $2,000 for the recovery of the bar, and $1,000 for the arrest and conviction of the thief.

The 581 diamonds which were seized two years ago from Louis Busch, who was heavily fined for smuggling, and which were recently ordered sold by Judge Swan of the United States District Court, will be disposed of in bulk by United States Marshal Bates at 10 o'clock on the morning of May 14 from the eastern front of the federal building on Shelby St. There has been a long controversy over these diamonds, several concerns claiming them. It is expected that New York dealers will be present. The diamonds are valued at about $20,000.

Milwaukee.

Among the gold and silversmiths who have their products at the arts and crafts exhibit at the Athenæum in this city are Jane Barnum, Cleveland, O.; Madeline Yale Wynne, Chicago; M. D. Colten, St. Paul, Minn.; Miss B. Bennett, Chicago.

Previous reports concerning the incorporating of the Bunde & Upmeyer Co. were somewhat erroneous. The new company was incorporated with a capital stock of $250,000, the incorporators being: L. W. Bunde, W. H. Upmeyer, F. C. Bunde, C. H. Upmeyer and Robert Gould. The officers are: President, L. W. Bunde; vice-president and treasurer, W. H. Upmeyer, F. C. Bunde, C. H. Upmeyer and Robert Gould are the new members of the company. They have been in the employ of the old firm of Bunde & Upmeyer for from 15 to 20 years, and are now given an interest in the business and will be at the head of the several special departments of the company. The departments will be considerably enlarged.

Pittsburgh.

Harry Heeren spent Sunday in Somerset.

B. E. Arons spent the latter part of last week in Buffalo.

S. F. Sipe and family are spending 10 days at Kokomo, Ind.

Steele F. Roberts will leave early in June for his annual trip to Europe.

Miss Mary Grant, of the office force of Hardy & Hayes Co., is seriously ill at her home with typhoid fever.

Kropff & McKelvey have opened a store in Fourth Ave. Both partners were formerly employed by Heeren Bros. & Co.

J. O. Ladd, formerly employed by W. W. Wattles & Sons, 214 Fifth Ave., has quit the jewelry business and is engaged in another line in Allegheny.

Elizabeth B. Will, daughter of Edward H. Will, entertained a dozen of her young friends at the home of her parents on N. Craig St. last week, in honor of her 12th birthday.

E. P. Roberts & Sons are making some improvements in their art ware department on the first floor of their establishment, 225 Fifth Ave. The room is being enlarged and new fixtures are being added.

Solomon Seleznick, who has been conducting a jewelry store at 408 Smithfield St., for several years is closing out his business there and has leased quarters at 110 Federal St., Allegheny, where he will open a store.

Otto Heeren, of Heeren Bros. & Co., sails April 4 for Europe, where he will spend four months buying goods. This will be the 18th annual trip Mr. Heeren has made across the ocean since he entered the jewelry business in this city.

Mrs. Charlotte Hall Gillespie, widow of

JOS. NOTERMAN & CO.,

Loose. DIAMONDS Mounted.

509-511-513 Race St.,

CINCINNATI - - - OHIO.

the late Charles H. Gillespie, one of the pioneer engravers in this district, died Tuesday at her home 6922 Hamilton Ave. She had been in poor health for three years and had been seriously ill since last September.

Harrisburg.

Uptown jewelers will begin April 1 to close their stores at 6 P. M. every day except Saturday. They will continue the practice until Sept. 1.

There were 40 contestants in the handicap shoot last week for the handsome loving cup presented to the Keystone Gun Club by Jacob C. Schmidt, a jeweler of Lebanon.

The House of Representatives has passed the Senate resolution providing for a commission, to consist of Governor Pennypacker and Senators Quay and Penrose, to select a silver service for the new battleship *Pennsylvania,* appropriating $25,000 for the purpose.

Members of the State Senate Wednesday presented Gen. J. P. S. Gobin, commander of the Third Brigade, N. G. P., and former Lieutenant Governor, with a beautiful collection of silverware and cut glass on March 25 as a remembrance of his former services. The gift embraced a diamond-studded miniature gavel of ivory for a watch charm, a massive silver punch bowl, two dozen cut glass punch cups and a pair of massive silver candelabra.

Trading stamp bills are accumulating in the Legislature. Last week no less than three were offered. Senator Drury's bill provides for the respecting of trading stamps, coupon tickets, etc., and makes it obligatory on the part of the manufacturer to print across such coupon, etc., its exact value, and also provides that these coupons shall be redeemable in currency if the holder so wishes. Senator Woods's bill would prohibit the offering for sale of goods, wares, etc., carrying any certificate, coupon, stamp, etc., redeemable by the merchant or manufacturer disposing of the goods and fixing a fine of $50 for the first violation and $100 for the second offence. These two measures conflict in a measure and were offered at the same session. Mr. Cook, of Allegheny, introduced in the House a bill prohibiting the giving of trading stamps under a penalty of $50 for the first offense and $100 for each subsequent offense, to become effective Oct. 1, 1903.

Lancaster, Pa.

John S. Eger, Altoona, Pa., visited the trade in Lancaster last week.

F. H. Ewald, Coatesville, Pa., formerly with Harry Garman, was in Lancaster on a purchasing trip last week.

L. C. Reisner, of L. C. Reisner & Co., was elected treasurer at the grand ruling meeting of the Fraternal Mystic Circle of Pennsylvania, held at Chambersburg, March 18.

Archie K. May, who recently took a course in watchmaking and engraving in the Ezra F. Bowman Technical School, has rented the room at 411 W. Market St., York, for a jewelry store.

George W. Hayes, Lewiston, Pa., is about to move into new quarters over John H. Sweger's jewelry store.

Judge Ray recently held a special term of the United States District Court in Utica, N. Y., and among those discharged in bankruptcy was Frank V. Morris, Carthage, N. Y.

E. H. Hollister, Greenfield, Mass., is receiving the condolences of the trade on the death of his mother, who died recently at East Greenwich, Conn.

Legal Notice.

DISTRICT COURT of the United States for the Eastern District of Michigan.—By virtue of a writ of venditioni exponas, issued out of and under seal of said court to me directed and delivered, notice is hereby given that I shall sell at public auction to the highest bidder for cash, at the easterly entrance of the Post Office Building in the City of Detroit, Michigan, on the 14th day of May, A. D. 1903, at 10 o'clock forenoon (city time), five hundred and eighty-one Diamonds condemned as forfeited to the United States for fraudulent importation. The diamonds may be examined by proposed bidders at the Marshal's office on the three days preceding the sale.

WILLIAM R. BATES, U. S. Marshal.
WM. D. GORDON, U. S. District Attorney.

A CARD.

I wish to inform my many friends in the jewelry trade throughout the country, that I have severed my connection with the Jewelers' League, of New York, and am desirous of making an engagement with some firm of manufacturing jewelers to sell their goods to the trade.

A collection of the latest practical receipts on the manufacture and repairing of watches, clocks and jewelry.

Price, $2.50

300 pages (size 7½x10½ inches), bound in cloth, stiff covers. Should be on every workbench.

Published by

THE JEWELERS' CIRCULAR PUBLISHING CO.,

11 John St., Cor. Broadway, New York.

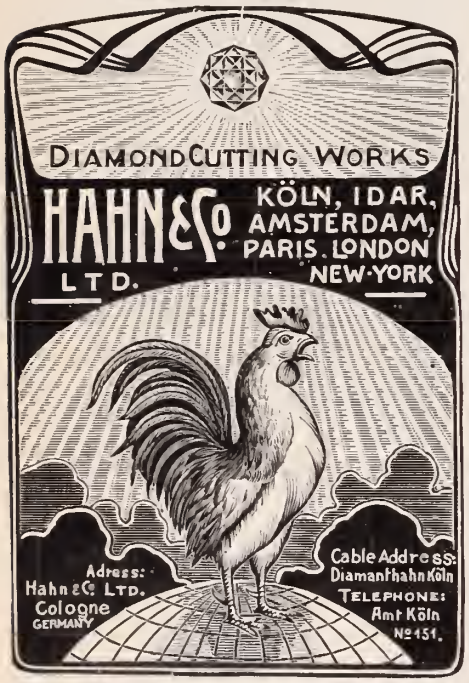
Philadelphia.

Ed. Sickles, of M. Sickles & Sons, was in New York during the week on business.

Louis H. Becker, retail jeweler, 1150 Passayunk Ave., is critically ill with typhoid fever.

Lewis J. Meyers, plater, is reported to have removed from 809 Sansom St. to 106 S. 8th St.

L. P. White and J. Warren Hutchins returned Sunday from an outing to Hot Springs, Va.



E. C. Albertson, Bridgeton, N. J., was one of the rural visitors to the local jobbers last week.

A. M. Peoples, Chester, Pa., returned last week from a pleasure trip to England and the Continent.

Harry Tress, manager for Weinmann & Co., 1217 Arch St., was initiated a Knight of Pythias Thursday.

Simon Nefsky, 1124 H St., Lincoln, Neb., was married in this city last week to Miss Annie Kendis, of 819 Ellsworth St.

John Ernst, retailer, has removed from 2028 Frankford Ave. to a larger and better store at 2038 Frankford Ave.

John S. Allen, Minneapolis, Minn., was here last week as the guest of Fred. T. Barry, of Gimbel Bros.' jewelry store.

Harry W. Smith, lapidary, 711 Sansom St., is looking for larger and better adapted quarters in the wholesale district.

David Berry, watchmaker, has resigned his position with McLaughlin & Raines and accepted a place with H. Muhr's Sons.

Wm. Todd, watchmaker, who suffered severe injuries by a fall some weeks ago, is now convalescent, but unable yet to resume business.

Charles Hansen, watchmaker, has resigned his position with Francis L. Kirkpatrick and accepted a place with C. R. Smith & Sons.

A millinery store has been opened on Federal St., Camden, by the wife of F. M. Daniels, watchmaker for E. A. Langendorf & Co., Camden.

Wm. P. Sackett, buyer for Wanamaker's Philadelphia and New York jewelry stores, is expected to start next month on his annual European trip.

Charles G. Taney, watchmaker, 728 Chestnut St., has removed his residence to Wildwood, N. J., with his family for the Spring and Summer.

The stock and fixtures of the jewelry store of Wm. Wardell, retired, at 217 S. 10th St., was sold out at auction Monday. Many small retailers attended.

Jules J. Hovey, who represented the Philadelphia Jewelers' Club in the inter-club billiard tournament which ended Friday, won fourth place out of eight entries.

The will of Ellis S. Lewis, father of Chas. E. Lewis, 4600 Frankford Ave., was probated Friday. The estate, valued at $4,600, reverts to his widow and four children.

J. E. Caldwell & Co. have brought suit in the Camden District Court to recover judgment against Charles T. Molony, the alleged fugitive defaulter, for jewelry purchased.

Abe Sickles, of M. Sickles & Sons, with his wife and two children, will sail for Europe on the *Kaiser Wilhelm der Grosse* next Tuesday and will spend the Summer abroad.

Eugene P. Bachmann, die sinker and chaser, has removed to 726 Sansom St., where he has fitted up roomy and well-equipped quarters to facilitate the transaction of an increased volume of business.

The store occupied by Blair & Crawford at 804 Chestnut St. is included in the site purchased last week from Geo. B. Wilson by Martin E. Greenhouse, a real estate operator. It is rumored that Blair & Crawford will remove to a location near 13th and Chestnut Sts. during the Summer.

The Bailey, Banks & Biddle Co. last week sold its four-story factory building at 12th and Sansom Sts. to Geo. B. Wilson for $120,000. The big jewelry firm will, however, retain possession of the building pending the erection of the new store and factory building at 1220-22 Chestnut St.

Baltimore.

William F. Jacobi, of Jacobi & Jenkins, was in New York on business last week.

Bernard J. Prissman has been granted a discharge of his debts in bankruptcy.

The gold plated tankard that will be given by the Maryland Hunt Club at its 10th annual race is being made by Jacobi & Jenkins.

The Business Men's Association, of Annapolis, took up the matter of the introduction among the merchants of the various trading stamp concerns and their systems and concluded by denouncing them all.

The silver coffee service presented to Gen. John M. Hood by the employes of the Western Maryland Railroad was made by the Samuel Kirk & Son Co. It consists of four pieces, handsomely executed to match the silver service presented to Gen. Hood last November.

Charles Gripp, 19 years old, an employe of the United States Express Co., was before Justice Fechtig at the Central police station Friday, charged with the larceny of a gold watch, a silver watch and a gold locket, the property of some one unknown. The articles, it is alleged, were taken from packages in transit. He was held for a hearing next Friday.

The Welsh & Bro. Co. was incorporated last Thursday, with a capital of $100,000, divided into 1,000 shares of $100 each. The incorporators are: Thomas Welsh, Frank E. Welsh, Harry Schwab, Henry B. Coulson, and George W. Richards, who will act as president, vice-president, secretary and manager, and treasurer, respectively. The business will be conducted at the same place, 5 E. Baltimore St., that has been used by Welsh & Bro. for many years.

John E. Bell, Ogdensburg, N. Y., has returned from a 10 days' outing.

THE JEWELER'S OPTICIAN

is what they call us, because we do more R_x work for the jewelers who have optical departments than any other house in our city.

We do only A1 work at reasonable prices. Why not send for a price list and be convinced?

MICHAEL WOOLF, 71 Nassau St., NEW YORK

A small package containing valuable printed matter for the improvement of your optical department sent free on request.

Jewelry, Clocks and Optical Goods Exported From New York.

THE following were the exports of jewelry, optical goods, silverware, clocks, watches and kindred lines from the port of New York for the week ended March 25:

Argentine Republic: 1 case watches, $690; 20 packages glass ware, $248; 76 packages clocks, $1,469.

Antwerp: 1 case German silver, $60; 1 case glass ware, $20.

Amsterdam: 1 package silverware, $270.

British West Indies: 98 packages glass ware, $537; 2 packages clocks, $101; 6 packages cutlery, $40; 2 packages watches, $15; 1 package plated ware, $15.

Brazil: 10 packages glass ware, $58; 7 packages cutlery, $432; 1 case watches, $440.

British Australia: 15 packages clocks, $165.

Bremen: 5 packages silverware, $3,775; 2 packages optical goods, $150; 2 packages jewelry, $590; 3 packages plated ware, $1,173; 1 package watches, $342.

Bristol: 8 packages glass ware, $97; 1 case cutlery, $18.

British East Indies: 199 packages glass ware, $2,241; 3 cases cutlery, $128; 4 packages watches, $666; 1 package jewelry, $20; 5 packages plating material, $68.

British Possessions in Africa: 2 packages cutlery, $52; 2 packages optical goods, $133; 4 packages watches, $2,180; 3 packages jewelry, $427; 4 packages plated ware, $602; 84 cases glass ware, $383; 113 packages clocks, $520.

Berlin: 12 packages clocks, $440.

Cuba: 455 packages glass ware, $3,510; 1 package optical goods, $48; 8 packages clocks, $87; 6 packages cutlery, $276; 3 packages jewelry, $368.

Central America: 2 packages glass ware, $15; 1 package plated ware, $83.

Colombia: 54 packages glass ware, $421; 8 packages cutlery, $130; 1 package jewelry, $46; 10 packages clocks, $109.

Christiania: 1 package glass ware, $10.

China: 1 package plated ware, $12.

Copenhagen: 2 packages clocks, $31.

Chili: 230 packages clocks, $4,659; 25 packages cutlery, $669; 367 packages glass ware, $1,002; 6 packages plated ware, $327; 2 packages watches, $2,145.

Dublin: 8 packages glass ware, $78.

Dutch West Indies: 5 packages glass ware, $36; 2 packages cutlery, $43; 1 case jewelry, $11; 2 packages clocks, $17.

Ecuador: 139 packages glass ware, $1,206; 1 package cutlery, $55; 19 packages clocks, $353.

French Guiana: 1 package plated ware, $7.

Glasgow: 44 packages clocks, $410; 3 packages glass ware, $93.

Genoa: 1 package jewelry, $500.

Hull: 2 packages clocks, $30.

Hamburg: 1 package silverware, $60; 1 package plated ware, $50; 6 packages optical goods, $718; 25 barrels nickel, $2,000; 4 packages glass ware, $192; 9 packages jewelry, $794; 1 package cutlery, $80.

Havre: 1 package optical goods, $75; 1 package cutlery, $555; 1 package glass ware, $360; 1 package jewelry, $500.

Hayti: 2 packages clocks, $26.

Hongkong: 1 package optical goods, $12.

Japan: 2 packages plated ware, $194.

Leith: 3 packages clocks, $47.

London: 26 packages glass ware, $592; 2 packages plated ware, $35; 1 package silverware, $149; 49 packages optical goods, $175; 158 packages clocks, $2,723; 3 packages jewelry, $891; 22 packages watches, $3,296.

Liverpool: 12 packages glass ware, $257; 9 packages optical goods, $765; 146 packages clocks, $2,967; 5 packages jewelry, $564; 9 packages watches, $620; 3 packages cutlery, $951; 3 packages plated ware, $115.

Mexico: 109 packages glass ware, $708; 30 packages clocks, $480; 3 packages jewelry, $124; 9 packages plated ware, $1,063; 2 packages cutlery, $82.

Manchester: 4 packages cutlery, $178.

Milan: 1 package cutlery, $25.

Newfoundland: 2 packages clocks, $39; 1 package jewelry, $40; 1 package plated ware, $25.

Peru: 15 packages cutlery, $1,346; 100 packages clocks, $2,410; 7 packages watches, $1,578; 3 packages jewelry, $137; 5 packages plated ware, $250; 49 packages glass ware, $978.

Philippines: 10 packages cutlery, $257; 3 packages glass ware, $23.

Rotterdam: 1 package cutlery, $180; 336 packages nickel, $13,181.

Siam: 2 cases glass ware, $20.

Southampton: 1 case glass ware, $25; 4 cases optical goods, $840; 1 case watches, $50.

San Domingo: 4 cases glass ware, $12.

Uruguay: 20 cases cutlery, $405; 13 cases glass ware, $102; 1 case watches, $250.

Venezuela: 41 cases glass ware, $249; 1 case cutlery, $39; 4 cases cutlery, $167; 1 case clocks, $21.

Optometry Bill Passes Lower House of New Jersey Legislature.

TRENTON, N. J., March 25.—Assemblyman Newcorn, of Plainfield, who, as told in THE CIRCULAR-WEEKLY last week, introduced a new bill in the House of Assembly of the New Jersey Legislature, to regulate the practice of optometry, which will legally recognize opticians of standing, to-day succeeded in having the bill passed by that body and it has now gone to the Senate.

The bill, the full text of which was published last week, authorizes the Governor to appoint a commission of four qualified opticians to serve as a State Board of Examiners in Optometry. The bill provides that all opticians desiring to practice in this State shall pass an examination, and that a license shall be granted to all who pass a successful examination on payment of the stipulated fees.

J. H. Waples, Shelton, Neb., recently sustained a loss of $250 by fire.

Dies From Designs.

We are now ready to furnish dies from your own designs if you have not the facilities for making them from models. The cost as well as the exactness and finish of the work will interest you. We make models in plaster or any metal from your own sketches.

The Photo Moulding Co.

215 East 24th Street, New York.

Automatic Die Cutting Machine.

Cuts *fine* dies in one-third the time required by hand.

The *only* machine that produces a finished DIE OR HUB *without retouching.*

Every machine is guaranteed and all purchasers protected by us.

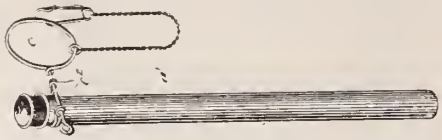
SOLE AGENTS,

TRADE MARK



14 E. 17th St., New York.

The Latest Patents.

ISSUE OF MARCH 24, 1903.

723,355. THERMOMETER-CASE. Albert Ashenberger, Elkins, W. Va. Filed Sept. 24, 1902. Serial No. 124,685. (No model.)

The combination with a thermometer and its case; of a support therefor located at a point be-

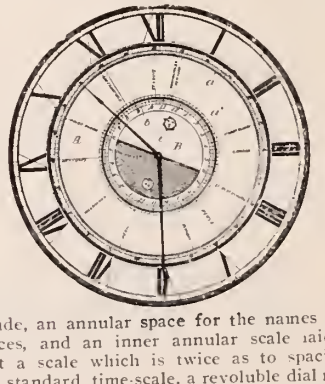
tween the ends of the case and extending laterally of the case, the case being freely rotatable on the support, the axis of such rotation being at right angles to the longitudinal axis of the thermometer and parallel to that of the support.

723,429. CHAIN-LINK. Gustav Wilke, Grüne, Germany, assignor to Rudolph A. Erbslöh, New York, N. Y. Filed June 18, 1902. Serial No. 112,144. (No model.)

A chain-link having flattened portions and shoulders near the ends, and thickened extremi-

ties, which portions and extremities are bent to form the eye, the shoulders at the ends of each flattened portion being in interlocking engagement respectively with the sides of the other flattened portion.

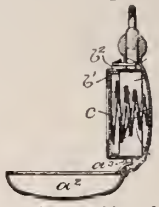
723,454. CUFF-HOLDER. Charles A. Foster, Lewiston, Me. Filed April 25, 1902. Serial No. 104,639. (No model.)



As a new article of manufacture, a cuff-holder consisting of a strip of spring metal having its ends bent upon itself to form oppositely-extended

spring-jaws, the central portion of the strip having an elongated, flattened part to co-operate with the outer, flat end of one jaw and a transversely-corrugated part to co-operate with the free end of the other and similarly-corrugated jaw, the said flattened and transversely-corrugated central portions of the strip being laterally offset from each other, to press said portions into contact with the flat and corrugated jaws, respectively.

723,489. UNIVERSAL CLOCK. Andrew Rosenbusch, Quincy, Ill. Filed April 30, 1902. Serial No. 105,343. (No model.)



In a universal or comparative time-clock, the combination with a standard dial having adjacent to its margin prominent numerals from "1" to "12," and within the space occupied by such numerals and adjacent thereto a scale indicative of

longitude, an annular space for the names of cities or places, and an inner annular scale laid off to present a scale which is twice as to spacing that of the standard time-scale, a revoluble dial mounted over the central portion of the fixed dial such dial presenting adjacent to its margin a time-scale which corresponds to spacing with the inner scale of the fixed dial and shading upon one-half of the revoluble dial, of a time train or clock mechanism which operates an hour and a minute hand in the usual manner, and a reducing and reversing train in gear with the time-train and connected to the revoluble dial to turn the same in an opposite direction from the direction of rotation of the hands and at one-half the rate of travel as the hour-hand.

723,600. PURSE-LOCKET. Samuel K. Grover, Providence, R. I. Filed Jan. 16, 1903. Serial No. 139,255. (No model.)

In a purse-locket, the combination with the casing *a* in the form of a locket, having the back a^1, the cover a^2, the circular lip a^3 forming the annular groove a^4 and the opening a^5, the spring-actuated coin-holder, composed of the coiled spring *d*, the push-plate *c* and the cylindrical frame *b* having the semicircular retaining-lip b^1, the coin-slot b^2 and the wedge-shaped arms b^3 b^3

cut out of the cylindrical side of the frame and adapted to be forced or expanded into the annular groove a^4 and under the circular lip a^3 to secure the coin-holder in the casing.

723,611. BACK FOR BRUSHES OR SIMILAR TOILET ARTICLES. Gustave F. Kolb, Mount Vernon, N. Y. Filed March 19, 1902. Serial No. 98,935. (No model.)

A back for a toilet-brush composed of a frame having an inner flanged edge, a panel having a

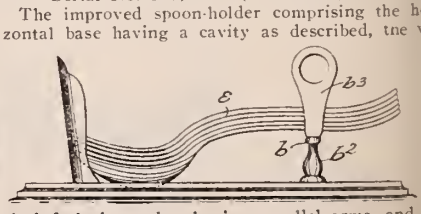
marginal flange engaging and projecting beyond the flange on the frame to form a laterally-opening groove accessible from the back side of the frame, and cementing material filled in said groove to secure the panel to the frame.

723,671. ENGRAVER'S CLUTCH. Joseph Hoffman, New York, N. Y. Filed Nov. 4, 1902. Serial No. 130,024. (No model.)

A device of the class described comprising a handle portion composed of two similar longitudinal parts, said handle portion being cylindrical in cross-section and the separate parts thereof being

connected centrally so as to permit of lateral movement at the ends thereof, this connection serving also as a clamp to press the separate parts together, said parts being also provided adjacent to the ends thereof with transverse guidepins secured in one part and movable in the other, and said ends being also provided with radially-adjustable clutch-pins adapted to hold an article placed between the pins.

723,726. FOUNTAIN-PEN. George W. Perks and Frederick C. Thacker, Birmingham, England. Filed Dec. 6, 1902. Serial No. 134,146. (No model.)



In a fountain or reservoir pen; a self-contained filling or charging means consisting of a sliding air-tube, an elastic or compressible and expansible

air-sack located on the outside of the ink-reservoir and connected therewith, which tube is directed through the reservoir and communicates with the interior thereof through the medium of an air-hole, and its forward end being adapted to be brought against a passage leading into the reservoir, or formed through the nib-plug of the pen, thus to establish a temporary but direct communication between the air-sack and the outside air, the said parts being arranged and operated.

723,729. SPOON-HOLDER. Henry Powles, Sr., Brooklyn, N. Y. Filed June 2, 1902. Serial No. 109,878. (No model.)

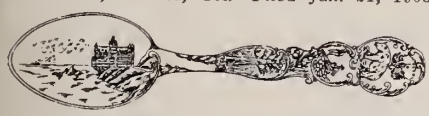
The improved spoon-holder comprising the horizontal base having a cavity as described, the ver-

tical forked member having parallel arms, and the vertical member *c* curved transversely throughout its length, in general conformity with the shape of points of spoon-bowls, the two members being arranged on opposite sides of said cavity and in alignment therewith.

723,781. HAT-PIN. Horace J. Nickett, Attle-

boro, Mass., assignor of one-half to Arthur R. Knox, Taunton, Mass. Filed Oct. 18, 1901. Serial No. 79,175. (No model.)

In a spring hat-pin, the combination of the stem,



and the connecting-head, with the volute spring held at one end by the connecting-head, the box inclosing the volute coil of the spring and having an opening at its edge for the loose movement of the free arm of the spring, and the ornamental head secured to the projecting end of the free arm.

DESIGN **36,248.** BUCKLE OR BROOCH PLATE. JOSEPH CATLOW, Providence, R. I., assignor to Manuel F. Williams, Providence, R. I.

Filed Jan. 12, 1903. Serial No. 138,769. Term of patent 3½ years.

DESIGN **36,249.** SOUVENIR-SPOON. PAUL A. HABERL, Denver, Col. Filed Jan. 21, 1903.

Serial No. 140,035. Term of patent 7 years.

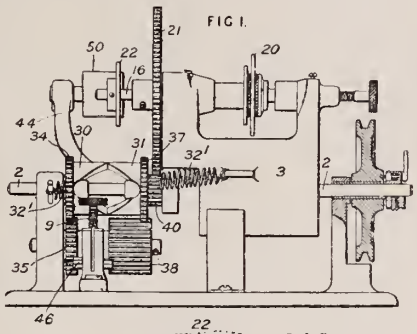
DESIGN **36,250.** PLATE OR SIMILAR ARTICLE. CHARLES J. AHRENFELDT, New York,

N. Y. Filed Feb. 24, 1903. Serial No. 144,921. Term of patent 7 years.

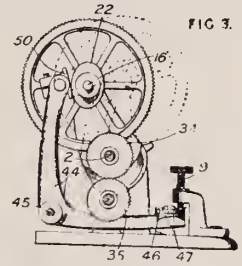
TRADE-MARK **39.951.** MEDALS, PINS AND BADGES. THE CHAS. M. ROBBINS Co., Attleboro, Mass. Filed March 2, 1903.

CMR

A monogram comprising the letters "C M R." Used since January, 1898.



ENGLISH PATENTS.

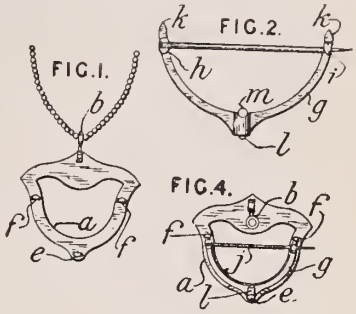


(ABRIDGEMENTS OF SPECIFICATIONS FROM *The Illustrated Official Journal.*)

ISSUE OF MARCH 18 1903.

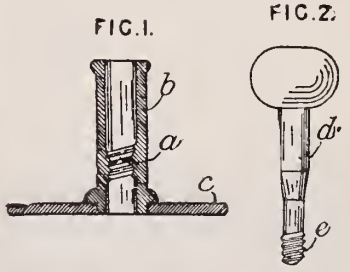
22,466. GRINDING LENSES. F. G. WILSON, Ithaca, N. Y., U. S. A. Nov. 7.

The rim of a lens 20 is ground by mounting it on a spindle 16, which rotates slowly in a carriage 3, this carriage having a rocking and sliding motion upon the spindle 2. The spindle 16 carries a plate 22 shaped to correspond to the finished lens. This plate rotates against the curved face of a block 50 adjustably fixed to a bell-crank lever 44 pivoted at 45 and adjusted in position by a screw 9. The size of the lens may be varied by turning the pivoted piece 46 so that blocks 47 of different thickness may come beneath the screw 9. Wear of the grindstone is compensated for by adjusting the block 50. The spindle 16 is rotated by the pinion 40 fixed to the shaft 2 and gearing with the toothed wheel 21. The carriage 3 is reciprocated along the shaft 2 by cams 30, 31 and gearing comprising toothed wheels 34, 35, 38, 37, the return motion being effected by a spring 32^1. The cams 30, 31 are fixed respectively to the wheels 34, 37, the wheel 34 is fixed to the shaft 2, and the wheels 35, 38 are fixed together. The teeth of these wheels are so related that the wheels 34, 37 have a slow relative motion, which causes the V-shaped acting faces of the



cams alternately to open out and close in together.

22,721. CONVERTIBLE PENDANTS AND BROOCHES. A. BIPPART, 915 S. 16th St., Newark, N. J., U. S. A. Nov. 11.



Relates to means for securing a pin-tongue or fastening to a pendant. Fig. 1 shows a rear view of an open center pendant with the pin-tongue removed, Fig. 2 shows the pin-tongue and its frame, and Fig. 4 shows the two attached to form a brooch. The pin frame *g* is formed with a hinge *h* for the pin *j*, and a catch *i* for the pin. Adjacent to the hinge *h* and catch *i* the frame *g* is formed with lugs *k*, adapted to engage sockets *f* on the pendant *a*, and secure the frame *g* at these points. The frame *g* has also a spring bolt *l* for engaging an ear or socket *e* on the pendant, to secure the frame in place with the lugs *k* in en-

gagement with the sockets *f*. The bolt *l* has a thumb-piece *m* for withdrawing it. The ring *b* is hinged to the pendant, and may be turned back as shown in Fig. 4.

22,523. STUDS AND SOLITAIRES. A. RIESLE, 53 Schläger St., Hanover, Germany. Nov. 8.

Jeweled and other studs comprise a base *c* and

socket *b* with a short internal screwthread *a*, and a head and shank *d* with a screw tip *e*, which is worked through and beyond the thread *a*.

22,670. BADGES, MEDAL RIBBONS, ETC.

The Best Method In The World For Cutting Fine Dies

is by means of the

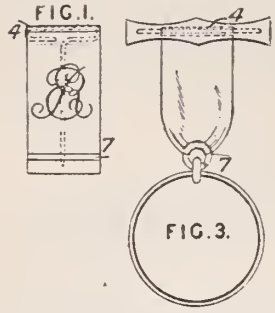
Keller Die Cutting Machine.

We Demonstrate It! We Prove It!

So **DELICATE** that it produces perfect Jewelry Work.

So **POWERFUL** that it cuts the largest Silverware Dies.

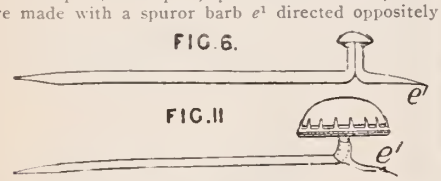
KELLER MECHANICAL ENGRAVING CO.,



Patentees and Builders,

570-576 W. Broadway, New York City.

Purchasers and Sellers of infringements will be prosecuted.



E. H. SPENCER, 37 Earl St., Coventry, Warwickshire. Nov. 11.

Woven badges, medal ribbons, and the like are woven with one or more tubular portions 4, 7 to receive pins, rings, etc., and thereby avoid the necessity for piping, hemming, or sewing.

22,940. PINS. A. A. MANNINGS, 188 Alexandria Road, West Hampstead, Middlesex. Nov. 13.

Dress pins, scarfpins, pins for brooches, etc., are made with a spuror barb e^1 directed oppositely

to the pointed shank. As shown in Fig. 6, the pin may be made from a length of wire, pointed at both ends, bent, and headed in dies, or an ornamental glass or other head may be attached. Or, as shown in Fig. 11, a separate barb may be attached, the barb being made with a sleeve to clip the shank, etc., and being soldered or otherwise attached.

Complete specifications accepted March 4, 1903.

1902.

4,456. CASTING OBJECTS OF ART. DUPONT.

7,091. MANUFACTURE OF WIRE FROM GOLD PLATE, GOLD OR OTHER METALS. DENNELLIER.

Retail Jewelers' Advertising.

[The use of this department is open to every retail jeweler and optician. Forward for criticism your newspaper ads., hooklets, catalogues, novelties, circulars, etc. Ask advice and offer suggestions. Replies in these columns are unbiased. Make letters as full and particular as you desire. Every letter and ad. sent will receive full attention, though the publication of the matter may sometimes be delayed several weeks. Address all letters and other matters to THE JEWELERS' CIRCULAR PUB. Co., 11 John St., cor. Broadway, New York.]

Should a Jeweler Try to be Humorous in His Ads.?

WHETHER a man who advertises should depart from the usual serious strain that characterizes most ads. depends very much on the man and his business position.

If he can do it without losing prestige or without appearing to lower himself or his store in the estimation of the people to whom he caters, then he may do it. But it seldom (better say never) pays to do anything that will lessen the opinion of any person toward a store that is doing legitimate business.

Brown's Conundrums—No. 1.

IF A MAN HAS TWO LEMONS AND AN ORANGE, HOW MANY DIAMOND PINS WILL HIS WIFE OWN?

Seems like foolishness? Maybe it is. But it is the only foolishness about my store.

This wife and every wife ought to have at least one diamond pin such as those to be seen any day in my store window.

She might have one for $5.

John J. Brown,
Jeweler,
1197 Albany Avenue.

It is well to remember, however, that it is equally true that the average ad. should not, above all things, be ponderous or obscure. The brighter and simpler it is the more likely it is to be read and considered, which are two objects for which ads. are published and paid for.

There have been many cases where an ad. with a strain of humor in it has made a hit. We can all recall at least one or two recent illustrations in general billboard and magazine advertising. There are even instances where a jeweler has had enough personal individuality or independence or don't-care-ativeness to make all his ads. characteristically odd and amusing; and know they were read by the people, and commented upon, which was at least one step toward making the readers customers. Several samples of such advertising have been given in THE CIRCULAR-WEEKLY at various times.

But it so happens that some of us are so placed that while we might do a little such advertising in our local newspapers, we don't know how to go about it. So I want to outline one way. Maybe it will give somebody an idea for a better scheme if this one does not meet the requirements. There are doubtless better ways than this; hope so, anyway.

The idea in this scheme is for a series of small ads., although the size is a secondary matter, which shall hinge upon an alleged conundrum at the beginning of each. A sample set of such conundrums as are in mind is appended. It is easy to alter them to suit any conditions.

I want to explain right here that it is very easy to manufacture such a line as these samples represent. I am not the originator of the design, so here is the formula: Take one sheet of white paper, ruled or unruled; one lead pencil, sharpened at one end; place the paper in any position so that the sharpened end of the pencil may rest upon it near the upper left hand corner, if the writing is to be in English; hold the pencil in the way familiar to most jewelers, in the right or left hand, between the thumb and fingers, according to habit; then guide the pencil across the paper as it writes; no further effort is necessary; the "conundrums" will write themselves; these did:

BROWN'S CONUNDRUMS.

No. 1.—If a man has two lemons and an orange how many diamond pins will his wife own?
No. 2.—If seven women have one strawberry ice cream soda how many bon-bon spoons will the other woman have?
No. 3.—If Friday and Monday were left out of a week how many times should a keyless clock be wound?
No. 4.—If one electric lamp gives twice as much light as three second hand novels how much will a watch cost?
No. 5.—If a store window is cleaned once a month for 12 years how often should the kitchen clock be repaired?
No. 6.—If a brick sidewalk is three feet wide and a mile long, how many pieces should there be in a $10 ice cream set?
No. 7.—If three figs make one bunch of grapes how cheap can you buy a set of nutpicks?
No. 8.—If an orchestra playing "Under a Bamboo Tree" wakes up sleepy "Mr. Dooley" in the theatre how soon can he buy a silk foh?

We will assume that Mr. Brown—John J.—is the man to adopt this idea. He has an ad. constructed as shown by the accompanying illustration. It is four inches long and one newspaper column wide. It will be seen that the conundrum leads directly to the body of the ad. This should be brief and simply worded. It should be, in short, pithy—to the point. It should connect the opening lines to Mr. Jones's store and leave no chance for uncertainty as to his name, his business or the special article the ad. is trying to interest people in. It is a waste of money and effort for the average storekeeper to indulge in indefinite generalities in a scheme of this nature, or any other nature. He can get better results by sticking close to his subject—his business—his own stock of goods to sell. This is not a joke.

Each ad., if used in a daily paper, should be changed daily; I do not think it would be well to run such a series of ads. for too long a time. This sort of thing may be good when a novelty, but it is apt to get tiresome in a comparatively short period and people stop reading the ads., or at least cease to be impressed. Run them only while there seems to be continued interest, even if that time be no longer than a week. You may think them good for a month, but it is what the people think, not what you think, that should be the guiding light in this case.

On the other hand, you may think this whole proposition is pure nonsense and too undignified for you. Well, here is where you must use your own mind and judgment. In this big country there is a wide variety of conditions and personal views and it requires all sorts of plans and schemes to enable everyone of the thousands of readers of these pages of THE CIRCULAR-WEEKLY to find something suited to the needs of his own particular business.

THE COMMENTATOR.

The Reader's Imagination and Advertising.

WRITERS of advertising matter are apt to lose sight of the reader's imagination, which is really a very important element in the success of advertising, says *Profitable Advertising*. To stimulate the imagination—to set the reader thinking, and to connect his thoughts with the article exploited—is to score a point, and if the trend of his reflections is in the direction of his own inetrests, with the article as a factor therein, success is practically assured.

The assertion that "Our article is the best on earth" will never kindle the fire of anybody's imagination. But the statement that "Our article is constructed especially to please the user, having such-and-such features which will greatly aid in accomplishing desired results," will induce the reader to think about those features, and to figure out how they will affect the results. He applies his imagination to the proposition, and the more he thinks about it, the more interested he becomes. He isn't sure that it will be all that is claimed for it, but he decides that it's worth trying, anyway. And thus by, as it were, winding up the reader's imagination the advertiser makes a hit.

Where a merchant employs a traveling salesman for a year at a fixed salary, payable monthly, and agrees to pay in addition to it all his expenses, not to exceed a certain sum per annum, he has a right to know that the expenses charged are legitimate business charges, and he is not bound to pay anything without knowing what it is for and that it is a legitimate expense of his business; and until such agent accounts for money advanced to him for expenses, such employer is entitled to offset against his account a balance claimed to be due as salary. (98 Ill. App. 7.)

RETAIL MERCHANDISING

That this department shall prove mutually beneficial to our readers, it is desirable that the members of the trade generally communicate with THE JEWELERS' CIRCULAR-WEEKLY regarding any advantageous device or plan that they are utilizing in connection with their business.

PRIZE ESSAY COMPETITION, NO. 10.

SUBJECT:

"How to Develop a Watch and Watch-Repairing Department."

THE store window must not be forgotten in displaying cases and movements quite frequently. When the cases have been displayed in the store window for a time, and each time they have been handled by prospective buyers, they should be wiped off, to remove the dust which may have settled on them in the window, and marks caused by the customer's fingers.

The cases and movements which I have mentioned were solid gold, filled and silver, in both ladies' and gent's, and Elgin and Waltham movements. The jeweler may also carry a cheaper line of watches, as he may see fit, such as nickel, silver, chatelaine and boys' watches. The majority of jewelers carry these lines, and the same attention and guarantee should be given to these as is given to the others.

If he desires, the jeweler may give a written guarantee with each watch sold, and in some cases the customer may ask for it. If the clerks be allowed to wait on a watch-customer, they should be well posted in the different grades of cases and movements so as to be ready to answer all questions.

The second question, "How to develop a watch repairing department," must not be dealt with lightly, for a great many sales may depend on the repair work. The first question is to secure a competent watchmaker, if the jeweler is not competent enough himself, or is not able to do all the work himself. The repair watches should occupy a rack in the front part of the store, with a glass front or door in the same, and if the jeweler is fortunate enough to secure the appointment of watch inspector of some railroad, he can announce this fact on the glass in the door of the rack. This announcement will impress the public with the jeweler's competency in repairing, as the majority of people know that the railroad employes must carry correct timepieces.

The most important thing is to turn out competent repair work, and never to let a watch leave the store before it is properly tested and regulated. A very good idea is to keep a record of the time of each watch, when winding each morning, and when properly regulated. This may be marked on the tag so as to let the clerks know they are ready to be given out.

When a watch is brought in for repairs the price should be set before the customer leaves the store. The best way to do this so as to get a reasonable price is to take the movement out of the case, and, having taken it partly apart, explain to the customer what should be done and tell him the price before he leaves the store, for in this way the jeweler will be able to get a better price and the customer will be better satisfied than if the jeweler were to take the watch for cleaning or a mainspring and while repairing the same find a great deal more to be done than was expected and ask a higher price afterwards than was given beforehand.

The cases should be kept constantly bright and clean in the watch rack. Watches which have been hanging for some time will become tarnished and will not harmonize with the new work which is constantly being added to the rack. A jeweler should never forget to advertise repair work occasionally in the local papers, for by having an attractive repair ad. he may gain a considerable number of watches for repair which he would otherwise not receive.

The jeweler in this department should also be very particular in keeping a strict record of all the watches repaired, including the kind of movement, its number, the amount of work done, price, date, customer's name, and by whom repaired. The jeweler who is pleasant and courteous to all customers, reliable in his guarantees, and delivers competent repair work, will be sure to succeed. H. I. K.

Useful Advice for the Jeweler.

(*Continued from issue of March* 18.)

NO advertiser to-day, who is at all wise in his generation, feels that he can do much execution with a single advertisement, or with desultory ones. He has learned by hard knocks that, if he has once begun, it is wise to continue. The dealer who appears in the advertising columns spasmodically generally advertises to a loss, and seldom deserves better. He, however, who maps out an intelligent campaign, and lets nothing swerve him therefrom, but carries it through as he had planned, is generally well rewarded for his constancy, as he deserves. This is not to say that, as the plan develops, if he sees that it may require changing in detail he is to bullheadedly stick to every point that he made, when, with less experience, he laid out his scheme. It is in recognizing the needs of the moment that a good advertiser demonstrates his mettle, just as a good commander on the field of battle does. It was while in council at his headquarters that the general plan was adopted, but on the field his observant eye and his intuition tell him how the details must be amended so that the general plan shall succeed.

The function of all advertisements is to

Prize Essay Competition—No. 11.

Three prizes, $20, $10 and $5, will be given to writers of essays on the subject:

"How a Jeweler Can Profitably Conduct a Camera Department."

The prizes will be awarded to the writers of the best and most reasonable essays. The ideas expressed, rather than the language used, will be considered in making the awards. The essays will be lettered when received and the judges will not know the identity of the writers until after the decisions have been made.

Essays must be in the office of THE CIRCULAR-WEEKLY by April 15. Write plainly and legibly and on one side of the paper only.

The right is reserved to publish any or all of the essays received. Only those connected with the trade are allowed to enter this competition.

G. and HINTS to JEWELERS

make people desirous to know more about the objects advertised; to get them to inquire about them if they cannot come and see them; or, in the case of such announcements as the jewelry dealer would make, to draw people to his store.

This being the conceded fact, he must supplement his advertising by making his store as attractive as he is able to make it. He should see to it that not only his wares are displayed to the best advantage, but so that his visitors shall encounter the least possible trouble in seeing these wares. In fact, he should make it a point to have them arranged so that they cannot help seeing them, without the help of anyone. For it is an axiom that people do not like to ask questions if they can avoid doing so. Then, besides this, he should see to it that he has the right kind of help.

A jeweler's salesman should be of the very best, the cream of the cream of clerks, of an entirely separate and superior kind, to those that sell dress materials, or notions, or groceries. They should be gentlemen, both in dress and in deportment. They should be diplomatic and skilled in selling. They should be very courteous, but, above all things, not obsequious. They should have tact enough to make every visitor not only feel welcome, but at home. They should not overwhelm him with attention and information, but make him feel at ease in asking questions.

Having seen to it that the advertisements are properly backed—that is, that should they draw visitors to the store, as is their function, that such visitors will feel themselves repaid for coming, let us try and determine what kind of an advertisement is to be presented. Here we are getting right down to "roots" at last. Let us assume that the store for which the advertising is to be done is one which caters for the better middle classes. In order to make any advice which is to be given good for anything, it must, in order to be broad, be very general. As a consequence, the emporiums which are inclined to be so exclusive that they may not attach price-tickets will find the counsel given of no value to them. For these establishments only purvey to the very wealthy, to whom price is an entirely secondary consideration. Such stores are very few in number, and only to be found in the large cities.

Nor will this counsel be of any worth to the little shop which has only the very poor for customers. These, in common with all men and women, have a great love for finery. But they can only afford to buy pinch-beck of the poorest character. Such stores do no advertising, and require none.

There remain then the great mass of stores which sell to the general public. Only a fraction of these advertise. The advertisers are the enterprising, progressive members of the guild, and what is here set down, while it may not always accord with all their views, will yet be a fair matter for differences of opinion.

THE ONLOOKER.

An Idea for an Easter Window.

THE window illustrated below will offer some valuable ideas to the jeweler seeking an attractive Easter display. This window was designed a short time ago by Hart & Parker, 208 Texas St., Shreveport, La. The prominent feature of the window is a wax bust figure adorned with a modest array of choice diamond jewelry.

In the arrangement of jewelry the firm seems to avoid the profuse display usually put on a figure of this kind, which makes it look like a display rack. This one has just enough. The figure sets in the corner of one of the big windows in an alcove built expressly for her, and this is, in turn, trimmed with pure white puffing, for a background, the front arched and a row of incandescent lights surrounding the whole arch.

Flowers are scattered on the floor of the alcove, and over the top of the arch are roses, lilies and other flowers, adding a beautiful effect. In the front of the window is another row of incandescent lights, and over each of these is a delicate red shade made to resemble poppies. The soft radiance from these lights involuntarily draws the attention of the passerby.

A PLEASING EFFECT FOR AN EASTER WINDOW DISPLAY.

On the bottom of the window on black nun's veiling is shown a profusion of late style jewelry, diamonds and precious stones. In the back, raised above the balance of the display, is shown exquisite silver deposit ware in glass of different shades. A few appropriate cards nicely printed invite prospective buyers to an inspection of the firm's store and stock. A timely inscription, such as "Easter Greetings," will add to the appropriateness of the display.

ONE OF THE MURINE EYE REMEDIES.

DO YOU SEE FLOATING SPOTS OR COBWEBS?

HAVE YOU CLOUDY VISION OR CATARACT SYMPTOMS?

BANENE

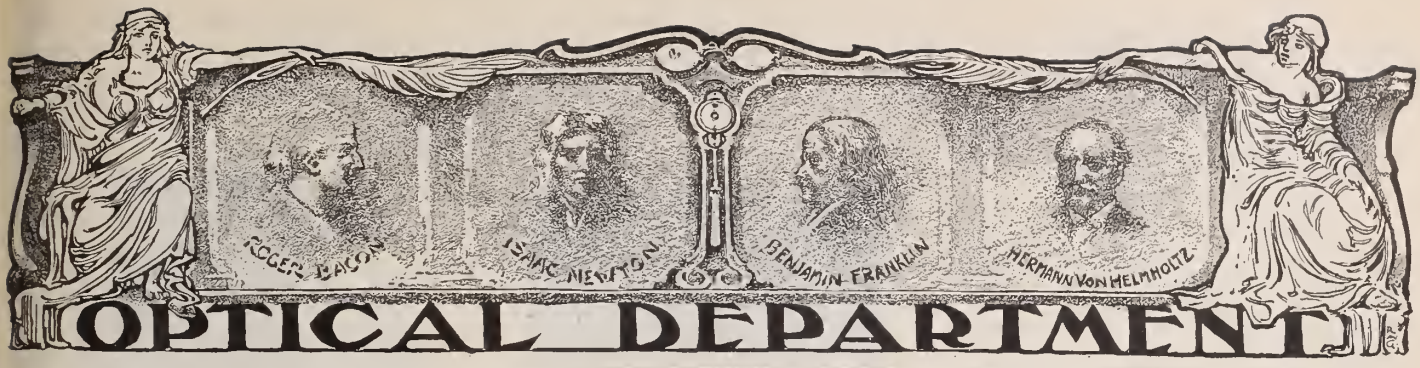
IS INDICATED IN THESE CASES

Banene is a distillation from well known vegetable ingredients that are ACTIVE TONICS, having a special affinity for the blood supply which NOURISHES THE EYE

The internal administration of Banene STIMULATES THE CAPILLARY CIRCULATION OF THE DELICATE STRUCTURES OF THE EYE Banene is indicated in OPACITIES OF THE CRYSTALLINE LENS (Cataract), FLOATING SPOTS OR COBWEBS before the vision, IMPAIRED CIRCULATION OF THE BLOOD which nourishes the eye, resulting in mal-nutrition. PAIN IN THE EYE-BALL, OPTIC NERVE DISEASES. DIMNESS OF VISION, accompanied by inability to wear glasses with comfort.

Cases are often found, more particularly in those of middle and advanced age, where proper correction for glasses has been made, while, at the same time, the eye refuses to accept the lenses with favor. Investigation discloses an impaired circulation in the interior of the eyeball. Banene relieves these conditions.

BANENE CLEARS THE RETINA OF CONGESTION.



Banene is taken internally—eight drops in a wineglass of water three times daily. Banene is absolutely harmless, no matter what the condition of the system may be, and will not interfere with other systemic treatment. These remedies are specially prepared by expert oculists in the laboratory of the

MURINE CURES Inflamed and Weakened Conditions of the Eye

Erect Vision and Inverted Retinal Images.

BY GUSTAVUS KAHN.

IF the retinal images constituted vision, everything would appear upside down and exceedingly small in size. Moreover there would be lateral inversion the same as any other negative, because all focalized images are, in a sense, negatives, not in regard to color and light and shade arrangement, but in reference to inversion of natural objects from their true position in space.

The general theory of the function of vision is, that the retinal images in themselves are not what we see but are only instrumental in enabling us to see—that is, they are the cause, while vision is the effect. But since cause and effect are correlated there is nothing which justifies the assertion that a cause could be inverted, for the resultant effect would be diametrically opposed to it.

Such is the stand taken at the present time and universally adopted. At best it is merely a contradiction in terms, because all attempts to discover any physical cause of erect vision from inverted images in the eyes and through all other organs in connection with it, have utterly failed, and in order to escape the appearance of contradiction, it was decreed that vision is really inverted, but, being a function of the mind and education rather than optical or physical, the intellect, notwithstanding the inversion, recognizes all objects in nature as erect, in harmony with the other senses such as touch and smell.

We speak of retinal images and at the same time we all know very well the physical impossibility of an image being impressed on a membrane which is perfectly transparent. Whatever images are formed must necessarily be projected on the choroidic coat immediately in the rear of the retina and not on that organ itself. This being the fact, it becomes evident that the act of vision must be performed during the transition of light through the rods and cones of the retina and when being projected as images behind the latter—that is, on the choroidic tunic, the act of vision must have taken place; consequently the so-called retinal images have nothing whatever to do with vision and a perfect focalized retinal image only proves equal perfection of focalization of the light rays in their passage through the transparent retina.

We have already seen that vision must result from the exilation of the rods and cones received from the passage of light through them. And since this light exilation is transmitted to the brain by the optic nerves as vision, the erecting of the inverted light stimulus must take place in the retina itself before reaching the brain. While this proposition has not yet been proven, it offers the only rational explanation why things are seen erect, in their natural place in space, and of natural size. This is in every respect the direct opposite of a projected inverted microscopical picture such as the so-called retinal images are known to be.

Therefore the explanation of erect vision lies in the fact, not that the retinal images produce or constitute it, but that we see the light which is at the same time the cause of those images. Since the latter are optical negatives as the result of focalization, vision is positive and caused by focalization in connection with the function of the retina, optic nerves and the brain. With the adoption of this theory we have no occasion to explain physical phenomenon metaphysically.

Organization of the New Jersey Optical Society.

NEWARK, N. J., March 25.—The New Jersey State opticians, who for some time past have been feeling the need of a State optical association or an organization of some sort that would draw them closer together for mutual advantage, have been moved by various bills and measures pending before the New Jersey State Legislature, regarding the practice of optometry and medicine in that State, to finally organize under the style of the New Jersey Optical Society.

The principal leaders in the movement which resulted in the initial meeting held at the Continental Hotel, in this city, March 16, are: Louis A. Rochat, of C. G. Rochat, Jersey City; Freeman C. Leaming, Trenton, and Joseph J. Hartman, Newark. The act which led to the meeting and the final organization of the association was the introduction of Assembly Bill No. 357 into the State Legislature by Assemblyman Newcorn, March 18. This bill, which was published in full in last week's issue of THE CIRCULAR-WEEKLY, was framed and presented to take the place of an amendment to Assembly Bill No. 227. This bill was to restrict a certain kind of practice by doctors, and that it might not include opticians under its general provisions, an amendment, provided for that purpose, was proposed to it. This amendment was defeated before the Assembly and to offset the lack of its provisions in bill No. 227, bill No. 357 was introduced.

This bill has been referred to the State Committee of Public Health. It is of considerable importance to New Jersey opticians, and that it might not be laid on the shelf too long and finally lost or thrown out altogether because of lack of proper support, the association was organized to use its utmost efforts to have it passed by the Senate.

At the first meeting of the association Marcus Higgenbotham, of Jersey City, was made temporary chairman and a committee appointed to draft the constitution and by-laws. This committee recommended the adoption of the constitution of the New York State Optical Society, with a few amendments and was concurred in by all those present at the meeting. The by-laws provide that any optician of good character and 21 years of age shall be entitled to membership. Five men shall constitute the executive committee and there shall be a yearly meeting on the first Monday in May.

As a recognition of his value and hard work done, Freeman C. Leaming, of Trenton, was elected president. The other officers are: William G. Cowgill, Camden, vice-president; Joseph J. Hartman, Newark, secretary; Louis A. Rochat, treasurer. The executive committee consists of Louis B. Hilborn, Newark, chairman; Adolph Walters, Jr., Jersey City; Frederick H. Hewlett, Paterson; Otto O. Stillman, New Brunswick; Robert G. Smith, Jersey City.

There were 40 persons present and 10 proxies were sent in by opticians who were unable to come, so that the association was started with a membership of 50. It is expected that this membership will be considerably increased in the immediate future, and that by the first of May, when the first annual meeting will be held, the association will be in a flourishing condition. The new society is composed chiefly of the younger and more progressive opticians of the State. Many of them already belong to the Optical Society of the City of New York and other local societies.

Death of a Noted Lens Maker.

SHARON, Pa., March 25.—The Rev. Dr. Peate, who died at Greenville, Monday, after a short illness, was an astronomer of national reputation and was well known as a maker of telescope lenses.

Dr. Peate took up the scientific study of lenses as a recreation and soon became renowned for his work in this direction. He made over 20 glasses measuring 20 or more inches in diameter. The last lens which he made was presented to the American University, Washington, D. C., and is said to be one of the largest reflecting lenses in the world. It took two years to make and was polished by Dr. Peate's own hands. He completed it on his 80th birthday.

The deceased was born in Ireland in the year 1820.

Optical Department.

Glass for Optical Purposes.

(From an illustrated lecture by Dr. GLAZEBROOK, F. R. S., reported in the *Optician and Photographic Trades Review.*)

(*Continued from issue of March 25.*)

I HAVE now got here one or two slides showing the action of lenses of different kinds in producing astigmatsim. Here is one, Fig. 16, which I got from Mr. Dennis Taylor, who used it in a paper read before the Photographic Society a short time ago. It is intended to represent the astigmatical effect in a lens having the shape shown. The primary focal line is *h* and the sec-

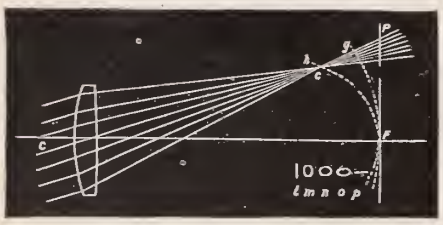

FIG. 16.

ondary focal line is at *g*. And as you come down nearer and nearer the axis, as you get the inclination of the axis of the pencil to the axis of the lens less and less, these two, primary and secondary focal lines, will more clearly coincide.

The dotted curves show the position that will be taken by the primary and secondary focal lens as the obliquity is reduced, and you see that the distance between the lines is reduced as we approach the axis. And the problem that we have to solve, if we can, is to bring these two curves as close together as possible and also, if possible, to make them coincide with the straight line F P. And then all the image-points will be points lying on this line F P at right angles to the axis of the lens.

The next slide, Fig. 17, is intended to show another form of astigmatism. Suppose that we are dealing now with a lens

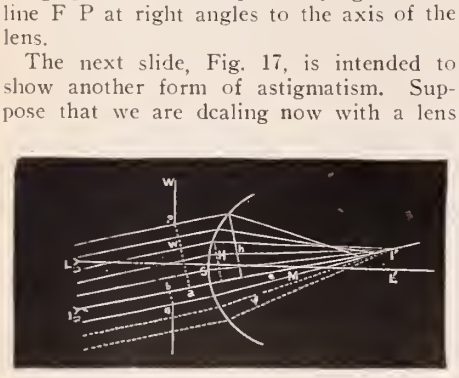

FIG. 17.

or with a surface which is corrected for spherical aberration, and suppose that the corrections are such that if you limit the incident pencil rays by an aperture which is indicated on the figure by *p q*, an aperture of that breadth, then for such a pencil of rays having a half breadth equal to the distance between P and the axis, the lens is supposed to be corrected; so that if you have such rays incident parallel to the axis they will all be brought to a focus at the point L.

The lens is corrected then for a distance H on either side of the axis. Now suppose the axis of the incident pencil of rays is oblique instead of direct let it be the line I I'. Remember that the aperture of the lens for which it is corrected is only of a

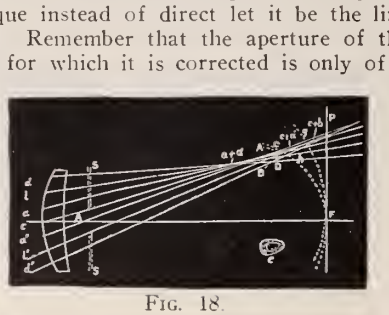

FIG. 18.

breadth H on either side of the axis, and consider what are the rays that can fall on the surface. They are not only rays at the distance H from the axis, but rays between P and A, which is a greater distance than H, so that if you allow rays to fall obliquely on the lens you are using for the one side of the lens a greater portion of the lens than that for which it was corrected, and for the other a less, and therefore the rays are not brought to a focus at the point I.

Hence, although the lens was corrected for an aperture of breadth L H, so long as the rays are incident parallel to the axis it ceases to be correct when you get the oblique pencil of rays. Above the axis

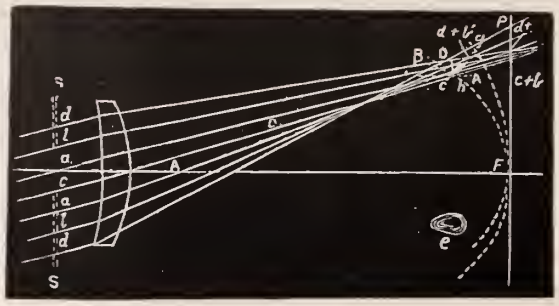

FIG. 19.

the aperture is greater than H; rays, therefore, are admitted which do not converge to I below the axis and rays which should go to make up the image at I are wanting. So that the image formed in that kind of way from such a lens is a lopsided sort of thing, and the result is, even if the focal lines are close together, that instead of obtaining a round, sharp image of the source, you get, in a case of that kind, a blurred pear-shaped spot. That is the defect of the lens which is called coma.

Here are two figures lent me by Mr. Taylor drawn so as to show the defect of coma due to the action of the stop. These lenses are corrected for a narrow stop; but if the full set of rays is allowed to come on the various rays will intersect at different points, and the result is the nearest approach to an image which is formed will be as shown in the lower part of the diagram. This is shown in Fig. 18. The image will be affected by the defect coma. The next figure (19) shows exactly the same thing, only drawn so as to produce the defect in the other direction.

We have then got to correct these defects if we can. And here, in Fig. 20, is shown my final defect of this kind, the defect known as distortion. The object of a lens is to produce an image of some distant object which shall be exactly similar to the object itself. Now it may happen that if we take any object of the form shown—a images produced will consist of a series of curved lines as in the diagram. A lens

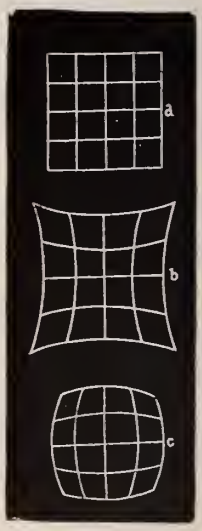

FIG. 20.

series of vertical and horizontal lines—the forming an image of that kind would produce distortion in the picture.

So now to sum up. When dealing with lenses, we have to consider the defects due to spherical aberration, the aplanatic condition, the condition for astigmatism, and for prevention of coma and for prevention of distortion. And we shall see in the following lectures how we are going to get rid of these defects.

There is, however, another series of difficulties to deal with, and these are due to the fact that white light has different degrees of refrangibility. I said that refraction was due to the fact that light travels with different velocities through different media; and now we have to remember that white light consists of different colored rays which travel with different velocities in any one medium, so that if we had a pencil falling on a prism as in Fig 7, the rays will be split up as shown in that figure. The red rays travel at a greater velocity than the blue rays, and the blue at

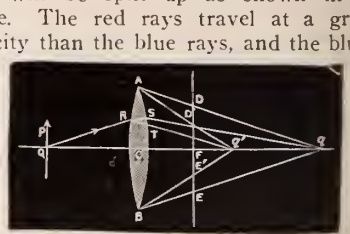

FIG. 21.

a greater rate than the violet, thus the rays are spread out as a spectrum—colored.

The defects will be present in our lenses If we have a convex lens such as is shown in Fig. 21, then any ray, such as Q R falling on the lens is split up by the action of the lens into a violet ray R T *q'* and a red ray R S *q*. And if the lens is aplanatic for the red light then all red rays will converge at *q*; while at *q'* we should have a violet image, assuring it also aplanatic for violet. That is the defect called chromatic aberration. The next slide will enable us to

Optical Department.

see how chromatic aberration can be corrected. If I take two prisms having the same angle but of different material—one of crown glass and the other of flint glass, then I find that the length of the spectrum which they produce is very different.

Fig. 22 shows the length of the spectrum

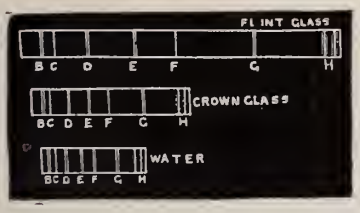

FIG. 22.

produced by a crown glass prism, and that produced by a flint glass prism, so that for prisms of about equal angle the flint glass spectrum is much longer than the crown glass spectrum.

(To be continued.)

The Optician and Unscrupulous Competitors.

"YES, indeed," said a well-known optician recently to THE ONLOOKER, "we have just as much to contend with, at the hands of unscrupulous competitors, as they have in any other line, bar none. And perhaps, if I knew more about other lines, I'd claim that honest opticians, such as I claim to be, and such as a pretty good trade that I have been able to build up by years of conscientious dealing believe me to be, have it harder than any line of dealers in other wares, who are constantly complaining."

"Oh, I don't know," rejoined THE ONLOOKER with a tolerant smile. "About every other man I meet, no matter what his trade may be, says that, in just about the same words. That's only another way of saying that every man's vocation is considered by himself the worst under the sun. Don't you remember the old Greek fable, of how Jupiter once summoned the sons of men? Well, he allowed them all to lay aside their bags of burdens, and to exchange with each other. So each man cast his burden to the ground, and carefully examining the others, made his choice and went on his way rejoicing. But the next day, when Jupiter ascended his throne, there was the entire crowd back again. You know the moral. There wasn't a single mother's son of them who asked more than to have his own pack of burdens replaced upon his own back. You know what you are carrying, but you haven't any idea of the load your neighbor is staggering under."

"Well, perhaps you are right," conceded the optician somewhat more moderately, "but let me cite a few of the abuses of unfair competition, and you will at least agree that our ills are not imaginary ones. I do not know whether you are aware of the fact that the better classes of opticians have been striving of late years to down those whom, for want of a better way of describing, I may term as the 'examination free' dealers. I think that is a felicitous way of giving you an idea of the men whom I mean, is it not?"

"Yes," answered THE OLOOKER, "I think I grasp the distinction you make, and wish to point out to me."

"Well, then," he went on, "we have been trying to educate the public up to a realization of the fact that the selection of suitable glasses for a customer involved more than would the matching of ribands or the choosing of a dress pattern in a dry goods store, as indeed it does. It has been our constant endeavor to make them appreciate that the optician should be, and is, more than a tradesman; that to be an optician requires a thorough knowledge not only of the construction, the parts and the functions the eye, and its sympathetic and physiological relations with its mate, but also a thorough, even if not profound, knowledge of the anatomy and physiology of the entire body. For when the eye is affected, often the cause is remote enough to lie in a distant member.

"Now, then, such being the case, none should be licensed as opticians who have merely the trade knowledge involved. It follows therefore that to give 'examinations free' is a rank injustice. But do not for a moment believe, Mr. ONLOOKLR, that the foolish people who patronize establishments which give or profess to give 'examinations free,' even have the paltry satisfaction of saving the small amount of money therein involved. For this is about the way the thing works in practice: The square optician, we will say, charges a dollar for the examination, and thereupon gives a suitable pair of glasses of the proper strength and character for, say, $2.50, making $3.50.

"The other optician gives the alleged 'examination frec,' and then gives a pair of glasses, the price of which, if bought otherwise, would not exceed $2.50, and charges $3.50 for them. Now you can see one of the causes for indignation that the optician who is conscientious, and who is trying to conduct a square business, labors under. Now don't think this is a solitary or only an occasional incident. It is happening every day, and everywhere where dealers of this class are in business, and will continue until we are able to stamp out the whole abuse."

THE ONLOOKER conceded the truth of the conclusion, and called attention to a window card this optician was displaying. This was illustrated in colors, and showed a fine-looking white-haired lady, stepping toward a counter, which showed an array of optical wares, goods of the same character bestowed on the shelves behind this gentleman, evidently a salesman, also. The lady is saying: "I bought these glasses," pointing to her eyeglasses, "from ———, as solid gold, but the spring has turned black and the other metal parts are only Dutch gold. Give me a solid pair."

"Yes," replied the optician in answer to the implied inquiry, "there are a good many dealers, and among them any number who have worked up a good trade and an enviable reputation, who advertise to sell solid gold eyeglasses for $1, and I have examined —yes, gone to the trouble of making the examination, solely for the purpose of ascertaining how reliable their advertisements were—and found them to be only six karat gold springs. The rest of the alleged gold eyeglasses were not even plated, in some instances—they were made of some cheap Dutch alloy or amalgam—absolutely no gold in the composition."

THE ONLOOKER turned away, after thanking the optician for the light he had thrown on these matters. He is rather convinced that, as far as optical goods at least are concerned, "all is not gold that glitters."

THE ONLOOKER.

A New Spectacle Soldering Block.

THE accompanying illustration represents a new spectacle soldering block recently marketed by the Keystone Mfg. Co., Lancaster, Pa., which has attracted considerable attention owing to its practicability and its cheapness.

The block is two inches wide and about four inches long. It is made of asbestos

NEW TOOL FOR SPECTACLE SOLDERING.

and provided with clamps, by means of which the parts of the spectacles can be adjusted and kept close together while the operator is directing the flame to the parts to be soldered. No binding wire is required to hold these parts together, and hence they are entirely open to view, which allows the operator to place the solder and flux exactly where it is needed.

A case recently observed in a jeweler's shop will show that the block in question fills a long-felt want. Two men were needed to do the soldering job, one holding both parts together with pliers, in order not to burn his hands, and the other directing the flame with the blowpipe and putting the solder and flux at the desired place.

Notwithstanding this lavish expenditure of time it happened that both parts were wrongly soldered together, attributable to the nervousness of the man with the pliers, which may have slipped out of position when a visitor entered the shop at this critical moment.

Undoubtedly such workmen and many others will be glad to have this new tool which will save time, trouble and money.

Optical Notes and Briefs.

W. F. Reuther has leased quarters on Broad St., West Point, Miss., where he will open an optical establishment.

Henry W. O'Bryant, optician, Dayton, O., was a recent visitor to Troy, O., where he was seeking desirable quarters for an optical establishment.

The State Board of Optometry of Minnesota recently licensed nine out of the 12 applicants who applied for certificates as opticians in Minneapolis. They are: Clinton Marshall, Jr., Duluth; A. D. Finch, Redwood Falls; W. D. Hanson, Granite Falls; E. H. Allen, Minneapolis; Mark Ridout, Rushford; George Nebelung, St. Paul; E. P. Long, St. Cloud; Mrs. Agnes Sawyer, Stillwater, and J. Kendall Clark, Carver. The board elected H. M. Hitchcock, of Redwood Falls, as president and re-elected C. A. Snell, of Minneapolis, secretary-treasurer.

VILLISCA, Ia., March 1, 1903.
Editor of THE JEWELERS' CIRCULAR-WEEKLY:

Will you kindly tell me if the En Holm patent electric clock is being manufactured? If so by whom and where? E. A. S.

ANSWER:—Oscar A. En Holm, 573 W. 146th St., New York, is the inventor of this electric clock, but it has not yet been manufactured for the general market.

BROOKLYN, N. Y., March 17, 1903.
Editor of THE JEWELERS' CIRCULAR-WEEKLY:

Please give us the address of a dealer who makes and sells ready mixed gilders' solution salts for rose color, etc. D. W. C. Co.

ANSWER:—You can get ready mixed colors solution salts from the United States Electro Chemical Co., 218 Centre St., New York.

SWAINSBORO, Ga., Feb. 25, 1903.
Editor of THE JEWELERS' CIRCULAR-WEEKLY:

I wish to inquire through THE CIRCULAR-WEEKLY where I can get a good second-hand New Century engraving machine. W. G. W.

ANSWER:—The New Century engraving machines are made by Eaton & Glover, 87 Nassau St., New York As they have been made only about a year, it is not probable that there are any second-hand machines of this type to be had. If a second-hand machine of the old style is wanted, they can be supplied by the manufacturers.

PARIS, Ky., March 16, 1903.
Editor of THE JEWELERS' CIRCULAR-WEEKLY:

There are one or two manufacturers of low-priced hall clocks in Wisconsin. Can you give us their addresses. A. J. W.

ANSWER:—We do not know the firms to which you refer. Perhaps some reader can answer the question.

WASHINGTON, D. C., March 4, 1903.
Editor of THE JEWELERS' CIRCULAR-WEEKLY:

Kindly publish the address of the manufacturers of Benedict collar buttons, and greatly oblige, V. E. D.

ANSWER:—Enos Richardson & Co., 21 Maiden Lane, New York.

HAVERHILL, Mass., March 17, 1903.
Editor of THE JEWELERS' CIRCULAR-WEEKLY:

Will you kindly inform us where we can get some fine French sand used by jewelers for casting? D. A.

ANSWER:— Sand of this kind is sold by E. P. Reichhelm & Co., 23 John St., New York.

WHATCOM, Wash., March 12, 1903.
Editor of THE JEWELERS' CIRCULAR-WEEKLY:

Kindly let us know if Bardou's U. S. Army signal field glasses are made in 8-power? Also, who carry these articles? K. B.

ANSWER:—Sussfeld, Lorsch & Co., 37 Maiden Lane, New York, import Bardou field glasses. They do not carry eight power in stock, but can furnish them when ordered.

COLORADO SPRINGS, Col., March 14, 1903.
Editor of THE JEWELERS' CIRCULAR-WEEKLY:

Can you give us any information regarding Crane's patent year clock? By whom were they made and when? F. G. H.

ANSWER:—These clocks were made in Newark about 1843. The concern is now out of business.

SCHENECTADY, N. Y., March 5, 1903.
Editor of THE JEWELERS' CIRCULAR-WEEKLY:

Will you kindly inform me where I can get door plates, either silver or plated? N. A. G.

ANSWER:—C. Rogers & Bros., Meriden, Conn., can supply you with door plates in silver or silver plate. A. Stafford, 38 Beekman St., New York, and Carragan & Tilson, 35 Beekman St., New York, can supply you with these plates in silver, nickel, brass and German silver.

CROWN POINT, Ind., March 16, 1903.
Editor of THE JEWELERS' CIRCULAR-WEEKLY:

Will you kindly tell me (1) where I can get charcoal suitable for casting? (2) Who makes bass wood boxes, frames, etc., for photography? (3) who manufactures the Monarch engraving block? Thanking you in advance. E. A. S.

ANSWER:—(1) Prepared charcoal for casting can be had from E. P. Reichhelm & Co., 23 John St., New York. (2) E. M. Gubsch & Co., 114 John St., New York, have on hand small size fine bass wood boxes; larger sizes will be made to order by this firm or by Bogert & Harper, 162 William St., New York, and E. B. Estes & Sons, 45 John St. (3) The Monarch engraving block is sold by Hammel, Riglander & Co., 35 Maiden Lane, New York.

CHARLOTTE, N. C., March 1, 1903.
Editor of THE JEWELERS' CIRCULAR-WEEKLY:

Will you please give us the addresses of several firms that manufacture small tools for watchmakers and engravers? We have a new tool that we want to have manufactured. G. & B.

ANSWER:—The F. W. Gesswein Co., 39 John St., New York; Kendrick & Davis, Lebanon, N. H., and A. N. Clark & Son, Plainville, Conn., are among the manufacturers of such tools.

COLUMBUS, O., Feb. 28, 1903.
Editor of THE JEWELERS' CIRCULAR-WEEKLY:

Please let us know who are the American agents for the Timing and Repeating Watch Co., Geneva, Switzerland. G. B.

ANSWER:—Adolphe Schwob, 40 Maiden Lane, New York.

THE BEST IS ALWAYS THE CHEAPEST; THIS applies to Watch Glasses as well as to anything.

The best Watch Glasses are those that are carefully made, from the proper stock, properly labeled and correctly gauged.

The CHEAPEST Watch Glasses are those which require the least time to fit, and in which there is the least percentage of breakage.

The **V. T. F.** Glasses combine all of these cardinal qualities and BEAR THIS LABEL: Insist upon getting the **V. T. F.** and take no other.

REVERSE.

The Manipulation of Steel in Watch-Work.

(By JOHN J. BOWMAN, of the Ezra F. Bowman Technical School, Lancaster, Pa.)

(*Continued from issue of March 25.*)

GRINDING AND POLISHING FLATWORK.

MOVE the tool over the lap with a circular motion. If the object is to produce a flat gray finish, do the grinding by moving in extremely small circles, decreasing the motion until it almost ceases. This lessens the liability of scratches. If everything is clean and the oilstone powder free from coarse particles, the result will be a clear silver gray surface. The appearance of this finish is very easily spoiled by finger marks or anything greasy. Clean it with fresh benzine or pith, then dip in benzine and dry by blotting with clean paper, or wash with soap and water, immerse in alcohol, and dry in boxwood sawdust.

All grinding with the tripod tool is done in substantially the same way. Care must always be taken to level the work by the screw feet. If the work is now to be polished, do not remove it from the tool nor disturb the feet, but wash the whole carefully with soap and water and wipe dry. Now take the carefully washed glass plate which has been prepared for polishing, and daub on it some of the polishing compound mixed with oil. Work the tool over the surface as in grinding, but take long, straight strokes. After a while the glass will become blackened. Put on more of the paste until this begins to turn black, then with a clean chamois skin remove all the paste you can by moderate rubbing, and wash and dry the work. Now, with some pressure start rubbing again on the glass, taking shorter strokes and decreasing the pressure gradually.

When finished you will have what is called a "black" polish, in contrast to which a finish made by Vienna lime will appear poor and shallow, indeed. A piece perfectly polished will be as clean and sharp-cornered as a facet on a diamond, and when held between the eye and the light in certain positions, will appear to be peculiarly deep and black. Steel intended for this finish must be as hard as the purpose will permit. Of course this takes time, and it would not pay to do such work for any but a fine watch, so that the Vienna lime fills a very useful place; the shallow quality of the luster, however, and the lack of flatness in work done with this material, put it out of the question when the best work is required.

The glass plate may not work well at first; if so, use it for polishing a while before condemning it. It is really a pretty delicate matter to get a glass plate in first-class condition. If scratches appear in the work, you must look for the cause either in the plate or in the polishing material used. When the plate finally is in good working condition, do not wash it after each use of it, but keep it carefully covered, and wash only when it begins to scratch the surface being polished.

Laps for flat polishing are made also of block tin and other metals, and while they work more rapidly, will not produce as sharp and flat work as the glass; the tripod polishing tool cannot be used on them on account of the feet marring their soft surfaces. For polishing the beveled edges on fine Swiss escapement levers, make slips of suitable shape from bell metal and use them as you would a file. Copper slips of various shapes charged with diamond dust may be used for dressing down hardened steel escapement work. These "diamond files" can be purchased already charged and probably this is more economical than for the workman to make them himself.

To polish out a hollow or cup in a piece of steel, turn a piece of bell metal to completely fill it, score its surface by gently passing a fine file over it in every direction, and mount it on one of the small male tapers for the pivot polisher, or on a plug to be held in a lathe chuck. Hold the piece in the fingers and move it all around over the curved face of the lap, well charged with paste, while the latter is revolving at high speed. If there is a hole at the bottom of the cup, it will have to be frequently washed because the paste works into the hole and keeps part of the lap surface moist when it should be acquiring the hard black surface mentioned before; the bell metal will not polish finely until this appears.

To the workman who has to handle the finer class of watches, there will often arise occasions demanding the use of little devices made to help out of the particular difficulty in which he finds himself. The workman who has a good knowledge of the fundamental principles governing his work, and a good outfit of tools with which to execute his ideas, will never find himself in such a "tight place" that he cannot make his way out creditably.

On the other hand, the man who considers it foolish to invest in more than a lathe, handful of chucks, and a few bench tools may reasonably expect to find himself all at sea when he strikes something different from cleaning watches or fitting ready-made material. An ample outfit of tools is an education in itself, it broadens one in his grasp of the principles underlying all mechanical work, in a way that even much reading, unassisted by experience, cannot accomplish.

(*The end.*)

Electrical Distribution of the Time at Berlin.

(Translated for THE JEWELERS' CIRCULAR-WEEKLY from the *Revue Chronometrique.*)

THE General Electric Co., of Berlin, constructs clocks of only 18 centimeters in diameter, which are furnished by an electric current, taken from that used for lighting. For this purpose, an electromagnet attracts and repels successively an armature of soft iron, which acts constantly on the spring of the clock, and energizes it anew as it is relaxed. The clock cannot therefore stop, as it is constantly rewound. If for one reason or another the central station does not produce the electric energy for several hours, the clock can still go on for a period of 12 hours, on account of the spring with which it is provided.

Another interesting point in this application is the automatic adjustment, which occurs every morning at five o'clock. At this hour the central station lowers, for a few minutes, the difference of potential from 110 to 85 volts. Immediately a special electromagnet liberates an armature of iron, which, on falling, causes a piece to oscillate. The latter strikes on the hands of the clock and sets them exactly at five o'clock.

In making use of the electric clock, there is thus no occasion for winding the clock and setting the time. These operations are produced automatically with the greatest regularity. The expenditure of electric energy is very small. A clock consumes yearly the same quantity of electric energy as a lamp of 16 candle-power in 10 hours, or 640 watt-hours. At the average price of 12 centimes per 100 watt-hours, the annual expense scarcely reaches 80 centimes.

A Watch Made of Bone and Wood.

DANIEL SMITH, Griffin Corners, N. Y., has constructed a watch entirely of bone and wood. Not one particle of metal enters into its make-up.

The escapement, consisting of balance wheel, lever and escape wheel, is of bilberry wood, and it performs its duty neatly in a setting of 11 "jewels" made of bone. The hairspring is of bamboo.

Clock Hand with Concealed Mechanism.

THE mysterious always exercises a peculiar charm upon us, and no other object possesses this faculty to such a high degree as a clock. No sooner has the sense of hearing developed in a child than it will listen with particular interest to the mysterious "tic-tac" of a watch held to its ear. Keeping step with the constant development of the mind, the interest for the object increases, and, in view of this fact, the clock has latterly been added to the toys for "object teaching." How children and adults will besiege the show window of the watchmaker, when something moves therein in a mysterious manner.

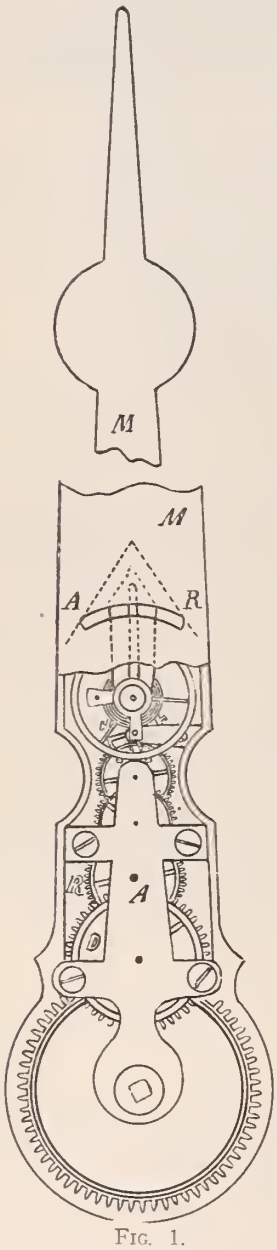

FIG. 1.

Is it surprising, therefore, says the *Deutsche Uhrmacher Zeitung*, that inventive minds and skilful hands are endeavoring to still more increase the charm of the mysterious by building clocks which not only deceive the eye of the layman, but even leave the expert in doubt regarding the true action of the mechanism, if only externally.

A new addition to the list of mysterious clocks constitutes the clock hand, illustrated herewith, an invention of M. Louis Reymond of Bandol, France. The reader will probably remember the transparent clocks, which still can be seen in some show windows, and whose hands were actuated by a clock work concealed in the counter-weight, which constantly changes the center of gravity. Something similar we have now before use, the only difference being that in this case the motion of the hands is governed directly by a cylinder or lever movement, concealed in the entire body of the minute hand, on the arbor of whose center pinion this hand turns. The defect of inaccuracy inherent in the first named clocks is avoided in Reymond's clocks by the more stable mode of construction.

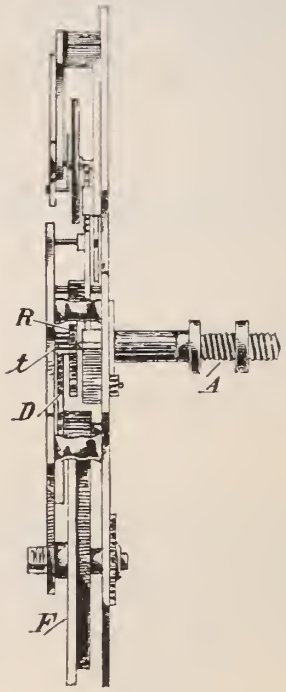

FIG. 2.

Fig. 1 shows the minute hand, M, whose shaft is represented open, in order to render visible the movement concealed in the hand. Fig. 2 affords a side view of the mechanism. The arbor, A, which is fitted with a thread and nuts for convenient attachment, is a glass plate carrying the center wheel, R, which consequently is fixed. It forms, with its staff, A, the center of motion of the two hands.

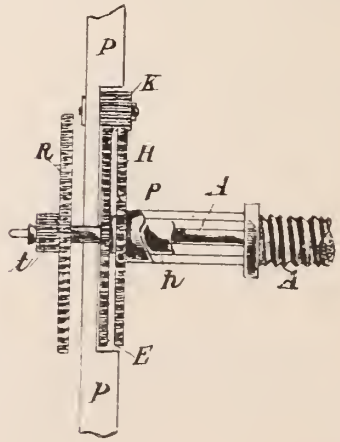

FIG. 3.

The mechanism shown in the illustration has a cylinder escapement and resembles in its construction an ordinary watch movement, with the exception that the pivot holes are all placed in a straight line. Between the barrel, F, and the center wheel, R, an extra wheel, D, is put in, whereby the works may be arranged to run from eight to 14 days. The extra wheel engages with a pinion, t (Fig. 2), carrying the center wheel and turning on the staff, A, with moderate friction, so that the hands can be set as desired. An arc-like opening over the regulator hand admits of regulating the work without opening the hand.

The motion of the hour hand, effected by the minute hand, constitutes an important feature of the whole arrangement, which ever possesses the advantage of novelty.

In Fig. 3, P represents a portion of the bottom of the minute hand, facing the dial, which, at the same time, forms the pillar plate of the train. It rotates on the fixed arbor A, which also carries the pinion t with the center wheel R. Outside of the hand, toward the dial side, the pipe h, of the wheel E, is mounted on the same staff A, with moderate friction. On this pipe moves freely the wheel H, resembling an hour wheel, with its pipe p, carrying the hour hand. These two wheels are engaged by the pinion K, revolving on a stud upon the plate P, which receives its motive power

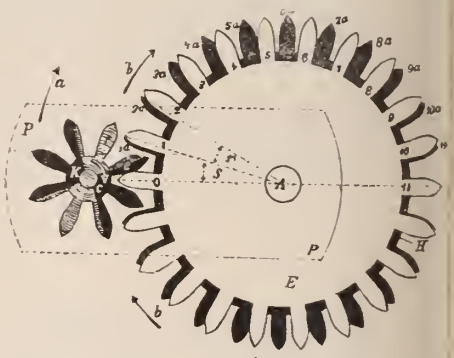

FIG. 4.

from the fixed wheel, E, through the advance of the minute hand.

By virtue of the fact that the number of teeth of the wheels E and H, which gear with the pinion, is different, the ratio of those of the fixed wheel, E, being to the number of teeth of the loose wheel, as 11 is to 12, the latter is made to move 1/12 of the circuit with every revolution of the center wheel, the hour hand thus advancing to the next hour. The number of leaves of the planet-pinion K, is immaterial, as long as the proportion of 11 to 12 is maintained between the wheels E and H.

A numerical example in conjunction with Fig. 4 will make this clear. Supposing the fixed wheel, E, to have 22 teeth, while the loose wheel, H, has 24, the division of the latter wheel will be closer. If, for instance at "nought" two teeth of the two wheels be exactly over each other, the next tooth Ia (in the direction of the motion of the minute hand, P), of the loose wheel, will project 1/12 into the following tooth-clearing of the fixed wheel, E. Since the plate P, of the minute hand, revolves in the direction of the arrow a, on the axis A, the

planet pinion, K, is compelled to unroll in the direction of the arrow c, on the fixed wheel, E. Hence it will endeavor to put the tooth gaps of the loose wheel, H, in the rear, in accordance with those of the wheel E. The pinion leaf e, will, therefore, displace the tooth 1a a little in the direction of the arrow b, so that it registers with tooth 1.

The next pinion leaf, f, will, in the same manner, shove the tooth 2a exactly under tooth 2, and so on. This is repeated by every pinion leaf; the succeeding tooth of the loose wheel, H, is always moved forward 1/12 of the size of the angle between two tooth points of the wheel E, so that finally, after the pinion K has turned 11 teeth, the tooth 11a will be exactly under the tooth 11, which, in the drawing, hides the tooth 12a. Thereby the wheel H has moved on as much as the angle S amounts to.

The motion of the wheel H is, as can be plainly seen, in the direction of the arrow b, and, when the hand P, with the planet-pinion K, has revolved once around the fixed wheel E, two teeth of the two wheels, E and H, will again cover each other at nought; the latter, however, will have advanced two teeth, since the tooth of the wheel H, originally at nought, will have reached 2a. Hence the wheel H has altogether advanced as much as the angles S and s^1 amount to; this corresponds exactly to the 1/12 revolution which is prescribed for the hour hand with every revolution of the minute hand.

It is obvious, moreover, that the number of teeth of the wheel is immaterial, so long as the ratio of 11 to 12 is observed; hence all multiples of 11 and 12 (22 : 24, 33 : 36, 44 : 48, etc.) may be used. Furthermore, the number of teeth of the planet-pinion K is immaterial, so long as its size, conforming to this number of teeth, is correctly adapted to the fixed wheel: Whether this pinion has six, eight or 10 leaves, or whether a wheel of 20, 30 or even 100 teeth is used, has no bearing on the question, since every tooth of the planet-wheel or pinion, imparts the above mentioned very slow advance motion to the loose wheel, H.

That the size of the pinion K fits exactly to the wheel E, but not to the wheel H, is of no account in a mere motion-work gearing.

The two hands, naturally, must be so balanced as to have no center of gravity, and this can be attained by applying counter weights in suitable places.

The arbor A can be fixed to a rubber disk in such a manner that it may be attached, by the aid of the atmospheric pressure, in the well known manner, to any vertical surface, such as the show window pane.

W. E. Shaw, of Brookline, Mass., a deaf inventor, has just completed an alarm clock for deaf people, which is attracting considerable attention. Instead of ringing a bell, an electric fan is set in motion, and, if this does not arouse the sleeper within a few seconds, a spring "thumper" is released, which, on striking the sleeper, is absolutely sure to cause wakefulness. Mr. Shaw is a young man engaged in the electric business, and has already produced several similar inventions.

The Division of Clock Dials.

(Translated for THE JEWELERS' CIRCULAR-WEEKLY from *La Nature*.)

THE primitive division of water and mechanical clocks seems to have been generally of 24 hours, although the 12-hour division has also been seen. In belfry clocks of the 15th century and in all kinds of the 16th century, the division is found, but in the latter century it was much less common.

In the dissertations of Falconet of 1753, we read:

"Pontus de Thiard (1521-1605), poet and Bishop of Chalons, distinguishes clocks indicating and perhaps striking 24 hours from those indicating only 12. He calls the first whole clocks and the others half clocks."

MULTI-DIAL CLOCK OF THE 17TH CENTURY.

There were several ways of arranging the 24 hours on the dials. In tower clocks of the 15th and 16th centuries, the 24 hours were designated on the same disc in two periods from one to 12. The Cathedral of Chartres has two very beautiful specimens; one is the dial of the choir tower and the other a dial particularly remarkable for the neatness of its design placed on the small structure built for the clock outside the monument. Dials of 24 hours are found at Wimborne and Glastonbury in England, at Venice and Berne in Italy and Switzerland, and at other points. In our researches we have not met with any house clocks of the 15th century having any other division than that of 12 hours.

In house and table clocks of the 16th century there are many arrangements of the 24 hours on the dials. First, that of which we have just spoken for tower clocks, two periods from one to 12 or from one to 24 on the same disc. Then, in other clocks, two periods from one to 12 or from one to 24 on two concentric discs. The idea of more than one disc was suggested by the smallness of the dials which rendered the reading of the hours difficult.

Frequently the hours were engraved in different characters; one of the discs bore Arabic and the other Roman numbers; or if of the same kind, they differed in appearance. For instance, the engraving of some was fine on one of the discs, while the others were traced with heavy borders on the other discs. These concentric discs produced a decorative effect, especially when they were accompanied with a third and even sometimes with a fourth dial concentric with the first. These supplementary discs served for an alarm or the phases of the moon.

The watches of the 16th century sometimes have the division of 24 hours. The collection of Prince Soltikoff contained one described in the sale catalogue. This superb timepiece has on the dial two discs, one with a division from one to 12 and the other from 13 to 24, each in different characters. The letter Z replaces the figure 2, as is frequently the case in dials of that age. The easy reading of the dial has always commanded the attention of horologists, as well as the number of strokes to be sounded. Thus, in the 13th century, the epoch when the dials of clepsydras were usually divided into 24 hours, six-hour dials had already been constructed. We read in Littré (III. 570): "The *joes* has 4 quadrans; the quadran, 6 eures; the eure, 4 points; the point, 10 moments," etc.

This plan was adhered to in Italy, where the division of 24 hours was continued; and in certain clocks of the 16th century the six hours were given with a corresponding striking mechanism. It may be remarked that it is much more difficult to count 24 strokes than to read the number 24 directly on the dial.

Martinelli, in his treatise on clocks (Venice, 1663), calls them "six-hour clocks after the Roman method." As to the striking apparatus, it could scarcely cause confusion, for a stroke at 7 o'clock in the morning, or at 7 o'clock in the evening, could hardly be taken for 1 o'clock in the morning or 1 o'clock in the afternoon. This remark applies also to the pointing of the hour hand. A similar arrangement is met with in the striking part of Japanese clocks.

Dials of six hours division are rarely found; when met with, they are represented as strange, without an attempt to explain the reason.

From the 15th century another plan was adopted for rendering the dials more easily read. On the disc, divided into 12 hours, there was a second concentric disc, on which the quarters were marked. This custom continued until the 17th century. In this arrangement the minute hand, which is the longer in our clocks, was the shorter, since the hours were beyond the minutes or rather beyond the quarters, the division of minutes being neglected, especially in the 15th century. Many clocks of the 16th and 17th centuries had two separate dials, one for the hours, the other for the quarters.

The illustration presented herewith of a timepiece of the beginning of the 17th century has this peculiarity that it bears three dials, one of 12 hours, one of six hours, and one of quarter hours. This is evidently one of the fancies of which there were many at the time, rendering the piece still more curious.

It should be noted that if the division of six hours is not suitable for the convenient reading of a dial, that of 24 hours is an opposite extreme for the small diameters of portable timepieces, and that for these, notwithstanding the desire that the day should be computed as of 24 hours, from 0 to 24 on the dial, the division of 12 hours is the more practical.

Workshop Notes and Queries.

[Answers are solicited from our readers to the questions published weekly on this page.]

QUESTION No. 416.—**Stone Setting.**—*Which is the best way to set a stone of any kind in a ring or brooch to get the claws to look well and hold the stone firm? At times I have difficulty in getting them just right.* *A. B. D.*

ANSWER:—The claw setting is called the "invisible" setting, because of the backward tapering of the claw. In order to hold the stone firm a bearing for the stone is made by cutting a hollow in each point with a scorper, then the points are bent over the stones, either by tapping them with a small hammer, or pressing them over with a blunt tool; afterwards the points of the claw are carefully filed, regulated and burnished over smoothly. Some useful tools for the purpose are: Brown's stone setting cutter, price, $1.00. Milling tool for opening and recutting stone settings, 75 cents; milling tools for cutting and shaping setting for rings, per set, $1.25, and others. All these tools are used with the American lathe.

QUESTION No. 417.—**French Gray.**—*I have searched through a number of issues of* THE CIRCULAR-WEEKLY *to see if a question had been asked as to how the French gray finish is produced on silver. Will you favor me with the receipt of the same?* *B. E. W.*

ANSWER:—This inquiry has been answered under Question No. 246 in the issue of Sept. 24, 1902. Hardly any two manufacturers of silver goods produce a similar French gray finish. It requires considerable skill and experience to get good results. The sand blast is in use in some establishments. Fine sand is used if a fine matt is desired and coarse sand if a thick matt is wanted. Emery may be used for the same purpose. After the goods have been matted and a frosted appearance is desired, brush them with a steel matting brush on a jeweler's polishing lathe. This may have the form of a swing brush or that of a scratch brush with steel wire. After the goods have been frosted pass them through potash to remove the grease and then dip them in the following bath: Eight parts of sulphuric acid; 16 parts of nitric acid; one part of sulphate of zinc; one part of salt. A few seconds of dipping will be enough, after which they are rinsed in clean water.

QUESTION No. 418.—**Ink for Hairsprings.**—*I am working in one of the great shops of the country, read your paper constantly and keep my eye on everything in the hope of learning something new. Recently I discovered a fellow watchmaker stealthily dipping a hairspring in the ink, where he kept it for a while. He then washed it. When I asked him why he did that he turned red and would not divulge his secret. Can you give me the reason for the above operation? I suppose it is intended to give a blue color to a hairspring which had previously been dipped in acid to weaken it.* *A. M.*

ANSWER:—This same manipulation was observed by the writer and under the same circumstances, but as the operator was not considered a very skilled workman no further inquiry into the method was made. Recently we read in the *France Horologère* a description of this operation by L'Anguéra, who says that it is recommendable to decrease the strength of hairsprings in cheap watches. Instead of using acid the ink process is much better and easier. To correct the trouble he proceeds as follows: In order to ascertain how much the spring should be weakened he first places the regulator exactly between fast and slow, and by letting the watch run during one day determines how many minutes it runs fast. If it had gained, say, 20 minutes, the hairspring was immersed for as many minutes in copying ink, without even unpinning it from the collet or stud. Then it was washed in water, afterward in alcohol and finally dried. It is then ready to be placed upon the balance and will keep perfect time, without necessitating the retouching of any of the coils. It is also ascertained that it will neither rust nor lose its color. If the method responds to everything that is claimed for it, it will undoubtedly be of service in certain cases.

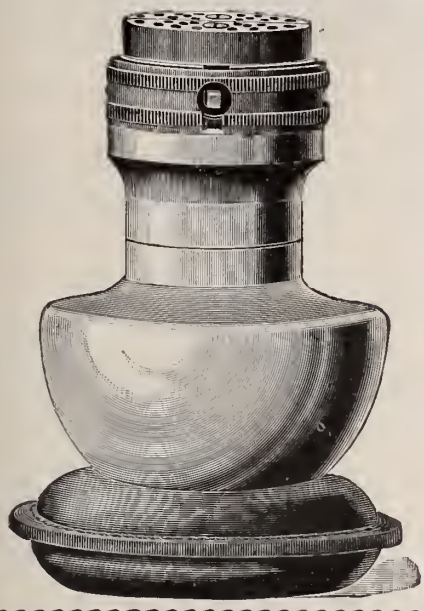
QUESTION No. 419.—**Gold Leaf Gilding.**—*Would like to know how to burnish gold leaf after it is laid. I want to gild and burnish a clock case. What coating is put on before the sizing of the gold leaf? Also what kind of burnisher is used?* *J. F. S.*

ANSWER:—Wood is gilded by cementing leaves of gold to it. Metals are gilded chiefly by amalgamation, or by the action of galvanism. There are two kinds of gilding on wood, the burnished, or water gilding, and the oil gilding. The burnished or water gilding will not bear being wet and is only fit for work when kept within doors. For this gilding the wood is first covered with four or five coats of whiting and size. That the gilding should be perfect it is necessary that there should be a sufficient body of whiting. When these coatings are dry, they are overlaid with a coat of gold size made of Armenian bole, a little wax, and some parchment size. When the size is dry, a portion of the surface is generously moistened with clear water and a soft brush. Then a leaf of gold is applied so as almost to float on the water, and it will instantly settle down and adhere to the size. Great care must be taken to prevent any of the water from flowing over the gold, or a stain will be produced. When the whole is covered with gold leaf the effect is what is called matt, or dead gold, and is the natural color of unburnished gold. Such parts as are required to be burnished are rubbed over with a burnishing tool of agate. Ornaments executed partly matt and partly burnished have a very rich effect which is seen in most picture frames. As already stated, burnished gilding cannot be cleaned with water, though oil gold may, but the matt portion of water gilding is so much like oil gold that it cannot be distinguished by an inexperienced eye. The oil gilding on wood, called oil gold, cannot be burnished, and is always of the natural color of unwrought gold. It has an advantage which burnished gold has not, namely, that it may be washed and cleaned with water. It is for that reason that it is employed for outdoor work. The surface to be gilded should first of all be rubbed smooth. If this surface be of stone, it should be rubbed with pumice, if wood, with Dutch rushes, when a very bright level effect will result. After this it should have its priming of glue size, and two coats of oil paint, and one of flatting. To enrich the color of the gold, these last may be laid down in red or yellow. White, however, is usually preferred, as the darker color renders any imperfection in the gold-sizing more difficult to detect. When the last coat of paint is thoroughly dry, rub it over with wash leather, to render it smooth and free from dust or grit. If there are any patterns or figures which are to be left ungilded, they should be lightly pounced over with white, in order to prevent the gold leaf from adhering to them. Another way is to paint them over with the white of egg diluted with water. If any gold sticks to this, it can be easily washed or wiped off with a moistened handkerchief. When very perfect gilding is required, it should be sized twice, the first coat being allowed to dry thoroughly before the second is applied. It is a good plan to size over night so as to gild in the morning. But all sizes do not dry alike. The readiness of the size can only be ascertained by the touch. If, on being touched by the finger, the surface daubs or comes off, it is not ready, and must be left; if it feels clammy and sticky, it is sufficiently matured.

Welding Aluminum.

MARY WISZNIEWSKA EMMÉ, of New York, recently patented a simple process for welding aluminum by means of which she assures the public a perfect, homogeneous and permanent junction of the two ends of the metal may be accomplished, says the *American Machinist*. The following extract from the specification fully describes the process:

"I have discovered that by heating two contacting ends of aluminum under suitable conditions approximately to or above the temperature of 600 degrees Centigrade —1,112 Fahr.—welding can be effected.

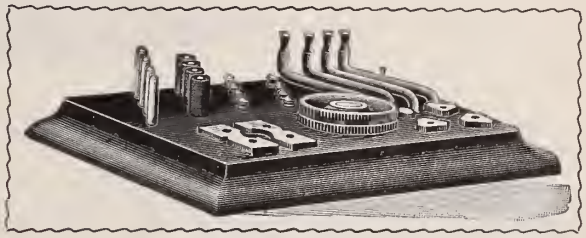


"The invention consists in bringing the two or more pieces of thoroughly cleansed metal or the two ends of the rods or wires of the metal into contact and applying a sufficiently high degree of heat to raise the parts to be united to the welding point, whereupon they may be welded together. To carry out my process successfully, the parts or ends to be united must be scrupulously cleansed before heating them to the welding point.

"The degree of heat required is approximately 600 degrees Centigrade and may vary, frequently requiring a slight excess. The correct temperature is reached when the aluminum commences to soften. By applying this heat when the parts are in contact they may be united or welded, whereby the mass or piece formed possesses throughout the same physical qualities as though the parts had never been separated—that is, the same tensile strength, the same flexibility, the same conductivity for heat or for electricity."

THE SPECIAL

DUPLEX BASE



Anti-Friction Engraving Block.

Designed by an Engraver for Engravers.

Nickel-plated.
With Swivel Jaws.

Designed and Manufactured by
Adolph Muehlmatt,
Cincinnati.

Perfection of construction, shape and workmanship. The Special is not a cheap engraving block, but a first-class article of improved design. Complete, with attachments and leather pad, $6.00.

THE RAMBLER'S NOTES.

WHAT THE RAMBLER SAW AND HEARD AMONG THE DEALERS IN ART POTTERY, CUT GLASS, BRONZES, ETC.

NOVELTIES IN TEPLITZ WARE.

TEPLITZ WARE which shows a decidedly new finish has just been received by L. Straus & Sons, 42 Warren St., New York. The new ware is made up into center pieces, card receivers, ash trays, vases and electroliers, and is decorated with a variety of *art nouveau* figures in relief, principally mermaids, nymphs, Cupids and other mythological figures. These decorations are applied to the pieces which they ornament with graceful effect. The striking feature of the ware is its metallic finish, shaded and dulled in different parts to the color and general appearance of gilded bronze. The finish is applied only to the figures, and is soft and rich in effect. In cases where these figures are draped with a purple shroud, which still retains the metallic luster of the body of the piece, the effect is both striking and artistic. The ware is undoubtedly one of the finest, as well as one of the newest, varieties of Teplitz now on the market. In addition to the pieces already mentioned, there are a number of *art nouveau* heads, statuettes and mantle ornaments, all finished in the dull, gilded bronze hue and touched up here and there with a bright color, which also shows a metallic effect. The goods are especially adapted to the jewelry trade, and should interest buyers who are looking for something novel and attractive.

*

NOVEL EFFECTS IN AMERICAN KERAMICS.

ANIMALS and birds as subjects for reproduction in pottery have heretofore received little attention from American manufacturers of keramic art wares. This has been in a measure due to the fact that pottery made up in these shapes and forms does not usually produce an effect which in attractive qualities is proportionate to the cost of manufacture. The very nature of these pieces forbids to some extent the use of bright color shading, fine glaze and polish, qualities that have much to do with making the wares popular with the public. To produce pottery illustrative of dumb animal life, make it popular and lift it out of the category of cheap terra cotta production and the plaster imitations that flood the market, is the task for no mediocre artist. There must be a faithfulness of modeling from the live subject and a perfection of detail and finish, as well as an artistic application of colors, to make such objects not only true to nature, but attractive and ornamental. The artist employed by the J. B. Owens Pottery Co., Zanesville, O., has been able to do this, and the samples of his work now received at the New York warerooms of that concern, 70 West Broadway, are already causing favorable comment in the pottery trade and among the connoisseurs in keramic art. These samples show, among other subjects, a polar bear and an owl. The bear is made from white clay and is shaded and modeled with wonderful lifelike effect. It has a dull glazed finish and is artistic and perfect in every detail. The owl is also a faithful likeness of the living model, is fitted with glass eyes and has a hollow interior which receives an electric light bulb. When this bulb is lighted the glass eyes glow with startling effect. The owl is mounted on a pile of books, also made from clay, and is a very appropriate ornament for a library.

*

NEW ELECTROLIERS AND BRONZES.

SWINGING electroliers in bronze are among the new articles being handled this season by Lazarus, Rosenfeld & Lehman, 56 Murray St., New York. Such is the general effect of the line that it is only necessary to see it to appreciate the little swinging figures from which jet out the electric bulb. For the most part the figures are very small and consist of winged Cupids, either single or in groups, holding the electric bulb as if it were a torch. In other instances it is a winged figure, beautifully molded and set off by folds of its streaming robes, which holds the torch and throws the light. Where there are groups of these figures the light bulbs are shaded by colored silk globes fringed with beads. Following the general style of the swinging electroliers are a number of small dining-room standard pieces also fitted with silk shades and made in small shapes from bronze and from metal in imitation of this substance. A line that might also be interesting to the jewelry buyer consists of a number of imitation bronze statuettes, figures and pieces of bric-à-brac. These figures show many old and standard subjects, many of them being copies of famous statues. Though of a popular price, they possess many qualities of merit to the jeweler.

THE RAMBLER.

The Fay Engraving Co. was recently incorporated in Utica, N. Y., with a capital stock of $50,000. The incorporators were F. L. Fay, Utica, and E. G. Corbett, Rome.

Increased Yield of the Persian Pearl Fisheries.

AN official report as to pearl fishing in the Persian Gulf states that the years 1900 and 1901 yielded a proportionately small result, owing to a disease of the shells. Far more satisfactory was the yield during the season (June to September) of the year 1902, when good prices were also paid by buyers coming from the ports in the Persian Gulf and from India. Koweit sent out 420 ships last year, which were manned by 7,560 persons, who gathered pearls worth 840,000 rupees. From the Bahrein Islands 700 ships came, manned by 12,000 persons, who drew pearls from the sea worth 2,000,000 rupees. Toward the end of November, 1902, pearls had already been shipped to Bombay, the chief emporium of the pearls from the Persian Gulf, valued at 4,000,000 rupees at the least.

In the Persian Gulf a change has occurred in the pearl trade, as the Persian port, Lingah, no longer occupies the first place as regards the shipments to Bombay, which place has been taken by the British Bahrein Islands. Formerly the mother-of-pearl shells were mostly thrown away, but a beginning was made with saving them during the past season and transporting them via Bandar Abbas and Bushire to Europe. About 70,000 sacks of mother-of-pearls shells, valued at 350,000 rupees, were thus exported from the Bahrein Islands to Europe. A German firm established in those islands is exclusively engaged in the exportation of these shells. Some Indian merchants are also engaged in this trade, while Syrian dealers also export large quantities.

A New Metal Meteorite.

(Translated for THE JEWELERS' CIRCULAR-WEEKLY from the *Deutsche Uhrmacher-Zeitung.*)

FOR a long time chemists and metallurgists have been searching for a metal as light as aluminum, but free from certain of its inconveniences. Great importance is attached to these researches, on account of the inestimable service which such a metal may render in industry.

Now, the "Meteorit Gesellschaft," of Berlin, announces that it has discovered a metal, to which it has given the name "meteorite," which is as light as aluminum and may be combined chemically without difficulty with other elements. This is not the case with other metals, these being united only mechanically.

The advantages which may be derived from this property will be of great utility. Meteorite is very malleable, and of fine color, resembling silver. When polished it is not oxidized in the air. Experiments are to be made to learn more about this remarkable discovery.

Marks and Monograms on Pottery.

FREDERICK LITCHFIELD delivered an address before the Ceramic and Art Collectors' Society, Birmingham, on Feb. 20. The address was illustrated by diagrams and specimens of some of the systems of marking that were adopted by Chinese, Continental and home manufacturers. Such marks and monograms number between 4,000 and 5,000, and may be roughly divided into two classes—factory marks and those which are artists' or potters' signatures.

The Worcester factory, Mr. Litchfield pointed out, altered its marks at different times as the direction and proprietorship were changed. Thus, from the starting of these works in 1751 until 1780, the crescent open and closed; the square mark, the initial "W" in varied forms, printed and cursive, the Oriental characters, and the Dresden crossed swords were used. Then, after the purchase of the works by Flight, the ware bore successively his name, accompanied by the crescent, the words, "Flight and Barr," and "Barr, Flight and Barr," with inscriptions, "Royal Porcelain Works, Worcester," and the address of the London depot and the initials, "F., B., B.," printed and impressed, surmounted by a crown. Later during the proprietorship of Kerr & Binns their initials in a shield were used; and from the time of the formation of the Worcester Porcelain Company, in 1862, a circular stamp, with the monogram of the company and the date, has been employed.

Chamberlain's Worcester and Grainger's Worcester also have distinctive marks, and the vicissitudes of the history of the Crown Derby factory are indicated by the differing marks which its products bear, according to their date. Mr. Litchfield is of opinion that an exaggerated value is placed upon the mark, which is the easiest part of a forgery to produce; and recommends that, in estimating the value of a particular specimen of pottery, one should first be satisfied that it has the qualities or character of its kind, and then regard the mark as confirmatory evidence. Two practical hints which he gave to collectors were that, until able to act on their unaided judgment, they should buy only from dealers of established reputation and insist upon receiving from the vendor a descriptive invoice.—*Pottery Gazette*

THE HOROLOGICAL REVIEW,

WITH WHICH ARE CONSOLIDATED THE JEWELERS' WEEKLY. THE JEWELERS REVIEW

Copyright 1903 by THE JEWELERS' CIRCULAR PUB. CO.

Corbin Building, John St., Corner Broadway, New York. Entered as second-class matter at the New York, N. Y., Post Office.

35TH YEAR. NEW YORK AND CHICAGO, WEDNESDAY, APRIL 8, 1903. VOL. XLVI. No. 10.

AN INGENIOUS HOROLOGICAL MASTERPIECE.

WHAT is claimed to be one of the most wonderful scientific and astronomical clocks in the world, has been exhibited in New York for some time, and has excited considerable interest and comment by the press and public.

The clock, an illustration of which appears on this page, is truly a remarkable piece of horological workmanship, and shows great minuteness of detail in the workmanship. It was made by Christian Gebhard, who occupied more than 30 years in constructing it, the great work being begun in 1865 and finished in 1895. It is enclosed in a massive quartered oak case, stands 10 feet high, is 10 feet wide and three feet deep, and weighs complete over 6,000 pounds.

In all the mechanism consists of 1,500 parts and displays 26 separate and distinct mechanical and astronomical movements, all ingeniously propelled by one weight. The movements are so constructed that the hands and indicators all move forward at once at the end of every half minute only, with the exception of the striking attachment. The clock shows four different kinds of time—mean, solar, sidereal and decimal time. In the center of the timepiece are 10 dials, showing comparatively the time in 10 of the principal cities of the world.

THE GEBHARD ASTRONOMICAL CLOCK.

On the right hand of the clock proper is a large globe which represents the Earth revolving on its own axis every 24 hours from west to east. This globe is circled by a band which shows the exact time at any point of the earth and the correct position of the earth to the sun. On the left hand side of the clock is another large globe, representing the heavenly constellations or the "World of Stars." This globe also revolves on its axis every 24 hours, but runs on the sidereal instead of mean time, thereby gaining three minutes and 56½ seconds daily on the globe representing the Earth. It makes 366¼ complete revolutions in a year, while the Earth takes 365¼ days. The movements governing each of these distinctive globes are minutely adjusted and claimed by the inventor to be thoroughly accurate.

There is installed in the base of the clock a complete automatic calendarium which shows at all times the day, date, month and year, changing automatically at 12 o'clock midnight daily. The change of year also takes place with remarkable accuracy. The leap years are designated at the proper time and the mechanism is so minutely adjusted that in the years when Feb. 29 does not occur the date March 1 appears.

On the other side of this calendar are chronological cycles which are changed at the proper time automatically by the clock works. There are the Golden Number or lunar cycle, the Epact, the Roman Indiction, the solar cycle, the dominical letter and the movable holidays, such as Easter. For 300 years in advance these cycles are all accurately figured out and the thousands of little wheels and bars are made to show the changes at the exact

(Continued on page 56.)

ALVIN DEPOSIT WARE

VASE No. 3383.

There is a brilliancy and charm about Alvin Deposit Ware. The accompanying illustration shows one of our new pattern vases, about which can truly be said, that, there is an individuality of design and that certain character which is the essence of good style.

We make this vase in a variety of sizes from 6 to 14 inches, and the flowers on each are different.

Alvin Manufacturing Company,

54 MAIDEN LANE. NEW YORK. 41 UNION SQUARE.

Tennyson and Longfellow could take a worthless sheet of paper, write a poem on it, and make it worth thousands—

"That is Genius."

Carnegie or Rockefeller can write a few words on a sheet of paper and make it worth millions—

"That is Capital."

Uncle Sam can take some gold, stamp upon it an eagle, and makes it worth $20.00—

"That is Money."

Fahys take over $20,000.00 worth of gold every week and make it into the best Watch Cases—

"That is Skill."

Fahys Watch Cases are so well and favorably known that they are being sold in every state and territory in the United States—

"That is Enterprise."

Other manufacturers try to follow **Fahys** and say their cases are "just as good."—

"That is Gall."

Those who are thoroughly familiar with all makes of watch cases say that **Fahys** are the best—

"That is Good Judgment."

There is nothing better than a **Fahys** Case—

"That is Truth."

KEEP IT ALL.

Don't give up a part of it to the middleman, don't give up a part to pay the travelers' expenses. Keep *all* the profits yourself.

Besides the extra profits that you make when dealing with first hands, there is also the greater promptness and greater reliability.

We are *cutters* of Diamonds. We sell direct to the retailer. We have no traveling salesmen. We are satisfied with one profit, and that a reasonable one. The extra profits go to you. Anything purchased of us is always as represented. There is no equivocation; there is no salesman to blame it on the middleman, no middleman to blame it on the importer or cutter. When you go to the fountain head you get the best service and the lowest price.

When you want anything in our line send to us for a memorandum package.

BERT BALL ST.L.

WE make the only line of high-grade college seals, flags and buttons on the market and sell them exclusively to the Retail Jewelry Trade.

Jewelers in college towns who have discontinued selling flags on account of dry goods, clothing and furnishing goods stores' competition, will find it will pay them to carry our goods in stock, and that their customers will readily appreciate the superior workmanship, finish and artistic merit, as the tendency heretofore has been to cheapen the quality and price of college goods.

The trade has our positive assurance that the standard of the goods and our policy of dealing direct with retail jewelers only, will be strictly maintained.

Jewelers outside of college towns carrying a large or small assorted stock of our college goods have the privilege of exchanging any of the pieces that are unsalable or shop-worn, if not damaged, for other college goods.

Orders for single pieces are also solicited from Retailers who carry no stock.

Special Flags made to order for Academies, Seminaries, Business Colleges, Public Schools, etc.

Pearl Dealers' Argument Against Bill To Protect Arkansas Pearl Fisheries.

LITTLE ROCK, Ark., April 1.—W. D. Burd, a dealer in American pearls in this city, has written the following against the Myers Mussel Bill for the protection of the fresh water pearl fisheries of this State:

The Myers bill for the protection of mussels in the streams of Arkansas is more far-reaching and drastic than its author intended it to be. The bill originally was for only two months closed season, and now it has three, two of them being the best months of the year for the shell and pearl industry. Instead of April, May and June, as it now is, it should have been—if at all—February and March, as it is believed those are the months in which the "niggerhead" and mucket mussels spawn most.

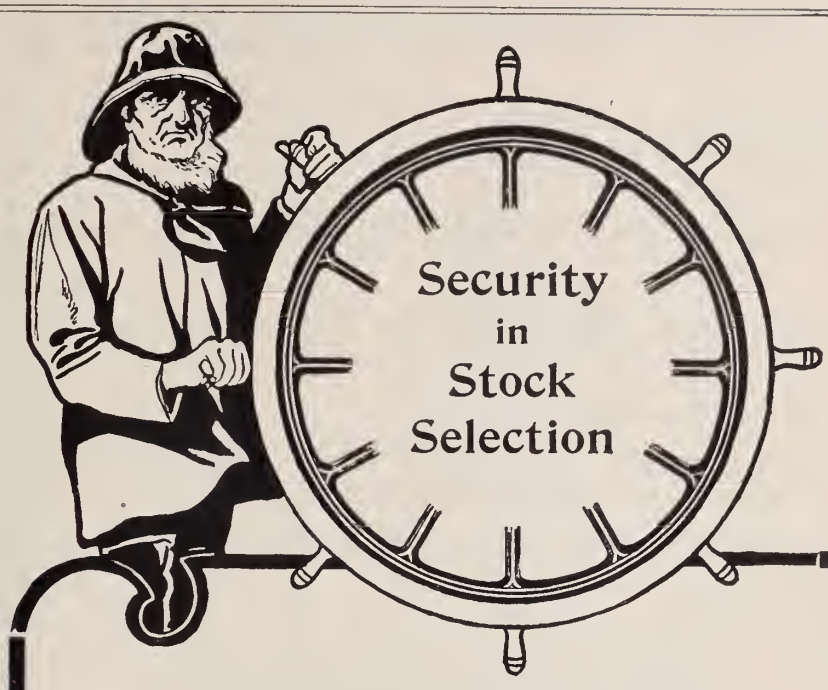
But some of the cotton planters think by having the closed season later they would be able then to employ some cheap labor to work in the cotton fields during those months, April, May and June. Hence the "closed season" is not so much for the protection of the mussel as for the protection of the infant industry—cotton growing.

Charles T. Simpson, in his pamphlet published by the United States Commission of Fish and Fisheries, says "It is doubtful whether any part of the year could be selected for a closed season that would be much better than any other part." Then why have two of the best months of the year, May and June, in that closed season? The shell business has grown in the last few years so that it has become a great industry—20,000 tons are estimated to have been shipped last year. If the fishermen are compelled to return to tongs and wading to get shells it will be but a short time till the industry will be killed in Arkansas.

The bill now prohibits the use of "crow feet" and dredges of all kinds, which practically ruins the business, as tongs can only be used successfully in 10 or 12 feet of water, while a great many of our best mussel beds in low water are 15 to 20 feet and even deeper.

Prohibit the use of the "crow feet" and neither the farmer nor any one else can get enough shells to pay them for their time and labor.

The mussel will never be exterminated by either "crow feet" or dredges, for when a mussel bed gets so thinned out as to cease to pay to work it the fishermen simply moves on down the river and seeks new beds, leaving the old ones to replenish. While the dredge is not practicable in getting out mussels, excepting in lakes and bayous, as it takes too much labor to separate them from the sand, gravel, etc., which are all brought up together, as it would to get them out at once from the beds with "crow feet," not to mention the labor of operating the dredge—still the dredge must be very injurious to the beds and to the young mussels, as it tears up the whole bottom of the river.



Now that our mussel shells have a value and Arkansas is rich in the supply, it is wrong to ruin the business by passing such laws as will make it impossible to carry it on.

The class of people who are in the rivers engaged in the business are usually poor. Hundreds of them in the past few years have been able to buy their homes, and more will be able to do so if the business continues.

The money comes mostly from the north for shells and from the east for pearls. If it were not for these markets what would shells and pearls be worth to-day? The fact that drastic and mischievous laws are occasionally passed in this State is enough to keep manufacturers, not only of buttons, but of all kinds, out of the State. With a law against taking a shell out of the water for three months, two of the best months of the year, and a law against using such tools and appliances as long experience has proven to be the only cheap and practical way for the poor man or any other man to get shells out of the water, a button factory situated in Little Rock, we will say, and depending on Arkansas alone for a supply of shells, and consuming, say 40 tons a week, would be in a great predicament. With this law in force we will not expect them all to move down here at once.

W. D. BURD.

In speaking of the matter to THE CIRCULAR-WEEKLY, Mr. Burd says that the only way to protect the shell and pearl industry would be with a closed season of from five to 10 years.

THE FIRST STEP in right selling is right buying. THE FIRST PROFIT IN RETAILING is the saving by wise selection of stock.

OUR FIRST SERVICE to you is in placing at your disposal a stock containing in unequaled abundance the goods that best suit your resources and patronage.

OUR NEXT SERVICE is our experienced aid to you in identifying and selecting this most suitable stock.

OUR THIRD AND GREATEST SERVICE is the assurance you take away with you that you have "bought right"—that you have secured reliable goods that suit your trade and at the most favorable prices the market can furnish.

WE STEER YOU PAST MISTAKES in buying; we know you can rely on yourself in selling.

OUR DIAMOND AND WATCH STOCK for spring trade is the cream of the world's markets. To see it is an education that will profit you.

NEW YORK CITY.

Vice-Consul General Tyler Reports on the Silver Trade in Persia.

Washington, D. C., April 1.—The social habits and domestic methods of the people provide but a moderate necessity and encouragement, as a mercantile investment for the importation of silver and plated ware into Persia. The usages of past years in some cases and the conditions of life in others preclude the indulgence, except to a limited extent, in these rather expensive modern refinements. The Persians are a frugal and simple-minded people, and are content with a very unassuming household equipment, hence such returns of imports as can be procured give no separate item for silver and plated ware, but class it with cutlery, etc. There is, however, according to Vice-Consul General Tyler, at Teheran, an increasing recognition by those who are in a position to satisfy their appreciation of articles of artistic make or the utility and purity of this class of goods. Formerly not more than two stores in Teheran found a market for the sale of these goods of foreign manufacture, but at the present time nearly every shop that pretends to respectability keeps them on view. It is, however, somewhat doubtful whether the United States is, to any appreciable extent, represented; but in this respect it does not suffer much by comparison with England and Germany, for Austria, France and Switzerland enjoy very nearly the monopoly. The quality, however, is not very high, but it no doubt suits the needs and means of the people better than what is more valuable. If American merchants possessed a location there where their resources could be brought to the notice of the public, not only this, but many other classes of useful and ornamental articles would find a considerable demand.

Touching the subject of home manufacture, Mr. Tyler says that local manufacturers, even with the incentives of foreign competition, scarcely touch the fringe of the supply, and are confined chiefly to such examples as appeal to the fancy and curiosity of foreigners, and, to but a very small degree attempt to meet the requirements of the people. Where the manufacture rises to the position of a local industry and native models are adhered to, the art and the workmanship blend to the production of attractive if not very durable articles.

The tariff on silver and plated goods imported into Persia is the same as on every other demonination, namely, 5 per cent. ad valorem, collected at the port of entry. There is, however, a report, more or less reliable, that the customs duty will shortly undergo revision, which may increase the impost on this line of goods.

American goods will encounter no obstacles of a more prohibitive kind than that of competition and want of enterprise in the extension of trade relations in Persia. The door is open and invitations to enter and participate in the commercial life are issued freely without respect to nationality or mercantile sections. A new departure in methods, a new choice of lines, an intelligent appreciation of the necessities of trade, and an unfaltering perseverance amid initial difficulties are the considerations which will invoke the tide of success in business operations with Persia.

With respect to packing, it should be

noted that all goods of a delicate nature should be carefully packed in tin or zinc-lined cases, and special attention should be paid to prevent the pieces from jarring or rubbing against one another. If an article in a case gets dislodged from its position it creates a vacancy, which is apt to give scope for confusion among the others with disastrous results. A case with contents or packing intended for transport into the interior of Persia should not weigh more than 140 pounds, which is half a mule load.

Consul Fee Reports on the Silver Trade in Bombay.

WASHINGTON, D. C., April 1.—Consul Fee, at Bombay, has furnished the State Department with an interesting report on the subject of silver and plated ware in that city and vicinity, from which it is learned that during the year 1900-1901 there was imported into Bombay from all countries silverware and silver plate to the value of $77,231, and during the same period the exports amounted to $32,248. The United Kingdom furnished the major portion of the imports, the total value for the year being $56,827, while the share of the United States was less than $100.

The Indian tariff on silverware and silver plated goods is not heavy. Such ware other than European is valued, if plain, at 32½ cents per 180 grains, and if embossed or chased its value is placed at 40½ cents per 180 grains, and the duty is taxed at 5 per cent. on the value. All other sorts of silver and silver plated ware are dutiable at 5 per cent. ad valorem.

Bombay is one of the great centers for native Indian silverware, and for which India has been from time immemorial especially famous. Every State, both British and native, and in fact every city or considerable village, has its particular brand of workmanship in silver. It is all worked by hand—hammered; the designs are quite artistic and frequently illustrative of village life and hunting scenes, though Hindoo mythology is largely drawn upon to furnish the main design works in native silverware. Some of this work is highly artistic, showing an inherited cunning of the caste of Hindoo workmen who have handed down the secrets and art of their craft from father to son for generations. The work is not only prized by the natives, but also by Europeans and Americans visiting India.

The silverware is usually made of coin pure silver; the native desires it as free from alloy as possible. It is very common all over India and is to be found in every shop and bazaar. In fact much of the native wealth of the people is to be found in the silverware of the household and in the personal silver adornments of the members of the family. The unit of weight by which the ware is sold is the tola (180 grains), equaling the weight of a silver rupee. The retail prices run from 35 cents to 50 cents per tola, varying according to workmanship and quality of silver.

There is no obstacle in the way of the extension of American trade in this line other than that which naturally surrounds the extension of our trade in any other line. The distance between India and the United States is great, and transshipment

generally takes place in England. There is a growing demand for silver plate and silver tableware of modern and western design. It is more serviceable and less expensive. It will in time, no doubt, take the place in daily life, to a practical extent, of the native plate or silverware. There is no reason why the American manufacturer and exporter should not obtain a fair share of this trade.

On the subject of packing, Consul Fee says American goods in foreign ships do not always receive the most gentle treatment, and hence he would advise our exporters to be exceedingly careful and thorough in packing. The articles should first of all be well wrapped in paper, then wound about with a straw rope, or packed well in excelsior packing in tin-lined, strong wooden boxes bound with hoop iron. Too much care cannot be taken in packing goods for our foreign trade.

Herewith are given the names and addresses of a number of jewelers, goldsmiths and silversmiths in Bombay, both native and European: Army and Navy Cooperative Society, Esplanade road; Bhicajee & Co., Apollo Bunder; Heerjimul & Co., Esplanade road; Lund & Blockley, Esplanade road; Marcks & Co., Esplanade road; Tarachund Pursram, Meadows St.; Kanjimul Bhugwandas & Co., Esplanade road.

N. L. Marsh Makes a General Assignment

SISTERSVILLE, W. Va., April 1.—Many friends of N. L. Marsh, a retail jeweler on Diamond St., were surprised to learn last week that he had made an assignment for the benefit of his creditors. The assignee, M. D. Hanes, is at present at work on the books, preparing the inventory of the liabilities and assets.

Mr. Marsh has been in the jewelry business for more than 30 years. He began originally at Toledo, O., from which place he moved to Bellaire in 1873. While there he opened a branch store in this city, which he later gave up and went to Mannington, W. Va., where he remained until 1900. Three years ago he came to Sistersville and succeeded his brother, C. C. Marsh.

J. Lee Martin Confesses Judgment to a Trustee for His Creditors.

BLOOMSBURG, Pa., April 2.—J. Lee Martin, a retail jeweler of this city, has confessed judgment for the benefit of his creditors to C. C. Peacock as trustee.

Mr. Martin has been in business here since March, 1900, but of late has been hard pressed for ready money. He is about 30 years old and was originally employed by J. M. Jewett, Cortland, N. Y., and was later with J. S. Hill, Morristown, N. J. Among his creditors are: N. H. White & Co., $799; The Non-Retailing Co., $137; F. W. Sackett, $500; G. W. Correll and C. C. Peacock, $225; W. J. Correll & Co., $465, and Harry Achenbach, $325.

Resolutions on the Death of the Late Henry Hayes.

The Jewelers' Safety Fund Society of New York has just presented to the family of the late Henry Hayes, who was president of this organization for 19 years, a set of resolutions of appreciation and sympathy. The resolutions are printed on white vellum and bound in black morocco, lined with purple moire silk. The typographical effect of the printed pages is very beautiful, the style of letters being graceful, and the coloring of the capitals, which is purple, very artistically combined with black. These capitals head the beginning of each page and each one is interwoven with a spray of the lily of the valley, delicately drawn.

The resolutions were adopted at a special meeting of the society held Feb. 3, the day immediately after Mr. Hayes's death, and are signed by the following directors: Ira Goddard; Jas. C. Aikin, of Aikin, Lambert & Co.; Chas. G. Alford, of C. G. Alford & Co.; Jas. P. Snow, of Snow & Westcott; Louis Kahn, of L. & M. Kahn & Co.; Fredk. H. Larter, of Larter, Elcox & Co.; Henry E. Ide, of Nereshcimer & Co.; O. G. Fessenden, of Hayden W. Wheeler & Co.; Wm. T. Gough, of Carter, Howe & Co., and A. V. Huyler, of N. H. White & Co. They read as follows:

Whereas, An all wise Providence has removed from our midst our warm friend and President, Henry Hayes, through whose efforts largely the charter of the Jewelers' Safety Fund Society was obtained, and who at its organization in 1884 was chosen its president, and continued to hold that office during his life, and by his many noble traits of character had endeared himself to all its members; therefore

Resolved, That we, the directors of the Jewelers' Safety Fund Society, desire to give expression of our sympathy and the high esteem in which we held our late associate, whose genial manner, wise counsel and just judgment has done much to ensure the success of our undertaking;

Resolved, That on behalf of the members, we extend to the family of our late associate our heartfelt sympathy in this time of their great sorrow.

Resolved, That this record be entered in our minutes, and a copy presented to the family of our late president.

A copy of the resolutions was also presented to Arthur H. Hayes, son of the deceased.

Death of Abner S. East.

READING, Pa., April 1.—Abner S. East, who died Saturday at his residence, 657 Penn St., from exhaustion, which followed a paralytic stroke, was for many years in the jewelry business in this city and conducted stores at various locations here. He had been ailing for a long time, and had been confined to his room for the past seven months.

Mr. East was born 52 years ago in Boyertown and had been in the jewelry business many years. He was formerly located in Philadelphia; from there went to Birdsboro and settled in Reading 13 years ago. In 1890 he opened a small store and his business gradually grew, until his establishment finally became one of the largest here. Business reverses in January, 1892, however, forced him to the wall, and since that time he had managed the jewelry business owned by his wife, Ida E. East, at 657 Penn St.

The deceased was a practical man, a good jeweler and was well thought of in the community. He was a member of Grace Lutheran Church, of the Mystic Circle, and was prominent in Masonry and in the Royal Arcanum. He is survived by his widow, who carries on the business, and one daughter.

Newburyport Silver Co. Installing Machinery in Its Factory.

NEWBURYPORT, Mass., April 4.—Workmen are making rapid progress in fitting up the plant of the Newburyport Silver Co., and from present indications the actual work of manufacturing for the market will be commenced within a few weeks. The company, which is incorporated under the laws of Massachusetts, has a capital stock of $25,000, all of which is paid in. John Currier, of Amesbury, president of the corporation, has been a member of the carriage manufacturing firm known as the Currier, Cameron Co., for several years. George E. Stickney, secretary and treasurer, is at present treasurer of the Newburyport Co-Operative bank and paying teller in the Old Colony Trust Co., Boston.

The management of the plant will be under the charge of Caleb Stickney and Herbert N. Woodwell, both of Newburyport. Mr. Stickney was for 20 years master mechanic for the Towle Mfg. Co., Newburyport, and Mr. Woodwell was also in the employ of the same company for a score of years, being in charge of the engraving department.

The new company intends to manufacture sterling wares only, and while the business will be at first confined to spoon work, small hollow ware, children's mugs, napkin rings, etc., all lines of silverware will be eventually included. At present a good-sized force of men is employed at the factory, making tools and installing machinery.

Programme for the Coming Meeting of the Ohio Optical Association.

COLUMBUS, O., April 4.—The programme for the meeting of the Ohio Optical Association, which will be held at the Neil house, April 13, was completed yesterday.

John C. Eberhardt, of Dayton, will preside and the following papers will be read at the afternoon session: "The Value of Organization," E. Klein, Cincinnati; "Optical Ethics," F. W. Wallis, Columbus; "The Refractionist of the Future," E. P. Barr, Lancaster; "State Application," Edward L. Jones, Sandusky.

The members of the association will dine at 6 P. M. and a number of addresses will be delivered at an evening session. Among them will be one by Dr. Andrew Timberman, of Columbus, on the relations which should obtain between the oculist and the optician.

Indiana County, Pa., was 100 years old on March 31, and the anniversary celebration will be held at Indiana in June. In commemoration of the event the Indiana jewelers have prepared a collection of unique and appropriate centennial souvenirs in silver. Among them are spoons bearing a fac simile of the court house, the State Normal School and other places of local interest. Another pretty souvenir shown is a good sized silver plate having miniature scenes of early life in the town and reproductions of buildings of the present day.

Attleboro Jewelers Fight Against Proposed Increase in Canadian Tariff on Jewelry.

ATTLEBORO, Mass., April 6.—The Canadian tariff campaign remains the most interesting matter in Attleboro jewelry circles this week. The announcement that the Tariff Committee of the Attleboros intend to flood the political and trade circles of the Dominion with facts and figures to counteract the proposed raising of the present 33 1-3 per cent. duty on jewelry going into that field has aroused a storm of discussion. The press of Boston, with one exception, has condemned the move. It has pointed the finger of scorn at the committee, predicted that its efforts will be futile, and apparently forgotten the claim of this same group of seven men that, backed by the rest of the jewelers of the two towns, they made the jewelry schedule in the Dingley tariff bill, smashed the French Reciprocity Treaty, and more than any other body of men in the country started the present agitation against "competitive reciprocity" with any country. The Boston *Transcript* alone has taken up the cudgels in defence of the Attleboro committee, praised its plan, and predicted its ultimate success.

The committee is in no wise daunted by criticism, but is preparing two distinct movements to counteract the move for a higher duty on Attleboro jewelry going into Canada. The first move will be that on Friday evening, April 10, when Chairman Sidney O. Bigney of the committee will give a lengthy and carefully prepared address before the Attleboro Republican Club on the situation. His purpose is partly to enlighten the members, who are almost exclusively jewelry employers and employes, and partly to give the first official utterance to the views of his committee. The committee will then take steps to see that copies of his address come under the eye of the Canadian business men and politicians who are so urgently pressing for a raise of the duty. Mr. Bigney was to have spoken last Friday, but asked the club to give him one week more for preparation, as he wished to be fully grounded on his facts and figures. The week's extension of time was cheerfully granted.

The committee will ask the aid of all newspapers and jewelry trade papers of any influence or circulation to assist them in spreading the data they propose to collect where it will do the most good. The second move was first announced on Monday, when Chairman Bigney stated that he proposed to start April 13 for New Orleans, and to attend the meeting of the National Manufacturers' Association. He will ask the members to give utterance to some expressions which will aid and encourage the jewelers in their effort to dissuade Canada from raising her duty on the products which sustain the Attleboros.

F. H. Woodman Withdraws From the Woodman-Cook Co.

BOSTON, Mass., April 4.—Fred H. Woodman, formerly treasurer of the Woodman-Cook Co., manufacturers of silverware, etc., 365 Washington St., this city, has withdrawn from the firm, having sold out his interest to Mr. Cook.

Mr. Woodman started the business about 10 years ago and carried it on successfully alone for about three years. Mr. Cook was then admitted as a partner, and, with Mr. Woodman, has controlled all of the stock since that time. Mr. Cook's time was devoted almost entirely to the management of the factory, which is located in Portland, Me.

The dissolution of the partnership is the result of a feeling on the part of Mr. Woodman that he wanted to have the entire control of the business or dispose of his interest therein. Mr. Woodman has not as yet made up his mind as to his plans for the future. The firm will continue to do business under the old name and the officers are now as follows: President, Charles Cook; treasurer, Edward B. Cook.

Latest News of the Labor Troubles at C. Rogers & Bros. Old Factory, Meriden, Conn.

MERIDEN, Conn., April 6.—Several of the 30 flat ware buffers who are out at the C. Rogers & Bros. factory of the International Silver Co. declared this afternoon that there was no strike at the factory, but that it was a lockout.

They say that more pay was demanded and that Manager Munson called the men to the office about 3.30 Saturday afternoon, paid them, and notified them that their services were no longer required. He had been considering their request for some days.

The situation presented serious features to-day. The men, it is said, have not been near the factory, and they are anxiously awaiting the special meeting of the Polishers and Buffers' Union to be held in K. of C. Hall to-night. At that session it is expected that action will be taken on the matter, and it can then be definitely stated whether workmen in other shops of the International Silver Co. will go out in a sympathetic strike.

It was said that every effort will be made to prevent a general strike, but if necessary it will be declared.

At the meeting to-night B. C. Fitzpatrick, of Troy, N. Y., member of the executive board of the international organization of metal workers, will be present, it is expected, and in all probability State Organizer M. J. Hanlon will be there, although he spent to-day at Stamford.

Death of Roman Warshawski.

The funeral of Roman Warshawski, a salesman for Isidore Ollendorff, wholesale dealer in watches and jewelry, 54 Maiden Lane, New York, was held Wednesday from his late home, 427 Herkimer St., Brooklyn. Interment was in Cypress Hills Cemetery.

Mr. Warshawski was born in Pleschen, Germany, 54 years ago, and came to this country when he was 25 years old. He obtained his first experience in the jewelry business with Mr. Ollendorff and had traveled for him off and on for more than 18 years. He was well known in the trade of New York, Ohio, Indiana and Kentucky.

After a number of years spent in New York the deceased started a retail jewelry store for himself in Altoona, Pa., but later gave this up and came back to the concern with which he was first employed. Several weeks ago he was suddenly stricken with heart disease and hurried to his home in Brooklyn, where he died Monday, March 30.

Mr. Warshawski leaves a widow and seven children.

Values Ancient and Modern

LEATHER was formerly used as a standard of measurement, the ancient chronicler Bede speaking of certain tracts as so many "hides of land." So valued was Ivory that of it were made the face, neck, arms, hands and feet of the statue of the goddess Athena in the Parthenon. Ebony was held in high esteem, and Egyptian tombs bear representations of Ethiopians bringing as tribute the trunks of ebony trees. The turtle was greatly venerated, owing to the belief that the world rested on the back of one. Even in this practical age the products of leather, ivory, ebony and tortoise shell continue to be most highly valued; and the best of such articles for jewelers are made by

Massachusetts Court Decides That Jewelers Who Buy Old Gold Must Take Out Licenses

BOSTON, Mass., April 2.—Dealers who buy old gold and silver and have the same refined for manufacturing purposes must be licensed. This is the ruling of the full bench of the Supreme Court, handed down yesterday in the cases of Henry Cook and John Hood, local jewelers, who were convicted last October in the Superior Criminal Court of having traded in old gold without licenses. Both dealers have been in business more than a score of years.

Counsel for the defendants took exceptions to the refusal of the trial judge to make certain rulings, and these were yesterday overruled by the full bench. The defense contended that the accused did not come within the scope of the statute demanding licenses, inasmuch as they did not sell the old gold and silver, but merely bought it from dentists and others for the purpose of having it refined at the United States mint and returned to them in bars for the purpose of manufacturing jewelry; and because such transactions were only a side issue, and not the feature of their business.

The full court decides to the contrary, holding that all it was necessary for the Government to prove was that the defendants had purchased the old metal at their shops, and that such a transaction without the sale made them subject to license.

"Chapter 102, paragraph 29, of the Revised Laws," says the Court, "does not require that the keeper of a shop where old metals are brought shall both buy and sell or barter there in order to be required to have a license. Buying old metals at such a shop and sending them thence to be refined is a dealing in them there, and evidences of such transactions at a shop justifies the finding that the shopkeeper is a dealer in old metals. Evidence rejected was inadmissible."

Death of Hector Jacot.

TORONTO, Can., April 2.—Hector Jacot, an old resident of Toronto, died last Saturday, aged 92 years. He came to Canada at the close of the American Civil War from Philadelphia, where he had been engaged in the watch case business.

For a number of years after his arrival here he conducted a hotel, but about 25 years ago took charge of the affairs of the American Watch Case Co., which he conducted for some time before he retired from active business life.

Mr. Jacot was a native of Switzerland, having been born in Locle in the Canton of Berne. He leaves a widow and four daughters.

Wm. H. Ludwig is building an addition to his jewelry store in Chambersburg, Pa.

According to the official figures recently published in the Transvaal *Government Gazette*, the value of jewelry and plated ware imported into the Transvaal in 1902 was £173,000. This is more than triple the amount imported during 1901, which is given at £46,000.

Death of George E. Marshall.

CHICAGO, April 6.—George E. Marshall, who conducted an instalment jewelry business in the Columbus building in this city, died of enlargement of the heart at 9 o'clock Friday morning. Mr. Marshall was born at Adrian, Mich., 43 years ago, and came to this city about 22 years ago, entering the employ of Sproehnle & Co. as credit man. He remained in that position until 1887, in which year he started in the instalment jewelry business for himself at 114 Wabash Ave. His growing business subsequently necessitated his removal to larger quarters, which he secured in 1893 on the fourth floor of the Columbus building. The business was incorporated under the laws of this State in January, 1901.

Mr. Marshall had been in poor health for the past two years, and in January last year made a trip through the south on the advice of his physicians. His condition was not much improved on his return, however, and he gradually became worse, until a week ago, when he took to his bed.

As a result of a special meeting of the tenants of the Columbus building, held at 4 P. M. Friday, in the rooms of the Chicago Jewelers' Association, a representative body attended the funeral, which was held at 2 o'clock Sunday afternoon from the deceased's late residence, at 6600 Lafayette Ave. Mr. Marshall was very well known in trade circles, and was much liked by all who knew him. He was a member of the Chicago Athletic Association and of the Auburn Park Golf Club. He is survived by a widow and three children.

Employe of New Haven Clock Co. Charged with Stealing Clocks and Watches.

Otto Wachenhausen, who for the past three years had been employed as a packer by the New Haven Clock Co., 46 Maiden Lane, New York, was arrested at his home in Jersey City Friday, charged with the theft of a number of clocks and watches from the above mentioned concern.

Wachenhausen's arrest was caused by the statement of his son, Hans, who, in company with another boy, was caught by the police of Jersey City Friday morning trying to pawn four clocks. When locked up Hans told the police that he had obtained the clocks from his father and that his father had stolen them from the New Haven Clock Co. The boy also said that his father had been stealing clocks from that concern for some time and had been giving them to him to pawn.

John J. Phelps, manager of the New Haven Clock Co., went to Jersey City Friday and saw the boy, who made a list of the places where he said 57 clocks and watches could be recovered. He said many others were pawned that he could not trace.

When the elder Wachenhausen was arrested, it appeared that he had taken 40 clocks and 25 watches, all of which he had given to his son to pawn. He had been employed by the company three years and was apparently one of the most faithful and trustworthy men in the establishment. Frequently he would work nights and overtime and was considered very steady and reliable. "There was not one of us who would not have loaned him $50," said an employe to a CIRCULAR-WEEKLY reporter Saturday, "if he had asked for it. We had not the slightest suspicion that he could ever be dishonest."

Detectives believe that Wachenhausen has stolen more clocks from the concern than they yet know of. The company is now taking an inventory of all its goods in the New York store to ascertain exactly how many clocks and watches are missing.

Rudolph Barth Gives Bill of Sale for Creditors' Benefit.

SAN FRANCISCO, Cal., April 3.—Rudolph Barth, a retail jeweler conducting a business at 141 Post St., this city, has given a bill of sale to L. Nordman for the benefit of his creditors. No detailed statement of his affairs has yet been made public, although it is said the liabilities amount to about $20,000 and the value of the assets will probably reach $15,000.

Mr. Barth is well known to the trade in this city and his business is one of the oldest on the Coast. It was established in 1850 by Barrett & Sherwood. Mr. Barrett died a few years later and Mr. Sherwood continued alone under the old style until 1880, when he was succeeded by his nephew, W. J. Sherwood.

About six years ago Mr. Sherwood met with financial reverses and Mr. Barth, who had been in the employ of the old firm, was made assignee. Since 1898 Mr. Barth has conducted the business under his own name.

J. E. Caldwell & Co. Dissolved, and a New Partnership Is Formed.

PHILADELPHIA, PA., April 3.—The most important business change in the Philadelphia trade this year was made Wednesday. The partnership agreement between the members of the firm of James E. Caldwell & Co., 902 Chestnut St., expired by limitation and Hugh B. Houston, who had charge of the fine arts department, retired from the firm. In retiring from the firm Mr. Houston will not leave the house, but will retain the direction and management of his department and will, as usual, go abroad this year on a purchasing trip.

The new partnership comprising J. Albert Caldwell, 1531 Pine St.; Frederic Shaw, 400 W. Walnut Lane, Germantown; J. Frederick Thomas, 40 W. Walnut Lane; Edw. T. Chase, 5817 Quincy St., Germantown; Wm. R. Eisenhower, 338 W. Duval St., and James E. Caldwell, 1531 Pine St., general partners, and Joseph H. Brazier 1803 Pine St., special partner, went in effect April 1. Mr. Brazier contributes to the common stock $200,000. The partnership articles are binding until March 31, 1905.

The new members of the firm are: J. Frederick Thomas, who has been buyer and general manager for some years; Edward T. Chase, Wm. R. Eisenlower, who is in the diamond department, and James E. Caldwell, a young man who is related to the president of the firm.

Henry Rempe, a jeweler of Danville, Pa., has just invented a two-year electric clock.

Woburn Jeweler Causes Arrest of Boston Auctioneer in Dispute Over Watches.

BOSTON, Mass., April 4.—A peculiar and somewhat complicated case arose in this city Friday, when Newell D. Atwood, an auctioneer, whose business address is 28 School St., this city, was arrested on a warrant sworn to by G. Osborne Gillette, a Woburn jeweler. The arrest of Atwood came about as the result of a dispute over the ownership of certain watches which had been left at the jeweler's place of business. Atwood bought out the store of Mr. Gillette last week, and among the articles transferred in the transaction were a number of watches which Giliette claims were left by customers to be repaired. Atwood says not only that he bought the watches, but that he also put an advertisement in the Woburn papers, advising all who had left timepieces at the store to call on him for their goods.

Early Friday evening the police of this city received a request for the arrest of a man who would arrive at the North Station on the 7.30 train with a valise full of watches and jewelry. The description was very accurate and the police of Station I had no trouble in identifying the man they wanted. He was taken to Station I, where he gave his name as Newell D. Atwood, and stated that he had bought the watches and was taking them to his Boston office. He was detained until the arrival of a Woburn policeman with a warrant. When it was found, upon reading the warrant, that it called for only two watches, valued at $20, Atwood was at once released on bail.

Young Boy Robs Two Buffalo Jewelers and Escapes.

BUFFALO, N. Y., April 3.—The police of this city are endeavoring to find a small boy who it is believed robbed two and perhaps more jewelers of Buffalo in a most daring manner. Wednesday afternoon a youth of about 14 years old went to the store of C. J. Fischer, 251 Main St., and going up to a young woman clerk who was waiting on a customer told her he had a message for one of the men working in the place. He handed the clerk a piece of paper which she started to take to the workman. The minute her back was turned the boy grabbed three rings from the tray on the counter and dashed out into Main St. He was immediately pursued, but was soon lost in the crowd and escaped.

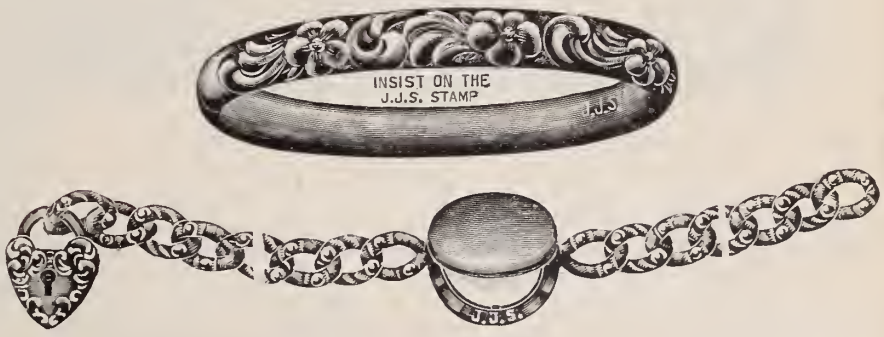
A boy of about the same age and answering the same description also called at the jewelry store of A. Schneider, 96 Seneca St., and grabbing four gold watches from a tray rushed into the street and made his escape. Both thefts were reported to the police, who made every attempt to keep the facts from the public, and have been unable to catch the thief.

Wm. Krueger, Edina, Mo., has purchased the stock of Ed. Brandon, Le Mars, Ia.

A. M. Kendall, a jeweler of Millville, N. J., recently received the last payment on a watch which had been stolen from his store 12 years ago. About a year ago the repentant thief sent two $5 notes through the mail to Mr. Kendall, and signed the communication "An Unknown Friend." With the last payment the full value of the watch has been received.

"I speak not to disprove what Brutus spoke."

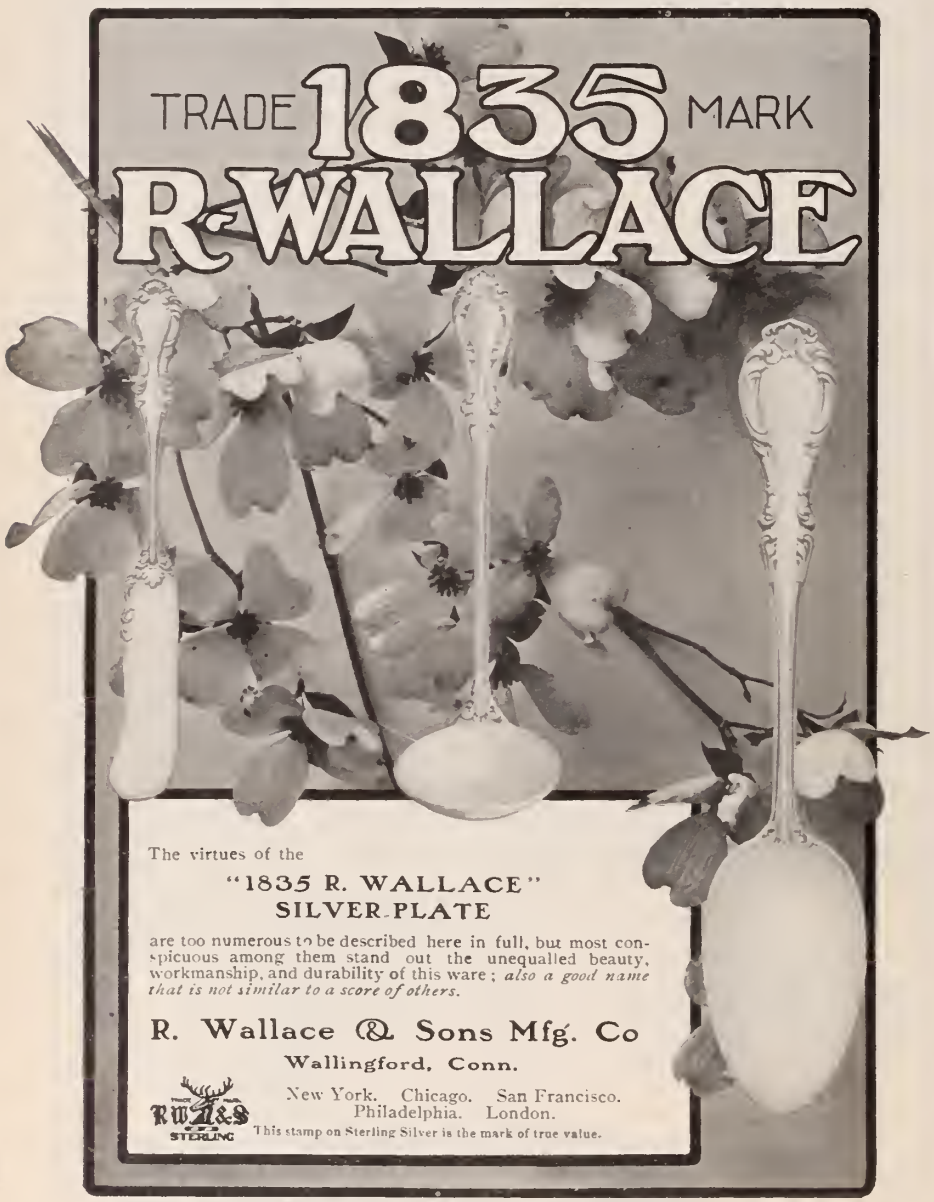
WHITE HOUSE,
Washington, Feb 28, 1902.



Gentlemen: I return herewith the chain bracelet, and regret to say that in view of the innumerable requests received for permission to name various articles after Miss Roosevelt, she has had to make it an invariable rule not to consent to the use of her name in any case.

Thanking you for your courtesy, I am,
Very truly yours,
(Signed) WM. LOEB, JR.
Assistant Secretary
to the President.

J. J. Sommer & Co.,
N. Attleboro, Mass.



Immediately after the presentation of The Kaiser's bracelet to Miss Alice Roosevelt by Prince Henry in *February, 1902,* we produced duplicates of the bracelet, the first, by many months, to appear on the market, and applied for permission to use the name "Alice Roosevelt." The above letter was in reply to our request. We would not, in deference to the President's wishes, use his daughter's name without permission.

"EHRLICH WAEHRT AM LAENGSTEN."

Our 2-Picture Locket and Secret Joint Bracelets
in Solid Gold, 1-10 Gold and Sterling Silver

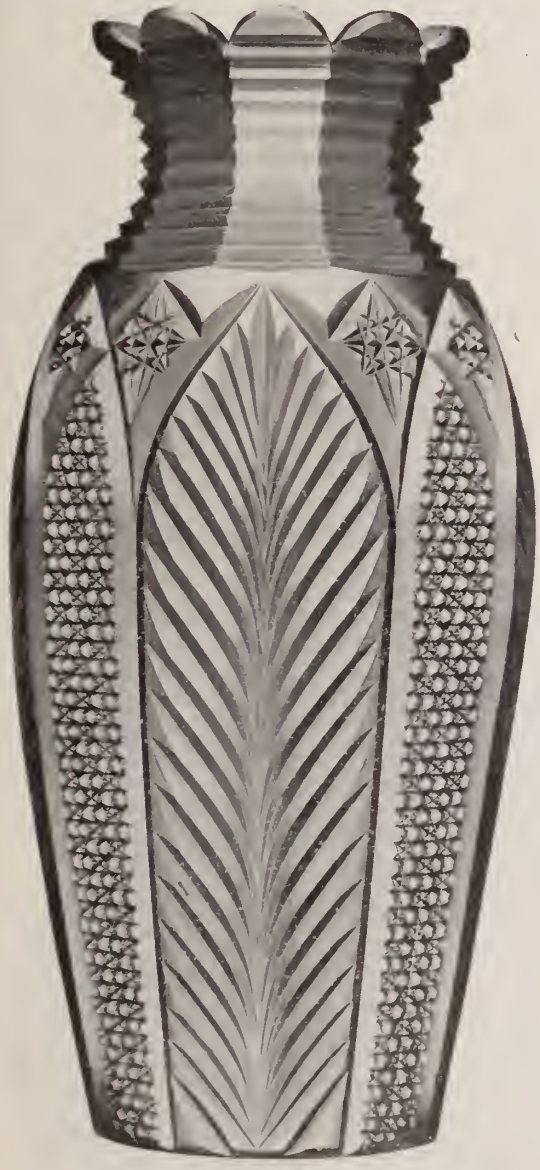
New York Police Arrest Man Believed to Be Notorious Jewelry Thief.

A man said to be Wm. Whitten, alias Whittier, alias Devlin, the notorious jewelry thief, burglar and all around crook, was arrested Wednesday afternoon in Union Square, New York, by Central Office detectives. Whitten is said to be wanted in a number of large cities for burglary and on other charges. He is believed to be the accomplice of Jas. Reilly, who was convicted last January of robbing the jewelry store of Gerome Desio, a retail jeweler at 1107 F St., Washington, D. C., in March, 1897. Recently the police department of Washington sent out 3,000 copies of circulars giving a photograph and description of Whitten, and tried to effect his capture. This photograph was reproduced in THE CIRCULAR-WEEKLY of Feb. 11, of this year, as was also the description of the crook.

Whitten is also wanted in Providence and Pittsburgh on charges of stealing trays of diamonds. He is said to be an associate of "Doc" Harris and John Ritchie, two alleged crooks. On June 14, 1898, the police say, Whitten was sentenced in Western Pennsylvania to 20 months in prison for stealing a tray of diamonds valued at $5,000, and he was also arrested in Chicago, in July, 1901, for the theft of a tray of diamonds. He is said to be wanted in Chicago, as well as Washington, Pittsburgh and Providence. Pending the decision of the Court as to which one of these cities the prisoner will ultimately be sent, he is held by the police of New York.

According to Inspector McCluskey, the prisoner was recently married, and it is because of this marriage that his capture was effected. He was sitting on a bench in the park, waiting to keep an appointment with his wife, when the two detectives saw him and recognized him.



PROVIDENCE, R. I., April 7.—Deputy Sheriff Andrew J. Wilcox, connected with the Attorney General's office, left this city Monday for New York to bring back William White, alias Devlin, who is held by the police of New York. White will be brought to this city to answer to two indictments. One charges that on Aug. 5 of last year he stole a gold watch case valued at $31 from the Albert Walker Co., the other that he unlawfully took from the Tilden, Thurber Co., on the same day, bronzes to the value of $148.50.

White was indicted, committed to jail in default of a bondsman, but afterward secured bail and was released. As soon as he was out of Cranston he proceeded to put miles between himself and Rhode Island. On Oct. 15 last his bail was defaulted.

It was learned that he was in New York, where he was recently arrested just as he was about to sail for Europe, and efforts were immediately made to bring him back to Providence.

Claude Sanborn and Charles Saulsgiver, who recently looted the store of Mrs. Hickok, Rew City, Pa., of jewelry, cutlery, etc., were arrested near Bradford, Pa., last week. The stolen property was recovered. Both men have confessed.

Rich Cut Glass, Sterling Silver and Silver Plate

No. 364—"PALM" VASE.

IN all these lines our Warerooms contain an almost endless variety of patterns and values. The out-of-town dealer will do well to call, upon his arrival in this city, and inspect what we have in the lines covered. Make your headquarters with us, whether you purchase largely or not —that is your privilege and our wish—and we offer you the freedom of our establishment.

Philadelphia.

Abe Sickles sailed yesterday for Europe on the *Kaiser Wilhelm der Grosse.*

A. Larieks, Vineland, N. J., has returned from an extended western pleasure trip.

Morris Pfaelzer, who intended sailing for Naples this week, has postponed his trip.

S. R. Kamp, 631 Chestnut St., returned last week from a trip to the Pacific Coast.

Abel Matthews, watchmaker for C. R. Smith & Son, is reported to be critically ill.

J. J Zimmern, of M. Sickles & Sons, left Sunday for a trip to St. Louis, Mo., and the south.

E. Cann has accepted a position as watchmaker with F. L. Kirkpatrick, 275 S. 11th St.

F. B. Wallen, of L. C. Reisner & Co., will spend his Easter holidays at the old homestead at Bridgeton, N. J.

Wm. Moore, watchmaker, at Wanamaker's, who has been seriously ill with typhoid fever, is now convalescent.

Thomas J. Maddock, southern representative of Simons, Bro. & Co., returned last week for the Easter holidays.

Wm. Scherr, watchmaker for A. Brousal, 2d St., near Spruce St., is reported to be critically ill at his home, 3d and Brown Sts.

J. E. Caldwell & Co. have been awarded the contract for the silver prize cups for the dog show of the Atlantic City Kennel Club.

C. F. Smith, of Vineland, N. J., accompanied by his wife, made a visit to this city last week, combining business and pleasure.

Wm. Ulrich, who has had charge of the jewelry repair desk of Strawbridge & Clothier's store for some years, has resigned his position.

Walter M. Hammerly, who has been in the jewelry business in this city for some years, has abandoned the trade to enter the cigar business.

Frank Latta, watchmaker, has resigned his position with O. F. O'Neill, 2454 Kensington Ave., and has gone to Uticaville, O., where he will locate.

Among other rural retailers who visited the jobbers were: J. J. Minster, Elkton, Md.; Harold N. Fitch, Salisbury, Md.; A. C. Brown, Delmar, Del.; W. W. Fisher, Sunbury, Pa.; J. J. Farley, Chester, Pa., and J Pilz, Egg Harbor, N. J.

Westcott Bailey, of Westcott Bailey & Co., 1020 Chestnut St., as a member of the Fairmount Park Art Association was a guest last week at a dinner given by Charles J. Cohen. The guest of honor was Herbert Adams, sculptor, of New York.

J. J. Zimmern, of M. Sickles & Sons, who returned last week from a southern and western trip, had a thrilling experience during the Mississippi floods, when, on leaving Memphis, the train was submerged by the rising waters and the passengers were rescued with difficulty.

The Philadelphia Jewelry Mfg. Co., which has an establishment at 36th and Market Sts., was closed all of last week and creditors of the firm were unable to find either the president, John Rosengarten, or the secretary, Mr. Wilson. During the week two suits were entered against the concern, one by Gustav A. Bisler, in Court No. 2, and the other by the Waterbury Brass Co., in Court No. 3. Both suits were on contracts.

Charged with having robbed the Bailey, Banks & Biddle Co. of hundreds of dollars in cash, stamps and street car tickets, A. Johnson, Jr., for many years night watchman of the big salesroom at 12th and Chestnut Sts., was arrested last week and held by Magistrate Moore in $800 bail for court. He confessed and some of the stolen goods have been recovered. Joseph T. Bailey, president of the company, says an example will be made of Johnson. Mr. Bailey says that several times before when the firm has been robbed the culprit was pardoned and the offense overlooked, but this time philanthropic thoughts will be cast aside and the prisoner will receive the full penalty.

Syracuse.

Fred. F. Mead is in New York buying goods for the new jewelry store which he will open May 1.

There was an especially attractive exhibit of jewelry at the Arts and Crafts' Exhibition held last week in Syracuse. There were a number of beautiful brooches, pendants, etc., designed and made by F. Walter Lawrence, among them a collarette valued at $1,500. There was also a fine display of hand-made silverware.

The case of Arthur Felson, of Gouverneur, has been again adjourned by consent of the interested parties until April 18.

C. E. Harter, of Fayetteville, has purchased J. Foley's interest in the firm of T. H. Meek & Co., gold and silver platers, Warren St.

Old English Flat Chased Hollow Ware is a successful feature with us. Full line shown in our stock.

We are showing many new and popular priced goods for the Spring Trade. See our new Black Coffee Sets, and note the weight and prices.

All Jobbers or Jewelers' Circular Pub. Co.

Pittsburgh.

O. C. Siedle, of R. Siedle & Sons, 254 Fifth Ave., accompanied by his wife, is spending the week in Philadelphia and New York.

C. C. Marsh, of Marsh & Brown, Bijou building, is at Sistersville, W. Va., where he was summoned on account of the serious illness of his sister.

Adolph Weiss, formerly watchmaker for M. Levant at 1420 Fifth Ave., died Monday evening in the West Penn Hospital of typhoid fever. He was 27 years old and was unmarried.

P. A. Ward, who for several years has been employed by Henry Terheyden, 530 Smithfield St., has accepted a position with L. W. Vilsack & Co., and will be with the latter firm after May 1.

Thomas Munn, father of Alexander D. Munn, 4409 Butler St., a jeweler, died last week after a lingering illness. Mr. Munn was one of the well-known residents of the Lawrenceville district and came to this city about 1845.

The California Clay Mfg. Co., of Charleroi, near here, has been granted a charter by the State Department of West Virginia. The company is capitalized at $100,000 and will operate potteries in this territory. The incorporators are J. K. Tener, C. S. McClosky, C. F. Thomas, J. W. Cornell, F. C. McClosky, all of Charleroi.

George M. Reed, a pioneer jeweler of Pittsburgh, lies seriously ill at the home of his son, J. A. Reed, of 1806 Bedford Ave. Mr. Reed is 75 years old and has spent 54 years in this city. In 1849 he entered into partnership with his brother, James R., and since that time the firm of James R. Reed & Co. has been one of the foremost in the city.

William Whitten, whom the New York police have arrested as a noted diamond crook from Pittsburgh, is not known to the police department of this city. Whitten is said to be wanted for many large diamond robberies in this neighborhood and for one in Pittsburgh, but the records at the Central police station show no account of his operations here.

The firm of Wm. E. Stieren Co., dealers in optical goods, 544 Smithfield St., has been dissolved by mutual consent. The firm was composed of Wm. M. Stieren and F. G. Stieren, and had been doing business in Smithfield St. and at 406-408 Sixth Ave., for many years. W. M. Stieren will continue the optical, photographical, meteorological, electrical and lantern department at 544 Smithfield St., while F. G. Stieren will continue the art pyrography, mathematical and mine supply departments under the name of the Wm. E. Stieren Co., at 543 Smithfield St., directly opposite the present location.

TRADE W&H CO MARK

ESTABLISHED 1856.

PROVIDENCE, R. I.

Miss Cora Barrett, who have been spending several weeks in Jaimaica and other southern points, returned to Pittsburgh Thursday.

George Dunbar, representing Geo. B. Barrett & Co., is in Ohio this week.

J. R. Brown, of Marsh & Brown, changed his residence April 1, from Bellevue to Avalon.

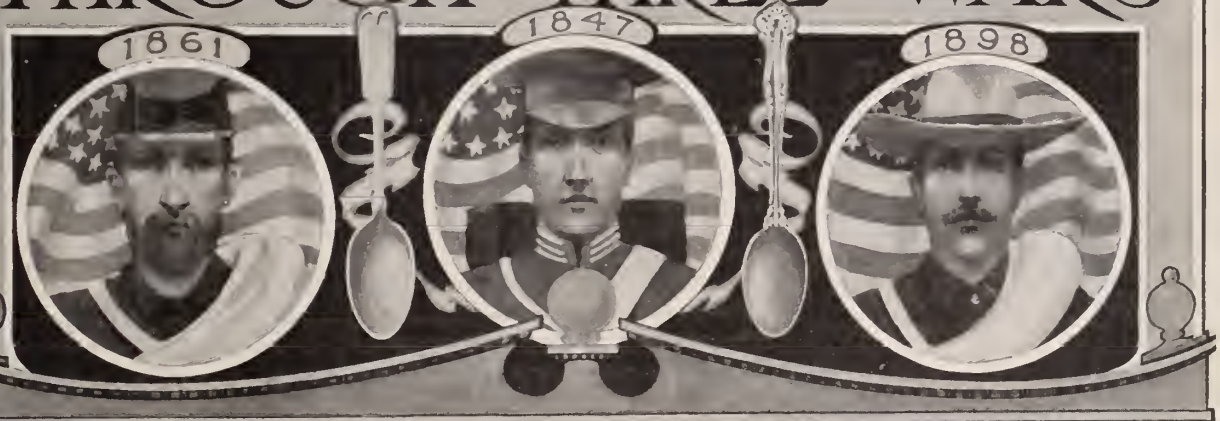
Retail jewelers who called on Pittsburgh wholesale houses during the week were: A. M. Helms, Steubenville, O.; Mrs. R. Furtwangler, Greensburg, Pa., and Messrs. Worrell and Murphy, Canonsburg.

Workmen started this week to remodel the room in the Griswold building which is to be occupied by B. E. Arons as soon as it is completed. The room is just near Mr. Arons's present store in Smithfield St., and it will be ready for occupancy about the middle of the month.

Durbin & Fuhr, who were located at 523 Penn Ave., from the time they started in business, have moved into their new establishment adjoining Graf & Niemann's, on 6th St. The entire store is being changed and a new front put in.

F. W. Buckingham, 30 years old, of Chicago, was taken to St. John's Hospital, Allegheny, last week, suffering from the effects of morphine, taken supposedly with suicidal intent. Buckingham is said to have formerly conducted a jewelry establishment in Chicago and had been in Allegheny two months.

While workmen were engaged in tearing down a building in the rear of the store of I. E. Isaacs, at 404 Smithfield St., Thursday, a large piece of tin roofing fell and crashed through the skylight in the rear portion of the jewelry store. The accident caused little damage beyond the breaking of the glass, but it might have been attended by serious results, as the heavy metal struck just above the bookkeeper's desk. Fortunately the bookkeeper was not in the building at the time.



Mr. Stanley, of Stanley & Stanley, Ponca, Okla., has bought out E. S. Gregory, Gallatin, Mo.

A. H. Rogers, formerly in business in Cleveland, O., for about 40 years, has removed to Pasadena, Cal.

THIS WEEK—16,000 JEWELERS

WHO ARE NOT SUPPLIED WITH "1847 ROGERS BROS." GOODS DIRECT FROM FACTORY WILL RECEIVE ONE OF THESE CARDS, PRINTED IN TWO COLORS:—

THROUGH THREE WARS

All these years ROGERS BROS. SPOONS & FORKS have been famous. First made in a small way during the year "1847" by the original Rogers Bros., this business has grown to be the largest of its kind in the world, employing many hundred people and with sales amounting to several hundred thousand dozen yearly. As many cheap imitations are now made, buyers should be careful and examine each piece for the complete trade-mark of the genuine

"1847 ROGERS BROS."

This brand has been made for over half a century, in fact, "Through Three Wars." Leading dealers sell it. If you are not familiar with these goods, write your jobber. Made only by the successors to Rogers Bros.

CHAS. L. TROUT & CO.,

6 AND 7 MAIDEN LANE, NEW YORK.

Boston.

Mr. Miller, of the Pennsylvania Optical Co., Reading, Pa., spent a few days in town last week.

Mr. Orr, of the Dupaul Young Optical Co., Southbridge, was in Boston during the past week.

M. Myers made a flying business trip through the western part of the State during the past week.

Mr. Gray, of the Standard Optical Co., Geneva, N. Y., called on members of the trade in this city last week.

Seth E. Thomas, Jr., of the Seth Thomas Clock Co., Thomaston, Conn., visited Boston this week on a pleasure trip.

W. T. Almy, New Bedford, has returned from a pleasure trip through the south and called on his friends in the Boston trade last week.

William Fenton, Boston representative of the Wm. L. Gilbert Clock Co., who has been confined to his home in Wollaston for some time on account of a serious illness, is reported as slowly improving.

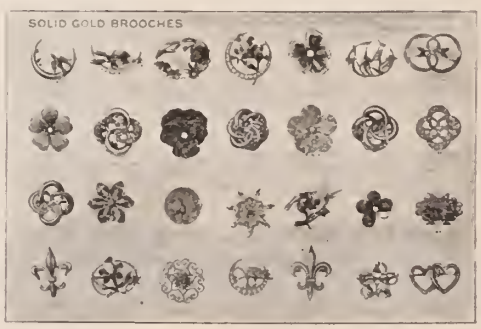
F. L. Parkhurst, of Everett, who has been in the employ of the Yale Lock Co. for some time past, has severed his connection with that firm, and is contemplating starting in business as a jeweler and optician.

The disappearance of three traveling clocks from the counters of the firm of Bigelow, Kennard & Co., 511 Washington St., has been reported to the police, who are now working hard to apprehend the thieves.

The E. Howard Clock Co. recently installed for Chase & Sanborn, one of the largest tea houses in the city, a complete watchman clock system, and for the First Ward National Bank this company has put in one of its special design marble clocks. Contracts have been closed for a quarter-striking tower clock for the new Eclipse Mill of the Arnold Print Works, North Adams, and for a master clock and secondary system for the new Solomon Sanatorium at Attleboro.

Chester B. Pratt, salesman for Daniel Pratt's Son, returned with his bride from a wedding trip this week. Mr. Pratt was married two weeks ago to Miss Bertha Ramsdell, of West Newton, who was formerly bookkeeper for the firm which Mr. Pratt represents. The couple have taken up their residence at West Newton.

A new jewelry firm has been started in Lynn, to be known under the firm name of Stern & Millett. The store was formerly owned by H. F. Palmer, who has recently sold out to the above named gentlemen. Mr. Stern was formerly in the employ of George H. Elson, 9 Park St., and Mr. Millett was with E. B. Horn Co., 429 Washington St., this city.



The treasurer's building of the American Waltham Watch Co. at Waltham, which has been remodeled, will soon be ready for occupancy again. On the ground floor will be the paymaster's office and counting room, both of which were formerly on the second floor, and the packing office and vault. On the second floor will be the directors' room, President Fitch's office and the office of D. H. Church, mechanical superintendent. Everything in connection with the interior is finely finished in hard wood, the metal fixtures being of polished bronze. An open fireplace in each room adds much to the beauty of the elegantly appointed apartments, and the building and furnishings are perfect in every detail.

Among the buyers in town this week were: B. B. Perkins, of B. B. Perkins & Co., St. Albans, Vt.; Harry Foye, of George O. Foye & Son, Athol, Mass.; W. F. Newhall, Lynn, Mass.; N. C. Squire, Lynn, Mass.; R. A. Lohnes, Worcester, Mass.; Fred Gray, of the Grant Jewelry Co., Lowell, Mass.; Elmer G. Tucker, Worcester,

Superlative.

There are certain people of commendable modesty who think that superlative claims should never be made about one's own accomplishments, that if such superlative qualities are possessed the world will find it out for itself. These are the people whom one might call modest, who count it beyond the bounds of necessity to say "They are silver plated on brass" or that gold is only ten karat, or that goods with almost imperceptible imperfections are seconds. They also think it proper to allow the trade to make the discovery for itself. On the other hand we believe that information is better than mock modesty, and whatever quality is possessed by the merchandise should be stated plainly. . . . . .

If goods are the "Best ever made" the trade wants to know it upon the authority of a reliable house. The right to the use of the superlative exists most largely, of course, with the firm that is most able to achieve superlative accomplishments. . . . . .

S. Sternau & Co. are an old established firm of vast prestige, who are always aiming at the new and original and all their goods are guaranteed. . The new goods for 1903 are the most acceptable we have ever presented to the trade. Some say "More beautiful than ever." But that is said each season, and truly when we cease to make it so we will not be S. Sternau & Co. . . . . .

S. Sternau & Co.,

PHILADELPHIA
WATCH CASE CO.
RIVERSIDE, N. J.

Mass.; Mr. Bruce, of Bruce & Chapin, Worcester, Mass.; J. R. Connell, Portsmouth, N. H.; H. L. Meyers, Lynn, Mass.; C. A. Thomas, Lynn, Mass.; J. H. Connor, Lynn, Mass.; W. J. Larcher, Webster, Mass.; Calvin Gay, Worcester, Mass.; L. P. Davis, Falmouth, Mass.; George H. Herrick, Attleboro, Mass.; W. R. Hurlbutt, South Framingham, Mass.

The committee on the Robbins memorial from the factory of the American Waltham Watch Co., of which the late Royal E. Robbins was for nearly half a century treasurer, recently met Henry H. Kitson, the artist, at the new Royal E. Robbins school house, and decided that a medallion is most suitable. It will be circular, of bronze, bearing the portrait of the late Mr. Robbins. It will be 18 inches in diameter, within a square frame, and will be placed in the corridor on the first floor in a position to be readily seen by one entering the building.

Baltimore.

S. Seff has opened his new store at 108 N. Eutaw St., and will conduct this in addition to his old stand at 413 E. Baltimore St.

Six boys were arrested last week for breaking show windows and stealing their contents. The Torsch & Minds Badge Co.'s case was broken into and several badges were stolen.

Jacobi & Jenkins are using instead of the regular show window display, neatly covered tables, on which are shown silverware, cut glass, etc., which are proving to be very attractive.

Lawrence Hennighausen, formerly in the employ of F. Hahn, 35 S. Calvert St., was found dead on the floor of his bedroom at his residence, 808 Edmondson Ave., Friday morning, from the effects of illuminating gas. Mr. Hennighausen was 41 years of age and is survived by three children.

The order for the handsome silver golf trophy to be given to the Suburban Club by Samuel Rosenthal, Jr., was awarded to Simon Janowitz & Son. The cup will be 15 inches high, of oblong shape, 7 inches in diameter, at the top, will have three handles, and will have the French gray finish with a gold lining.

Many thefts have been traced to Charles Gripp, the United States Express employe, whose arrest was noted in last week's issue of the CIRCULAR-WEEKLY. Besides many pieces of jewelry already identified there still remain unclaimed a gentleman's set ring, valued at $25; a gentleman's stick pin, valued at $5; lady's breastpin, valued at $15; and a gentleman's gold watch, valued at $75.

The arguments in the demurrer to the indictment in the removed arson case of Frederick Hooker and Howard J. Fehl from Frederick County were concluded last week at Ellicott City, where the case will be tried. There were eight counts in the indictment, four of which were quashed and four sustained. If an appeal is not taken the case will come up for trial next week. Dr. P. M. Price, the State Fire Marshal, will attend the trial.

The suit of Henry Kirk, president of the Samuel Kirk & Son Co., to redeem the ground rent of the property at 108 E. Baltimore St., which adjoins the company's property, was decided in Mr. Kirk's favor last week by Judge Sharp in the Circuit Court. The property was bought by Mr. Kirk for $65,000 and it was provided in making the sale that $50,000 of the purchase money should be used in redeeming the ground rent. The redemption was resisted on the ground that the rent was irredeemable.

Two alleged "pennyweighters" were arrested here last week for stealing a diamond screw stud valued at $12 from Wm. J. Miller, 28 E. Baltimore St., They gave as their names Charles, alias "Kid" McNally, of this city, and William Brown, alias James Hallen, of St. Louis. They were seen acting suspiciously on Baltimore St. by two detectives who traced them to Miller's jewelry store and their arrest followed their exit. A quantity of other small pieces of jewelry was found on them, and they will be held for a further hearing.

An echo of the long drawn out litigation between Townsend, Grace & Co. and Jacob Epstein came up before the Board of Estimates last week, when Mr. Epstein filed an application for a superstructure over Garrett Alley to adjoin his other property. A former application was made by Mr. Epstein and rejected, as the Court of Appeals had decided against him in the long suit referred to, but this application calls for a foot bridge and it was forwarded to the Council with a favorable report. It is thought the protestants will again take the matter into the courts.

Providence.

The first dividend from the Gladding & Coombs Bros.' estate has been declared by Chester W. Barrows, Referee in Bankruptcy. It amounts to 7 per cent.

Until further notice the factory of the Ostby & Barton Co. will run on a short time schedule, closing down at 5 o'clock P. M. through the week and at noon Saturdays.

The contract for supplying the Fitzgerald building with automatic sprinklers has been awarded and this needed improvement will be appreciated at its full value by the tenants of the building.

Henry Waterman, one of the oldest business men of Woonsocket, died at his home in that city recently. For years he kept a jewelry and watch repairing store in that city. He was 86 years of age.

By a decree entered in the United States Court, Monday, the McWilliams Mfg. Co. was adjudged bankrupt by Judge Brown and the case referred to the Referee in Bankruptcy. The liabilities of the concern are $10,618.07, and the assets, consisting for the most part of machinery and stock, are valued at $6,000.

Thos. W. Lind won a suit for $5,000 damages brought against him by George Strasnich in the Common Pleas Division of the Supreme Court and which was tried last week. The plaintiff claimed that while he was at work on a drop press the plunger fell, crushing his left hand. He claimed that the machine was defective, but the defendant asserted that a test of the machine demonstrated that it was in good working order.

Suit was entered Monday in the Common Pleas Division of the Supreme Court against the S. & B. Lederer Co., for $10,000 damages. The plaintiff is Nellie Dugan, and she claims that one day last January as she was operating a drop press the drop fell, catching the plaintiff's fingers. The plaintiff claims to have suffered a severe nervous shock, as well as more material injuries. She claims that the machine was defective in some respect.

Samuel G. Hirsfield, who was indicted by the Grand Jury on a charge of stealing rings, scarfpins, etc., from Edwin Brown, a manufacturing jeweler, the entire property being valued at $80, pleaded *nolo* when arraigned in the Common Pleas Division of the Supreme Court last week and was given over to the care of the probation officer. This was the young man's first offense, and Mr. Brown, who lost the property, sent a letter to the Court, in which he said that he would not be displeased to see the young man placed on probation. This course was therefore taken.

Alexander B. Gladding, one of the oldest watchmakers in this city, died at the State Hospital in Cranston last week. He had been suffering from Bright's disease for some time and two weeks before his death it was deemed advisable to remove him to the State Hospital. He had been engaged in business here for nearly 40 years. He came to Providence when a young man and established a business on Westminster St. A few years ago he removed his business to Federal St. He was prominent in the Knights of Pythias and was also a member of the Odd Fellows. He leaves a widow and one son.

The far-reaching effects of a strike were never made more apparent than at present during the strike of the coal team drivers. It would scarcely be thought that such a labor disturbance would have any effect upon the jewelry business, but that it has has been only too apparent during the past week. Friday, the Lederer building, on Stewart St., owing to the fact that its supply of coal was exhausted, had to close down and upward of 1,000 hands employed in the several shops in the big structure had to quit work. The stringency has been relieved now and the strike seems to be on the road to settlement.

The funeral of Joseph F. Blood, of Flint, Blood & Co., was held Wednesday from his late residence, 600 Broad St. The house was filled to overflowing with the friends and business acquaintances of the deceased, who took this opportunity to show their esteem for one whom they had learned to respect for his many sterling qualities. The services were very brief and simple, being those of the Episcopal Church. Dr. Samuel H. Webb, rector of Christ Church, officiated. The floral tributes were exceedingly numerous. There were pieces from private friends as well as a huge set piece from the firm with which Mr. Blood was associated. There were no honorary pall bearers or music. Interment was at Swan Point Cemetery.

J. E. Knocke, for 10 years with the Clemens Oskamp Co., Cincinnati, O., has been admitted as a partner with Victor Bogaert, a manufacturing jeweler and importer, 57 E. Main St., Lexington, Ky., and Brussels, Belgium. Mr. Bogaert's business will be continued without change under his own name as before. Mr. Knocke will conduct the Lexington store, while Mr. Bogaert will attend to the business of his commission house in Brussels. Mr. Bogaert sails for Europe Saturday.

Result of Recent Investigations

Statistics show us that there are a few men left in this country who are not wearing an Elgin Pride one quarter gold 14 Karat Watch Case. Further investigation brings to light the fact that each and every one of these men is looking for, and ready to wear, just such a case as the Elgin Pride—it's up to the enterprising retailer to display a line of the Elgin Pride Cases.

News Gleanings.

M. Beskow, Detroit, Tex., has sold out.

H. F. Hart has succeeded A. Ross at Webster, S. D.

L. Egholm, Greeley, Col., has given a bill of sale for $200.

G. H. Casavaw & Co., Sac City, Ia., have sold their entire stock to Goodell & Scott.

M. F. Dowling has succeeded to the business of Carl E. Stokoe, Middleville, Mich.

W. M. Miller, formerly in business in Greer Depot, S. C., is now located at Amestown, Ala.

It is reported that E. E. Wilcox, Griswold, Ia., will shortly engage in business at Red Oak, Ia.

H. A. Hamilton, St. Joseph, Mich., has purchased the entire stock of William E. Kennedy, Benton Harbor, Mich.

Among the new bills which are occupying the attention of the Nebraska Senate is one to establish a standard system of time.

E. E. Mack, Logan, Ia., has disposed of his jewelry business, and after a short vacation intends to branch out as an evangelist.

W. J. Lorack, manager of the New England Jewelry Co., Iowa City, Ia., will be a candidate for Alderman at the Spring election.

Robert H. Gorrie, Newburgh, N. Y., has added a small mahogany wall case to his store equipment in which to exhibit gilt clocks.

E. K. Hall, Walden, N. Y., who has been conducting a 20 per cent. reduction sale previous to his removal to Gouverneur, N. Y., this week began an auction sale to close out the balance of his stock. Mr. Hall will be succeeded by G. H. Wood, who is now disposing of his stock at Athens, N. Y.

Jas. F. Crist, Newburgh, N. Y. Saturday completed the sale of his stock at auction and will retire from the jewelry business.

Otto J. Pettinger, formerly with A. D. Norton, Gloversville, N. Y., is now optician and watchmaker for Louis Kades, Newburgh, N. Y.

The attorneys for Alfred C. Dorner, Helena, Mont., announce that Mr. Dorner's stock and fixtures will be sold at auction about April 18.

W. F. Czeskleba, Mankato, Kan., has sold his business to Mr. Bonney, who has moved the stock to Ionia, Kan., where he will continue business.

The business of the late Judson W. Turrell, Longmont, Col., is now conducted as the J. W. Turrell Pharmacy by Mr. Turrell's widow and son.

The store of Shapiro & Poser, Grampian, Pa., was entered last week by thieves who made their escape with $300 worth of jewelry and clothing.

E. H. Hufnagel, Mt. Vernon, N. Y., is advertising a reduction sale of his stock preparatory to enlarging and otherwise improving his store.

J. W. Mussina has purchased an interest in the business of S. Mussina & Co., Williamsport, Pa., and will be general manager of the new company.

Arlington M. Ambler, Middletown, N. Y., has received an appointment as watch and clock inspector for the New York Division of the Erie Railroad.

A large shipment of diamonds recently imported from Amsterdam by D. P. Paul, Norfolk, Va., is said to be the first direct importation of gems which passed through the Norfolk custom house.

Sherman W. Moody, for many years in business in Battle Creek, Mich., has removed to Grand Junction, Col., where he will continue business.

J. Harvel & Son, Litchfield, Ill., have moved their stock from W. Ryder St. into more commodious quarters in the Levy building on N. State St.

J. R. Cameron, Carbondale, Pa., is obliged to vacate his present quarters on Salem Ave. owing to a lease taken on the premises by the Casey & Kelly Bank.

The general store of T. D. McIlveen, Fairfield, Tex., which carried a large stock of jewelry, was recently damaged by fire to the extent of about $1,000.

Dell Owen, who recently sold his jewelry stock and building at Walnut Grove, Minn., left last week for Minneapolis, where he expects to remain permanently.

Charles D. Stewart was arrested in La Crosse, Wis., a short time ago for selling "phony" jewelry and sentenced to 10 days' imprisonment in the County Jail.

Members of the Retail Merchants' Protective Association of Mt. Carmel, Pa., have decided to close their stores at 6 P. M. on and after May 1, except on pay nights.

Wm. Hellfach, La Crosse, Wis., has moved his stock into more commodious quarters at 322 Main St. W. A. Edward, optician, will have space in the new quarters.

Preston McNeer was arrested a short time ago, charged with embezzlement by the Calhoun Jewelry Co., Birmingham, Ala. The article embezzled was a chatelaine watch valued at $10.

All the New York Central conductors and engineers have been ordered to have their watches inspected. Among the watch inspectors designated by the company are: W. B. Wilcox, Utica; Jules Wendell & Co., Ogdensburg; Silas L. George, Watertown; T. B. Gasser, Carthage; A. C. Healy & Co., Norwood, and Ernest E. Muller, Malone.

The store of Geo. L. McCloskey, Renovo, Pa., was entered one night last week by thieves, who escaped with $30 worth of stock. The police are confident that Harry "Williams," who was shot at Lock Haven by Officer Brendel shortly after the burglary, is one of the men who entered the store

James Renshler, alias James Oakley, alias Roy Joy, was arrested in Cleveland, O., last week, charged with larceny by the Drinkwater Jewelry Co., Toledo, O. It is alleged that Renshler purchased a ring valued at $100 on the instalment plan and, after making a deposit of $5, disappeared.

David Frankfort, a jeweler of Duluth, Minn., was arrested a short time ago on a warrant issued by Anton Anderson, who charged him with swindling. Anderson alleges that he visited the jeweler's store to purchase a watch chain. The jeweler, he says, inspected his watch and attached it to the chain. Anderson says when he left the store he discovered that he had a watch which was worth much less than his own.

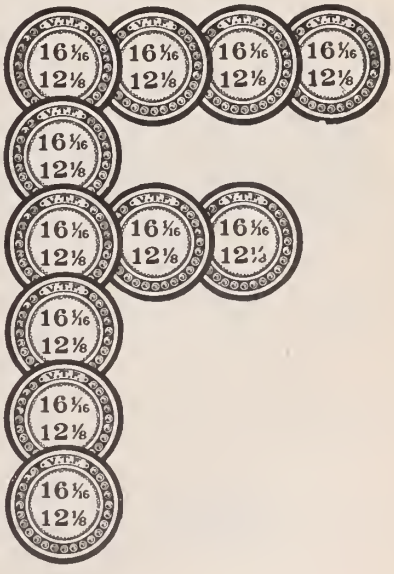
The E. Howard Watch Co.
has ready for delivery

A New Model 16-Size Bridge Movement,

fitting regular model cases. This movement is designed for the very best trade and represents the highest attainment in watch making. Open face and hunting.

Description and full particulars on request.

Hayden W. Wheeler & Co.,
2 Maiden Lane, New York.
[Telephone, 8 Cortlandt.]



THE BEST IS ALWAYS THE CHEAPEST; THIS applies to Watch Glasses as well as to anything.

The best Watch Glasses are those that are carefully made, from the proper stock, properly labeled and correctly gauged.

The CHEAPEST Watch Glasses are those which require the least time to fit, and in which there is the least percentage of breakage.

The **V. T. F.** Glasses combine all of these cardinal qualities and BEAR THIS LABEL: Insist upon getting the **V. T. F.** and take no other.

REVERSE.

N. B. — See that each Geneva Glass is wrapped separately in tissue paper, and this paper stamped with the size of the glass, and **V. T. F.**

SPECIAL CREDIT REPORTING

JEWELERS' CREDIT REGISTER.

Special Investigation of Mercantile Credits.

CURTAIL YOUR LOSSES.

Special Reporting. Co.,
INCORPORATED.
80 William St., New York.

TO THE JEWELRY TRADE:

This Company makes a specialty of reporting JEWELRY CREDITS for the TRADE. We are in touch with all CREDIT CENTRES of the trade and furnish prompt reports, Special, Ordinary and Extraordinary.

The Jewelry Trade is the universal target of the "FAKE CREDIT TRADER", and you need special reporting to be safe. Our experts are trained to do this work and know When, Where, How and Whom to see. You may be using other agencies, but as we specialize for the Jewelry Trade throughout the country, you cannot well afford to be without our service.

You should have precise and accurate facts and confirmations. We can give you confidential information which you can hardly hope to secure otherwise.

These Special Reports are now being adopted by the best firms in the country. We believe you also need them and will find them of special value. They are intended to cover any special phase of your business and are strictly confidential. We make reasonable charges for this work, according to the time and expense involved.

For our Ordinary Special Mercantile Reports we charge our subscribers an annual membership fee of $25.00, entitling them to 25 of such reports. Additional reports, $1.00 each.

We believe we can save you thousands of dollars through the special information which we secure through our daily work in the jewelry trade.

Respectfully,

SPECIAL REPORTING CO.

Creditors of Hyman Davis to Start Criminal Proceedings Against Him.

A meeting of the creditors of Hyman Davis, formerly a retail jeweler at 90 Ludlow St., New York, who disappeared last week, taking with him his entire stock of goods, was held Wednesday in the office of Durlach Bros., 14 Maiden Lane, New York. At the meeting a committee was appointed to hunt up Davis and have him arrested. Accordingly this committee engaged the services of ex-Assistant District Attorney Osborne, who had been successful in causing the arrest and conviction of a merchant whose dealings had been somewhat similar to Davis's, to have Davis brought here from Colorado, where it is thought that he has gone.

Davis owes about $9,000 to $10,000 and the only assets he left behind was a safe and show case. His disappearance was entirely unlooked for, as he had borne a good reputation and was known to own real estate. On investigation, the creditors found that this real estate had been sold and that they have nothing whatever to levy upon. Davis bought a very large amount of goods about March 1, and it is these recent sales for which he owes. He was a consumptive, and it is thought that his sudden going away was in some manner due to this disease.

Death of Samuel Chapin.

ONEIDA, N. Y., April 6.—Samuel Chapin, of S. Chapin & Son, 66 Main St., died here last night, aged 96 years. Mr. Chapin married Miss Fannie Sage, a sister of Russell Sage, who survives her husband. Twelve children were born, of whom three daughters and seven sons are living.

Mr. Chapin, who was a member of the First Baptist Church, began life as a wagon maker. He was ingenious and became expert at repairing watches and clocks and finally branched out into the jewelry business.

Trans-Atlantic Voyagers.

TO EUROPE.

Victor Bogaert, Lexington, Ky., and Brussels, Belgium, will sail April 11.

John Kay, of Wright, Kay & Co., Detroit, will sail April 18 on the *Minnehaha*.

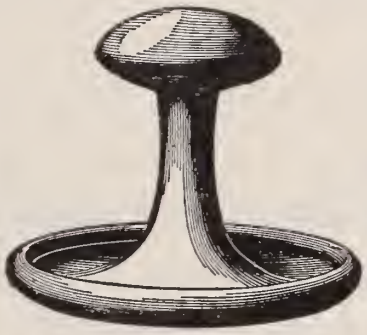
Otto Heeren, of Heeren Bros. & Co., Pittsburgh, sailed Saturday on the *Trave*.

I. Michelson, of I. Michelson & Co., New York, will sail April 18 on *Kronprinz Wilhelm*.

Fred. G. Gruen, of D. Gruen, Sons & Co., New York, will sail to-morrow on the *Deutschland*.

Simon Frankel, of Jos. Frankel's Sons, New York, will sail April 18 on the *Kronprinz Wilhelm*.

W. W. Hayden, of the Wm. W. Hayden Co., Newark, N. J., accompanied by his wife, will sail June 9 on the *Moltke*.



Chas. Rathgen, of Ferd. Bing & Co.'s Successors, New York; E. M. Gottle, of Gattle, Ettinger & Hammel, New York, accompanied by his wife, and Abraham Sickles, of M. Sickles & Sons, Philadelphia, accompanied by his wife and family, sailed Tuesday on the *Kaiser Wilhelm der Grosse*.

FROM EUROPE.

Henry Untermeyer, of the Untermeyer-Robbins Co., New York, arrived Wednesday on the *Kaiser Wilhelm der Grosse*.

The Giant of Collar Buttons

IN QUALITY,
IN SALES.

One Million Five Hundred Thousand Krementz One-Piece Collar Buttons made and sold within the last year. . . . . .

WHY? Because of their HIGHEST QUALITY, BEST CONSTRUCTION, GIVING THE MOST WEAR, AND GREATEST COMFORT and their IRON-CLAD GUARANTEE.

To verify this we invite the trade to read **"The Story of a Collar Button, with Illustrations,"** which may be had **FREE** for the asking, and to try the experiment suggested on page 5 of that booklet.

Extract from "Printers' Ink," Nov. 23, 1898.

The Little Schoolmaster now suggests, to every pupil in his class, to send a two-cent stamp to Krementz & Co., 49 Chestnut Street, Newark, N. J., and ask to be favored with a copy of their leaflet, "The Story of a Collar Button." Afterward, if any pupil will send to *Printers' Ink* another leaflet, new or old, that is half as good as this one, or that approaches it in excellence, the deserving student will be rewarded with one of *Printers' Ink's* souvenir spoons as an acknowledgment of his discovery and contribution. "The Story of a Collar Button" is the best piece of advertisement construction that has come to *Printers' Ink's* attention in the yeat of our Lord 1898.

Should you wish to utilize this booklet to increase your collar button business, we will, on receipt of your order, print your card upon and send you a quantity of them.

Krementz One-Piece Collar Buttons are stamped as follows, ON BACKS:

Patent sustained by United States Supreme Court.

Quality and Construction have made our reputation.

All Krementz Collar Buttons are Manufactured by

KREMENTZ & CO.,

in their Factory,

49 Chestnut Street,

NEWARK, N. J.

Pettec, Waterbury Clock Co.

KLENZENE removes and prevents tarnish on Jewelry and Silverware of all kinds.

Price, 2 oz. Bottle, 35 Cents.

Write for Sample

What Is More Convincing Than The Proof?

Free Sample upon Request

Price, 3 oz. Bottle, 25 Cents.

A TRIAL WITH FAVORENE and you will never go back to the old way of soldering with Borax, Anti-Oxidizer, Pickle, etc. With Favorene you can flow 14 K. solder on 6 or 8 K. goods without the use of Borax and without danger of melting the goods.

Favorene was patented October 28, 1902, and is superior to all other hard-soldering solutions now on the market.

Favorene is guaranteed to please absolutely or money refunded, on hard-soldering of Gold, Silver, Filled, Alumnico, Brass and Nickel.

Parts to be soldered need not be cleaned or filed.

Obtained through any jobber.

KLENZENE WILL REACH the hope of your expectation with amazing results.

You simply apply the solution and the tarnish disappears almost instantly and without the slightest injury either to the article or the hands; requires no rubbing, no brushing.

Klenzene leaves your work bright and clean; no dust, no powder left in the engraved parts or chasing, no rubbing or brushing necessary, consequently no scratches left on the polished articles, as you have by the use of paste or powder.

A trial with Klenzene and you will never do without it; saves time and trouble and does the work as you want it.

Any jobber can supply you.

To prevent Jewelry and Silverware from tarnishing full directions accompany each bottle.

BEWARE of imitations and infringements.

KLENZENE

is patented and the only solution of the kind now on the market whereby the chemical action dissolves the tarnish like magic, and without the slightest injury to the article. Contains no acid.

THE JOBBING TRADE SUPPLIED THROUGH

Precious Stone Importations for March.

THE precious stones and pearls imported into the port of New York for the month just passed exceeded in value the importations of any March on record, being nearly $1,000,000 in excess of the importations of March, last year, and about $600,000 more than during March, 1901, which was the banner March in the records of the Appraisers' Stores. According to Gen. Geo. W. Mindil, the jewelry examiner at the port of New York, the value of the precious stones and pearls imported last month was $2,871,645.40, of which $2,022,804.43 were cut, and $848,840.97 were uncut. A comparison of the importations of precious stones for March during the past six years is interesting. The figures are:

Year.	Cut.	Uncut.	Total.
1903.....	$2,022,804.43	$848,840.97	$2,871,645.40
1902.....	1,386,647.04	507,724.43	1,894,371.47
1901.....	1,410,770.20	817,768.32	2,228,538.52
1900.....	720,408.40	60,601.80	781,010.20
1899.....	1,195,397.45	516,513.67	1,711,911.12
1898.....	481,107.76	293,808.35	774,916.11

To Fight Increase in Canadian Jewelry Tariff.

THE Tariff Committee of the Attleboros, which prides itself on being the framer of the jewelry schedule in the Dingley Tariff Bill, and as the David which slew the French Reciprocity Treaty Goliath, is again in the field, girt for strife. Its members have decided to apply the homely proverb that an ounce of prevention is worth a pound of cure, and in a few days they will take a hand in the present campaign waged in Canada over the tariff.

To-day American-made jewelry is admitted to Canada on payment of a tariff duty to 33 1-3 per cent., but there is a campaign now going on in the Dominion in favor of raising the tariff duty on all imported articles of manufacture. Minister Tarte of the Cabinet of Sir Wilfrid Laurier has resigned that post with the frankly avowed intention of stumping the country in favor of such a sweeping protectionist movement. He believes that Canada should build her tariff levee against American products in due time to avoid an inundation that might seriously disturb her markets, bring disaster to her manufacturers, and lead to ill feeling between the two nations.

President Bigney of the Tariff Committee of the Attleboros sees in the campaign for raising the duty on jewelry a blow aimed at Attleboro's Canadian market, and one which if successful would destroy that market for years. Accordingly he stated publicly last week that he intended to fight the proposed movement by sending information to Canada and conducting there a campaign of education against Mr. Tarte. The Attleboro Republican Club, which originated the Tariff Committee, has invited him to make a speech, outlining the entire situation from every standpoint, and he has accepted the invitation, and will probably speak there Friday evening.

Bankruptcy Petition Filed Against the Spencer Optical Mfg. Co.

The jewelry and optical trades were surprised last week to learn that the Spencer Optical Mfg. Co. of New York and the Spencer Optical Mfg. Co. of Newark, N. J., were in financial difficulties. Though practically one concern, these two companies are technically separate corporations, the former having been incorporated under the laws of New York and the latter incorporated under the laws of New Jersey, each with $100,000 capital. The officers and stockholders of both these companies were the same men, being James E. Spencer, president; John S. Spencer, secretary and treasurer, and John W. Vreeland, director.

An involuntary petition in bankruptcy was filed in the United States District Court of New York Friday against the New York corporation, and an assignment of the assets of the New Jersey corporation was made to John Elliott Spencer Saturday. It was the New York corporation that failed, but the assignment of assets of the New Jersey corporation was made in order to avoid preferences of creditors and legal trouble in settling up the estates. The affairs of both companies, being conducted by the same men, are so complicated that this action was necessary.

Though the New York corporation was intended to be the selling agent of the New Jersey corporation and the latter corporation was to be the manufacturing plant, it transpired at the meeting of the creditors of both companies, held in the office of Geo. Carlton Comstock, attorney for the petitioning creditors, 68 William St., New York, Monday, that the New York concern was in reality no more an agent for the New Jersey concern than the latter was for the former. It developed that those who sent goods to the New Jersey company often received payment from the New York offices.

The petition against the New York corporation was filed by Jas. E. Spencer, the president, Richard W. Ryer and Norburne B. Jenkins, two salesmen, on claims for back salary and commission. Mr. Spencer stated in his affidavit that the company owed him $807 for his services as president and that it was unable to pay him. He resigned his position as president March 31. He declared that the company was insolvent.

At the meeting of the creditors held Monday it was shown that the liabilities of the New York company were about $68,000 and that the assets were about $105,000. The assets of the New Jersey corporation are estimated at about $184,000, consisting of real estate, $33,000; machinery, $93,000, and goods in process of manufacture, $58,000, while the liabilities are about $58,000. The assets of the two companies combined are estimated at about $289,000, and the liabilities at about $126,000.

Hiram A. Bliss, president of the Jewelers Association and Board of Trade of New York, was appointed receiver of the stock by the United States District Court under a bond of $25,000. Leo Wormser, of the Julius King Optical Co., and Henry Lorsch, of Sussfeld, Lorsch & Co., have been appointed appraisers of the stock, under the supervision of Mr. Bliss. A committee composed of D. L. Safford, secretary of the Jewelers Association and Board of Trade; Mr. Fink, of the Bausch & Lomb Optical Co., of Rochester, N. Y., and Frank Richardson, president of the Nassau Bank, were appointed to advise Mr. Bliss.

The only secured claim against the New Jersey corporation is that held by the Chatham National Bank of New York. The claim is for $36,000, and is secured by a chattel mortgage on the machinery of the manufacturing plant and a second mortgage on the real estate. The only secured claim on the New York assets amounts to about $4,000.

The time for the next meeting of the creditors has not yet been decided.

The Spencer Optical Mfg. Co. is one of the oldest optical manufacturing concerns in the United States. It was incorporated in 1871, but for years before that time the business was known as Jas. E. Spencer & Co. and had its factory at Newcastle, near Mt. Kisco, N. Y. In 1888 the factory was moved to Newark, N. J., where a large building on the corner of Cottage Place and Railroad Ave. had been purchased. The New Jersey concern was incorporated in 1896.

Among the creditors for amounts ranging upward of $100 are the following:

Aikin, Lambert & Co., $301; Bausch & Lomb Optical Co., $401; Bivere Bros., $407; Bay State Optical Co., $163; Bliss & Co., $177; Dutchen, Sperglas & Freda (Germany), $1,108; Duncan & Co., $118; Dederick & Co., $166; Geneva Optical Co., $489; Jeandhere Bros., $180; *Keystone*, $208; Chas. Keller & Co., $116; Julius King Optical Co., $487; Miller, Tompkins Co., $155; Martin, Copeland & Co., $3,534; Paul Bros., $583; Riverside Metal Co., $1,056; Wm. Smith & Co., $954; Stevens, Leithoff & Kenyon, $120; Geo. Scaracool, $115; W. H Wintergirst (Paris), $204; George Weyhanch, $137; H. M. Williams & Co., $2,515; H. A. Kirby Co., $381; H. H. & F. S Benson, $1,692; Sussfeld, Lorsch & Co., $452; Roe & Pencver, $178.

J. D. Russell, has succeeded to the business of Russell & Davis, Canon City, Col.

F. W. Passmore has sold his stock of jewelry, etc., in Steamboat Rock, Ia., to Hartman & Doud.

Last Week's New York Arrivals.

THE CIRCULAR-WEEKLY each day posts in its office a bulletin of the latest buyers visiting New York, which every member of the trade is ordially invited to copy.

For the sum of $10, (payable in advance, a daily list will be mailed or delivered, during the Spring season (ending July 1, 1903, to the offices of those desiring this service.

DIAMONDS!

CROSS & BEGUELIN

Importers and Cutters of Diamonds and Precious Stones

8 Rue de Meslay, PARIS *Telephone, 2188 Cortlandt* *17 Maiden Lane, NEW YORK*

New Stores and Enterprises.

(New Optical concerns will be found in the Optical Department and new enterprises in New York will be found under heading "New York Notes.")

G. Palmer has commenced business at Palmer, Ia.

Thos. Kenyon has established himself in business in Milton, Ill.

W. S. Helm and J. Jacobs have opened a new store in Kennewick, Wash.

C. R. Summer has opened a jewelry store at 380 Richmond St., London, Ont.

C. Mybers, formerly of Elgin, Ill., has started a jewelry business at Andover, S. D.

Snow & Wood is the firm style of a new jewelry business recently begun in Los Angeles, Cal.

Conn and Friedberg are about to open a jewelry and clothing store in Chambersburg, Pa.

James Ronayne, formerly with James C. Morris, Calmar, Ia., has opened a new store in Ossian, Ia.

Lester F. Lawrence has leased a store room in Galesburg, Ill., where he will start a jewelry business about May 1.

Ed. Evatt, formerly with Thomas Lundy, San Francisco, Cal., is fitting up a retail store at 76 Geary St., in that city.

R. A. Dillingham and Oscar Tripp have formed a partnership at Aberdeen, S. D., to deal in jewelry and typewriters.

The Equitable Savings Investment Co. has been incorporated at Washington, D. C., to buy and sell diamonds, the incorporators being R. W. Newmann, E. P. White and A. H. Fiegenbaum.

The Welsh & Bro. Co. has been incorporated in Baltimore, Md., to conduct a jewelry business. The capital stock is $100,000, and the incorporators are Frank E. Welsh, Thomas Welsh, Henry B. Coulson and George W. Richards.

The Albert T. Lemkuhl Co. was incorporated last Wednesday under the laws of the State of New Jersey, with a capital of $25,000. The object of the company is to manufacture watches and jewelry, and the incorporators are: Louis B. Dailey, Joseph M. Mitchell, K. K. McLaren, Warren Aplers and H. H. Coughlan. The company's main office will be in Jersey City, N. J.

Among the corporations which recently filed certificates at the office of the Secretary of State in Maine is the H. M. Hill Co., organized at Kittery, Me. The company intends to deal in jewelry and optical goods, and the capital stock is $10,000, of which nothing is paid in. The par value of the stock is $25. The promoters are Herbert M. Hill, Abbie A. Hill, Lynn, Mass.; James Redmond, Springfield, Mass. The officers of the company, as given in the certificate of incorporation, are: President, Herbert M. Hill; treasurer, Abbie A. Hill.

Anton Daniels, Dallas, Tex., has been sued for a debt of $27.

Geo. T. Sterling, for several years a traveling representative of the Crown Silver Co., died last week at his residence, 169 College St., Toronto, Ont., aged 60 years.

New York Notes.

Chas. L. Trout & Co. will remove from 5 Maiden Lane to 15 Maiden Lane about April 15.

Julius Wodiska, manufacturer of diamond mountings, now at 52 Maiden Lane, will remove about May 1 to 40 John St.

Andrew Mander, Jr., has gone into business for himself as a gold and silver electro-plater, fire gilder and colorer at 36 John St., room 10.

E. Markens, with I. Ollendorff, will cover the territory in Ohio, Indiana and Kentucky lately covered by Roman Warshawski, who died last week.

Lawrence L. Moore, of Lawrence L. Moore & Co., 705 2d St., Seattle, Wash., was in New York a few days last week on his way to Europe.

Among the creditors of Dr. W. H. H. Kane, who filed a voluntary petition in bankruptcy Wednesday, are Ludwig Nissen & Co., for $1,500.

Geo. A. Carpenter, the Boston representative of the Crescent Watch Case Co., was in New York a few days last week visiting friends and calling on the trade.

H. A. Groen & Bro., diamond importers and cutters, will move about May 1 from 37 Maiden Lane to 61 Beekman St., where their office and cutting works will be combined.

H. C. Van Ness, manufacturers' agent, San Francisco, Cal., was in New York last week visiting friends and calling on the trade. He was stopping at the Hoffman House.

Through a typographical error last week, it was stated that Oppenheimer Bros. & Veith were creditors of William L. Pollock, the bankrupt, to the extent of $4,520. This amount should have read $400.

The African Diamond Co., Buffalo, N. Y., was incorporated Wednesday at Albany with a capital of $50,000. The directors are Elmer E. Kirkland, Binghamton; J. H. Miller, Buffalo, and C. E. Alvord, Detroit.

Fred. G. Gruen, of D. Gruen, Sons & Co., 65 Nassau St., New York, and Cincinnati, O., will sail to-morrow for Dresden, Germany, on the *Deutschland*. Mr. Gruen will visit Switzerland and other countries of Europe.

E. A. Phelps, of Phelps & Adams, San Francisco, Cal., the western representatives of the Gorham Mfg. Co., is in New York for a few days' visit, calling on his friends in the trade. Mr. Phelps is staying at the Holland House.

Geo. D. Lunt, manager of the Chicago branch of the Towle Mfg. Co., has come east to take charge of the company's New York office at 41 Union Square. The Chicago branch hereafter will be in charge of Ernest M. Lunt, brother of Geo. D. Lunt.

Chas. Seigman, connected with the Maiden Lane store of the Gorham Mfg. Co., returned Thursday from a week's vacation in Washington and Virginia, where he had been visiting the home of Washington and other places of historical interest and Revolutionary fame.

Rosenzweig Bros. will move May 1 from 48 Maiden Lane to 51 Maiden Lane, where they have secured better and larger quarters. In their new quarters they will largely extend their business, will import diamonds, precious stones and pearls and will deal more extensively in imported watches.

Frank E. McCullin, the eastern traveling representative of Wm. A. Rogers, Ltd., is at present confined in the Skene Sanitarium, Brooklyn, recovering from a delicate operation performed by Dr. B. B. Mosher. He is gaining steadily and expects to start on the road again in perfect health about April 15.

Thos. A. Hyland, who does business under the style of the World Watch Co., has started in business at 16 E. 125th St. He will sell jewelry on the weekly instalment plan. Mr. Hyland was for several years with the Globe Watch Co., 65 Nassau St., having charge of the Harlem branch of that concern at 16 E. 125th St.

I. C. Nicholson has been admitted into the firm of the Excelsior Mfg. Co., manufacturing jewelers, Providence, R. I., whose New York office is at 19 Maiden Lane. Mr. Nicholson needs no introduction to the trade in New York, having formerly represented Flint, Blood & Co., manufacturing jewelers of Providence, in New York and vicinity.

The Seth Thomas Clock Co. shipped two large tower clocks last week; one which had an eight-foot dial and a 3,000-pound bell was for the Court House at Marietta, O., and the other, which had a 10½-foot dial, was for the Southern Passenger Station at Knoxville, Tenn. A large clock with an eight-foot dial will be shipped some time during the coming week to the Municipal building at Winnipeg, Can.

A. H. Atwood, who was formerly connected with the Gorham Mfg. Co., will hereafter represent in the east and south Schickerling Bros. & Co., importers and manufacturers of jewelry at 28 E. 22d St. H. E. Reich will travel in the Central States for the concern and Theodore M. Schroeder will handle the trade in Chicago, west to the Pacific Coast. Conrad Schickerling will be the New York salesman for the concern.

P. Osterberg, head of the watch and clock repairing department of R., L. & M. Friedlander, 30 Maiden Lane, received a peculiar injury last week, which will cause his absence from business for a month or six weeks. Mr. Osterberg was repairing a French clock at his home in Brooklyn when a spring which he had in his hand suddenly uncoiled and one of the sharp ends cut open an artery in his wrist. He was in great danger of bleeding to death and was very weak from loss of blood when an ambulance surgeon arrived from the Brooklyn Hospital, where he was subsequently taken and the wound dressed. The accident is such that the doctor forbade him to do any work for several weeks, as he might break open the healing artery.

J. M. Strass & Co., 22 E. 21st St., were visited last week by a man who represented himself to be a dealer in sporting supplies with a store at 997 Washington St., Boston, and said that the Strass concern had been recommended to him by a well-known uptown jewelry firm as making a line of jewelry he could profitably handle. He spent four hours with Mr. Strass and took lunch with him. Finally, while looking over the samples and giving his order, he rose suddenly, saying he had to send a telegram and rushed to the elevator, taking with him a diamond ring and several scarf pins, valued in all at about $400. The thief is described as a man about 30 years of age, 5 ft. 8 inches high, smooth face and dark complexion. He was well dressed.

The argument on the injunction in the suit brought before Vice-Chancellor Stevens in the New Jersey Court of Chancery, at Jersey City, N. J., March 23, by Michael P. O'Connor, of New York, and Wm. H. Watrous, Hartford, Conn., to restrain the so-called "voting trust" of the International Silver Co. from voting on the pooled stock, has been postponed until Monday, April 20.

The fine collection of rare books owned by Daniel F. Appleton, of Robbins & Appleton and the American Waltham Watch Co., will be sold at auction in New York this week. The collection is notable specially for a great number of first editions of the Bible printed in the English language. It contains also a large number of first editions of English and American authors, many of which are pronounced very rare. The catalogue of the sale contains 424 numbers and embraces everything, from the Bible in the varying styles of literature, from poetry to prose. Mr. Appleton, when seen

Fine Glassware for the Table.

Plain, Engraved, Etched, Cut, and Rock Crystal Decorations.

C. DORFLINGER & SONS, 36 Murray Street, New York.

by a CIRCULAR-WEEKLY reporter Monday, stated that there was no particular reason for the sale of his books, except that he had had them long enough and now wanted to let someone else enjoy the pleasure of owning them.

James Rainess, retail jeweler and dealer in optical goods, has removed from 1566 Second Ave. to 744 Third Ave.

August Oppenheimer, of Oppenheimer Bros. & Veith, received a slight accident to his knee, Sunday, while out horseback riding. Mr. Oppenheimer will be able to retu business in a day or so.

A gold cross was found on Maiden Lane Monday by M. Laubheim, of Laubheim Bros., and is now held by Laubheim Bros., at 65 Nassau St., until the owner calls and proves his title to the piece.

Hauserman & Co., retail jewelers at 85 Van Houten St., Paterson, have leased a large new store in the Nathan building, at 214 Main St., and expect to be installed in their new quarters and ready for business by April 10. Mr. Hauserman has purchased an entirely new stock for his new stand.

Tiffany & Co., on behalf of one of their customers, whose name is not disclosed, are offering a reward of $1,000 for the return of a pearl necklace which was lost about April 2 while the owner was on a shopping tour somewhere between Park Ave., 35th and E. 28th Sts. The string contained 57 fine pearls.

It is said that Charles M. Schwab, president of the United States Steel Corporation, while on his trip abroad recently purchased five Swiss watches, costing $1,000 each, which he will present to the five superintendents of the corporation's manufacturing plants who get the most and best work out of the great army of laborers under them.

Benjamin Olbricht, a retail jeweler at 730 Broadway, Brooklyn, has taken the adjoining store, at 732 Broadway, and will unite the two places and make extensive improvements in the window space and in the interior. The addition of this store and the improvements, which are expected to be completed by May 15, will give Mr. Olbricht one of the handsomest stores in that section of Brooklyn.

F. Kronenberger, retail jeweler at 608 E. 138th St., has sold out his business to Julius Lobel, who was formerly his watchmaker, and has retired because of ill health. Mr. Lobel was originally employed by Anton Novotny, 106 Greenwich St., who for several years past has been a watchmaker for Mr. Kronenberger. Mr. Kronenberger had been in business upwards of 25 years, having succeeded J. Scherboam.

Louis Untermeyer, of the Untermeyer-Robbins Co., manufacturing jewelers, 192 Broadway, who was exploited in the newspapers last week as the instigator of a prize fight in his home at 62 E. 95th St., Friday night, denies that such a prize fight occurred. Mr. Untermeyer admits putting on the gloves with a friend for a friendly bout, but says there was no ring or referee and that the reports in their details are entirely erroneous.

Geo. Landon, an optician and dealer in photographic supplies at 451 Grand St., filed a voluntary petition in bankruptcy in the United States District Court in this city Saturday. No reason was given for the failure. His liabilities are estimated at $4,421 and his assets at $704, $284 of which is in stock and $240 in debts due on open accounts. Among the creditors with sums ranging above $100 are Gianni Bettini, $411; Lambert & Co., $650; Isaac Goldberg, $200; Abraham Berinskow, $375; Simon O. Pollock, $200; Morris D. Rapple, $125; Perlman & Rosansky, $200.

S. F. Myers, of the S. F. Myers Co., with his son Jerome for companion, is spending a few weeks in Florida, not only on a vacation but looking after his important interests in that State. He owns a very productive orange grove on the Indian river, and is also interested in some improvements along the east coast below Jacksonville, where he owns some three miles of shore land. This land is being developed into what is expected to be one of the choicest resorts along the Atlantic coast, elaborate plans for its improvement having been completed and contracts for carrying out the same involving the expenditure of over $1,000,000 having been closed.

Louis Berney, a dealer in diamonds at 51 Maiden Lane, was arrested Saturday in a civil suit brought by Leopold Spitzel & Bros., 51 Maiden Lane, for failure to account for $3,000 worth of diamonds which they claimed he had obtained on memorandum and had not returned or paid for. Mr. Berney was locked up in the Ludlow St. Jail, but was subsequently admitted to bail of $3,000, which was furnished by Martin Engel. Berney is said to be in financial difficulties, and a meeting of his creditors was held in the offices of Myers, Goldsmith & Bronner several days ago, at which he offered to pay 10 cents on the dollar. This offer was refused, and another one of 20 per cent. made, which was also refused. Berney then declared that he would file a petition in bankruptcy, but he has not yet done so.

On page 23 of this issue J. J. Sommer & Co., of North Attleboro, Mass., illustrate a bracelet fashioned after the one presented to Miss Roosevelt by Prince Henry. The firm also reproduces a letter from the President which will interest many jewelers.

Chicago Notes.

TRADE CONDITIONS.

During the early part of March the wholesale trade in this city was rather irregular, chiefly on account of the slow retail trade in the country, the latter being due to the weather conditions, as excessive rains were prevalent in most sections. With the advent of April, however, a more uniform activity is reported by the wholesalers, and general conditions throughout the country indicate an excellent business for the season. Reports from all sections state that Winter wheat is in a very promising condition generally. The crop has wintered well and is now making vigorous growth in all sections. Grain men who have visited the wheat belt of Kansas and Oklahoma agree that the present condition of the plant and the thoroughly soaked earth portend the greatest wheat crop ever grown in the west. The seeding of Spring oats has begun as far north as Michigan. Very little corn has been planted north of the Gulf States, and while the bulk of the crop is planted in Florida and planting is general in Texas, it has been delayed by excessive moisture, and as a rule confined to the uplands. Considering all these remarkable conditions of prosperity it is difficult to imagine anything but a most prosperous season.

M. Lippet, of M. Lippet & Co., left Sunday for a six weeks' western trip.

K. H. Clarke, with the Towle Mfg. Co., left yesterday for a western trip.

Ed Fry, with the Stein & Ellbogen Co., leaves this week for a northern trip.

C. H. Knights, accompanied by his wife, returned last week from a trip through the south.

Mr. Burke, of the Brooks Optical Co., St. Louis, Mo., recently spent several days in this city.

Mrs. N. Selkirk, wife of A. T. Selkirk, Charlotte, Mich., was in Chicago on a buying trip last week.

C. M. Smith, Cheyenne, Wyo., visited this market last week on a buying trip while en route to New York.

John M. Cutter, of the Trenton Watch Co., looked up his old friends in this city during the past week.

J. M. Porter has moved from 52 State St. to 57 Washington St., where he has much larger and better quarters.

M. McLernon, son of Simon McLernon, a jeweler at Gisborn, New Zealand, called on the local trade last week.

W. M. Davidson, with J. W. Forsinger, has returned from a two weeks' visit to the New York office of the concern.

Mr. Arnold, of Oberreich & Arnold, La Porte, Ind., was in this city looking over the various lines last week.

William Hellberg, Marshalltown, Ia., has refitted his store with new fixtures, and it is now one of the finest establishments in the State.

J. K. Caldwell, representing factory "L" of the International Silver Co., left Friday for a visit to the various factories of the company in the east.

R. H. Stevenson, manager of the western office of E. G. Webster & Son, returned last week from a visit to the factory of the company in Brooklyn, New York.

The transfer of the property on Hoyne Ave. 100 feet north of 92d St., W. F. 50x187, from M. A. Mead to Carl C. Fries, in consideration of $1,000, was filed for record April 10.

J. F. Kappelman & Co. have moved their factory and office from the eighth floor of the Silversmiths' building to the 15th floor of the Champlain building, where they have secured much larger quarters.

R. W. Barlow, with C. H. Knights & Co., leaves this week for the southwest. Charles Gustofsen, with the same firm, was recalled from his territory last week on account of the serious illness of his mother.

F. W. Van Bergh, of the Van Bergh Silver Plate Co., spent a few days of the past week at the local office of the company. P. M. Vermaas, local manager for this company, returned last week from a western trip.

Frank Sproehnle, of Sproehnle & Co., is expected to return this week from an eastern business and pleasure trip. Edw. Calliger, with this concern, left Sunday for his territory. George C. Faling, bookkeeper for Sproehnle & Co., has resigned his position.

Otis F. Hall, manager for the Murine Eye Remedy Co., who has been ill for the past two months, has sufficiently recovered to take a trip through California for his health. Mr. Hall left last Wednesday, accompanied by his son, Frank, and will be away about six weeks.

J. W. Stoneburner, western representative of the J. G. Fuller Co., is spending a short vacation at his old home in Edinburg, Va. Mr. Stoneburner will go direct from Edinburg to the factory of the company at Providence, R. I., and will return to this city about May 1.

W. S. Sparrow, western manager for Stern Bros. & Co., who recently left this city for the New York office of the concern, stopped off at Albany to visit his sister for a few days, and while there was taken so ill as to delay his arrival in New York. "Ed" Bently, of the local office of this firm, has been on the sick list for the past week.

The property on Paulina St. 92 feet north of Montrose Boulevard, E. F. 75x165 feet, with an incumbrance of $21,000, was transferred from Samuel N. Crowen to Albert E. Ziehme, in consideration of $40,000, Feb. 23. On the same day A. E. Ziehme transferred to Samuel N. Crowen, in consideration of $8,500, the property on Winchester Ave., E. F. 92x152½. The transfers were filed for record April 1.

Among those buyers in town the past week not elsewhere mentioned were: N. Jacobs, Ironwood, Mich.; E. G. Keller, Victor, Ia.; A. Tennysen, Manhattan, Ill.; S. Sox, Ottumwa, Ia.; George W. Flanders, Three Rivers, Mich.; A. Bielenberg, Keystone, Ia.; J. W. Atwell, Steamboat Springs, Col.; Chas. Veuve, Peotone, Ill.; T. E. Davidson, Three Oaks, Mich.; A. R. Chamberlain, Aurora, Ill.; C. P. Giddings, Sterling, Ill.

A. C. Becken moved his business last week from the third floor of the Columbus building to the 11th floor of the Powers building, Wabash Ave. and Monroe St. The new quarters contain about 7,000 square feet and is completely surrounded by window space, making the store one of the best lighted in the city. The office occupies a large portion of the Monroe St. frontage. New and handsome fixtures have been installed, and, as the space is several times as large as the former store, the handling of Mr. Becken's rapidly growing business will be greatly facilitated.

Walter Sheen, a former bellboy at the Palmer House, who, according to the police, is a burglar, was arrested a few weeks ago and charged with robbing the home of J. H. Showalter, of this city. Among the articles stolen was a pigeon blood opal ring, surrounded by a cluster of 13 diamonds. Recently the ring was found in the shop window of Samuel Rosenberg, a jeweler at 211 Blue Island Ave. The jeweler was tried last week and held for the Grand Jury on a charge of receiving stolen goods. The police searched Rosenberg's store and they alleged that they discovered the plunder of several robberies.

W. T. Woodruff, of the Seth Thomas Clock Co., Thomaston, Conn., and his daughter, Mrs. Williams, recently stopped over in this city for a day while en route home from a California pleasure trip. W. J. Miller, western manager for the Seth

Thomas Clock Co., made a brief trip last week to Cincinnati, O., and St. Louis, Mo.

H. E. Barkman, traveling from the factory of Simons, Bro. & Co., spent a few days of the past week at the local office of the company.

The local office of the Seth Thomas Clock Co. has closed a contract to ship one of the largest tower clocks with a 2,000-pound bell to Sparta, Greece.

"Charlie" Garlick, western representative for Charles F. Wood & Co., returns this week from the New York office of the firm, where he has been rearranging his line.

Louis Bash & Co. have been incorporated with a capital of $15,000 to manufacture and deal in jewelry. The incorporators are John Stirlin, F. L. Brooks and Martha L. Hughes.

A fire which broke out Saturday evening at 75-77 W. Monroe St. did damage to the premises of the Chicago Case Co., manufacturers of cases for jewelry and glass eyes, which occupied the seventh floor.

Montana.

G. Charteris has opened a watch repairing business at 119 Central Ave., Great Falls.

The schedules of B. M. Francis, a jeweler of Missoula, now in bankruptcy, which were filed in United States Court recently, show liabilities of $2,829.25 and assets of $1,765. The petition has been referred to Referee in Bankruptcy Thompson Campbell, of Missoula.

A company which proposes to do some gem mining in this State has just filed its articles of incorporation in the office of the Secretary of State. The company is known as the Tanner Gold and Gem Mining Co. and is incorporated under the laws of Arizona. Its principal places of business are Phoenix, Ariz., and Red Bluff, Mont. The stock is valued at $150,000. The company began active operations at Pony Creek last week.

Detroit.

John Kay, of Wright, Kay & Co., has arranged to sail for Europe on his annual buying trip, April 18. Mr. Kay will be absent until about the middle of August and will visit France, England, Germany and Italy.

The case against Fred J. Fox, charged with the larceny by conversion of $300 worth of diamonds from Horace W. Steere, has been dropped, and Fox has been released on his personal recognizance. He is again employed by his uncle, Charles Rice, a jeweler of this city.

The sale of the $20,000 worth of diamonds taken from Louis Busch, convicted as a smuggler in 1899, will be held May 14. Prospective buyers will be given an opportunity to examine them before the sale, in the office of United States Marshal Bates in the Federal building. They will be sold in one or three lots. It is expected that a number of eastern dealers in diamonds will be present at the sale.

Thieves last week entered the establishment of Norris C. Feltz, Elkhart, Ind., and made off with jewelry valued at $318. This is the third robbery which has occurred in the store in eight months.

PRECIOUS AND IMITATION STONES.

No More Guessing No Figuring to Do.

Use the

MOE Diamond Weight Gauge and Calculator

to determine the weight of stones while in the mounting. The gauge measures the diameter and depth, and by referring those two measurements to the book of tables that accompanies each gauge, the correct weight is shown. The book has 26 tables, showing weight of 1,700 diamonds from ¼ to 7⅝ carats inclusive. By its use you avoid chipping stones through removal from settings to weigh and save trouble and expense.

Gauge and book sent to any address: prepaid $5.00. *Send for descriptive booklet and testimonials.*

The R. J. Hillinger & Co. Silk Guards.

Kansas City.

C. E. Russell is out of town for a few days.

Harry Guenther has given a real estate transfer deed for $300.

Mrs. Snow, cashier for J. R. Mercer, has gone to Excelsior Springs for a week.

Harry B. Carswell has donated a clock for the clubrooms of the Musicians' Union, of which he is a member.

D. P. Ingram, with the C. B. Norton Jewelry Co., is in from his trip and is preparing for another tour through Oklahoma and Kansas.

Two boys recently broke the plate glass window in the store of Louis U. Jeanneret and stole jewelry valued at about $50. They were captured and placed under arrest.

A local jeweler last week received from Amsterdam $10,000 worth of diamonds, the largest single importation which has passed through the Custom House in a long time.

Peter Anderson, Abilene, Kan., who made a fortune mining in the Klondike, has left for Brazil, to invest with a mining syndicate in diamond mines in the interior of that country.

Mrs. Nugent, cashier for the Jaccard Jewelry Co., has just returned from a short stay at Excelsior Springs, Mo. The firm is making elaborate improvements in the interior and exterior of its store.

The following out-of-town merchants visited the city during the past week: C. A. Clement, Springfield, Mo.; A. Marks, Lawrence, Kan.; Leslie White, Lee's Summit, Mo.: A. Hoffman, Leavenworth, Kan.

D. B. Ward, formerly with Woodstock, Hoefer & Co., and who recently inherited a large sum of money from his father and subsequently left for California, will shortly return and engage in the jewelry business here.

C. B. Norton, of the C. B. Norton Jewelry Co., will represent the jewelry trade on the trip of the Kansas City Commercial Club over the new Kansas City, Mexico and Orient Railway. The club will leave March 29 as the guest of President A. E. Stillwell of that road.

St. Louis.

TRADE CONDITIONS.

The retailers say that business was better last week than usual and that they can see a weekly increase in the volume of business. The wholesale jewelers report a brisk business and declare that the past week was much better than the corresponding week of last year.

W. Bode, formerly with Robert F. Reeves, has located at Ashley, Ind.

Mr. Walter, of Walter & Hafner, Hillsboro, Tex., was a visitor to this city last week.

J. Reed Eliot, traveling representative of the Eisenstadt Mfg. Co., will soon take a vacation and will make a trip to Cuba.

Morris Eisenstadt was at the office of the Eisenstadt Mfg. Co. all week, but is using crutches. His ankle is gradually getting better.

George Thomas, aged 35, was arrested in this city last Wednesday, at his boarding house at 2953 Easton Ave. on a telegram from Chief of Detectives J. C. Hayden, of Rochester, N. Y. Thomas is alleged to have been a salesman for a jewelry house and is charged with the theft of his sample case. He will not fight his return to Rochester.

Minneapolis and St. Paul.

W. M. Stone, Minneapolis, is recovering from a brief illness.

J. B. Hudson, Minneapolis, is back from a five weeks' trip to Mexico.

The wife of A. H. Schulz, Minneapolis, returned recently from a visit to Kankakee, Ill.

John Larson, engraver for J. B. Hudson, Minneapolis, has resigned to go to Denver, Col.

B. Reed, with the Reed-Bennett Co., Minneapolis, is ill and is threatened with typhoid fever.

Mr. Radcliffe, with the Reed-Bennett Co., Minneapolis, is in from a trip to Southwestern Minnesota.

Harry McCollom, with S. H. Clausin & Co., Minneapolis, returned last week from a trip to Southwestern Minnesota and South Dakota and left at once for a western trip.

James Graham, formerly working jeweler for Wooley & Shirley, St. Paul, has gone to Seattle, Wash. Fred. Damcke, with the same firm, is confined to his home by illness.

Among the out of town dealers who visited Minneapolis and St. Paul during the past week were: E. C. Bennett, Zumbrota, Minn.; A. Hammerstein, Cokato, Minn.; O. A. Bjella, Osakis, Minn.; Mr. Hurd, Forest Lake, Minn.; Fixdale Bros., Webster, S. D.; Lucien Diacon, Chaska, Minn.

Benjamin Gates, colored, was arrested recently at Helena, Mont., charged with being the perpetrator of the bold diamond robbery of the store of S. Jacobs & Co., Minneapolis. Charles Turner, also colored, jumped from the train as it was entering the Helena yards, and escaped. Gates is called "Diamond Benny," and seems to be well known to the criminal fraternity of the country. Prior to the Jacobs robbery a colored man visited many of the jewelry stores of St. Paul and also some of Minneapolis, always asking for diamonds, but in no other instance was a theft committed.

A. J. CLOW, Proprietor.

Pacific Coast Notes.

E. P. Segret, Carters, Cal., was a visitor to Stockton, Cal., last week.

George J. Ellis, Grass Valley, Cal., has considerably enlarged his store.

George Jordan, Redlands, Cal., is again on duty at his store after a severe attack of la grippe.

A. C. Becken, Chicago, is now in Southern California, after spending a few days at Redlands.

Ray H. Edwards, Ferndale, Cal., is making extensive improvements in the interior of his store.

J. W. Babcock, Sacramento, Cal., has moved from 726 K St. to a larger and more convenient place on J St.

Alvin B. Wilson, Martinez, Cal., has decided to open a photograph gallery which he will conduct in connection with his jewelry business.

Mrs. M. E. Hoyle, Riverside, Cal., is just getting settled in her new location in the Glenwood Inn which, when completed, will be one of the finest stores on the coast.

The Bethel Electric Clock Co. has purchased a site for a plant on the shores of Lake Union, Seattle, Wash. The plant including the necessary machinery will cost about $12,000.

A new jewelry establishment has been opened at Oxnard, under the name of the Oxnard Jewelry Co., managed by E. M. Hostetter. The store is located in the Wineman Block, and Mr. Hostetter says that an extensive line of jewelry will be carried.

A. D. Quillet, Oakland, Cal., who was arrested recently on a charge of embezzling a watch which had been left with him for repairs, was before Judge Thorpe last week for examination. After hearing the evidence, which was of little value to the plaintiff, the Judge dismissed the case.

Tom Burke and J. Irwin, two of the four men charged with looting A. H. Grennell's store at Bakersfield, Cal., have been given 30 days each on charges of vagrancy, in order to hold them until some action can be taken in the matter of the more serious charge against them. Owing to the escape of the other two, a conviction would be hard to get, and consequently they will be held in the hope of soon capturing their two accomplices.

A. Dobrowsky, Redding, Cal., has brought suit against John W. Hare, an insurance agent, to recover $27.50 paid Hare for a nugget which proved to be bogus. The nugget was filled with what appeared to be gold. The filling was goldfoil, cleverly inserted in the nugget. Hare paid $20 for the "gold brick," and sold it to Dobrowsky, not knowing it was a counterfeit. Mr. Dobrowsky found the nugget to be bogus and demanded the return of his money. The insurance agent refused to give back the full price, hence the suit.

Pacific Northwest.

TRADE CONDITIONS.

Portland jewelers enjoyed a fair March trade. All lines are well represented by traveling men and stocks are complete for Spring and Summer business. Cut glass seems to be in demand just at present, superseding, to a large extent, silverware for wedding presents.

W. Leidl, Goldendale, Wash., visited Portland, Ore., last week.

T. H. Van Norden, The Dalles, Ore., has just received his new Spring stock of goods.

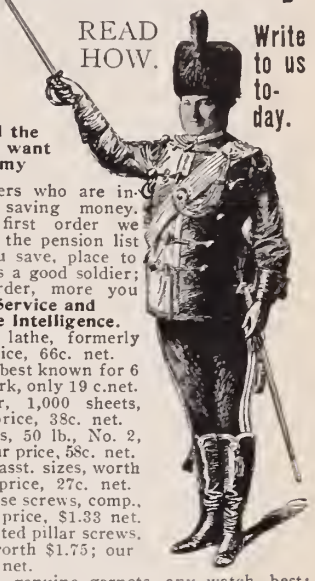
R. G. Colvine, formerly of Hastings, Neb., intends to open a first class jewelry establishment at Everett, Wash.

A. O. R. Brown has taken charge of the jewelry establishment of J. Dover, Nelson, B. C., for the benefit of the creditors.

J. T. Laughlin, Boise, Idaho, has added to his business a new and up-to-date plating outfit, which was installed by his watchmaker, Chas. H. Brigden.

The stock of B. M. Francis, Missoula, Mont., was recently sold at Sheriff's sale and was bid in for $530 by J. Ward, who held a mortgage on it for $700.

Fire recently broke out in the building in which Chas. C. Moore has his jewelry manufactory in Portland, Ore., but was confined to one portion of the building. Mr. Moore's office was slightly damaged by smoke.



G. Beninghausen, Seattle, Wash., who recently removed his stock to his new store, held a reception in the new quarters March 28, and every lady visiting the establishment was presented with a souvenir spoon made especially for the occasion.

Cincinnati.

TRADE CONDITIONS.

Business is fair and the manufacturers still keep busy. Most of the traveling men who came in last week are on the road again, and say that they have had pretty good trade.

The Emerie Optical Co. is putting in a stock of cameras for Summer trade.

Joseph Mehmert has bought a 200-acre farm in the neighborhood of Norwood, where he now spends much of his time.

John Osthoff, of Jos. Noterman & Co., who came home from the road last week to stock up again, reports that trade is now better than at any corresponding season for many years.

One of the most elaborate social functions of the season was the marriage of Arthur Spiegel, of Chicago, to Miss Sadie Fox, daughter of Gustave Fox, at the St. Nicholas, Wednesday evening. About 150 guests attended, and after the reception the bride and groom left for a two weeks' trip through the south. Mr. Spiegel will take up his trip on the road for the Gustave Fox Co. about the latter part of this month.

Two men, believed to be pennyweight thieves, entered the office of Jos. Noterman & Co., last week, and asked to look at diamond rings worth about $500. Mr. Osthoff, who waited on them, kept all articles of value away from them, and told the men the house did not retail. The strangers said they were referred to the firm by a jeweler, but when asked for the dealer's name or card they could not give it and departed.

C. J. F. Bene, of Bene, Lindenberg & Co., is making his last trip to the trade this month, as he contemplates retiring from business. Mr. Bene expects to take a year's vacation before entering business again, during which he will go to Europe and visit his old home and friends. The firm of Bene, Lindenberg & Co. will be reorganized and the business enlarged. The partners are now looking for larger quarters than those they now occupy.

Duhme Bros. & Co. have completed their settlement with the insurance companies, and by it are to receive the sum of $42,000 and all the salvage. They are now getting the goods in shape to put on sale at auction at the earliest possible moment. This stock now occupies one whole floor of the Boylen building, and much of it is as bright and new as when it was in their cases in the store before the fire. After the sale the firm will at once set to work re-establishing their business in their new store at 138 and 140 E. 4th St., of which they will take possession May 1.

Columbus, O.

O. S. Hofman, of the Hofman Jewelry Co., entertained the 40 employes of the company, with their wives, at the Empire Theatre, March 31.

The H. Cole Optical Co. will hereafter occupy larger quarters, the entire floor being taken by the company. The room has been refitted and decorated.

According to A. L. Thurman, trustee in bankruptcy for W. S. Tussing, the estate may not yield over 3 per cent. dividend to the creditors. Little hope is entertained that any further property will be discovered.

Indianapolis.

Eugene Wilson, formerly at Winchester, Ind., will shortly move into a new storeroom at Martinsville, Ind.

Out of town visitors to this city last week included: Frank C. Sheldon, Shelbyville, Ind.; Henry Rorsier, Martinsville, Ind.; E. E. Mosinian, Bluffton, Ind.

James S. Comstock died of consumption at his home in this city March 31. For a number of years he was employed in the jewelry store of his brother, H. A. Comstock, but for the past few months was unable to attend to business.

Denver.

J. C. Bloom & Co. will move into their new store next week.

George Hurryon, of the D. F. Briggs Co., Attleboro, Mass., visited this city last week.

A. Abramson has moved from 15th St. to the store on Arapahoe St., recently vacated by Frank Cosley.

Will F. Fulton is city salesman for the Lewis Jewelers' Supply Co. This is the first time this firm has had such an employe.

Among the out-of-town jewelers in Denver during the past week were: I. H. Hart, Manitou; Sam Hirst, of Sam Hirst & Co., Pueblo.

Alfred J. Provencher, East Pepperell, Mass., has filed a petition in bankruptcy. His liabilities are $1,733.48 and his assets, $376.24.

TRADE CONDITIONS.

Traveling men for local wholesale houses sum up the present trade conditions by saying that the trade throughout the country south as well as north is good, but that in the city it is still unusually quiet.

J. H. Davidson, French Gulch, is visiting the trade in this city.

The Morgan-Allen Co. is said to have secured the agency of the New Haven Clock Co. formerly held by Geo. Greenzweig & Co.

Frank Golden, Reno, Carson and Tonopah, Nev., is in town telling his friends of his success in the mining district of Tonopah.

The Retail Jewelry Clerks' Local Union No. 763 will give an entertainment and dance Thursday evening, April 23, at 421 Post St.

H. M. Abrams, formerly with M. L. Levy & Co., will return from his eastern trip this week and will start in the jobbing business for himself in this city.

D. F. Badgley has sold out his store at Anderson, Cal., to a Mr. Russell. Mr. Badgley is now in San Francisco, where he intends to engage in business.

Mr. Wilcox, of Wilcox & Wagoner, New York, in company with his wife, Ella Wheeler Wilcox, is making a pleasure tour of the Pacific Coast and is now in this city.

Alex. Noack, with Chas. J. Noack, Sacramento, Cal., was in this city last week. His brother, Max Noack, has accepted a position with F. W. Carter, Santa Rosa, Cal.

Frank Whitney, with J. B. Whitney, has just returned from a trip to the southern part of the State. He has brought back with him a line of sea kelp novelties from Long Beach.

A. I. Hall & Son filed articles of incorporation March 28. The capital stock is $200,000 and the shares are $100 each. The incorporators are H. E. Hall, A. W. Huggins, E. V. Saunders, A. W. Mahone and Purcell Rowe.

D. F. Hollander, Eureka, Cal., is now in this city making purchases. Joe McCann, formerly with Nordman Bros., of this city, and now with Mr. Hollander, was also in town a few days last week.

A number of local firms are affected by the disappearance of F. H. Ball, Plymouth, Cal., whose liabilities are about $5,000. It is reported that Ball transferred his stock March 11 for a small consideration to J. G. Hawthorne and Hawthorne, in turn, transferred this as well as his own stock to S. A. Lane. Both Ball and Hawthorne are thought to be in Mexico. W. K. Reed, Colorado City, Col., has also disappeared, slightly affecting a number of firms in this city.

J. J. Lohr, Hooversville, Pa., has purchased the book and stationery stock of J. L. Berkebile.

Burglars recently entered the store of Max Polland, Milwaukee, Wis., and escaped with two trays of jewelry and a tray of silk handkerchiefs. Entrance was gained by removing the glass in the front door. There is no clue to the thieves.

Albany.

James Mix, who was reported ill last week, is greatly improved in health.

Edward Francis, a jeweler of Syracuse, is visiting friends in town.

Albert Sachs, who conducted a jewelry store in this city for several years, has removed to Lancaster, Pa. He left Albany last week.

The engagement of Miss Honora Budwig, of Middletown, N. Y., to M. R. Eliassof, of Eliassof Bros. & Co., of this city, has been announced.

The Albany jewelers are favorably considering a proposition to organize a trade organization, the main object of which will be to protect the jewelry trade against harmful legislation, either local or State. During the past week the sentiment for organization has been very strong and it will not be surprising if a meeting of the jewelers is held at an early date.

J. W. Mende, 1 Clinton Ave., has been appointed one of the chief watch inspectors of the N. Y. C. and H. R. Railroad by Webb C. Ball, the general chief inspector of the road. Mr. Mende's duties will be the same as those of Otto H. Fasoldt. The large amount of extra work as a result of the order that employes of the Boston and Albany road have their timepieces examined often, and additional work on the N. Y. C. and H. R. Railroad are the direct causes for the appointment of the new inspector.

I. Dresbach has purchased the jewelry business of Louis D. Clock, Mercur, Utah.

W. W. HARRISON,

MANUFACTURER OF

Umbrellas and Walking Sticks

OF THE BETTER SORT,

405 BROADWAY, NEW YORK.

SOME POINTS OF EXCELLENCE in Harrison Umbrellas, gained by 25 years of careful study of the details so essential in making an umbrella adapted to the wants of the Jewelry trade:

Exclusive Designs in Handles. Quality of Silks.
Perfection of Finish in Handles. Finest Tempered English Frames.
Compactness in Roll. Strength of Construction.

Harrison's Gold Head Walking Sticks have stood the test for more than a quarter of a century. They comprise all the Standard Shapes and are made of twenty-year 14k. Filled Gold and of twenty-year 14k. Filled Gold with 14k. Solid Gold tops, ends and name plates. Also a line of Solid Gold Heads.

The only Umbrella and Walking Stick Manufacturer in the United States not selling to the Dry Goods and Department Stores.

W. W. HARRISON, 405 Broadway, New York.

Optical Notes and Briefs.

(*Additional Optical News on page 71.*)

Prof. H. Thomas, optician, has located in Oakland, Cal., at 466 13th St.

D. Navin, optician, Florence, Ont., has sold out to Roy Miller, of Dresden.

H. A. George, optician, Superior, Wis., has left for a month's trip to California.

Mrs. A. M. Harper, Renville, Minn., has fitted up handsome new optical parlors.

E. D. Harrison, optician, Pocatello, Idaho, made a pleasure trip to San Francisco, Cal., last week.

The Jacksonian Optical Co. was recently incorporated in Jackson, Mich., with a capital stock of $5,000.

G. L. Clark, optician, Sandusky, O., has leased an entire building on Jackson St. for his optical business.

J. B. Sennett, optician, formerly of San Jose, Cal., has opened an optical establishment at Porterville, Cal.

A. Nollmer, 144 W. Girard Ave., Philadelphia, Pa., has added an optical department to his jewelry store.

E. A. Gilman, with D. V. Brown, 740 Sansom St., Philadelphia, Pa., has returned from an extended southern trip.

Herman H. Weindeck, optician and jeweler, Red Bluff, Cal., is in San Francisco, Cal., combining business and pleasure.

Andrew Brown, son of D. V. Brown, Sansom St., Philadelphia, Pa., attended the farewell dinner given to retiring Mayor Ashbridge last week.

J. C. F. Cummins, who formerly conducted an optical business in Pomona, Cal., has decided to locate there again next month. He will do watch repairing in conjunction with his optical business.

Among a number of recent changes and improvements made in his store, Chas. B. Safford, Kingston, N. Y., has added a dark room for optical purposes.

H. A. Gross, who operates a number of optical stores in Philadelphia, Pa., has abandoned the branch at 133 S. 8th St. and opened a store in Frankford.

Geo. E. Whitlock, Des Moines, Ia., will soon open optical parlors in the Pierce block at Boise, Idaho. Mr. Whitlock is a graduate of the Des Moines Optical School and the McCormick Optical College, Chicago.

In attempting to light a gas heating stove in her store in Indianapolis, Ind., Miss Stella V. Rogers, optician, was last week severely burned about the face and head. The gas in some way had been turned on without her knowledge and accumulated in the stove. An explosion resulted as soon as she opened the stove door and attempted to hold the lighted match to the burner.

Cohen Bros., Ltd., manufacturing and wholesale opticians, Toronto, Ont., have opened a western branch establishment in Winnipeg, Man., where they have in operation a complete dispensing plant. L. G. Amsden, secretary of the company, has been for some weeks in Winnipeg superintending the inauguration of the branch, which will be permanently in charge of Frank Poulter, lately chief clerk of the Toronto establishment. Leo Strauss has been promoted to the latter position.

Members of the Optical Society of the City of New York are deeply interested in the bill launched by New Jersey opticians regulating the practice of optometry. The bill has already passed the House of Assembly and further developments are expected at to-night's meeting. The meeting will be held in the usual quarters at the College of the City of New York and will open at 8:30 P. M. Dr. Bryan, in the Hall of Natural History, will continue his lecture on "Tissue of the Eye," illustrating it with lantern views, dissected eyes and microscopical specimens. Professor Fox will deliver in the laboratory an interesting lecture upon "Refraction," supplementing it with the customary individual laboratory work.

John A. Lash, Wheeling, W. Va., has sold his business to Wain & Lash, who will add an up-to-date optical department.

Dr. Geo. E. Whitlock, a graduate of the Holmes Optical College, Des Moines, Ia., and of the McCormick Optical College, Chicago, will shortly open optical parlors in Boise, Idaho.

The Sessions Clock Co., Forestville, Conn., successor to the E. N. Welch Mfg. Co., has just issued catalogue No. 60, a neatly printed and well arranged booklet, illustrating the products of the company. The catalogue covers 60 pages and many of the illustrations appear in colors, while all are accompanied by descriptive details and prices. Jewelers who have not received a copy of this catalogue will find it to their advantage to write for one.

To Importers and Large Dealers in Diamonds.

We are now operating, and have been for the past ten years, the most extensive and best equipped Diamond Cutting Works in this country, equaling any in Europe.

We are continually buying large series of Rough direct from the Syndicate controlling the output of the associated Diamond mine owners, and can offer to Importers and Large Dealers, Original Lots at prices equal to those of the European Markets, thereby saving the 10 per cent. import duty.

We do NOT solicit memorandum orders.

Attleboro.

James E. Blake, of the James E. Blake Co., with Mrs. Blake, returned last Friday from a six weeks' pleasure tour spent in the south, Cuba and other West Indian points.

A number of the Attleboro jewelry houses are preparing to exhibit goods at the Rhode Island Exposition of Arts and Crafts at Crescent Park, that State, from July 1 to Sept. 8.

Homer M. Daggett, Jr., of the Daggett Jewelry Co., was last week appointed by Judge Colt, of the United States Circuit Court, the receiver of the Eastern Electric Cable Co.

Fred M. Ellis, of the embarrassed firm of F. M. Ellis & Co., is the defendant in a suit at law filed last week by Henry B. Bart. Mr. Bart seeks to recover some property held by Mr. Ellis, and which he claims belongs to him.

The Attleboro jewelers have been asked by the police of Detroit, Mich., to aid in locating a gold bar, 10x4x4½ inches, and weighing 83 pounds, stolen in that city a few days ago. The police and detectives learned facts which indicated that the gold would be brought east and offered in sections to jewelers.

The Attleboro jewelers, whose work led to the unearthing of the mammoth "bogus directory swindle" which has been tried on thousands of business men all over the country, received last week requests from the Boston police to furnish information which would help them in tracing evidence of the same swindle, which has just been tried in the Hub.

About 80 young women from Taunton work in the Attleboro jewelry factories and return every night to their home on a train arriving in Taunton at 6.30. It has been found necessary to give the group police escort lately when passing through a Portuguese settlement near the junction where they have to leave the train, as three of them have been attacked by the men of the settlement within the past few days.

Everett S. Horton, of the Horton, Angell Co., and Emmons D. Guild, of W. H. Wilmarth & Co., were honored last week by receiving invitations from the Rhode Island Legislature to be members of the official party from that State which will go to Andersonville, Ga., the last of this month and dedicate the handsome granite shaft set up there by the Commonwealth in memory of the Rhode Island soldiers who died there from neglect and ill treatment during the Civil War.

At a mass meeting of citizens held last Thursday evening Sidney O. Bigney, of S. O. Bigney & Co.; Fred L. Torrey, late of the Torrey Jewelry Co.; Everett S. Horton of the Horton, Angell Co.; Thos. W. Williams, formerly of the American Watch Case Pendant Co., and Jesse P. Mowry were appointed a committee to represent the town in the dedication of a new $350,000 hospital in Attleboro on April 25. It is the Solomon Sanatorium, owned and run by John M. Fisher, of J. M. Fisher & Co. The Governor, 28 secret order lodges, the town officials and 11 bands will participate in the exercises.

The Massachusetts Legislature received last week a favorable report from the Committee on Labor on a bill to make it compulsory to place blowers in factories in cor

nection with all emery, rag or other kinds of polishing or grinding wheels. The bill specifies the size and character of the blowers. If the bill passes, as now seems certain, it will oblige the jewelers in many factories to add blowers and change existing ones to meet the requirements.

One of the five largest stamp drops in the country was set up last Saturday in the factory of the Frank Mossberg Co.

Stephen Cremo, an operative working for Regnell, Bigney & Co., has come into the public eye the past week owing to the discovery that he is an extremely able silversmith and a carver of no ordinary ability. The discovery was made by a wealthy Boston woman, Dr. Mary Jones, of 8 James St., that city, who got acquainted with the man and his family a while ago while engaged in some Catholic mission work. She now proposes, according to the daily press, to set him up under her patronage in Boston. She has helped him to get silver, from which he has produced some exquisite objects of art, which have found instant sale in Boston.

North Attleboro.

Samuel Slocomb, of the United Brush Co., has taken up his residence in town.

Frank H. Bliss, of A. H. Bliss & Co., has purchased one of the finest lots on Church St.

Dr. E. E. Hale, of the estate of O. M. Draper, made a flying trip to New York last week.

Fred J. Mills, formerly of the Sommer & Mills Co., but now of Providence, paid his local friends a visit last week.

G. C. Hudson, of the G. C. Hudson Co., stands second in the Fish and Game Association billiard tournament. His percentage of games won is .975.

Joseph Bassette, an employe of the W. & S. Blackinton Co., sustained severe injuries to the fingers of his right hand last week by getting them drawn into some rolls.

John H. Peckham has been enjoying a week's outing at Wenaumet on Cape Cod.

Frank H. Cutler, of F. H. Cutler & Co., has purchased a fine house lot on Bucklin St.

The friends of Howard C. Saunders, the refiner, will be pleased to learn that his young son, who was run over a week ago, is slowly but surely recovering from his injuries.

Automobiles are so numerous among the jewelers that it is quite probable that before summer an auto club will be organized. The organization was talked of last year and is expected to be perfected this season.

W. A. Lorke, formerly of Providence, has hired the top floor of the King building and will employ 25 hands in the manufacture of patent collar buttons. This is the third concern to move here from Providence in two months.

Gardner H. Niles, of this town, and one of the founders of the Bugbee & Niles Co., is one of 20 survivors of the old Volunteer Fire Department of Providence. His picture was recently published in a group in the Providence *Journal*. William Clark, Jr., of Clark & Coombs, formerly of this town, was also in the group.

O. W. Clifford, of the Webster Co.; A. H. Riley, of Riley, French & Heffron, and Dr.

E. E. Hale, of the estate of O. M. Draper, constitute a committee to bring in nominations for the officers of the North Attleboro Country Club.

Theron I. Smith, of the T. I. Smith Co., is expected home from the south before Easter.

Daniel M. Chisholm, of the Bugbee & Niles Co., and Miss Miriam Chisholm returned from Jamaica Monday.

The Paye & Baker Mfg. Co. is building an addition to its factory about 12x20 feet in size. The new boiler house is nearly completed.

Plainville.

Woodbury Melcher, of Scofield, Melcher & Scofield, has returned from an enjoyable sojourn in the south.

W. F. Maintien, of Maintien Bros. & Elliott, has been confined to his home by an aggravated attack of la grippe.

Lancaster, Pa.

Mr. Oberlin, of Howard L. Oberlin & Bro., Columbia, Pa.; Mr. Casey, Landisville, Pa.; Mr. Brubaker, of Kaufhold & Brubaker, Columbia, Pa.; Harry People, Mt. Joy, Pa.; Wm. J. Frazer, Lincoln, Pa.; J. E. Rossler, Rothville, Pa.; D. B. Frymyer, Groffs Store, Pa., visited the trade in Lancaster last week.

At the annual election of officers of Common Council of this city, held Wednesday, Joseph Zook, the retiring president, was presented with a handsome solid ivory gavel, gold mounted. On the same evening, at the annual meeting of the Select Council, the retiring president, B. Yecker, was presented with a handsome solid silver snuff box. Both the gavel and snuff box were furnished by Augustus Rhoads.

Harrisburg, Pa.

I. Mayers, a pawnbroker and jeweler at 1729 N. 6th St., will shortly open a shop at 1323 N. 3d St.

The assignee's sale of the real estate of E. L. Egolf will take place in front of the court house to-morrow.

William Woods was last week sentenced to 10 days in jail for selling cheap jewelry on the streets without a license.

Mr. Wilson, of Becker & Wilson, cut glass manufacturers of Brooklyn, was here last week looking for a site for a factory.

The C. Day Rudy Co., 1515 N. 3d St., has been chartered, with a capital stock of $5,000, to engage in the manufacture of art and stained glass.

Harry P. Utz, of Hanover, has bought the jewelry store of Mrs. Anna Kaiser in that place at private sale. He was an employe of Mr. Kaiser for 13 years.

Two men were arrested as suspicious characters last week while in the act of pawning watches and jewelry with Market St. pawnbrokers. One prisoner was subsequently discharged.

After defeating by a vote of 96 to 28 the Trading Stamp Bill, permitting the stamps to be issued by storekeepers, who are required to redeem them in cash, the House last week reconsidered its action and passed the bill by a vote of 145 to 4.

Connecticut.

Walter A. Ingraham, of the E. Ingraham Co., Bristol, has returned with his family from a sojourn in the south.

Governor Chamberlain has approved of the act authorizing the New Haven Clock Co. to increase its capital stock.

The Bradley & Hubbard Mfg. Co., Meriden, has given out the contract to build a two-story addition to one of its factory buildings.

Alderman Geo. F. Rogers, Meriden, has severed his connection with C. Rogers & Bros.' factory, of the International Silver Co., and will engage in other business.

The marriage is announced of Stanley S. Gwillim, the son of T. I. Gwillim, Bristol, and Miss M. Funck. The ceremony will be performed April 14 in Trinity Church.

Owing to the need of increased accommodations, the stores of Samuel H. Kirby & Son and the S. Goodman Co., New Haven, will shortly be enlarged. A two-story brick addition is to be built on the rear and the stores will have new fronts.

Garl G. Aldrich arrived at Winsted last Friday from Barton, Vt., to take possession of the business formerly conducted by Chas. P. Buskirk. Mr. Buskirk's watch repairers, Messrs. Strang and Smith, will continue in the employ of Mr. Aldrich.

The transfer of the property from W. H. Squire as trustee of the bankrupt estate of W. A. Kendricks to E. W. Beecher has been recorded in Wallingford. The property, all of which is in Yalesville, consists of nine lots in different localities and seven buildings.

Henry Kohn & Sons, Hartford, have had on exhibition in their store the handsome trophy cup made by the Gorham Mfg. Co. and presented to the Hartford Yacht Club. Considerable anxiety prevailed last Friday when a photographer, to whom the cup had been sent by the jewelers, returned the empty case to Vice-Commodore Chas. A. Goodwin. The next morning, however, the cup was returned to the custodian, it having been accidentally mislaid.

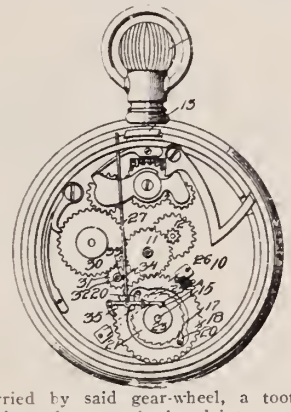
The Latest Patents.

ISSUE OF MARCH 31, 1903.

723,853. HAT-FASTENER. Austin Fleeger, Chicora, Pa. Filed Sept. 26, 1902. Serial No. 124,922. (No model.)

In a hat-fastener, a hat-pin, a spring-clamp, flexible means for connecting the hat-pin and the clamp, and means for securing the flexiole means to a hat.

723,961. LADY'S BELT, COLLAR, OR THE LIKE. Edith O. Whittlesey, St. Paul, Minn., assignor of one-half to Nelson W. Clark, Minneapolis, Minn., and Arthur P.



. Lothrop and H. S. Johnson, St. Paul, Minn. Filed Oct. 1, 1902. Serial No. 125,568. (No model.)

An article of the class described, comprising a row of rings arranged in lapping position and an interlaced ribbon, the ribbon passing through the rings in one direction only and passing alternately under and underlapping and over the overlapping portions thereof, whereby the rings are held in lapped position.

724,028. WINDING-INDICATOR FOR WATCHES. Felix E. Mistrot, Galveston, Tex. Filed Sept. 11, 1902. Serial No. 122,999. (No model.)

The combination with a watch, of the lid forming a part of the watchcasing, a watch-movement, an auxiliary gear-wheel supported by the base-plate of the movement, a ratchet-wheel and a notched

disk carried by said gear-wheel, a toothed ring supported on the gear-wheel and intermeshing with the hour-wheel of the movement, pawls carried by the ring and engaging said ratchet-wheel, a pivoted detent-lever adapted to engage in the notched disk, a pawl carried by the detent-lever and adapted to engage the teeth of the gear-wheel, a locking-rod connected to the detent-lever and adapted to engage the bezel of the watch-lid, a pinion intermeshing with the locking or ratchet wheel of the winding-post, a cam carried by said pinion, and a lug or shoulder projecting from the locking-rod and adapted to be engaged by said cam.

724,107. COMPOSITION OF MATTER FOR ELECTROLYTIC DEPOSITION. Edward D. Kendall, New York, N. Y. Filed Sept. 17, 1902. Serial No. 123,760. (No specimens.)

The herein-described composition of matter for preparing an electrolyte to be used for the electrolytic deposition of gold, consisting of potassium aurate with a small excess of alkali-metal hydroxid and a large excess of potassium ferrocyanid, substantially as described.

724,108. COMPOSITION FOR COATING METAL WITH SILVER. Edward D. Kendall, New York, N. Y. Filed Jan. 29, 1903. Serial No. 141,030. (No specimens.)

The herein-described composition of matter consisting of a salt of silver, a suitable thiosulfate and silicious powder.

724,151. SPECTACLES. James C. Anderson, Highland Park, Ill. Filed Jan. 27, 1903. Serial No. 140,790. (No model.)

The lenses connected with their horizontal axes in proper relation, by an intermediate rigid and immovable bridge adapted to rest upon the bridge

of the nose, in combination with forwardly-projecting and vertically-disposed anchors adapted to be seated within the vertical cavities of the nasal bone, whereby said anchors will prevent the outward movement of the spectacles.

724,403. BUTTON-PAD. James A. Stuart, Wollaston, Mass. Filed July 26, 1902. Serial No. 117,145. (No model.)

The combination with a stud, of a soft pad and a sheet-metal fastening device permanently affixed to said pad and constructed to be applied to the head of the stud.

724,407. NOSE-GUARD FOR EYEGLASSES. Robert B. Finch, Denver, Col., assignor of one-half to Edwin T. Jones, Denver, Col.

For Their Own Protection

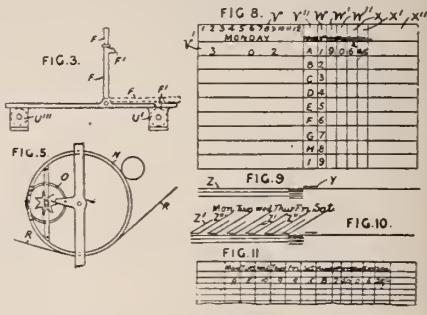
ENGLISH PATENTS.

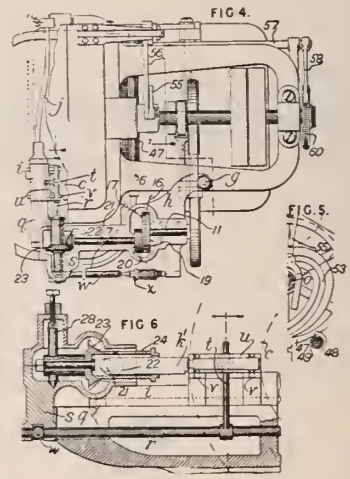
(Abridgements of Specifications, 1901, from *The Illustrated Official Journal.*)



23,216. WATCHES. G. Schlesicky, 5 Schillerstrasse. Frankfort-on-the-Main, Germany. Nov. 16.

Bows for watches are prevented from coming out of the holes in the pendant by means of a diametral screw pin.

23,257. TIME RECORDERS. W. M. Llewellin, 15 King Sq., Bristol. Nov. 18.

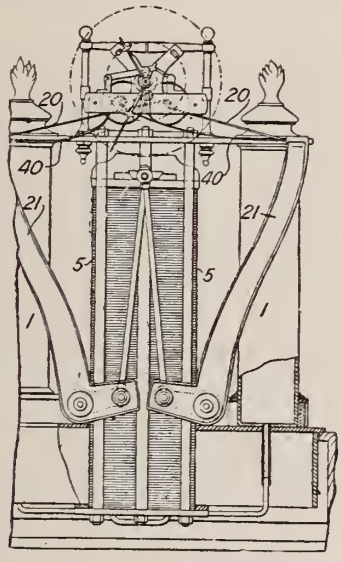


Time-checking apparatus for workmen.—A printing-drum N, Fig. 5, containing an epicyclic drum O, delivers paper R constituting the daily record forms r, shown by the left-hand half of Fig. 8, where the horizontal spaces correspond to different employes, and a minute-printing stamp is used to mark the times r^1 of arrival and departure after the hours r. These forms Z, Fig. 9, are pasted up in a guard hook Y against forms for entry of the employes' names or initials r^{11}, numbers w, hours and minutes of working w^1, w^{11}, rates of pay X, daily earnings X^1, and remarks X^{11}. In a modification, the records forms Z^1, Fig. 10, may have a right-hand column Z^{11} for hours of work, and each weekly set may be assembled, as shown in Figs. 10 and 11, on the left-hand pages Y^{111} of a hook in which the weekly totals are entered on the right-hand pages. The numbers or names may be printed on the paper, before division into sheets, by the hand-stamp shown in Fig. 3, or by a roller press. In the hand stamp, the paper being unwound from a roller U^{111} at one end of a table is wound on a roller U^1 at the other end, and is printed by bringing down a hinged frame F bearing the type F^1. The winding-roller is used as a platen, or a separate platen can be employed. To facilitate the reading of the records and entries, a finding-frame is provided. Reference is made in the

Specification to Specifications No. 4653, A. D. 1882, No. 11,597, A. D. 1889, and No. 2627.

23,369. GRINDING AND POLISHING. J. N. Nutt, 3 Market Pl., Derby.—(A. Johnston, Ottumwa, Ia., U. S. A.) Nov. 19.

Surfacing and polishing the handles of knives and forks. The blade of the knife k^1, Fig. 6, or the pronged end of a fork, is fitted into a tube



24, which is rotated by a bevel-wheel 23, and is capable of rocking with the pin 28 pivoted to the part s. The handle of the knife, etc., is pressed against the face of the grindstone c by a holder u, which is moved on the slide v of the carriage i by an arm t on the rod r carrying an arm w by which it is rocked. The carriage i slides on the way q, and, like the part s, forms part of an arm n, Fig. 4, pivoted at g so as to move in a horizontal plane. The knife, etc., handle thus moves toward and from the grindstone, is rotated, and is reciprocated along the face of the grindstone. This last motion is obtained by a rod j fixed to the carriage i and to a lever k operated by a link eccentrically pivoted to the shaft o. The rotation of the knife, by which all sides of the handle are acted on, is effected by bevel-wheels 23, 22. The wheel 22 is carried by the spindle 21, which is connected to the spindle 11 by mechanism which converts the uniform rotation of the spindle 11 into variable rotation, by which means the edges of the knife handle are rotated more quickly than the flat sides, so that less material is removed from the edges than would otherwise be the case. This mechanism consists of a disc 16 slotted at 17 for a slide engaging an eccentric pin 19 on the disc 20. The arm w is actuated so as to press the handle against the grindstone by means of a fork 7 on the rock-shaft 6, and by an extensible spring pin z the position of which may be varied to vary the effective force of the spring. The machine is started by a treadle and automatically stopped by one of a number of pins on a ratchet-wheel fixed to the shaft 57. One of these pins releases a lever to allow the treadle to rise and stop the machine. A pawl actuates the ratchet-wheel. The shaft 57 itself carries a pawl 58 actuating a nut 60, by which means the grindstone is advanced to take up wear. After a complete revolution of the shaft 57 a snail cam upon it liberates a spring pawl, and allows it to turn a loose wheel 47, Figs. 4 and 5, which is toothed except at one point 48. The pawl thus brings the teeth into gear with a constantly-rotating pinion 49, which now drives the wheel 47. A cam-groove 53 on this wheel actuates

by the connecting-rod 55 the arm 56 of a rock-shaft which carries a second arm provided with a tool for dressing the grindstone.

23,549. CLOCKS. C. Hour, 7 Rue St. Anastace, Paris. Nov. 20.

Winding mechanism and apparatus.—Mainsprings in going barrels are wound up by the expansion and contraction of columns of liquid under changes of temperature. The liquid (alcohol) fills a pair of hollow pillars 1 and a connected tall closely-corrugated thin metal tube 5, which

lengthens and shortens with the changes of volume of the liquid. A pair of magnifying-levers 21 linked to the head of the tube are connected by straps 20 and 40 to the arbor of a spring coiled in a fixed barrel, and ratchet gear on the arbor connects it to the winding-arbor.

RETAIL MERCHANDISING

That this department shall prove mutually beneficial to our readers, it is desirable that the members of the trade generally communicate with THE JEWELERS' CIRCULAR-WEEKLY regarding any advantageous device or plan which they are utilizing in connection with their business.

PRIZE ESSAY COMPETITION, NO. 10.

SUBJECT:

"How to Develop a Watch and Watch-Repairing Department."

FIRST, get some good, durable paper boxes made with glass tops, 3½ x 4½ x 1½ inches, with partitions across two corners. Have the boxes covered with black linen, so they will not appear soiled after use. About 25 will be sufficient for an ordinary bench.

When a customer brings in a watch, sit down and take it apart; examine it carefully, and point out to him each defect. Every workman knows that when he takes in a watch for cleaning he will find other things necessary to do in order that the watch may perform satisfactorily. If you proceed to do the work and charge your customer more than the price agreed upon, you are liable not to get his work again: if you do the work and say nothing, you are the loser. So, examine it very carefully. You may find a chipped jewel, rough pivot, etc.

Then set your price and the customer will almost invariably tell you to put it in good condition. You have agreed to clean it, put in new jewel, polish pivots, etc., for, perhaps, $3.50 or $4. If you had not examined it you would agree to clean it for $1.50. Then when you get it done you are in a dilemma. But when you have examined it your customer has seen the trouble and understands what it will cost. You put the parts in one of the above boxes, with balance fork and escape wheel in separate apartments to avoid damage.

Have the owner's name and the date on which you promised to have the job finished written on a slip inside. When you get to it do the work in the best possible manner, making it as good as it ever was as a timekeeper. Remember that you are being paid your own price for doing good work and try to see how nicely you can do it—not how quickly, but how well.

For cleaning, the wheels should be strung on a wire and dipped in cyanide, rinsed in hot water, then in alcohol, and dried in sawdust. The plates should be treated in the same manner, removing all steel parts, washing with soap and hot water, polishing with a medium stiff brush and then dipping in alcohol and drying in sawdust, as before. This seems a long process, but with a little practice it does not consume much time. Your work will look well and will be thoroughly clean.

Polish the case on the polishing lathe, wash with soap and water and dry over an alcohol lamp. When you have put the watch together set it on the second and hang it by itself on the rack; watch it carefully, changing the regulator five or six times a day, if necessary. In 24 hours it will be keeping fine time. When the owner calls you can hand it to him with pride, feeling that you have done the work thoroughly and conscientiously. Your customer will notice how different the case looks, and if it keeps good time he will certainly come again and recommend you to his friends.

For all adjusted movements the watchmaker should keep a rate book. When a person calls to have his watch regulated enter the name and date in this book. He will call again in a few days to compare it, and you can turn to your book and see exactly the amount of the variation. When persons wish any work done they will naturally drop in where they have been shown this little act of courtesy.

Above all things, don't show that it annoys you in the least to perform a kind act. Do it cheerfully, and make your customer feel that his interests are yours, and do not try to see how cheap a piece of work can be done. Charge a fair price and see how well it can be done. The sum of $1.50 is a price cheaper than which no man can properly clean a watch. Of course, complicated watches should be charged for proportionately. This plan, if practiced, will certainly increase your income and in time your reputation.

O. C. J.

Prize Essay Competition—No. 11.

Three prizes, $20, $10 and $5, will be given to writers of essays on the subject:

"How a Jeweler Can Profitably Conduct a Camera Department."

The prizes will be awarded to the writers of the best and most reasonable essays. The ideas expressed, rather than the language used, will be considered in making the awards. The essays will be lettered when received and the judges will not know the identity of the writers until after the decisions have been made.

Essays must be in the office of THE CIRCULAR-WEEKLY by April 15. Write plainly and legibly and on one side of the paper only.

The right is reserved to publish any or all of the essays received. Only those connected with the trade are allowed to enter this competition.

A Clever Contrivance for the Display of Stock in the Show Window.

HARRIS & BRO., Cleveland, O., have a unique and attractive show window arrangement trimmed with green velvet. It is in the form of steps. The first step is rather broad and has a circular raise at the ends about three or four inches high. The larger pieces are arranged on the step, with smaller ones on the raised ends. The next step is narrower, but high enough to bring all the goods on it into plain view. The others grow narrower toward the top and the rear portion is in narrow shelves, so divided as to exhibit different kinds of goods to the best advantage.

In the middle of the window and built into these steps and shelves is half of a section of a cone; that is, a cone split down through the middle and the sharp point cut off. This gives a circular surface, with a constant taper toward the top. This is covered with green velvet, and pinned in it in an attractive manner are brooches and other goods of this kind. The whole makes a very pretty effect and gives a larger surface for the display of goods than could otherwise be obtained.

W. M. Farrington's show window, Pittsfield, Me., recently contained some interesting relics of the Spanish-American War.

Gand HINTS to JEWELERS

A Retail Jeweler Extols the Advantages of a Corner Jewelry Store.

"YOU don't seem to be in a particularly amiable mood this morning, Mr. Dash," commented THE ONLOOKER, on a recent call at the fine store of this unusually successful retail jewelry dealer. The store referred to occupies a corner accessible for the bulk of the shoppers of the middle classes of New York city, of the upper East Side. Through this advantage and by close attention to business, Mr. Dash has been enabled to build up a trade which is second to very few of its kind in the metropolis. Indeed, Dash's corner has grown to be quite a landmark, and the clock, when it shall have been removed, will be missed far and wide.

"Well, to confess the truth," answered Mr. Dash, "though I really thought I had been able to have played the part of a hypocrite successfully enough to disguise and hide my real feelings, I do feel as amiable as the proverbial bear with the sore head. I've felt so ever since a certain circumstance happened about a week ago, and which is relevant to the columns of THE CIRCULAR-WEEKLY. Indeed, I am glad you dropped in, for it gives me a chance to air a grievance that rankles in my bosom. I do not think you can suggest a remedy, but even that may be possible."

"Well, out with your tale," interposed THE ONLOOKER, with some impatience. "You don't suppose I am a mind reader—I won't be able to suggest a remedy if I don't know what is to be remedied."

"I'm going to begin with when I first took this store, about five years ago. Before that I had had a store in another part of town, in the middle of a block. I had been enabled, in the course of 15 years of struggling, to build up a pretty fair trade and a good reputation. It had always been a pet theory of mine that, other things being equal, a corner store is worth fully 50 per cent. more than one not at a corner—that such a store would more than offset the added cost of rent, etc.

"The opportunity came about that time to put that theory into practice, and after a lot of dickering I secured this place. From the day I got here I found that I had not overestimated the advantages of such a corner. My business grew so that every year I became more widely and favorably known, until now, I do not believe I overestimate, when I claim that Dash is one of the best-known retail jewelers in New York city."

THE ONLOOKER agreed with Mr. Dash and asked him what all this had to do with his grievance.

"Much—everything!" affirmed Mr. Dash, with vehemence. "When I first moved into this store I thought my landlord had been taking advantage of me, but now I am sure of it. The first price he had asked had struck me as very high, and we had almost split then and there. I gave in, however, and then tried to get a five years' contract on that basis, arguing that the business would pay, and that I had better arrange to pay at that rate than to have him raise me year after year. But that's just what he has been doing ever since I first came here. I now see that the rental was exorbitant to start with; nevertheless, that shark has made me pay more every year, until I simply would not stand it any longer. This is a regular game with this landlord, as I have learned since. Once he has a tenant like me, he squeezes him all he can, knowing that he'll stand a good deal before he will undergo all the nuisance, trouble and expense of moving again. He argues, and truly, that by this time I've become identified with this corner, and that that is a tangible asset. Nobody likes to move, and never changes his residence even without a good reason; how much less so his business! My landlord's demands are—well, preposterous is not too strong a term. I believe that he still thinks that I will back down. But he's mistaken. Even if I gave in again, as I have done heretofore, what guarantee have I for next year? He has disgusted me to such an extent that he cannot win me back.

"I am trying to close on another corner store not very far from here, and I believe I will succeed. Oh, yes; I feel that I must have a corner. It is impossible to make an effective display in front of a store standing between other stores. But a corner store gives one such a wide sweep. It gives a commanding position, and if the corner window shows in both directions, one ought to be able to make a display that is practically irresistible.

It is difficult to make an estimate in figures of the difference in money value between this store, at the corner, and the one next door. As for myself, even if they are the same in size, in improvements and in fixtures, I would sooner pay $1,000 in rent for this store than $400 for that. Yet, I believe corner stores do not usually command twice as much as their interior neighbors." THE ONLOOKER.

An agent employed to take orders for the sale of goods, which he is required to submit to his employer for acceptance or rejection, and who has no express authority to make collections, has no implied authority to collect, which will protect a debtor making payment after the discharge of the agent. (62 S. W. Rep. 218).

Ideas and Schemes.

A DAZZLING display of miniature automobiles and loving cups, prizes for the recent automobile races in Detroit, Mich., were exhibited by Wright, Kay & Co., of that city.

A. & C. Feldenheimer, Portland, Ore., recently exhibited in one of their windows a dozen or more cups, which were given as prizes at the bench show of the Portland Kennel Club.

G. A. Schlechter, Reading, Pa., is attracting considerable attention to his show window by the exhibition of a "Dickery Dickery Dock" clock, constructed as described in a recent issue of THE CIRCULAR-WEEKLY.

Samuel Prager, Terre Haute, Ind., is issuing "horological accident policies." The customer pays $2 and receives a policy which insures his watch for one year against all accidental breakage. It also provides for the cleaning of the watch.

An attractive feature of the Diamond Palace, San Francisco, Cal., is a large star of brilliant electric lights arranged on the ceiling near the rear of the store. This star is reflected in hundreds of places by mirrors about the store. A similar star is to be put in on the ceiling near the front.

Parker Bros., Colusa, Cal., have in their show window a small box containing ashes from the volcano of Mt. Valle. The ashes resemble a powdered pumice stone, and were taken from the decks of one of the ocean steamers. From this one steamer there were taken up about 300 sacks of ashes.

W. H. Appel, Allentown, Pa., recently displayed in his show window one of the tiniest books ever printed. The book is the New Testament, and its pages are ¾ inch long by ½ inch wide. It is neatly bound and ¾ inch thick. The print is so fine that a strong magnifying glass is required to read it.

Chas. W. Brown, Charlestown, W. Va., has on display in his show window a correct model of the renowned Ferris Wheel, designed and constructed by Prof. William F. Marz, of Baltimore, Md. Prof. Marz is now at work on an airship, which will make its maiden trip from Mr. Brown's establishment about July 4.

H. J. Kuechler, San Francisco, Cal., had a most artistic and patriotic display on Washington's Birthday, which might offer a suggestion for Decoration Day. The floor of the window was covered with bunting and under a canopy of stars in an azure field were arranged many handsome and costly pieces of silver and gold jewelry. Small flags were placed in every nook and corner, with a beautiful silver and bronze statue of Liberty in the center.

QUERIES BY OUR READERS.

Note.—Questions under this department will be answered as promptly as possible. Some queries require careful investigation before a satisfactory answer can be given; hence such answers are often seemingly delayed. THE CIRCULAR-WEEKLY desires every jeweler to take advantage of this department.

The recent query by W. P. S. as to whether or no Fletcher & Gardiner, silversmiths, were located in Philadelphia, is answered by a CIRCULAR-WEEKLY reader in the following letter:

PHILADELPHIA, March 4, 1903.

Editor of THE JEWELERS' CIRCULAR-WEEKLY:

In your issue of THE CIRCULAR-WEEKLY of June 28, I notice Mr. W. P. S. wishes to know if Fletcher & Gardiner were in business in Philadelphia. In reply I will say they were, and were located on Chestnut St., above 4th St., south side. They had the order for the celebrated silver service that was presented to Nicholas Biddle, president of United States Bank, which cost nearly $23,000. My father made the set and I have the only remaining piece. Fletcher & Gardiner failed in business and carried Jacob Bennett down with them. Yours very truly, JAMES M BENNETT.

MILFORD, Mass., March 1, 1903.

Editor of THE JEWELERS' CIRCULAR-WEEKLY:

One of our customers has an old fashioned "grandfather's" clock which has been in his family about three generations, but do not know just when it was purchased. Can you help us any from the following description, to find out anything about the maker: It has a solid brass movement, brass dial inscribed "Warranted to Seth Davenport" by the maker, "Simon Willard." The case is solid mahogany, handsomely inlaid with white wood and black ebony. Inside the door is the original "paster" or advertisement, which begins as follows. "Simon Willard, at his Clock Dial, in Roxbury St., manufactures every kind of clock-work; such as clocks for steeples, etc." Any information you can give us in regard to this clock, or its maker, will be greatly appreciated. C. W. W.

ANSWER:—Simon Willard was born in Grafton, Mass., in 1753, and established himself in business as a clockmaker in (Roxbury) Boston, Mass., in 1780. In 1835, when 82 years old, he made the clock for the Capitol at Washington. He died in Boston in 1848, aged 95 years.

NEW YORK, March 18, 1903.

Editor of THE JEWELERS' CIRCULAR-WEEKLY:

Do you know of any case in New York State wherein a jeweler has been legally held responsible for accidentally breaking a stone which had been left with him to be set? If there is no case on the subject, can you tell us how the liability of the jeweler could be determined? and oblige, S. & G.

ANSWER:—We can find no case in which this point has been directly decided, and are informed that the law governing this question is that relating to bailor and bailee for hire. Ordinarily a bailee of an article left with him to have something done to it is bound to take reasonable care, and exercise reasonable skill in doing what is necessary, and he is not responsible for damage to the article where he has exercised such reasonable care and skill; that is, providing there is no contract between the bailor and bailee, wherein the exact amount and nature of liability on the part of the bailee is set forth. But where the bailee undertakes to do work that requires peculiar or unusual skill and care and holds himself out to the bailor as a person possessed of the requisite skill to do the work, he is then bound to be possessed of the skill necessary for the proper performing, and he is bound to exercise in doing the work the highest degree of skill that is requisite, and the highest degree of care that is necessary; and he is then responsible for damage to any article left with him for the exercise of his skill, which damage is caused by a lack of necessary skill or any carelessness whatsoever on his part. If he has been neither negligent nor unskilful, and through some unavoidable cause for which he is in no way to blame, the article is injured, he cannot, in the absence of a special contract, be held liable for such injury.

You will see from the above that in the absence of any agreement between you and the party, you would probably not be held liable, unless the splitting of the stone was due to negligence or lack of skill on the part of you or your workman.

DICKEY, N. D., March 19, 1903.

Editor of THE JEWELERS' CIRCULAR-WEEKLY:

Can you tell me what my legal position is under the following circumstances. Some time ago I started to take a course in engraving by mail, and the party who was to instruct me agreed to do so for $25, and to furnish metals and designs for the work. He promised that I would be able to do paying work within six weeks. On the blank which he sent me to fill out and sign, there was a printed agreement by which he was send me one lesson every week, and for this I was to pay $5 in cash, $10 at the end of 30 days, and the final payment of $10 at the end of 60 days. On Dec. 30, 1902, I sent him $5 and received the first lesson, but after this instead of coming weekly the lessons came irregularly, and it was the middle or latter part of February before I received the fourth lesson. As it was then getting so near Spring that my business kept me occupied all the time, I wrote to the instructor, telling him that I could not take any more lessons. I received no answer until the 18th of March, when he wrote me to the effect that if I did not send $5 and keep on with the lessons, he would hold me to my agreement. As a matter of fact all I received from him were some paper designs, which he told me to copy and return to him with my work. Can he force me to pay any more, or legally hold me to the agreement? By answering these questions you will oblige. R. R. T.

ANSWER:—As you state the case, there appears to have been a simple contract between you and the engraving instructor, who agreed to give you certain lessons at regular intervals and guaranteed to fit you to do paying work in six weeks. According to your letter, your instructor broke the contract when he did not send you the instructions regularly, and you, in notifying him to send no more lessons and refusing to remit any portion of the balance, merely elected to consider the contract broken on account of his acts. Of course, we cannot say exactly what the laws in North Dakota may be in cases of this kind, but it is reasonable to suppose that common law principles govern, and under the circumstances we do not see how you are liable for a further sum of money. It even appears that you might have an action against your instructor for breach of contract, in which you could ask for the return of the $5 already paid, and any damages which you sustained by reason of this breach. In matters of this kind, however, we think the easiest way is the best, and would, therefore, advise you simply to pay no attention to the threats of the instructor, and you will probably hear nothing more from him.

B. H. Miller, formerly of Garnett, Kan., has moved to Turney, Mo.

Holmberg & Weeks, Peekskill, N. Y., are about to dissolve partnership. Mr. Weeks will continue the business in his own name and Mr. Holmberg will devote his entire time to the practice of optometry.

Opticians Warned Against Violating Postal Laws by Sending Instructions with Repair Work at Merchandise Rate.

OF special interest to every jeweler and optician who is obliged to send repair or prescription work from one city to another is the statement of the chief post office inspector of the Pennsylvania-New Jersey division, that many prominent firms and others of lesser importance in that division are continually violating the United States Postal laws.

These violations consist in sending first-class mail matter, such as instructions on repair work, sales prices on samples of merchandise, bills, statements, etc., with goods, which are lawfully sent as second, third and fourth class matter.

In speaking of the prices on samples of merchandise, one inspector has said that "prices convey information just the same as written letters," and of course they must be sent under separate covers and as first-class matter.

The same condition as found existing in the Pennsylvania-New Jersey division, no doubt, exists throughout the entire country, and as the postal authorities are on the alert and are scrutinizing every piece of lower class mail matter, it is advisable for the jeweler or optician to be very careful about what correspondence he sends through the mails in the same package with his repair or prescription work.

As ignorance of the law will excuse no one who is found guilty of violating it, we herewith publish the new postal laws and regulations of 1902, which are very clear on this phase of law breaking.

Section 484, of these regulations, bearing on this point, reads as follows:

Matter of the second, third or fourth class containing any writing or printing in addition to the original matter, other than as authorized in the preceding section, shall not be admitted to the mails, nor delivered, except upon payment of postage for matter of the first class, deducting therefrom any amount which may have been prepaid by stamps affixed, unless by direction of the Postmaster-General such postage shall be remitted; and any person who shall knowingly conceal or enclose any matter of a higher class in that of a lower class, and deposit or cause the same to be deposited for conveyance by mail, at a less rate than would be charged for both such higher and lower class matter, shall for every such offence be liable to a penalty of $10.

The exceptions referred to in this section are that a sender may write upon the wrapper or tag of a package his name, occupation, residence or business address, preceded by the word "From," and any marks, numbers, names or letters for purposes of description.

For Optical Notes and Briefs See Page 71.

Undignified Practices Extant Among Certain Opticians.

(Being the gist of an interview with A. J. Cross, New York.)

A. JAY CROSS, of the optical company which bears his name, of 20 E. 23d St., on the south side of Madison Sq., New York, one of the great metropolitan optical centers, is one of the leading spirits in the calling which, so largely through his own efforts, has of late years risen to the dignity of a specialized profession. *The Onlooker,* aware of his prominence in its ranks, recently called on Mr. Cross, and found that gentleman both able and willing to talk on the subject so near to his heart.

Having in a previous interview defined the differences and distinctions between "dispensing" and "refracting," as used technically, yet made that definition so clear that the layman can easily understand it was but natural that Mr. Cross should discourse on phases of the question suggested by this differentiation.

"I hope the day is not far off," said Mr. Cross, "when there shall be nothing more than simply one kind of optician—all using that single word—the duties of the 'dispensing' being entirely merged in the functions of the 'refracting optician,' as I explained to you. Their interests are alike, in fact identical, and the tendency is so marked that most of the 'dispensing opticians' already recognize that not only is there no reason for their survival, but that their extinction will be a good thing all around, even for themselves. Their independent existence is an anomaly, for really all that they do, is to fill the prescriptions sent by the oculist. On such a slender basis as this, there doesn't seem to be enough to maintain independent existence, except, perhaps, in a few of the more populous centers, and this only for a short time.

"I find that the older men among the 'dispensing opticians' are more difficult to lead to a recognition of this tendency than are the younger ones. We all know that the older we grow the more conservative we are inclined to be, but this is called a young man's age, when improvement is the order of the day, so the ultra-conservative must keep abreast of the times or be left in the race.

"There is, however, one burning question which is rapidly and justly being amended, and that too in the only way in which it should be settled—the right way. That is the question of charging fees for the examination of the eyes and similar services.

"One still sees, too frequently by far, the sign in opticians' parlors or on windows, 'Examination Free.' This is a profcssional as well as a commercial wrong, and, according to my views, cannot be too severely condemned. There is a taint about a system which tolerates a practice so obviously catch-penny and picayune, which savors of the giving away of chromos, of premiums, of prizes, etc., practices nowadays so frequent that they must be deplored by the judicious.

"How can folks who accept of such for a moment, believe that they are securing the intrinsic worth of their outlay. Is it to be believed even in this 20th century that there are folks who can be taken in by such transparent devices? In an age when intelligence ought to be universal, can the charlatan still find dupes everywhere? For that is practically what it amounts to. The moment that a man acts upon the idea that he is going to get something for nothing, he is inviting rascality to take advantage of him.

"There never was a time when commercial products were cheaper than they are to-day, nor a time when professional skill brought a higher price, so the sooner the opticians, as a class, recognize this, the better it will be for both public and profession.

"When you consider that it is only four or five years ago that I read my first paper on this subject to the American Association, and that there are already between 400 and 500 opticians who are committed to charge fees for these services, the only proper course, I think, we have every reason to feel encouraged. There is no doubt that within another period of the same length, practically all opticians will be demanding the same, and public opinion will sustain them as being within their just rights.

"Those who are shrewd will not for a moment believe that the opticians who announce with brazen lungs that they give 'examinations free' really do so. Far from it. These are the chaps who are not to be relied on in any transaction. You may depend upon it that the victim who walks into their parlor for a 'free examination,' when he walks out with the eyeglasses this optician gives him, has paid more than he would have done, in all probability, if he had gone to the store which does not give anything 'free.' In the latter case, he would have paid a reasonable amount for an honest examination; thereupon he would have been given just the kind of glasses best adapted for him. He would have paid for these services, I'll warrant, not a cent

Optical Department.

more than in the first place, in which he received the alleged 'examination free.'

"If people only recognized and sustained and encouraged honest institutions, and what would be to their own best interest, the disinterested who suffer because their sense of right forces them to wage battle for the right, would not have nearly so hard a battle of it. But there is no doubt as to the final outcome of this struggle, fortunately, or I for one would not feel as sanguine as I cannot help feeling now.

"It's worth while to live under abuses and unfortunate conditions and to put your shoulder to the wheel to help to correct these matters if you have a reasonable certainty that you will survive to enjoy life under the new and improved conditions," said Mr. Cross enthusiastically.

"Do you know," said he, "that among the very best of 'refracting opticians' I have found not a few to be country practitioners, a fact which those who do not give the subject thought would at first be loth to admit. I can readily see why it is so, however, and so will you also when I explain it. The city man is bound to have a much narrower experience, because the demand in the city is so large that it calls for specialists with the narrowest limitation. But the country optician is bound to have the most varied demand for his services—he will be continually called on for all sorts of things, and, as a consequence, his practice will make him adept in every phase. There is no doubt, therefore, that the country optician, like the country physician, ought to be and often is much broader and more liberal in his views."

"You would be surprised," added Mr. Cross, as an after thought to a most interesting interview, "to know how many people call upon me just because I do charge for examinations."

Donders' Rule Covering Presbyopia.

KENTON, O., March 26, 1903.

Editor of THE JEWELERS' CIRCULAR-WEEKLY:

I am in receipt of advertising matter from a certain optical company, which says that after fitting glasses for distance with the "Ametropometer," if patient is over 40 years of age, the optician should add for reading sphericals according to presbyopic table they present: They give table starting with + 0.25 for 40 years and advance to + 8.75 for 80 years.

Now, my optical training would indicate that not over four diopters should be added even for the close reading distance of 10 inches if all accommodation were lost. Either there is a hole in my education or else this is a bad break for an optical house to print and send out. Please let me know which it is through your columns.

Yours, G. L. D.

ANSWER:—In answer to your query, Donder's rule covering presbyopia, or, to be more exact, "Amplitude of Accommodation," places age glasses about as follows: + 1 D. S. for 45 years of age; + 1.50 D. S. for 48 years of age; + 2 D. S. for 55 years, and + 3 D. S. for 60 years and upward. This, of course, is in addition to the correction for any error of refraction which may be present.

Almost all rules have their exceptions, and, while Donder's rule is generally accepted, still there are cases in which variations have to be made to this standard. This, however, is infrequently done.

Glass for Optical Purposes.

(From an illustrated lecture by Dr. GLAZEBROOK, F. R. S., reported in the *Optician and Photographic Trades Review.*)

(*Continued from issue of April* 1.)

IF then I alter the angle of the crown glass and make it greater, I can get two spectra like those shown in Fig. 23, the one of flint glass and the other of crown glass, both being practically the same length. And now, if I put two such prisms, one behind the other, turning the angles in the opposite directions, then I can get a resultant bending of the ray of light on passing through the two; but since the spectra due to the two are of the same length, I obtain on the whole a colorless

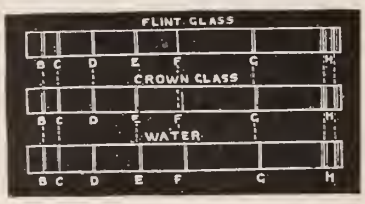

FIG. 23.

image. This is shown in Fig. 24. The prisms are corrected for chromatic aberration. Going back to Fig. 21 we see that a convex lens produces a violet image of the object near the lens and a red image at a distance. Now if we use a concave lens such as is shown in Fig. 24, and if the light falls on it in the direction R Q, the violet image is produced at q', and the red at q, and by superimposing these two lenses, one

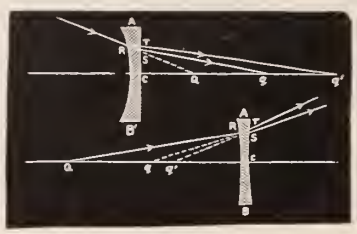

FIG. 24.

behind the other, as in the next figure (25), the light is refracted by the convex lens so as to produce a violet image at q' and a red at q; but the rays are refracted upwards by the concave lens, the violet, again more than red, so that the result is that the two images coincide at the point Q'. And we have formed at Q' a white image of Q. But this alone does not by any means complete the chromatic aberration correction. There are other points to be considered. I only wish at present to call attention to the defect. And now you have got before you all the defects that we are going to consider one by one.

I am, however, to speak to you of glass; the material of which these lenses and prisms is made, and it will probably be interesting to refer a little to its history, and the method of its manufacture, what its constituents are, and so on. The origin of glass appears, as far as I can trace, to be entirely lost in antiquity. Practically some of the very earliest memorials that we have seem to show that the men living then were acquainted with glass and with some of its properties.

I believe that there are records of Egyptian origin that go back at least two thousand years before the birth of Christ, which show pictures of glass bottles and the manipulation of glass blowing and so on, figured on the tombs. In Roman times glass blowing was a well-known art. The glass manufactures of Alexandria were very celebrated indeed, and from Alexandria the art traveled to Italy, to Venice, and of course the Venetian glassware is known and celebrated at the present day. In England, as far as I can trace it, there was not much known about glassmaking in the middle ages; but flint glass, which is the basis of the optical glass about which I am to treat, was first made in England probably about the year 1620, although the date is not certain.

Glass is a mixture, in almost all cases, of silicates of two or more metals—at any

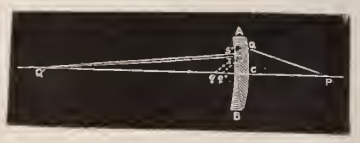

FIG. 25.

rate two metals are necessary—and silica is necessary. And generally one of the metals is an alkaline earth. Here is a table taken from the article on glass in the *Encyclopædia Britannica,* by a very well-known glass manufacturer, who has done much for the manufacture, showing the main con-

TABLE GIVING MAIN CONSTITUENTS OF GLASS.
(From the *Encyclopaedia Britannica.*)

Acid.	*Alkaline.*	*Earthy. Colorless.*	*Colored.*
Silica	Oxides of	Oxides of	Oxides of
Boracic Acid	Potassium	Calcium	Iron
	Sodium	Lead	Manganese
		Barium	Copper
		Strontium	Chromium
		Magnesium	Uranium
		Aluminium	Cobalt
		Zinc	Gold
		Thallium	

stituents of glass. You have as acid material, silica, and very often some boracic acid. You have as the alkaline material, oxides either of potassium or of sodium, and then you have, as other material that you combine with those, oxides of, one or more may be, of the materials given in the last two columns.

For colored glass you use the one series and for colorless glass the other. These materials are all mixed together in proper proportions. The whole is then dried, pounded up, and then put into a furnace at about 1,400° C, and kept molten for a long time. I need not trouble you with the chemical formulæ which have been given to represent the various kinds of glass. In the next table are the materials used in crown, plate, and crystal, which last is the basis of our optical glass.

Crown glass is made of purified sand, chalk, or limestone, and sulphate of soda. These are ground up and mixed with broken pieces of the glass you are making. Such broken glass is called cullet. It has been found desirable to mix in a certain quantity of broken glass with the raw material.

Flint glass or crystal is made of very fine white sand and red lead, and a little niter. Now the difference between optical flint glass and any one of these glasses consists firstly in the fact that for optical purposes the glass has to be homogeneous.

Optical Department.

You will notice this flint glass or crystal, which is the material which forms the basis of many optical glasses, contains red lead, a very much heavier substance than the others in the glass, and the result is that if you try to make optical glass in the ordinary way, the lead tends, as the glass cools, to sink to the bottom. The glass is striated and not homogeneous, and the first thing to do is to render it as nearly as possible homogeneous throughout.

The method of securing this was first discovered by P. Guinand, of Brenets, in Canton Neuchatel, Switzerland, who was born about 1740. He was the son of a working carpenter and was entirely uneducated; when he began to make glass he could hardly write or read. He was brought up first as a carpenter, and then he became a cabinet maker, and later a watch case maker. While engaged in this occupation

MATERIALS USED IN VARIOUS GLASSES.

he became interested in optical instruments of various kinds. Through the kindness of M. Jacques Droz, who had one or two telescopes, Guinand was allowed to take a valuable telescope to pieces. He then thought he would like to make lenses, being urged to this partly by his wish to make spectacles for himself.

Shortly before this time Dollond had discovered that by means of combining lenses of crown and flint glass you could secure a large amount of achromatism in a telescope. Through M. Droz, Guinand became acquainted with one of Dollond's lenses, and heard of the great difficulty of making the glass perfectly homogeneous. He then set to work to overcome this difficulty and discovered that he could get the glass much more homogeneous provided he arranged for its very slow melting and cooling, and for continued stirring.

I am not sure that that is the whole of his discovery, but at any rate it is generally accepted as such, and Guinand was the first to make fairly large lenses from masses of flint glass cast by himself sufficiently homogeneous to be used for optical purposes. He made several such lenses and finally his success became known to a glassworker named Urt Schneider, of Munich, who persuaded him to migrate from Switzerland to Germany and to start a glass works. For some time they worked together preparing glass, with more or less success, being joined after a time by Frauenhofer.

Finally, however, Guinand got tired of the partnership and returned to Switzerland and again started making glass on his own account. He had, however, to forego an annuity paid him by Urt Schneider so long as he remained idle. After his death his son sold the secret to George Bontemps, of Paris, who came to work with him; Bontemps then carried the secret and the method back from Switzerland to Paris, where he set up glass works.

Bontemps was finally brought by Messrs. Chance Bros. to Birmingham, which has been the home of optical glass making up to the present day; and the furnaces and pots, which by Messrs. Chance's kindness I had the opportunity of seeing the other day, are, I understand, practically the same as those originally set up by Bontemps. For many years Birmingham and Paris were the only places at which this optical glass was made.

(The End.)

Winking the Cause of Asthenopia.

MR. GEORGE J. BULL, of Paris, recently published a pamphlet in which he points out the danger of winking, says the *Canadian Optician.* He says it causes asthenopia, a disease of the eyes which affects the vision and leads to blindness.

The general symptoms of asthenopia are inability to read, to work, or to practice music after a few minutes, owing to dimness of vision and to a smarting pain in the eyes. The pain disappears after a short rest, but begins again when work is recommenced. If the disease is disregarded or winking persisted in, the edges of the eyelids become permanently swollen and red.

Dr. Bull considers that asthenopia is due to strong closure of the eyes in winking, and he believes that the pressure exerted by a wink causes wrinkling of the surface of the cornea, and consequent blurring of images by the multiplication of horizontal lines.

Dr. Bull does not deny the importance of errors of refraction in the production of asthenopia, and he mentions the possibility of the formation of a line of mucus caused by winking on the surface of the cornea, to which many would be disposed to attribute the symptoms observed; but he points to the persistence of the reduplication of horizontal lines and the failure of relief from the use of glasses in some cases as being opposed to this view.

The treatment he adopts is simple. The patient should avoid as far as possible strong closure of the eyes or rubbing them through the eyelids with the finger, and he should place the object looked at in such a position that he has not to roll the eye downward to see it, which brings the wrinkle or wrinkles across the center of the cornea, but should rather, if the object be below the level of the eyes, bend the head to see them.

Optical Notes and Briefs.

Gustave Lanz, Jr., son of G. Lanz, Reading, Pa., has graduated with high honors from the Philadelphia Optical College and received his degree. He will have charge of the optical rooms at his father's store.

A frenzied woman recently entered the optical establishment of Walter Reed, Portland, Ore., and smashed everything breakable in the store, alleging that the optician, who is a married man, had been guilty of a flirtation with her daughter.

The Optical Society of the State of New York will hold its next annual meeting in Rochester, N. Y., June 9 and 10. The meeting will be devoted to the transaction of general business and addresses and discussions on scientific subjects, and will conclude with a banquet. B. B. Clark, of Rochester, is president of the society and W. W. Bissell, of the same place, is chairman of the executive committee.

MICHAEL WOOLF, 71 Nassau St., NEW YORK

How about your R_x work? Have you sent for our price list?

Why the "Longeval" Mainspring for American Watches is the Best.

The only spring unaffected by climatic changes.

With each order for one gross of mainsprings, a fine oak cabinet, made expressly for this brand of springs, will be included, gratis.

Only one spring need be handled and exposed at a time instead of a full dozen as with other makes. Method of packing avoids all possibility of rust. It is made by the best maker in Switzerland, of highest grade steel, finished down by hand, high in carbon, best of temper, ensuring uniform pulling power.

Every Spring Guaranteed.

ORDER A SAMPLE DOZEN FROM YOUR JOBBER.

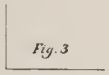
If you cannot obtain them there, write direct to the importers, **HAMMEL, RIGLANDER & CO., 35 Maiden Lane, New York,** who will inform you of the nearest jobber who will supply you.

NOTICE.

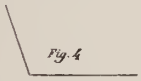
The importers of these mainsprings are the first have employed the idea of putting each spring a separate box, thus protecting them against st and climatic changes, and to place a num- r of these small boxes in a box or case. They have taken expert advice as to their sole d exclusive right to this manner of "dressing" ainsprings, and have been advised that they ve a proprietary right thereto. The trade is hereby notified that any infringe- ent of this manner of "dressing" main prings r the market will be vigorously pro-ecuted.

PROBLEMS OF THE WATCHMAKER'S BENCH.

[*Copyright, 1902, by The Jewelers' Circular Pub. Co.*]



By Puteanus.



Repairing of American Watches.

THE total angle of motion of the fork, as we said, should not be more than 10 degrees and the locking 1½ degrees. This may seem somewhat technical for many watchmakers who do not clearly conceive what angles of so and so many degrees represent. Without intending to go into general geometrical explanations at any length, it will be necessary to devote a few lines to a clear understanding of the measurement or size of angles, for without this it is impossible to thoroughly understand the working of an escapement.

Angles are represented by degrees; there are acute (sharp) angles, right angles and obtuse angles. An angle in common parlance is what is called a corner—the point where two straight lines meet. Fig. 2, for instance, represents an acute angle. Therefore, a house built like this is called the house on the sharp corner. Fig. 3 represents a right angle; it is the mean between the acute and the obtuse angle. When an angle is smaller than a right angle, it is acute, and when it is greater, it is an obtuse angle, as shown in Fig. 4.

The right angle, which is formed by a right line falling on another perpendicularly, has never more nor less than 90 degrees. The measurement of angles can be made as follows: With the meeting point of an angle as the center we describe an arc; the angle may be measured by the portion of the arc (which is a part of a circle) cut off by the lines forming the angle, with reference to the whole circle.

It is customary to divide an entire circle into 360 equal parts, called degrees, and instruments called protractors are constructed, whereby the number of degrees contained in any angle are determined. The protractor, Fig. 5, which is to be found in almost every set of mathematical instruments, and which can be bought separately for a few cents at any draftsman's material store, consists of a semi-circle divided into 180 parts. In making use of it, its center *b* must be placed on the apex of the angle in such a manner that its diameter coincides with one side, *a b*, of the angle, when the measurement of the angle will be indicated by the division intersected by the other side of the angle. Thus the angle *a b c* is one of 50 degrees (abbreviated 50°) and it will always have this measure, whatever be the length of the radius of the arc, and consequently, whatever be the length of the sides, for the measuring arc must always be the same fraction of the circumference.

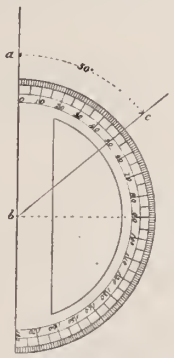


Fig. 5.

In order to make this still plainer, we will take, for instance, a watch dial. Since it is divided into 60 parts instead of 360, ¼ of the dial, or 15 minutes, will be equal to 90 degrees of a circle. If we draw a line from the center of the dial in the direction of the 12 and another in the direction of the nine, or of the three, we will have a right angle containing 90 degrees; it does not matter if the dial be that of an 18 size, an 0 size watch, or of a clock. The ordinary dial having only 60 divisions or one-sixth of that in which circles are generally divided, an angle of 50 degrees, as shown in Fig. 5, would be equal to that containing $\frac{50}{6} = 8\frac{1}{3}$ minutes of a dial.

The motion of 10 degrees of the fork, as shown in Fig. 1, would represent a space of $\frac{10}{6} = 1\frac{2}{3}$ minutes of a dial, or a space limited by a line drawn, for instance, from the center of the dial to 12, and another line from the center to 1⅔ minutes past 12. The use of a watch dial for the measuring of angles is not very practical, because its divisions are too large. It was mentioned merely as a comparison with the protractor and, specially, to show that measuring the angles with arcs of great or short radius, or with large or small protractors, makes no difference. The degree is subdivided into 60 minutes (60′) and the minute into 60 seconds (60″), a subdivision which is never used in horology.

The fork, F, as seen from sketch A, Fig. 1, describes an angle of 5 degrees to each side of the center line, or a total motion of 10 degrees, and the angle of the roller, such as it is, represented in connection with the fork, is 22½ degrees, or a total of 45 degrees, or, compared to the minutes of a watch dial, 3¾ minutes. The length of the fork and the diameter of the roller will regulate the impulse and the length of the ruby pin. A short fork and a roller of large diameter shorten the impulse, while a long fork and a small roller make the impulse longer.

Horologists in general differ in opinion as to the length of the angle that the impulse on the ruby pin should have. Some manufacturers think 35 degrees sufficient, others give 40 to 45 degrees, and even go as high as 60 degrees. As repairers of watches, we have not much to do with all this diverse opinion, but we must repair the watches and see that, without expending too much time and cost, they give the best results and satisfaction in comparison to their original construction and value. When we have obtained a clearer understanding of the working of the ruby pin and fork, as more illustrations and explanations of the device will give, we may incidentally be able to express our opinion as to the length of a ruby pin or angle which will be most favorable.

(To be continued.)

A Gigantic Floral Clock Will be a Feature of the World's Fair at St. Louis.

A GIGANTIC floral clock, with a dial 100 feet in diameter, is a feature of the plan for the treatment of the hill upon which will be constructed the Agricultural and Horticultural buildings of the World's Fair, says the St. Louis *Post-Dispatch*.

The crown of the dial will be composed of green bedding plants, and the figures will be in white, each of them 10 feet high. The hands will be 50 feet long and the clock will be operated pneumatically. A power house for supplying compressed air will be constructed nearby.

The timepiece will occupy a slope of about 30 degrees, so that it will be visible from the entire district west of Skinker Road and north of the hill.

To Polish Smooth Watch Cases.

(Translated for The Jewelers' Circular-Weekly from the *Deutsche Uhrmacher Zeitung.*)

IN placing before the reader the following remarks upon this subject we believe we are offering them suggestions which they may use to their advantage, more especially since little or nothing has been written upon it in the journals devoted to the trade. Smooth watch cases, both silver and gold, have lately become very much in vogue. Whether the popularity is due to their naturally beautiful appearance or to a desire, on the part of the purchasers, to have their cases decorated according to their own individual tastes, either with a complicated monogram, engraved or set in gems, or other fanciful design, one cannot positively assert; of this, however, we are assured—they are here and apparently intend to remain some time, and meanwhile they must be kept in order.

Upon such a highly polished surface infinitesimal scratches are visible and not a few of the watches, after being carried in the pocket for a while, look as if a trick skater had been practicing upon them. What workman is not aware of the precautions received from his chief when he receives a smooth watch case to refit, lest the case become marred by careless handling? Few indeed are the jewelers who know how easily all traces of handling, hair lines or deep scratches may be obliterated.

In a retail business, be it ever so large, there is little opportunity to become adept in this branch, for expertness is only acquired by much practice. "What facility I possess," says Reinhard Anvers, "was gained in the wholesale line, where the travelers' samples were made to shine in their highest effulgence to render them all the more attractive. Such pointers, then, as follow here are intended to help all workmen to obtain the same faultless luster which the case originally possessed.

When it is a question of polishing a case, first thoughts generally suggest the buffing machine with its rotating ball of cloth. At one time I, too, thought that this was the only means to the desired end. However, I have since learned that practice with a pair of hands is the only machine needed, whether it be to polish pieces of steel with rouge and diamantine or brass wheels with zinc and a sword file (burnishing file). Here, as in many other branches of industry, now and then one accomplishes easily what the great majority can perform only by the sweat of their brows.

A slightly marred case can be refurbished in the shortest possible time with only an extremely clean finger tip and a little Paris rouge and spittle. Either the index or the middle finger may be used, on account of their rigidity, and the one used must be scrupulously clean and free from grit. Moisten the finger tip with saliva, dip it into the box of rouge and spread the mixture over the whole case, without a thought as to whether there are one or 20 scratches to be rubbed off. As soon as the rouge is tolerably dry rub lustily with the finger tip. You need not worry about rubbing in other scratches. No special movement is prescribed; you may rub round, crosswise or up or down, only be sure to cover the whole surface. By the time most of the rouge is rubbed off another dose may be needed, and you stick your finger in your mouth or a nearby glass of water and again in the rouge and proceed as before.

Now, the seemingly inexplainable secret is just here. It comes with practice; each one must learn the trick himself, and he will "catch on" almost immediately.

This much is certain—neither much rouge nor heavy pressure is requisite. In most cases one application of rouge is sufficient. The main thing seems to be the frequent moistening of that already on the case and rubbing it out broader, thinner and finer. The fundamental principles for polishing any material are that the original abrasive must be worked down thinner and thinner until at last scarcely a breath of it remains upon the surface, and when this is completely removed the object shines forth with the highest possible luster.

For deep scratches, of course, somewhat heavier pressure is necessary, though in the beginning it is well to avoid it as much as possible, for the cuticle at the finger tip being somewhat tender, is liable to rub up into a blister, which, besides being painful, will incapacitate one for a short time. It would be more advisable to rub the scratch out with a slate stylus or the finest of emery paper before applying the rouge and spittle. Though the process is absolutely primitive, the result is equally astounding. Case makers, who, in the nature of their business, control all methods for perfecting their wares, do not scorn this process, but rather frequently resort to it.

The polishing of the insides of the cases is attended with more difficulty. Having removed all the dust and dirt, with the chamois or polishing cloth, the rouge is applied with the same unguent and the process continued to the desired end.

Under the rim of the dust-proof cover the rouge soon finds a place and often remains there. Great care, therefore, must be taken to remove all old rouge and dust before beginning the operation, for this hardened rouge, when worked under the finger, is very productive of scratches and cuts which it is the workman's object to eliminate.

Do not lose courage if you do not succeed immediately, or if the finger becomes painful; the final result brings its own reward; the finger tip will soon become toughened and your troubles will be at an end. There is no other process half so well adapted to the polishing of enameled cases. Since the case is the most attractive to the eye of the layman, it is well to return it to the customer well polished, for that, at least, stands for a good deal of work with him; of the interior he knows little, perhaps nothing at all.

The polished dust-proof cap or inner case of a watch, especially if it be plated, often presents an untidy sight; a sort of cloud seems to cover it, which comes either from moist hands or from the price ticket which is frequently placed between the cases for safety and easy access. This may be easily removed by gently tapping the dust cap or dome with a bit of cotton, moistened with fuming oil of vitriol, and afterward rubbing it off with a clean cloth.

Of course, if this be done, the movement must first be taken from the case and the case thoroughly washed before reinserting the movement.

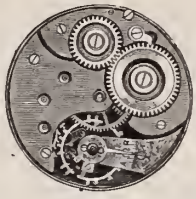
A Rosebit for Removing Broken Screws.

HOW often in the course of routine work does it fall to the lot of the watchmaker to remove an injured, rusted or broken screw from the plate, and after exhausting his strength and patience in all ordinary endeavors, to resort, finally, to the punch? Should the screw not give way to the first few taps of the hammer, the difficulty becomes real and the state of the plate surrounding the hole from which the

NOVEL TOOL FOR REMOVING WATCH SCREWS.

screw has finally been forced gives ample evidence of the heroic measures called into play.

With a view to avoid the useless generation of internal heat and to accomplish such work in the neatest and quickest possible manner, a certain Andreas Gotting, in Merl-on-the-Mosel, as the *Deutsche Uhrmacher Zeitung* informs us, has invented the drill shown in the accompanying illustration. He has protected himself against infringement by taking out a German Imperial Design Patent.



As shown in the illustration, which is about five times the original size of the tool, the drill consists of a hollow steel tube. The diameter of the tube should correspond as nearly as possible to the thickness of the screw to be removed, certainly not any smaller than the body of the screw.

The working end of the drill is shaped into a truncated cone and ground to three sides, having as many sharp cutting surfaces, which, when used as an ordinary drill, cut away the metal close to the screw and drop it out. This drill, of course, is made to fit the ordinary holder, and its manipulation is no more difficult than any other drill. If the broken screw projects slightly above the plate, one has simply to cover it with the hollow drill and proceed as in boring any other hole. If, however, it be broken off below the surface, then it will be necessary to countersink a portion of the plate to prevent the new drill from getting out of place.

The only disadvantage presented by the use of this drill is the resultant hole, which will always be of good size, and must be bushed; still, when this is well and neatly done, it always presents a better appearance than a badly battered plate.

Mr. Gotting assures us that jewel holes may also be bored out with his drill, and when the drill of suitable size is selected the jewel may be taken out without the slightest injury.

The Silver Workers' Union, of Newburyport, Mass., last week enjoyed a banquet in the Central Labor Union Hall. About 125 members were present.

OMEGA  MOVEMENTS

An Ingenious Horological Masterpiece.

(Continued from page 1.)

moment, and will continue to show them for generations to come.

The upper right hand dial of the clock shows correctly the time when the sun rises and sets and shows the length of each day for the entire year. Just above this dial the moon is illustrated by a globe, half of which is bright and half dark. The globe revolves on an axis and as the moon grows a little streak of the bright side of the globe appears. This bright streak enlarges on the next day and on the next and so on, until at exactly the right minute of the right day the full bright side will announce full moon. After this the bright side diminishes daily until the next full moon. This orb revolves on its axis once in 29½ days.

Opposite the moon, on the other side of the clock, is a barometer showing the weather indications of the locality in which the clock is situated. This is the only piece of mechanism that is not operated by the clock movements.

Immediately beneath the barometer is the dial representing the planetary system. This is one of the most intricate parts of the clock and was made and remade with tireless patience for 30 long years by the inventor. Parts of it were corrected more than 100 times before he would finally pronounce it accurate. It shows the heliocentric movements of the planets around the sun. The sun in the center of the dial revolves on its own axis once in 25½ days; then Mercury revolving around the sun once in 88 days is shown; Venus makes the circuit in 225 days; Earth in 365 days, six hours, nine minutes and nine seconds; Mars 687 days; Jupiter 4,332 days or 11¾ years; and finally Saturn, which is the planet farthest from the sun, requires 10,759 days, or 29½ years, for a complete revolution. All these planets are shown in their relative positions to each other and with wonderful precision, make their courses in the prescribed time. In addition to these planets, on the same dial, are the 12 signs of the Zodiac.

Not the least remarkable thing about the clock is its striking apparatus. The visible part of this is arranged in the center of the clock directly above the group of 10 dials. In announcing the first quarter of the hour, a child appears and strikes the anvil once; then, on the half hour, a youth appears and strikes twice on the bell. At the third quarter a figure representing Manhood comes forth and strikes three times on the gong; and on the completed hour the image of Old Age appears and strikes the four completed quarters. At all these stages of the hour the Guardian Angel figure above them stretches forth her hands and blesses them. When the figure of Old Age appears, however, the Angel remains silent, signifying that time has run its course. At the striking of the last quarter another figure opposite the Guardian Angel, holding an hour glass, reverses the glass and a figure representing death announces the number of the hour. At 12 o'clock 12 figures representing the 12 Apostles, each appear and all bow in reverence to their Master, except Judas Iscariot, who fails to show respect as the others, and a cock in a small niche before the figures thrusts forth his head and crows three times. At the end of each year a bugler appears and with a blast of his trumpet announces the new year, while the Apostles take their positions on a shelf provided for them, and an automatic music box plays a sacred hymn.

The inventor of this wonderful clock was born in Ruchsen, Baden, Germany, June 29, 1829. He was the son of a shepherd of small means, and the education which his parents were able to give him was very meagre. After traveling through Germany, Switzerland and France, young Gebhard finally located at Marseilles, taking up the watch and clock making business under one of the most efficient craftsmen of that day. The young watchmaker spent his evenings in studying mathematics and astronomy and made such good progress that a few years later he was appointed a Professor of Astronomy and Science in a Marseilles university.

It was in the days of his professorship that he conceived the idea of making this wonderful clock; so in the year 1865 he began his task. In 1878 his eldest son, who was also a clockmaker, assisted his father, and together they labored until 1880. Then the youngest son was also enlisted and all three worked on the clock until it was completed in 1895.

On its completion the elder Mr. Gebhard was crowned with honors by the Government and for four years he traveled over Europe displaying the results of his life's labor. In 1899 he passed away and then his elder son, W. R. Gebhard, decided to bring the clock to the United States. W. R. Gebhard's photograph appears in the illustration on page 1, sitting beside the clock.

Strange Fatalities Associated With the Possession of a Watch.

THE recent trial of a small boy in Baltimore, Md., for the larceny of an ordinary silver watch brought out some interesting facts about the ill-fated connection the timepiece has with the family of James Tracey, a contractor, that would make the ordinary observer wonder why he tried to recover it and has not thanked the purloiner of this hoodoo. This watch has been in the Tracey family for 28 years and during this time three members of the family have been killed with it on their persons.

About 10 years ago, while the elder Tracey was at work on a bridge across the Baltimore & Potomac Railroad, near Calverton, he was killed. The watch was in his vest pocket. It then went to James Tracey, Jr., who loaned it to his brother, who was a brakeman on the Northern Central Railroad. About four years ago he was killed on the railroad.

The watch was then loaned by James Tracey, Jr., to another brother, a tinner, who was killed shortly after by falling off a roof. Mr. Tracey, irrespective of the fate the watch had brought to his father and his two brothers, began to wear the watch himself, and continued to do so until it was stolen from his vest pocket while at work on the Custom House building.

American Chamber of Commerce of Paris on the Metric System.

THE American Chamber of Commerce in Paris is composed mainly, if not exclusively, of men who have direct business relations in America, says the *American Machinist*. Many of its members are Americans; others who are not Americans have American branch houses or connections that make their interest in American commercial affairs a real one. They are of course familiar with the workings of the metric system in various lines of trade. The following resolutions were adopted at a meeting of the Chamber, December 3, 1902:

Whereas, The importance and advisability of further rapid extension of the foreign trade of the United States is recognized by all;

Whereas, The American Chamber of Commerce of Paris, from its location and from the intimate relations of its members to the commerce between the United States of America and France, is peculiarly well placed to appreciate the serious hindrances to trade arising from differing systems of weights and measures;

Whereas, The United States Government is, with the principal countries of the world, a party to the International Bureau of Weights and Measures, and possesses with them prototypes of the recognized fundamental standards, Meter and Kilogram;

Whereas, The metric system has been adopted by countries having a population of 480,000,000 inhabitants, and has universally proved beneficial;

Whereas, The simple and uniform metric system is readily learned and never forgotten, in striking contrast to the complicated system of weights and measures of the United States, where, as examples of the numerous objections, the fact may be cited that the ounce of silver is heavier and the pounds of silver lighter than the ounce and pound of iron, and where the value of the quart, gallon, bushel and barrel varies with the commodity measured and the place where measured;

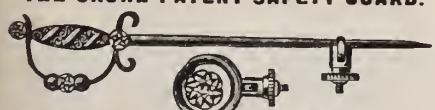
Whereas, The American Chamber of Commerce of Paris is profoundly convinced that the adoption by the United States Government of the metric system would greatly simplify the exchange of commodities within the boundaries of the country, and facilitate and notably increase foreign trade; and

Whereas, A bill to fix the standards of weights and measures is now on the calendar of the Fifty-Seventh Congress; now, therefore, be it

Resolved, That this American Chamber of Commerce of Paris fully approves said bill, and strongly urges that all proper steps be taken, and every effort be exerted to secure the early and general adoption of the metric system as the standard in all departments of the Government of the United States.

FRANCIS KIMBEL, President.

W. S. DALLIBA, Honorary Secretary.



Claud McLaughlin, who, a short time ago, escaped from the store of Louis Heilbron, Texarkana, Ark., with a tray of diamonds valued at $5,000, was recently convicted in the District Court of Texarkana and sentenced to four years' imprisonment in the penitentiary.
